JORDAN, THOMAS (1612?-1685), English poet and pamphleteer, was born in London and started life as an actor at the Red Bull theatre in Clerkenwell. He published in 1637 his first volume of poems, entitled Poetical Varieties, and in the same year appeared A Pill to Purge Melancholy. In 1639 he recited one of his poems before King Charles I., and from this time forward Jordan's output in verse and prose was continuous and prolific. He freely borrowed from other authors, and frequently re-issued his own writings under new names. During the troubles between the king and the parliament he wrote a number of pamphlets, the first of which, A Medicine for the Times, or an Antidote against Faction, appeared in 1641. Deductions, occasional verses, prologues and epilogues to plays poured from his pen. Many volumes of his poems bear no date, and they were probably written during the Commonwealth. At the Restoration he eulogized Monk, produced a masque at the entertainment of the general in the city of London and wrote pamphlets in his support. He then for some years devoted his chief attention to writing plays, in at least one of which, Money is an Ass, he himself played a part when it was produced in 1668. In 1671 he was appointed laureate to the city of London; from this date till his death in 1685 he annually composed a panegyric on the lord mayor, and arranged the pageantry of the lord mayor's shows, which he celebrated in verse under such titles as London Triumphality, or the City in Jollity and Splendour (1672), or London in Luster, Projecting many Bright Beams of Triumph (1676). Many of these curious productions are preserved in the British Museum.

In addition to his numerous printed works, of which perhaps A Royal Arbour of Loyally Poetic (1664) and A Nursery of Novelties in Variety of Poetry are most deserving of mention, several volumes of his poems exist in manuscript. W. C. Hazlitt and other 19th-century critics and biographers have recorded more merit in Jordan's writings than was allowed by his contemporaries, who for the most part scornfully referred to his voluminous productions as commonplace and dull.

JORDAN, WILHELM (1819-1904). German poet and novelist, was born at Insterburg in East Prussia on the 8th of February 1819. He studied, first theology and then philosophy and natural science, at the universities of Königsberg and Berlin. He settled in Leipzig as a journalist; but the demand for his views expressed in some essays and the success of his works Goethe and Kanonen (1841) and Irdische Phantasien (1842) led to his expulsion from Saxony in 1846. He next engaged in literary and tutorial work in Bremen, and on the outbreak of the revolution, in February 1848, was sent to Paris, as correspondent of the Bremer Zeitung. He almost immediately, however, returned to Germany and, throwing himself into the political fray in Berlin, was elected member for Freienwalde, in the first German parliament at Frankfort-on-Main. For a short while he sided with the Left, but soon joined the party of von Gagern. On a vote having been passed for the establishment of a German navy, he was appointed secretary of the committee to deal with the whole question, and was subsequently made ministerial councillor (Ministerialrat) in the naval department of the government. The naval project was abandoned, Jordan was pensioned and afterwards resided at Frankfort-on-Main until his death on the 25th of June 1904, devoting himself to literary work, acting as editor and publisher, and producing numerous poems, novels, dras纳斯 and translations.

Among his best known works are: Demiurgos (3 vols., 1852-1854), a "Mysterium," in which he attempted to deal with the problems of human existence, but the work found little favour; Nibelungen, an epic poem in alliterative verse, in two parts, (1) Sigfriedsage (1867-1873), and (2) Siegfriedsage (1884-1889); and (3) Hildebrands Heimkehr (1872; 9th ed. 1892)—in the first part he is regarded as having been remarkably successful; a tragedy, Die Witwe des Agis (1858); the comedies, Die Liebesleugner (1855) and Durchs Ohr (1870; 6th ed. 1885); and the novel, Jordan Street (1859). Jordan also published numerous translations, notably Homers Odysse (1876; 2nd ed. 1890) and Homers Ilias (1881; 2nd ed. 1894); Die Els (1889). He was also distinguished as a reciter, and on a visit to the United States in 1871 read extracts from his works before large audiences.

JORDAN (the down-comer; Arab. esh-Sheri'a, the watering-place), the only river of Palestine and one of the most remarkable in the world. It flows from north to south in a deep trough-like valley, the Aulon of the Greeks and Ghôr of the Arabs, which is usually believed to follow the line of a fault or fracture of the earth's crust. Most geologists hold that the valley is part of an old sea-bed, traces of which remain in numerous shingle-banks and beach-levels. This, they say, once extended to the Red Sea and even over N.E. Africa. Shrinkage caused the pelagic limestone bottom to be upheaved in two ridges, between which occurred a long fracture, which can now be traced from Coelosyria down the Wadi Araba to the Gulf of Akaba. The Jordan valley in its lower part keeps about the old level of the sea-bottom and is therefore a remnant of the Miocene world. This theory, however, is not universally accepted, some authorities preferring to assume a succession of more strictly local elevations and depressions, connected with the recent volcanic activity of the Jaulan and Lijia districts on the east bank; which brought the contours finally to their actual form. In any case the number of distinct sea-beaches seems to imply a succession of convulsive changes, more recent than the great Miocene upheaval, which are responsible for the shrinkage of the water into the three isolated pans now found. For more than two-thirds of its course the Jordan lies below the level of the sea. It has never been navigable, no important town has ever been built on its banks, and it runs into an inland sea which has no port and is destitute of aquatic life. Throughout history it has exerted a separatist influence, roughly dividing the settled from the nomadic populations; and the crossing of Jordan, one way or the other, was always an event in the history of Israel. In Hebrew times its valley was regarded as a "wilderness" and, except in the Roman era, seems always to have been as sparsely inhabited as now. From its sources to the Dead Sea it rushes
down a continuous inclined plane, broken here and there by rapids and small falls; between the Sea of Galilee and the Dead Sea its sinuosity is so great that in a direct distance of 65 m. it traverses at least 200 m. The mean fall is about 9 ft. in the mile. The Jordan has two great sources, one in Tell el-Kadi (Dan) whence springs the Nahr Leddan, a stream 12 ft. at its birth; the other at Banias (anc. Paneas, Caesarea-Philippi), some 4 m. N., where the Nahr Banias issues from a cave, about 30 ft. broad. But two longer streams with less water contest their claim, the Nahir Barright from Coeleysaria, which rises near the springs of the Litany, and the Nahr Hashbany from Hermon. The four streams unite below the fortress of Banias, which once held the gate of the valley, and flow into a marshy tract now called Huleh (Semuchonitis, and perhaps Merom of Joshua). There the Jordan begins to fall below sea-level, rushing down 680 ft. in 9 m. to a delta, which opens into the Sea of Galilee. Thereafter it follows a valley which is usually not above 4 m. broad, but opens out twice into the small plains of Bethshan and Jericho. The river actually flows in a depression, the Zor, from a quarter to 2 m. wide, which it has hollowed out for itself in the bed of the Ghor. During the rainy season (January and February), when the Jordan overflows its banks, the Zor is flooded, but when the water falls it produces rich crops. The floor of the Ghor falls gently to the Zor, and is intersected by deep channels, which have been cut by the small streams and winter torrents that traverse it on their way to the Jordan. As far south as Kurn Surtabeh most of the valley is fertile, and even between that point and the Dead Sea there are several well-watered oases. In summer the heat in the Ghor is intense, 110° F. in the shade, but in winter the temperature falls to 40°, and sometimes to 32° at night. During the seasons of rain and melting snow the river is very full, and liable to freshets. After twelve hours’ rain it has been known to rise from 4 to 5 ft., and to fall as rapidly. In 1257 the Jordan was dammed up for a short time on the Zorriship, probably due to heavy rains, leaving the Sea of Galilee almost dry. But it soon assumes a tawny colour from the soft marl which it washes away from its banks and deposits in the Dead Sea. On the whole it is an unpleasant foul stream running between poisonous banks, and as such it seems to have been regarded by the Jews and other Syrians. The Hebrew poets did not sing its praises, and others compared it unfavourably with the clear rivers of Damascus. The clay of the valley was used for brickmaking, and Solomon established brickfoundries there. From crusading times to this day it has grown sugar-cane. In Roman times it had extensive palm-groves and some small towns (e.g. Livia or Julias opposite Jericho) and villages. The Jordan is crossed by two stone bridges—one north of Lake Huleh, the other between that lake and the Sea of Galilee—and by a wooden bridge on the road from Jerusalem to Gililead and Mosb. During the Roman period, and almost to the end of the Arab supremacy, there were bridges on all the great lines of communication between eastern and western Palestine, and ferries at other places. The depth of water varies greatly with the season. When not in flood the river is often fordable, and between the Sea of Galilee and the Dead Sea there are then more than fifty fords—some of them of historic interest. The only difficulty is occasioned by the erratic zigzag current. The natural products of the Jordan valley—a tropical oasis sunk in the temperate zone, and overhung by Alpine Hermon—are unique. Papyrus grows in Lake Huleh, and rice and cereals thrive on its shores, whilst below the Sea of Galilee the vegetation is almost tropical. The flora and fauna present a large infusion of Ethiopian types; and the fish, with which the river is abundantly stocked, have a great affinity with those of the rivers and lakes of east Africa. Ere the Jordan enters the Dead Sea, its valley has become very barren and forbidding. It reaches the lake at a minus level of 1,200 ft., the depression continuing downwards to twice that depth in the lake. Over parts of the Dead Sea. It receives two fluvials, with perennial waters, on the left, the Yarmuk (Hieromax) which flows in from the volcanic Jaulan a little south of the Sea of Galilee, and the Zeka (Jabbok) which comes from the Belka district to a point more than half-way down the lower course. On the right the Julad descends from the plain of Edraelon to near Baisan, and the Far's farms near Nablus. Various salt springs rise in the lower valley. The rest of the tributaries are wadis, dry except after rains.

Such human life as may be found in the valley now is mainly migratory. The Samaritan villagers use it in winter as pasture-ground, and, with the Circassians and Arabs of the east bank, cultivate plots here and there. They retire on the approach of summer. Jericho is the only considerable settlement in the lower valley, and it lies some distance west of the stream on the lower slopes of the Judean heights.

JORDANES,1 the historian of the Gothic nation, flourished about the middle of the 6th century. All that we certainly know about his life is contained in three sentences of his history of the Goths (cap. 50), from which, among other particulars as to the history of his family, we learn that his grandfather Paria was notary to Candac, the chief of a confederation of Alans and other tribes settled during the latter half of the 5th century on the south of the Danube in the provinces which are now Bulgaria and the Dobrudjca. Jordanes himself was the notary of Candac's nephew, the Gothic chief Gunthigis, until he took the vows of a monk. This, according to the manner of speaking of that day, is the meaning of his words ante conversionem munem, and it is quite possible that he may at the same time have renounced the Arian creed of his forefathers, which it is clear that he no longer held when he wrote his Gothic history. The Getica of Jordanes shows Gothic tradition, and it is probably due to an imitation of the tone of Dio Cassiodorus, from whom he was practically all his material. He was not himself a Goth, belonging to a confederation of Germanic tribes, embracing Alans and Scyrians, which had come under the influence of the Ostrogoths settled on the lower Danube; and his own sympathies are those of a member of this confederation. He is accordingly friendly to the Goths, even apart from the influence of Cassiodorus; but he is also possessed advantage in favour of the eastern emperors in whose territories this confederation lived and whose subject he himself was. This makes him an impartial authority on the last days of the Ostrogoths. At the same time, living in Moesia, he is restricted in his outlook to Danubian affairs. He has little to say of the inner history and policy of the kingdom of Theodoric: his interests lie, as Mommsen says, within a triangle of which the three points are Sirmium, Larissa and Constantinople. Finally, connected with the Alans, he shows himself friendly to them, whenever they enter into his narrative.

We pass from the extremely shadowy personality of Jordanes to the more interesting question of his works.

1. The Romana, or, as he himself calls it, De summa temporum vel origine actibugis gentis Romanorum, was composed in 551. It was begun before, but published after, the Getica. It is a sketch of the history of the world from the creation, based on Jerome, the epitome of Florus, Orosius and the ecclesiastical history of Socrates. There is a curious reference to Amblichus, apparently the neo-platonist philosopher, whose name Jordanes, being, as he says himself, ogrammatus, inserts by way of a flourish. The work is only of any value for the century 450–550, when Jordanes is dealing with recent history. It is merely a hasty compilation intended to stand side by side with the Getica.

2. The other work of Jordanes commonly called De rebus Geticis or Getica, was styled by himself De origine actibugis (anc. Getica). The evidence of MSS. is overwhelming against the form Jordanes. The MSS. exhibit Jordanis or Jordanianis; but these are only Vulgar-Latin spellings of Jordanes.

1 The terms of the dedication of this book to a certain Vigilius make it impossible that the pope (538–555) of that name is meant.
Gelorum, and was also written in 551. He informs us that while he was engaged upon the Romana a friend named Castalius, invited him to compress into one small treatise the twelve books—now lost—of the senator Cassiodorus, on The Origin and Actions of the Goths. Jordanes professes to have had the work of Cassiodorus in his hands for but three days, and to reproduce the sense not the words; but his book, short as it is, evidently contains long verbatim extracts from the earlier author, and it may be suspected that the story of the triduana lectio and the apology quamvis verba non recalo, possibly even the friendly invitation of Castalius, are mere blunders to cover his own entire want of originality. This suspicion is strengthened by the fact (discovered by von Sybel) that even the very preface to his book is taken almost word for word from Ruinus's translation of Origem's commentary on the epistle to the Romans. There is no doubt, even on Jordanes' own statements, that his work is based upon that of Cassiodorus, and that any historical worth which it possesses is due to that fact. Cassiodorus was one of the very few men who, Roman by birth and sympathies, could yet appreciate the greatness of the barbarians by whom the empire was overthrown. The chief historian of the Romans and Theodoric, the East Gothic king in Italy, he accepted with ardour that monarch's great scheme, if indeed, he did not himself originally suggest it, of welding Roman and Goth together into one harmonious state which should preserve the social refinement and the intellectual culture of the Latin-speaking races without losing the hardy virtues of their Teutonic conquerors. To this aim everything in the political life of Cassiodorus was subservient, and this aim he evidently kept before him in his Gothic history.

But in writing that history Cassiodorus was himself indebted to the work of a certain Ablabius. It was Ablabius, apparently, who had first used the Gothic sagas (prisca carmina); it was he who had constructed the stem of the Amals. Whether he was a Greek, a Roman or a Goth we do not know; nor can we say when he wrote, though his work may be dated conjecturally in the early part of the reign of Theodoric the Great. We can only say that he wrote on the origin and history of the Goths, using both Gothic saga and Greek sources; and that if Jordanes used Cassiodorus, Cassiodorus used, if to a less extent, the work of Ablabius.

Cassiodorus began his work, at the request of Theodoric, and therefore before 526: it was finished by 533. At the root of the work lies a theory, whencesoever derived, which identified the Goths with the Scythians, whose country Darius Hystaspes invaded, and with the Getae of Dacia, whom Trajan conquered. This double identification enabled Cassiodorus to bring the favoured race into line with the peoples of classical antiquity, to interweave with their history stories about Hercules and the Amazons, to make them invade Egypt, to claim for them a share in the wisdom of the semi-mythical Scythian philosopher Zamolxis. He was thus able with some show of plausibility to represent the Goths as "wiser than all the other barbarians and almost like the Greeks" (Jord., De reb. Got., cap. v.), and to send a son of the Gothic king Telephus to fight at the siege of Troy, where he gained a victory over the Trojans. All this work may be said to have no relation to history, but at the same time it may have made the subjugation of the Roman less bitter to feel that he was not after all bowing down before a race of barbarian upstarts, but that his Amal sovereign was as firmly rooted in classical antiquity as any Julius or Claudius who ever wore the purple. In the eighteenth years which elapsed between 533 and the composition of the Getica of Jordanes, great events, most disastrous for the Romano-Gothic monarchy of Theodoric, had taken place. It was no longer possible to write as if the whole civilization of the Western world would sit down contentedly under the shadow of East Gothic dominion and Amal sovereignty. And, moreover, the instincts of Jordanes, as a subject of the Eastern Empire, pre-disposed him to flatter the sacred majesty of Justinian, by whose victorious arms the overthrow of the barbarian kingdom in Italy had been effected. Hence we perceive two currents of tendency in the Getica. On the one hand, as a transcript of the philo-Goth Cassiodorus, he magnifies the race of Alaric and Theodoric, and claims for them their full share, perhaps more than their full share, of glory in the past. On the other hand he speaks of the great anti-Teuton emperor Justinian, and of his reversal of the German conquests of the 5th century, in language which would certainly have graced the ears of Totila and his heroes. When Ravenna is taken, and Vitigis carried into captivity, Jordanes almost exults in the fact that "the nobility of the Amals and the illustrious offspring of so many mighty men have surrendered to a yet more illustrious prince and a yet mightier general, whose fame shall not grow dim through all the centuries." (Getica, lx. § 315).

This laudation, both of the Goths and of their Byzantine conquerors, may perhaps help us to understand the motive with which the Getica was written. In the year 551 Germanus, nephew of Justinian, accompanied by his bride, Matasuntha, grand-daughter of Theodoric, set forth to reconquer Italy for the empire. His early death prevented any schemes for a revived Romano-Gothic kingdom which may have been based on his personality. His widow, however, bore a posthumous child, also named Germanus, of whom Jordanes speaks (cap. 60) as "blending the blood of the Anicii and the Amals, and furnishing a hope under the divine blessing of one day uniting their glories." This younger Germanus did nothing in after life to realize these anticipations; but the somewhat pointed way in which his name and his mother's name are mentioned by Jordanes lends some probability to the view that he hoped for the child's succession to the Eastern Empire, and the final reconciliation of the Goths and Romans in the person of a Gothic-Roman emperor.

The De rebus Geticis falls naturally into four parts. The first (chs. i.–xiii.) commences with a geographical description of the three quarters of the world, and in more detail of Britain and Scanzia (Sweden), from which the Goths under their king Berig migrated to the southern coast of the Baltic. Their migration across the northern sea, and their settlement in the land by the name of Gotland, their later differentiation into Visigoths and Ostrogoths, are described. Chs. xiv.–xix. contain an account of the intrusive Geto-Scythian element before alluded to.

The second section (chs. xiv.–xxiv.) returns to the true history of the Gothic nation, sets forth the genealogy of the Amal kings, and describes the invasions of the Goths into the Roman Empire in the 3rd century, with the foundation and the overthrow of the great barbarian kingdom of Jordanes speaks of as that shadowy kingdom of Jordanes speaks of as extending from the plains of a, to the plains of barbary. The third section (chs. xxv.–xxvii.) the history of the West Goths from the Hunnish invasion to the downfall of the Gothic kingdom in Gaul under Alaric II. (576–597). The best part of this section is that which is devoted to the life and deeds of Attila, the conqueror of Gaul and the battle of the Mauriac plains. Here we have in all probability a verbatim extract from Cassiodorus, who (possibly resting on Ablabius) interwove with his narrative of the Goths' amatory passion with the story of Attila. The version of Attila's death in the Getica is almost certain to have been borrowed from Jordanes' Getica Minores, in which we find the same story, with some minor variations. The book closes with a brief description of the partition of the land of the Goths among the sons of Attila, and the devastation of Italy by Vitigis, the son of Theodoric, who appears to have overthrown the Western Empire of Valentinian III and to have carried his arms into Gaul. All these faults make him a peculiarly unsatisfactory authority where we cannot check his statements by those of other authors. It may, however, be pleaded in extenuation that he is professedly a transcript, and, if
his story be correct, a transcriber in peculiarly unfavourable circumstances. He has also himself suffered much from the inaccuracy of copyists. But nothing has really been more unfortunate for the reputation of Jordanes as a writer than the extreme preciousness with which he has dressed his stories. The tribes whose dim origins he records have in the course of centuries attained to world-wide dominion. The battle of the Maurisc plains which he is really the sole historian, is now seen to have had important consequences for the destinies of the world. The hasty pamphlet of a half-educated Gothic monk has been forced into prominence, almost to rivalry with the finished productions of the great writers of classical antiquity. No wonder that it stands there today, but with all its faults the Geogra- 

Jordanus—

Commentatio

loth

The next of the MSS. in value are the Vaticanus Panatins of the tenth century, and the Valenciennes MS. of the 9th century.

JORDANUS (JORDAN CATALAN) (fl. 1321-1330), French Dominican missionary and explorer in Asia, was perhaps born at Séverac in Aveyron, north-east of Toulouse. In 1302 he may have accompanied the famous Thomas of Tautafon (or Taufaun) to the Negritas in Negritas. He is only known to us in 1321, when he definitely discovered himself in the Western Indies, in the company of the same Thomas and certain other Franciscan missionaries on their way to China. Ill-luck detained them at Tana in Salsete island, near Bombay, and here Jordanus’ companions ("the four martyrs of Tana") fell victims to Moslem fanaticism (April 7, 1321). Jordanus, escaping, worked some time at Baruch in Gujar-nat, near the Nerbudda estuary, and at Surat (?) near Surat; to his fellow-Dominicans in north Persia he wrote two letters—the first from Gogo in Gujar (October 12, 1321), the second from Tana (January 24, 1323/4)—describing the progress of this new mission. From these letters we learn that Roman attention had already been directed, not only to the Bombay region, but also to the extreme south of the Indian peninsula, especially to "Columbus," Quillon, or Kulam in Travancore; Jordanus’ words may imply that he had already started a mission there before October 1321. From Catholic traders he learned that Ethiopia (i.e., Abyssinia and Nubia) was accessible to Western Europeans; at this very time, as we know from other sources, the earliest Latin missionaries penetrated thither. Finally, the Epistles of Jordanus, like the contemporary Secreta of Marino Sanuto (1306-1321), urge the pope to establish a Christian fleet upon the Indian seas. Jordanus, between 1324 and 1328 (if not earlier), probably visited Kulam and selected it as the best centre for his future work; it would also appear that he revisited Europe about 1328, passing through Persia, and perhaps touching at the great Crimean port of Soudia or Sudak. He was appointed a bishop in 1328 and nominated by Pope John XIX. to the see of Columbus in 1330. Together with the new bishop of Samar- kand, Thomas of Mancasola, Jordanus was commissioned to take the bishopric to John de Core, a bishop of the Persia, within whose province Kulam was reckoned; he was also commended to the Christians of south India, both east and west of Cape Comorin, by Pope John. Either before going out to Malabar as bishop, or during a later visit to the west, Jordanus probably wrote his Mirabilia, which from internal evidence can only be fixed within the period 1320-1338; in this work he furnished the best account of Indian regions, products, climate, manners, customs, fauna and flora given by any European in the Middle Ages—superior even to Marco Polo’s. In his triple division of the Indies, India Major comprises the shorelands from Malabar to Cochín China; while India Minor stretches from Sind (or perhaps from Baluchistan) to Malabar; and India Tertia (evidently dominated by African conceptions in his mind) includes a vast undefined coast-region west of Baluchistan, reaching into the neighbourhood of, but not including, Ethiopia and Prester John’s domain. Jordanus’ Mirabilia contains the earliest clear African identification of Prester John, and what is perhaps the first notice of the Black Sea under that name; it refers to the author’s residence in India Major and especially at Kulam, as well as to his travels in Armenia, northwest Persia, the Lake Van region, and Chaldaea; and it supplies excellent descriptions of Parsee doctrines and burial customs, of Hindu ox-worship, idol-rural, and sutter, and of Indian fruits, birds, animals and insects. After the 8th of April 1330 we have no more knowledge of Bishop Jordanus. Of Jordanus’ Epistles there is only one MS., viz., Paris, National Library, 5060 Lat., fol. 182, and of the Mirabilia also one MS.; only, viz., London, British Museum, Additional MSS. 19, 913, fols. 3-12 r. The text of the Epistles is in Quæf and Échar, Scriptores ordinis praedicatar, i. 549-550 (Epistle I); and in Wadding, Annales minorum, v. 359-361 (Epistle II); the text of the Mirabilia in the Paris Georg. Soc’s Recueil de voyages, iv. 1-68 (1838). The Papal letters referring to Jordanus are in Raynaldu, Annales ecclesiastici, 1330, §§ iv. and iv. (April 8; Feb. 14). See also Sir H. Ellis, Jacobus de Strasz, Monumenta Orientalia (Hakluyt Soc., 1863) and the same editor’s Cathay, giving a version of the Epistles, with a commentary, &c. Kunsmann, “Die Mission in Melaspor und Lanka,” in the Historische-politische Blätter von Phillips and Göres, xxxvii. 25-38, 135-152 (Munich, 1856), &c. (R. C. Beazley, Dawn of Modern Geography, ii. 215-235. (C. R. B.)

JORIS, DAVID, the common name of Jan Jorisz of Ghent (c. 1501-1536), Anabaptist heresiarch who called himself later Jan van Brugge; was born in 1501 or 1502, probably in Flanders, at Ghent or Bruges. His father, Georgius Joris de Koman, otherwise Joris van Amersfoordt, probably a native of Bruges, was a shopkeeper and amateur actor at Delft; from the circumstance that he played the part of King David, his son received the name of David, but probably not in baptism. His mother was Maryte, daughter of Jan de Gorter, of a good family in Delft. As a child he was clever and delicate. He seems then or later to have acquired some tincture of learning. His first known occupation was that of a glass-painter; in 1522 he painted windows for the church at Enkhuizen, North Holland (the birthplace of Paul Potter). In pursuit of his art he travelled, and is said to have reached England; ill-health drove him home in 1524, in which year he married Dirckgen Willems at Delft. In the meanwhile the Southern reformation took hold of him, and he began to issue appeal letters and write tracts in protest against the pope as antichrist. On Ascension Day 1528 he committed an outrage on the sacrament carried in procession; he was placed in the pillory, had his tongue bored, and was banished from Delft for three years. He turned to the Anabaptists, was rebaptized in 1533, and for some years led a wandering life. He came into relations with John a Lasco, and with Menno Simons. Much influenced by Melchior Hofman, he had no sympathy with the fanatic violence of the Münster faction. At the Buckholdt conference in August 1536 he played a mediating part. His mother, in 1537, suffered martyrdom as an Anabaptist. Soon after he took up a rôle of his own, having visions and a gift of prophecy. He adapted in his own interest the theory (constantly recurrent among mystics and innovators, from the time of Abbot Joachim to the present day) of three dispensations, the old, with its revelation of the Father, the new, with its revelation of the Son, and the final or era of the Spirit. Of this newest revelation Christus David was the mouthpiece, supervening on Christus Jesus. From the 1st of April 1544, bringing with him some of his followers, he took up his abode in Basel, which was to be the New Jerusalem. Here he styled himself Jan van Brugge. His identity was unknown to the authorities of Basel, who had no suspicion of his heresies. By his writings he maintained his hold on his numerous followers in Holland and Friesland. These monotonous writings, all in Dutch, flowed in a continual stream from 1524 (though none is
extant before 1530) and amounted to over 200 in number. His *magnum opus* was *I Wonder Boek* (n.d. 1542, divided into two parts; 1551, handsomely reprinted, divided into four parts; both editions anonymous). Its chief claim to recognition is its use, in the latter part, of the phrase *Restitutio Christi*, which apparently suggested to Servetus his title *Christianismi Restitutio* (1553). In the 1st edition is a figure of the “new man,” signed by the author’s monogram, and probably drawn as a likeness of himself; it fairly corresponds with the alleged portrait, engraved in 1607, reproduced in the appendix to A. Ross’s *Pansebeia* (1652), and idealized by P. Burckhardt in 1900. Another work, *Verklärung der Scheppenissen* (1553) treats mysteriously the book of Genesis, a favourite theme with Boehme, Swedenborg and others. His remaining writings exhibit all that easy dribble of triumphant muddiness which disciples take as depth. His wife died on the 22nd of August, and his own death followed on the 25th of August 1550. He was buried, with all religious honours, in the church of St Leonard, Basel. Three years later, Nicolas Blesdijk, who had married his eldest daughter Jannecke (Susanna), but had lost confidence in Jorisz some time before his death, denounced the dead man to the authorities of Basel. An investigation was begun in March 1559, and as the result of a conviction for heresy the exhumed body of Jorisz was burned, together with his portrait, on the 13th of May 1559. Blesdijk’s *Historia* (not printed till 1642) accuses Jorisz of having *plures uxorum*. Of this there is no confirmation. Theoretically Jorisz regarded polygamy as lawful; there is no proof that his theory affected his own practice.

The first attempt at a true account of Jorisz was by Gottfried Arnold, in his anonymous *Historia* (1713), pursued with much fuller material in his *Kirchen und Ketzer Historie* (best ed. 1740-1742). See also F. Nippold, in *Zeitschrift für die historische Theologie* (1863, 1864, 1868); A. van der Linde, in *Allgemeine Deutsche Biographie* (1881); P. Burckhardt, *Basler Biographien* (1900); Hegler, in *Hauck’s Wiedererkennende* (1901), and the bibliograpgy by A. van der Linde, 1867, supplemented by E. Weller, 1869. (A. Go.)*

**JORFIN, JOHN** (1668-1770), English theologian, the son of a Protestant refugee from Brittany, was born in London on the 23rd of October 1698. He went to Charterhouse School, and in 1715 became a pensioner of Jesus College, Cambridge, where his reputation as a Greek scholar led to his being selected to translate certain passages from Eustathius for the notes to Pope’s *Homor*. In 1722 he published a small volume of Latin verse entitled *Lusus poetici*. Having taken orders in 1724, he was in 1725 presented by his college to the vicarage of Swavesey in Cambridgehire, which he resigned in 1730 to become preacher at a chapel-of-ease in New Street, London. In 1731, along with some friends, he began a period of travel entitled *Miscellaneous Observations on Authors Ancient and Modern*, which appeared at intervals during two years. He was Boyle lecturer in 1740. Shortly after becoming chaplain to the bishop of London in 1762 he was appointed to a prebendal stall of St Paul’s and to the vicarage of Kensington, and in 1764 he was made archdeacon of London. He died at Kensington on the 5th of September 1770.

The principal works of Jorfin are: *Discussions Concerning the Truth of the Christian Religion* (1746); Remarks on Ecclesiastical History (3 vols. 1751–7); *Life of Erasmus* (2 vols. 1750, 1760) founded on the work of J. de la Cercl; and *Tracts Philosophical and Critical* (1790). A collection of his *Various Works* appeared in 1805-1810. All his writings display wide learning and acuteness. He writes on theological subjects with the detachment of a thoughtful layman, and is witty without being flippancy. See John Dinsey’s *Life of Jorfin* (1792).

**JOSEPH**, in the New Testament, the son of the patriarch Jacob by Rachel; the name of a tribe of Israel. Two explanations of the name are given by the Biblical narrator (Gen. xxx. 23 [E], 24 [J]); a third, “He (God) increases,” seems preferable. Unlike the other “sons” of Jacob, Joseph is usually reckoned as two tribes (viz. his “sons” Ephraim and Manasseh), and closely associated with it is the small tribe of Benjamin (q.e.), which lay immediately to the south. These three constituted the “sons” of Rachel (the ewe), and with the “sons” of Leah (the antelope?) are thus on a higher level than the “sons” of Jacob’s concubines. The “house of Joseph” and its offshoots occupied the centre of Palestine from the plain of Esdraelon to the mountain country of Benjamin, with dependencies in Bashan and northern Gilead (see MANASSEH). Practically it comprised the northern kingdom, and the name is used in this sense in 2 Sam. xix. 20; Amos v. 6; vi. 6 (note the prominence of Joseph in the blessings of Jacob and Moses, Gen. xlix., Deut. xxxiii.). Originally, however, “Joseph” was more restricted, possibly to the immediate neighbourhood of Shechem, its later extension being parallel to the development of the name Jacob. The dramatic story of the tribal ancestor is recounted in Gen. xxxvii.–l. (see GENESIS). Joseph, the younger and envied son, is seized by his brothers at Dothan north of Shechem, and is sold to a party of Ishmaelites or Midianites, who carry him down to Egypt. After various vicissitudes he gains the favour of the king of Egypt by the interpretation of a dream, and obtains a high place in the kingdom. He becomes the chief of his brothers’ servants, and is given the task to buy food, and in the incidents that follow Joseph shows his preference for his young brother Benjamin (cf. the tribal data above). His father Jacob is invited to come to Goshen, where a settlement is provided for the family and their flocks. This is followed many years later by the exodus, the conquest of Palestine, and the burial of Joseph’s body in the grave at Shechem which his father had bought.

The history of Joseph in Egypt displays some familiarity with the circumstances and usages of that country; see Driver (Hastings’s *D.B.* and Cheyne (*Ency. Bib.*, col. 2589 sqq.); although Abrech (xii. 43), possibly the Egyptian ib r (Crum in Hastings’s *D.B.*, l. 587), is reminiscent of other Babylonian *ibarakku* (a high officer). An interesting parallel to the story of Joseph in Gen. xxxix. is found in the Egyptian tale of *The Two Brothers* (*Petrie, Eng. Tales, 2nd series, p. 36, 1895*), which dates from about 1500 B.C., and the differences are not inconsiderable compared with the points of resemblance, and the tale has features which are almost universal (Fraser, *Golden Bough*, 2nd ed., vol. iii. 351 seq.). On the theory that the historical elements of Joseph’s history refer to an official (Yannamu) of this time of Amenophis III. and IV., see Cheyne, *op. cit.*, and Hibbert Journal, October 1903. That the present form of the narrative has been influenced by current mythological lore is not improbable; on this question see (with caution) Winckler, *Gesch. Geschichtswiss.*, 1906, 17, and *Bibl. Text.*, 1904-5.

It may be added that the Egyptian names in the story of Joseph are characteristic of the XXII. and subsequent dynasties. See, also Meyer and Luther, *Die Israeliten* (1906), Index, s.v. (S. A. C.)

**JOSEPH**, in the New Testament, the husband of Mary, the mother of Jesus. He is represented as a descendant of the house of David, and his genealogy appears in two divergent forms in Matt. i. 1-17 and Luke iii. 23-38. The latter is probably much more complete and accurate in details. The former, obviously artificial in structure (notice 3×14 generations), traces the Davidic descent through kings, and is governed by an apologetic purpose. Of Joseph’s personal history practically nothing is recorded in the Kingdom of T. Forts by him common to the two birth-narratives (Matt. i.–ii.; Luke i.–ii.) that he was a descendant of David, (b) that Mary was already betrothed to him when she was found with child of the Holy Ghost, and (c) that he lived at Nazareth after the birth of Christ; but these facts are handled differently in each case. It is noticeable that, in Matthew, Joseph is prominent (e.g. he receives an annunciation from an angel), while in Luke’s narrative he is completely subordinated. Bp Gore (*The Incarnation, Hampton lecture* for 1891, p. 78) points out that Matthew narrates everything from Joseph’s side, Luke from Mary’s, and infers that the narrative of the former may ultimately be based on Joseph’s account, that of the latter on Mary’s. The narratives seem to have been current (in a poetical form) among the early Jewish-Christian community of Palestine. At N.T. times Joseph, though a carpenter (Matt. xiii. 55), is a very different person altogether; it is not difficult to determine how much of this is of ethological value and how much belongs to romance (viz. that of the individual Joseph).
JOSEPH OF ARIMATHAEA

Joseph also plays a large part in the various versions of the Legend of the Holy Grail (see GRAIL, THE).

JOSEPH I. (1678-1711), Roman emperor, was the elder son of the emperor Leopold I. and his third wife, Eleonora, countess palatine, daughter of Philip William of Neuburg. Born in Vienna on the 26th of July 1678, he was educated strictly by Prince Dietrich Otto von Salm, and became a good linguist. In 1687 he received the crown of Hungary, and he was elected king of the Romans in 1690. In 1690 he married Wilhelmina Amalia, daughter of Duke Frederick of Brunswick-Lüneburg, by whom he had two daughters. In 1702, on the outbreak of the War of the Spanish Succession, he saw his only military service. He joined the imperial general Louis of Baden in the siege of Landau. It is said that when he was advised not to go into a place of danger he replied that those who were afraid might retire. He succeeded his father as emperor in 1705, and it was his good fortune to govern the Austrian dominions, and to be head of the Empire during the years in which his trusted general Prince Eugène, either acting alone in Italy or with the duke of Marlborough in Germany and Flanders, was beating the armies of Louis XIV. During the whole of his reign Hungary was disturbed by the conflict with Francis Rákóczi II., who eventually took refuge in France. The emperor did not himself take the field against the rebels, but he was entitled to a large share of the credit for the restoration of his authority. He reversed many of the pedantically authoritative measures of his father, thus placating all opponents who could be pacified, and he fought stoutly for what he believed to be his rights. Joseph showed himself very independent towards the pope, and hostile to the Jesuits, by whom his father had been much influenced. He had the tastes for art and music which were almost hereditary in his family, and was an active hunter. He began the attempts to settle the question of the Austrian inheritance by a pragmatic solution, which were continued by his brother Charles VI.

Joseph died in Vienna on the 17th of April 1711, of small-pox.

JOSEPH II. (1741-1790), Roman emperor, eldest son of the empress Maria Theresa and her husband Francis I., was born on the 15th of March 1741, in the first stress of the War of the Austrian Succession. Maria Theresa gave orders that he was only to be taught as if he were amusing himself; the result was that he acquired a habit of crude and superficial study. His real education was given him by the writings of Voltaire and the encyclopaedists, and by the example of Frederick the Great. His useful training was conferred by government officials, who were directed to instruct him in the mechanical details of the administration of the numerous states composing the Austrian dominions and the Empire. In 1761 he was made a member of the newly constituted council of state (Staatsrath) and began to administer with vigour, to the consternation of the public, for he was hastening to be the executor of his father to read. These papers contain the germs of his later policy, and of all the disasters which finally overtook him. He was a friend to religious toleration, anxious to reduce the power of the church, to relieve the peasantry of feudal burdens, and to remove restrictions on trade and on knowledge. So far he did not differ from Frederick, Catherine of Russia or his own brother and successor Leopold II., all enlightened rulers of the 18th-century stamp. Where Joseph differed from great contemporary rulers, and where he was very close akin to the Jacobins, was in the fanatical intensity of his belief in the power of the state when directed by reason, of his right to speak for the state uncontrolled by laws, and of the reasonableness of his own reasons. Also he had inherited from his mother all the belief of the house of Austria in its "august" quality, and its claim to acquire whatever it found desirable for its power or its profit. He was unable to understand that his philosophical plans for the moulding of mankind could meet with pardonable opposition. The overwhelming character of the man was obvious.
JOSEPH, FATHER

515

Vienna with ruined health, and during 1780 was a dying man. The concentration of his troops in the east gave the malcontents of Belgium an opportunity to revolt. In Hungary the nobles were all but in open rebellion, and in his other states there were peasant risings, and a revival of particularist sentiments. Joseph was left entirely alone. His minister Kaunitz refused to visit his sick-room, and did not see him for two years. His brother Leopold remained at Florence. At last Joseph, worn out and broken-hearted, recognized that his servants could not, or would not, carry out his plans. On the 30th of January 1790 he formally withdrew all his reforms, and he died on the 20th of February.

Joseph II. was twice married, first to Isabella, daughter of Philip, duke of Parma, to whom he was attached. After her death on the 27th of November 1763, a political marriage was arranged with Josepha (d. 1767), daughter of Charles Albert, elector of Bavaria (the emperor Charles VII.). It proved extremely unhappy. Joseph left no children, and was succeeded by his brother Leopold II.

Many volumes of the emperor's correspondence have been published. Among them are Maria Theresa und Joseph II. Ihre Korrespondenz samt Briefen Josephs an seinen Bruder Leopold (1867-1868); Joseph II. und Leopold von Toskana. Ihr Briefwechsel (1872); Joseph von Sickingen, Kurfürst von Regensburg. Ihn Briefwechsel (1869); and Maria Antoinette, Joseph II. und Leopold II. Ihr Briefwechsel (1866); all edited by A. Ritter von Arnet.

Other collections are: Joseph II., Leopold II. und Kaufverein. Ihr Briefwechsel, edited by A. Beer (1873); Correspondences intimes de l'empereur Joseph II. avec le comte Joseph de Fuerstenberg, ministe, le prince de Kaunitz, edited by S. Brunner (1871); Joseph II. und Graf Ludwig Colonen. Ihr Briefwechsel, edited by A. Beer and Fournier, and also by A. Leclerc and L. Delplace, Historien Josephs II. (1843; German translation by F. Köhler, 1844); H. Meyer, Kaiser Joseph II. (1862); A. Beer, Joseph II. (1882); A. Jager, Kaiser Joseph II. und Leopold II. (1877); A. Fournier, Joseph II. (1885); and J. Wenzelski, Kaiser Joseph II. (1890). There is a useful small volume on the emperor by J. Franck Bright (1897). Other books which may be consulted are: G. Wolf, Das Unterrichtswesen in Oesterreich unter Joseph II. (1880), and Oesterreich und Preussen 1789-1790 (1880), A. Wolf and H. von Zwichendock-Siedenthor, Oesterreich unter Maria Theresa, Joseph II. und Leopold II. (1882-1884); H. Schliiter, Die Regierung Josephs II. in den Osterreichischen Niederlanden (1900); and Fuss VI, and Joseph II. 1782-1783 (1894), Joseph II. and the Revolution (1862); and L. Delplace, Joseph II. et la revolution brabantine (1896).

JOSEPH, FATHER (FRANÇOIS LECLERC DE TREMBLAY) (1577-1638). French Capuchin monk, the confidant of Richelieu, was the eldest son of Jean Leclerc du Tremblay, president of the chamber of request of the parlement of Paris, and of Marie Motier de Lafayette. As a boy he received a careful classical training, and in 1593 made an extended journey through Italy, returning to take up the career of arms. He served at the siege of Amiens in 1597, and then accompanied a special embassy to London. In 1599 Baron de Mafluer, by which name he was known at court, renounced the world and entered the Capuchin monastery of Orleans. He embraced the religious life with great ardour, and became a notable preacher and reformer. In 1606 he aided Antoinette d'Orleans, a nun of Fontevraud, to found the reformed order of the Filles du Calvaire, and wrote a manual of devotion for the nuns. His proselytizing zeal led him to send missionaries throughout the Huguenot centres—h, had become provincial of Tours in 1645. He entered politics at the conferences of Lorraine, when the claims of the Capuchins and the papal envoy, he opposed the Gallican claims advanced by the parlement, which the princes were upholding, and succeeded in convincing them of the schismatic tendency of Gallicanism. In 1612 he began those personal relations with Richelieu which have indubitably joined in history and legend the cardinal and the "Eminence grise," relations which research has not altogether made clear. In 1627 the monk assisted at the siege of La Rochelle. A purely religious reason also made him Richelieu's ally against the Habsburgs. He had a dream of arousing Europe to another crusade against the Turks, and
believed that the house of Austria was the obstacle to that universal European peace which would make this possible. As Richelieu’s agent, therefore, this modern Peter the Hermit manœuvred at the diet of Regensburg (1630) to thwart the aggression of the emperor, and then advised the intervention of Gustavus Adolphus, reconciling himself to the use of Protestant armies by the theory that one poison would counteract another. Thus the monk became a war minister, and, though maintaining a personal austerity of life, gave himself up to diplomacy and politics. He died in 1638, just as the cardinalate was to be conferred upon him. The story that Richelieu visited him when on his deathbed and roused the dying man by the words, “Courage, Father Joseph, we have won Breisach,” is apocryphal.

See Fagniez, Le Père Joseph et Richelieu (1894), a work based largely on original and unpublished sources. Father Joseph, according to this biography, would seem not to have lectured Richelieu in the fashion of the legends, whatever his moral influence may have been in strengthening Richelieu’s hands.

JOSEPHINE (Marie Rose Josephine Tascher de la Pagerie) (1763-1814), empress of the French, was born in the island of Martinique on the 23rd of June 1763, being the eldest of three daughters of Joseph Tascher de la Pagerie, lieutenant of artillery. Her beauty and grace, though of a languid Creole style, won the affections of the young officer the vicomte de Beauharnais, and, after some family complications, she was married to him. Their married life was not wholly happy, the frivolity of Josephine occasioning her husband anxiety and jealousy. Two children, Eugène and Hortense, were the fruit of the union. During Josephine’s second residence in Martinique, whither she proceeded to tend her mother, occurred the first troubles with the slaves, which resulted from the precipitate action of the constituent assembly in emancipating them. She returned to her husband, who at that time entered into political life at Paris. Her beauty and vivacity won her many admirers in the salons of the capital. As the Revolution ran its course her husband, as an ex-noble, incurred the suspicion and hostility of the Jacobins; and his ill-success at the head of a French army on the Rhine led to his arrest and execution. Thereafter Josephine was in a position of much perplexity and some hardship, but the friendship of Barras and of Madame Tallien, to both of whom she was then much attached, brought her into notice, and she was one of the queens of Parisian society in the year 1795, when Napoleon Bonaparte’s services to the French convention in scattering the malcontents of the capital (13 Vendémiaire, or October 5, 1793) brought him to the front. There is a story that she became known to Napoleon through a visit paid to him by her son Eugène in order to beg his help in effectuating the Restoration of his father’s sword, but which rested on slender foundations. In any case, it is certain that Bonaparte, however he came to know her, was speedily captivated by her charms. She, on her side, felt very little affection for the thin, impious and irrepressible suitor; but by degrees she came to acquiesce in the thought of marriage, her hesitations, it is said, being removed by the influence of Barras and by the nomination of Bonaparte to the command of the army of Italy. The civil marriage took place on the 9th of March 1796, two days before the bridgework was set up for his command. He failed to induce her to go with him to Nice and Italy.

Bonaparte’s letters to Josephine during the campaign reveal the ardour of his love, while she rarely answered them. As he came to realize her shallowness and triviality his passion cooled, but an illness at Monteberello (near Milan) in 1797 still showed great regard for her. During his absence in Egypt in 1798-1799, her relations to an officer, M. Charles, were most compromising; and Bonaparte on his return thought of divorcing her. Her tears and the entreaties of Eugène and Hortense availed to bring about a reconciliation; and during the period of the consulate (1799-1804) their relations were on the whole happy, though Napoleon’s conduct now gave his consort grave cause for concern. His brothers and sisters more than once begged him to divorce Josephine, and it is known that, from the time when he became first consul for life (August 1802) with large powers over the choice of a successor, he kept open the alternative of a divorce. Josephine’s anxieties increased on the proclamation of the Empire (May 18, 1804); and on the 1st of December 1804, the eve of the coronation at Notre Dame, she gained her wish that she should be married anew to Napoleon with religious rites. Despite her care, the emperor procured the omission of one formality, the presence of the parish priest; but at the coronation scene Josephine appeared radiant with triumph over her envious relatives. The august marriages contracted by her children Eugène and Hortense seemed to establish her position; but her ceaseless extravagance and, above all, the impossibility that she should bear a son strained the relations between Napoleon and Josephine. She complained of his indulgencies and growing callousness. The end came in sight after the campaign of 1809, when Napoleon caused the announcement to be made to her that reasons of state compelled him to divorce her. Despite all her pleadings he held to his resolve. The most was made of the slight technical irregularity at the marriage ceremony of the 1st of December 1804; and the marriage was declared null and void.

At her private retreat, La Malmaison, near Paris, which she had beautified with curios and rare plants and flowers, Josephine closed her life in dignified retirement. Napoleon more than once came to consult her upon matters in which he valued her tact and good sense. Her health declined early in 1814, and after his first abdication (April 11, 1814) it was clear that her end was not far off. The emperor Alexander of Russia and Frederick William III. of Prussia, then in Paris, requested an interview with her. She died on the 24th of May 1814. Her friends, Mme. de Rémuat and others, pointed out that Napoleon’s second fortune deserted him after the divorce; and it is certain that the Austrian marriage clogged him in several ways. Josephine’s influence was used on behalf of peace and moderation both in internal and in foreign affairs. Thus she begged Napoleon not to execute the duc d’Enghien and not to embolden himself in Spanish affairs in 1808.

JOSEPHUS, FLAVIUS (c. 37-c. 95?), Jewish historian and military commander, was born in the first years of Caligula (37-41). His father belonged to one of the noblest priestly families, and through his mother he claimed descent from the Asmonæan high priest Jonathan. A precocious student of the Law, he made trial of the three sects of Judaism—Pharisaics, Sadducees and Essenes—before he reached the age of nineteen. Then, having spent three years in the desert with the hermit Banus, who was presumably an Essene, he became a Pharisee. In 64 he went to Rome to intercede on behalf of some priests, his friends, whom the procurator Felix had sent to render account to Caesar for some insignificant offence. Making friends with Alitrus, a Jewish actor, who was a favourite of Nero, Josephus obtained an introduction to the empress Poppaea and effected his purpose by her help. His visit to Rome enabled him to speak from personal experience of the power of the Empire, when he expropriated with the revolutionary Jews on his return to Palestine. Notwithstanding all the sufferings to which the Jews who did not fly the country, was dragged into the great rebellion of 66. In company with two other priests, Josephus was sent to Galilee under orders (he says) to persuade the ill-affected to lay down their arms and return to the Roman allegiance, which the Jewish aristocracy had not yet renounced. Having sent his two companions back to Jerusalem, he organized the forces at his disposal, and made arrangements for the government of his province. His obvious desire to preserve law and order excited the hostility of John of Giscala, who endeavoured vainly to remove him as a traitor to the national
cause by inciting the Galileans to kill him and by persuading the Sanhedrin at Jerusalem to recall him. In the spring of 67 the Jewish troops, whom Josephus had drilled so sedulously, fled before the Roman forces of Vespasian and Titus. He sent to Jerusalem for reinforcements, but none came. With the stragglers who remained, he held a stronghold against the Romans by dint of his native cunning, and finally, when the place was taken, persuaded forty men, who shared his hiding-place, to kill one another in turn rather than commit suicide. They agreed to cast lots, on the understanding that the second should kill the first and so on. Josephus providentially drew the last lot and prevailed upon his destined victim to live. Their companions were all dead in accordance with the compact; but Josephus at any rate survived and surrendered. Being led before Vespasian, he was inspired to prophesy that Vespasian would become emperor. In consequence of the prophecy his life was spared, but he was kept close prisoner for two years. When his prophecy was fulfilled he was liberated, assumed the name of Flavius, the family name of Vespasian, and accompanied Josephus' extraneous writings, was written towards the end of Vespasian's reign (69–79). The Arahic original has not been preserved; but the Greek version was prepared by Josephus himself in conjunction with competent Greek scholars. Its purpose in all probability was to express to him the abject state of his subjects. The overwhelming power of Rome and so to deter them from repeating the futile revolt of the Jews of Palestine. Of its seven books, the first two survey the history of the Jews from the capture of Jerusa

meh by Titus in 70 down to the beginning of the war of 132–135 A.D. The rest deals with the events of the war (67–73) which fell more or less within his own knowledge. Vespasian, Titus, Agrippa, Apion (he tells us) to his accuracy. Representatives of the Zealots would probably have protested against his pro-Roman prejudices.

2. The Jewish Antiquities (Ἰουδαϊκὰ ἀρχαιολογία) covers in twenty books the history of the Jews from the creation of the world to the outbreak of the wars of 132–135 A.D. It was finished in the thirtieth year of Domitian (93). Its purpose was to glorify the Jewish nation in the eyes of the Roman world. In the part covered by the books of the Bible Josephus follows them, and that mainly, if not entirely as he understood them to have been understood by the Jews. The account of the Hebrew Bible which Josephus follows is the Alexandrine, which includes 1 Esdras, from general Greek histories. For the later period he uses the Greek Esther, with its additions, 1 Maccabees, Polybius, Strabo and Nicolaus of Damascus. But towards the end he changed his own account so as to bring it into line with the account of the Synagogue, and his narrative consequently becomes meagre. The work contains accounts of John the Baptist and Jesus, which may account for the fact that Josephus' writings were rescued from oblivion by the Christians. But the description of Jesus, if intended to be genuine, and the assurance "this was the Christ" is equally doubtful, unless it be assumed that the Greek word Χριστός had become technical in the sense of false-Christ or false-prophet among non-Christian Jews.

3. Josephus wrote a narrative of his own life in order to defend himself against the accusation brought by his enemy Justus of Tiberias to the effect that he had really been the cause of the Jewish rebellion. In his defence Josephus departs from the facts as narrated in the Jewish War and represents himself as a partisan of Rome and, therefore, as a traitor to his own people from the beginning.

4. The two books Against Apion are a defence or apology directed against certain misrepresentations of the Jewish narratives. They are Concerning the Antiquity of the Jews or Against the Greeks. Apion was the leader of the Alexandrine embassy which opposed Philo and his companions when they appeared in behalf of the Alexandrine Jews and their scriptural theology of the Logos. The form that Josephus puts forward has a permanent value and shows him at his best.

The Greek text of Josephus' works has been edited with full collection of different readings by B. Niezer (Berlin, 1887–1893). The English translation based on this. The translation into English of W. Whiston has been (superficially) revised by A. R. Shilleto (1889–1890). Schürer (History of the Jewish People) gives a full bibliography.

JOSHEKAN, a small province of Persia covering about 1000 sq. m. Pop. about 5000. It has a yearly revenue of about £1200, and is held in fief by the family of Bahram Mirza, Muizz ed Dowleh (d. 1882). Its chief town and the residence of the governor used to be Joshekan-Kali, a large village with fine gardens, formerly famous for its carpets (kali), but now the chief place is Maimeh, a little city with a population of 2500, situated at an elevation of 6670 ft., about 63 m. from Isfahan in a north-westerly direction and 13 m. south-west of Joshekan-Kali.

JOSHUA, BOOK OF, the sixth book of the Old Testament, and the first of the five books of the Pentateuch.

It takes its name from Joshua the son of Nun, an Ephraimite who, on the death of Moses, assumed the leadership to which he had previously been designated by his chief (Deut. xxxii. 4 seq., 23), and proceeded to the conquest of the land of Canaan.

The book differs from the Pentateuch or Torah in the absence of legal matter, and in its intimate connexion with the narrative in the books which follow. It is, however, the proper sequel to the origins of the people as related in Genesis, to the exodus of the Israelite tribes from Egypt, and their journeys in the wilderness. On these and also on literary grounds it is often convenient to class the first six books of the Bible as a unit under the term "Hexateuch." For an exhaustive detailed study has revealed many signs of diversity of authorship which combine to show that the book is due to the incorporation of older material in two main redactions; one deeply imbued with the language and thought of Deuteronomy itself (D), the other of the post-exilic priestly circle (P) which gave the Pentateuch its present form. That the older sources (which often prove the more reliable) are the narratives of the Divine YOUTH OF THE EXILE, that of Joshua (J) and the Elohist or Ephraimite (E) narratives (on which see Genesis) is not improbable, though, especially as regards the former, still very uncertain. In general the literary problems are exceedingly intricate, and no attempt can be made here to deal with them as fully as they deserve.

The Invasion.—The book falls naturally into two main parts, of which the first, the crossing of the Jordan and the conquest of Palestine (i.–xii.) is mainly due to Deuteronomistic compilers. It opens with the preparations for the crossing of the Jordan and the capture of the powerful city Jericho. Ai, near Bethel, is taken after a temporary repulse, and Joshua proceeds to erect an altar upon Mt Ebal (north of Shechem). For the fullness with which the events are recorded the writers were probably indebted to local stories.

The Israelites are at Abel-Shittim (already reached in Num. xxv. 1). Moses' dead body and Joshua entrusts the people with the help of the Transjordanic tribes who have already received their territory (i). The narrative is of the later prophetic stamp (D; cf. Deut. iii. 18–22, xi. 24, where Moses is the speaker; xxxii. 1–8), but may be based upon an earlier and shorter record (E; iv. 1 seq., 10, 11).

1 Heb. יִהוָּשֶׁה; later Joshua; Gr. Ἰσχορας, whence "Jesus" in the A.V. of Heb. iv. 8; another form of the name is Hoshea (Num. xiii. 8, 16). The name may mean "Yah(weh) is wealth, or glory," or "Yah (weh) has saved." The only extra-biblical notice of Joshua is the inscription of more than doubtful genuineness given by Procopius (Var. iv. 20), and mentioned also by Moses of Chorene (Hist. Arm. i. 18). It is said to have stood at Tings in Mauretania, and to have borne that those who erected it had fled before Ἰσχορας and Ἰασωτής. For the medieval Samaritan Book of Joshua, see T. Juyanboll, Chronicum Samaritanum (1846); J. A. Montgomery, The Samaritans (1907), pp. 301 sqq.
Of the mission of the spies to Jericho, two versions were current (duplicates i. 3, 11, 18; v. 15 seq. breaks the connexion between vv. 13 and 18, but is resumed in vv. 22-24); D's addition is to be recognized in i. 9-11. The incident occupies at least four days, but the main narrative, occupying three days, is placed immediately after the narrative of the division of the land. The march of Joshua follows the passage of the Jordan (commemorated by the erection of twelve stones), the encampment at Gilgal, and the observance of the rite of circumcision and of the passover (iii. -v. iv.). The complicated narrative in iii. -iv. is of composite origin (contrast iii. 17 with iv. 10 seq.); D has corrected the latter, so that it agrees with E's version of the division of the land (cf. xii. 16, cf. xii. 17; xvi. 2, &c.)

As in ii. D has amplified (iii. 4, 7, 10, iv. 9-10, 12, 14; more prominently in iv. 1-1, v. 4-8); and subsequently P (or a hand akin to P) has worked over the whole (iii. 4, note the number and position of the Canaanite towns of the southern boundary of the land (iv. 9-12, 14-16), and its spirit shows in iv. 5-10). Circumcision, already familiar from Exod. iv. 26, Deut. x. 16, is here regarded as a new rite (v. 2, 9, supplemented by iv. 1, 4-8), but the conflicting views have been harmonized by the words "the second time," which implies a renovation of the "repose of Egypt" (v. 6), but iv. 20 suggests the earlier, origin, viz. the sacred stone-circle (cf. Judges iii. 19, R.V. marg.).

An older account of the divine commission to Joshua appears in the archaic passage v. 13-15 (cf. Moses in Exod. iii.). Fusion of sources is obvious in the spirit of the fall of Jericho (contrast iv. 5 and v. 10, vi. 21 and vii. 22, and iv. 25); according to one (E ?) the people march seven times round the city on the day, and the ark and the priests occupying a prominent position (vi. 4-7, 7-9, 12 seq., 16a, 20 [part]: 22-25), and the inhabitants are led to believe that they are really attacking the city. Both here and in the preceding chapters the Septuagint has several variations and omissions, due either to an unsuccessful attempt to simplify the present difficulties, or to the use of another recension. The strata of the narrative of Joshua (vi. 26) should be associated with an incident in the reign of Abner, which is acquainted with the story (1 Kings xvi. 34); the city, however, reappears in Joshua xviii. 21; 2 Sam. x. 5. Achan's sacri
gence, the capture of the repulse at Ai and of the naming of the valley of Achor (vii.), are introduced by vi. 18 seq., and, as their spirit shows, is of relatively later date. It contains some probable traces of D (in vii. 5, 7, 11, seq., 15, 25) and P (in iv. 1, 18, 24 seq.). The capture of Ai has marks of the same dual origin as the preceding chapters (cf. v., vi. 18, 24, and, as its spirit shows, is of relatively later date). The general resemblance between chs. vii.-viii. and the war with Benjamin (Judges xx.) should be noticed.

Conquests in Palestine.—The erection of the altar, not at the scene of battle (cf. 1 Sam. xiv. 35) but on Mt Ebal (viii. 30-35), D presupposes the conquest of central Palestine and the removal of the ark from Jericho. These, however, are not narrated, and, unless some account of them has been replaced by the present passage, this portion of the conquest was ignored. Possibly the passage is not in its original position: in the Septuagint it appears after ix. 2, while Josephus (Ant. v. i, 19) and the Samaritan book of Joshua read it before ch. xii.; Dillmann, however, would place it after xi. 23. The capture of Jericho and Ai is followed by the successful stratagem of the Gibeonites to make peace with Israel (ix.). This involves them in a war with the southern Canaanites; Joshua intervenes and obtains a crowning victory (x.). The camp is still at Gilgal. A similar conquest of the northern Canaanites follows (xi.), and the first part of the book concludes with a summary of the results of the Israelite invasion (xii.).

No satisfactory explanation of vili. 30-35 has been found, yet ix. 1 seq. is clearly to be understood as the occupation of Canaanite wars. In contrast to the absence of any reference to the occupation of central Palestine, the conquest of the south was current in several divergent traditions. Two records are blended in ix.; one narrates the defeat of the Gibeonites, the other that with the Hivites (properly Hivvites): and in the second variant the latter has been replaced by the "congregation," a characteristic post-exilic term (contrast vii. 21 and 23; and on 27 see Sept. and commentators). The story of the covenant with Joshua and the Gibeonites was still an independent matter which is introduced at a later time (2 Sam. xxi. 2).

The defeat of the southern coalition is based on the doctrine of two sources; the war arises from two causes (vexation upon the Gibeonites, and the attempt to overthrow Israel), and concludes with a tragedy; numerically: in x. 16-24 the kings are pursued to Makkedah and slain, in v. 11 they are smitten by a great hailstorm in their flight to Azekah (cf. 1 Sam. vii. 10, xiv. 15, 17 seq.). The battle is described in the narrative: in iv. 2, 6 seq. the Gibeonites are introduced as the "congregation," a characteristic post-exilic term (contrast vii. 21 and 23; and on 27 see Sept. and commentators). The story of the covenant with Joshua and the Gibeonites was still an independent matter which is introduced at a later time (2 Sam. xxi. 2).

entirely to individual or tribal achievements. This view can be traced in xii. 13, xv. 63 (cf. the parallel Judges i. 21 in contrast to v. 8), xvi. 10 (Judges i. 29), xvi. 11-13 (Judges i. 27 seq.), and in the references to separate tribal or family exploits: xv. 13-19, xix. 47 (cf. Judges i. 19). Two closing addresses are ascribed to Joshua, one an exhortation similar to the homilies in secondary portions of Deuteronomy (xxiii.; cf. Moses in Deut. xxvii. seq., and Samuel's last address in 1 Sam. xii.); this virtually excludes the other (xxxiv.), where Joshua advises the tribes at Shechem (Shiloh, in the Septuagint) and passes under review the history of Israel from the days of heathenism (before Abraham was brought into Canaan) down through the oppression in Egypt, the exodus, the conquest in East Jordan and the occupation of Canaan. A few otherwise unknown details are to be found (xxxiv. 2, 11 seq. 14). The address (which is extremely important for its representation of the religious conditions) is made occasion for a solemn covenant whereby the people agree to cleave to Yahweh alone. This is commemorated by the erection of a stone under the oak by the sanctuary of Yahweh (for the tree with its sacred pillar, see Gen. xxxv. 4; Judges ix. 6). The people are then dismissed, and the book closes in ordinary narrative style with the death of Joshua and his burial in his inheritance at Timnath-serah in Mt Ephraim (cf. xix. 40 seq.); the burial of Joseph in Shechem; and, a few days later, the burial of Eleezer the son of Aaron in the "hill of Phinehas." Chapter xxiv. presupposes the complete subjection of the Canaanites and is of a late prophetic stamp. Some signs of amplification (e.g. xv. 11b, 13, 31) suggest that it was inserted by a Deuteronomic hand, evidently distinct from the author of xxiii. But elsewhere there are traces of secondary Deuteronomic expansion and of internal incongruities in Deuteronomic narratives; contrast xiv. 6-15 with Joshua's extermination of the "Anakim" in xi. 21 seq.; the use of this name with the "Philistines" of xiii. 2 (see "Philistines"), or the conquests in xi. 16-22 with the names in x. 39-43. All these passages are now due to D; but not only is Deuteronomic itself composite, a twofold reduction can be traced in Judges, Samuel and Kings, thus involving the deeper literary problems of Joshua with the historical books generally. Both Joshua xxiii. and xxiv. are closely connected with the very complicated introduction to the era of the "judges" in Judges ii. 6 seq., and ii. 6-9 actually resumed Judges xxiv. 28 seq., while the Septuagint adds to the close of Joshua the beginning of the story of Ehud (Judges iii. 12 seq.). Both Judges i.-ii.5 and chap. xvii.-xxxi. are of post-Deuteronomic insertion, and they represent conditions analogous to the older notices imbedded in the later work of P (Judges i. 21, xii. 10-12, cf. Joshua xv. 63; see Judges ad fin.). Moreover, P in its turn shows elsewhere deficiencies in the narration of different periods and standpoints, and the fluid state of the book at a late stage is shown by the presence of non-Deuteronomic elements in Joshua xx., not found in the Septuagint, and by the numerous and often striking readings which the latter recension presents.

Value of the Book. — The value of the book of Joshua is primarily religious; its fervency, its conviction of the destiny of Israel and its incalculation of the unity and greatness of the God of Israel give expression to the philosophy of Israelite historians. As an historical record its value must depend upon a careful criticism of its contents in the light of biblical history and external information. Its description of the conquest of Canaan contains definite elements in the history of the past. It is an ideal view of the manner in which a divinely inspired leader guided a united people into the promised land of their ancestors, and, after a few brief wars of extermination (x-xii.), died leaving the people in quiet possession of their new inheritance (xii. 23; xxi. 44 seq.; xxiii. 1). 2 On the other hand, the earlier inhabitants were not finally subjugated until Solomon's reign (1 Kings ix. 20); Jerusalem was taken by David from the Jebusites (2 Sam. v.); and several sites in its neighbourhood, together with important fortresses like Gezer, Megiddo and Taanach, were not held by Israel at the first. There are traces of other conflicting traditions representing independent tribal efforts which were not successful, and the Israelites are even said to live in the midst of Canaanites, intermarrying with them and adopting their cult (Judges i.-iii. 6). From a careful consideration of all the evidence, both internal and external, biblical scholars are now almost unanimous that the more finished picture of the Israelite invasion and settlement cannot be accepted as a historical record for the age. It accords with this that the elaborate tribal-lists and boundaries prove to be of greater value for the geography than for the history of Palestine, and the attempts to use them as evidence for the early history of Israel have involved numerous additional difficulties and confusion. 3

The book of Joshua has ascribed to one man conquests which are not confirmed by the tradition. The capture of Bethel, implied rather than described in Joshua viii., is elsewhere the work of the Joseph tribes (Judges ii. 22 seq., cf. features in the conquest of Jericho, Joshua vi. 25). Joshua's victory in north Palestine has its parallel in Judges iv. at another period (see Deborah), and Adoni-zedek of Jerusalem (Joshua x.) can scarcely be severed from the Adoniah of 2 Samuel 15 with the tribes of Judah and Simeon (Judges i. 5-7). The prominence of Joshua as military and religious leader, and especially his connexion with Shechem and Shiloh, have suggested that he was a hero of the Joseph tribes of central Palestine (viz. Ephraim and Manasseh). Moreover, the traditions in Joshua viii. 30-ix. 2, and Deut. xxvii. 1-8 seem to place the arrival at Mt Kbal immediately after the crossing of the Jordan. This implies that Israel (like Jacob in Gen. xxxii.) crossed by the Jakob, and in fact few of Fari'a provides an easy road to Shechem, to the south-east of which lies Jezreel; and while this is the Gilgal of Deut. xi. 30, the battles at Jericho and Ai (Joshua ii. seq.) occur naturally after the encampment at the southern Gilgal (near Jericho). The alternative view (see especially Stade, Gesch. Isr. i. 133 seq.) connects itself partly with the ancestor of all the tribes (Jacob, i.e. Israel), and partly with the eponym of the Joseph tribes whose early days were spent around Shechem, the removal of whose bones from Egypt must have found a prominent place in the traditions of the tribes concerned (Gen. i. 25; Exod. xiii. 19; Joshua xxiv. 32). According to one view (Stade, Wellhausen, Guthe, &c.) only the Joseph tribes were in Egypt, and separate tribal movements (see Judah) have been incorporated in the growth of the tradition; the probability that the specific traditions of the Joseph tribes have been excised or subordinated finds support in the manner in which the Judaean P has abridged and confused the tribal lists of Ephraim and Manasseh.

The serious character of the problems of early Israelite history can be perceived from the renewed endeavours to present an adequate outline of the course of events; for a criticism of the most prominent hypotheses see Cheyne, Encyc. Bib. art. "Tribes" (col. 520 seq.); a new theory has been more recently advanced by E. Meyer (Die Israeliten u. ihre Nachbarstämme, 1906). But Joshua as a tribal hero does not belong to the earliest phase in the surviving traditions. He has no place in the oldest surviving narratives of the exodus (Wellhausen, Steuernagel); and only a subordinate place in the sources of Caleb (Num. xiv. 30; the reference in Deut. i. 38 is part of a later insertion). The two are called the leader of all the tribes (Deut. iii. 21, 28). As an attendant of Moses at the tent of meeting he appears in quite secondary passages (Exod. xxxiiii. 7-11; Num. xi. 28). His defeat of the Amalekites is in a narrative (Exod. xvii. 8-16) which belongs more

1 The historical problems are noticed in all biblical histories, and in the commentaries on Joshua and Judges. Against the ordinary critical view, see J. Orr, Problem of the O.T. (1905) pp. 240 seq. This writer (on whom see A. Peake, The Interpreter, 1908, pp. 252 seq.) says that the book as a whole, allowance being made for "the generalizing tendency peculiar to all summaries," 2 His argument that "the circumstantiality, local knowledge and evidently full collection of the narratives (in Joshua) give confidence in the truth of their statements" is one which historical criticism in no field would regard as conclusive, and his contention that a redactor would hardly incorporate conflicting traditions in his narrative "if he believed they contradicted it" begs the question and ignores Oriental literature.
naturally to the wilderness of Shur, and it associates him with traditions of a movement direct into south Palestine which finds its counterpart when the clan Caleb (q.v.) is artificially treated as possessing its seats with Joshua's permission. But points of resemblance between Joshua and the invader Saul the founder of the (north) Israelite monarchy gain in weight when the traditions of both recognize the inclusion or possession of Judah, and thus stand upon quite another plane as compared with David's founding of a dynasty. Instead of rejecting the older stories of Joshua's conquests it may be preferable to infer that there were radical divergences in the historical views of the past. Consequently, the parallels between Joshua and Jacob (see Steuernagel's Commentary, p. 150) are more significant when the occupation of central Palestine, already implied in the book of Joshua, is viewed in the light of Gen. xviii. 22, where Jacob as conqueror (cf. the very late form of the tradition in Jubilees xxxiv.) agrees with features in the patriarchal narratives which, in implying a settlement in Palestine, are entirely distinct from those which belong to the descent into Egypt (see especially, Meyer, op. cit. pp. 227 seq., 414 seq., 433; Luther, ib. 108 seq.). The elaborates account of the exodus gives the prevailing views which supersede other traditions of the origin both of the Israelites and of the worship of Yahweh (Gen. iv. 26). Several motives have influenced its growth,1 and the kernel—the revelation of Yahweh to Moses and his dealings with all the tribes of Israel—are included and their history as a people now begins. The old traditions of conquest in central Palestine have similarly been extended, and have been adapted to the now familiar view of Israelite origins. It is this subordination of earlier tradition to other and more predominating representations which probably explains the intricacy of a book whose present text may not have been finally fixed until, as Dillmann held, as late as about 200 B.C.

JOSHUA THE STYLITE—JóSIKA, the reputed author of a chronicle which narrates the history of the war between the Greeks and Persians in 502-506, and which is one of the earliest and best historical documents preserved to us in Syria. The work owes its preservation to having been incorporated in the third part of the history of pseudo-Dionysius of Tell-Mahrê, and may probably have had a place in the second part of the Ecclesiastical History of John of Asia, from whom (as Nau has shown) pseudo-Dionysius copied all or most of the matter contained in his third part. The chronicle in question is anonymous, and Nau has shown that the note of a copyst, which was thought to assign it to the monk Joshua of Zuškin near Amîd, more probably refers to the compiler of the whole work in which it was incorporated. Anyhow the author was an eyewitness of many of the events which he describes, and must have been living at Hâdath during some years when tyranny and persecution suffered so severely from the Persian War. His view of events is everywhere characterized by his belief in overruling Providence; and as he eulogizes Flavius II., the Chalcedonian patriarch of Antioch, in warmer terms than in which he praises his great Monophysite contemporaries, Jacob of Sèrah and Philemon of Mabbâgî, he was probably an orthodox Catholic.

The chronicle was first made known by Assemani's abridged Latin version (B.O. i.200-283) and was edited in 1876 by the abbé Martin and (with an English translation) by W. Wright in 1882. After an elaborate dedication to a friend—a priest and abbey of Sergiopolis, the recogcatization of the chief events from the death of Julian in 363 and a fuller account of the reigns of the Persian kings Pêrôz (457-484) and Balîsh (484-518), the writer enters upon his main theme—the history of the disturbed relations between the Persian and Greek Empires from the beginning of the reign of Kandîd I. (498-531), which culminated in the great war of 502-506. From October 494 to the conclusion of peace near the end of 506, the author gives an annalistic account, with careful specification of dates, of the main events in the conflict, the theatre of battle—such as the siege and capture of Amîd by the Persians (502-503), their unsuccessful siege of Edessa (503), and the abortive attempt of the Greeks to recover Amîd (504-505). The work was probably written a few years after the conclusion of the war. The style is graphic and straightforward, and the author was evidently a man of good education and of a simple, honest mind. (N. M.)

JOSIAH (Heb. yôšîyâhû, perhaps "Yah [weh] supports"), in the Bible, the grandson of Manasseh, and king of Judah. He came to the throne at the age of eight, after the murder of his predecessor Amon. The circumstances of his minority are not recorded, nor is anything related of the Scythian inroads which occurred in the latter half of the 7th century B.C., although some passages in the books of Jeremiah and Zephaniah are supposed to refer to the events. The storm which shook the external states was favourable to the peace of Judah; the Assyrian power was practically broken, and that of the Chaldeans had scarcely developed into an aggressive form. Samaria thus lay within the grasp of Josiah, who may have entertained hopes of forming an independent power of his own. Otherwise, it is not clear why we find him opposing himself to the Egyptian king Necho, since the assumption that he fought as an Assyrian ally against a Medo-Persian empire is clearly not tenable. His measures of energy and policy were taken to the battle of Megiddo 2 he lost both his kingdom and his life (608 B.C.), and for a few years Judah was in the hands of Egypt (2 Kings xxii. 29 seq.). The chronicler gives a rather different account of the battle, and his allusion to the dirge uttered by Jeremiah over his death (2 Chron. xxxv. 20-25; 1 Esd. i. 32) represents the tradition which makes this prophet the author of the book of Lamentations.

The reign of Josiah is important for the biblical account of the great religious reforms which began in his eighteenth year, when he manifested interest in the repair of the Temple at Jerusalem. In the course of this work the high priest Hilkiah discovered a so-called "law-book" which gave rise to the liveliest concern. The reasons for believing that this roll was substantially identical with the book of Deuteronomy were already appreciated by Jerome, Chrysostom, Theodoret and others,3 and a careful examination shows that the character of the reformation which he undertook corresponds with the prescriptions and exhortations of that book. (See DEUTERONOMY.) But the detailed records in 2 Kings xxii. seq. are evidently written under the influence of the reforms themselves, and are not contemporary (see KINGS, Book of). They are further extended, to agree with still later ideals, in 2 Chron. xxxiv. seq. The original roll was short enough to be read at least twice in a day (xxii. 8, 10), and hence only some portions of Deuteronomy (or of an allied production) may be intended. Although the character of the reforms throws remarkable light on the condition of religion in Judah in the time of Josiah, it is to be observed that the writings of the contemporary prophets (Jeremiah, Ezekiel) make it very questionable whether the narratives are thoroughly trustworthy for the history of the king's measures. (See further JEW, § 16.) (S. A. C.)

JOSIKA, MIKLÓS [NiCkHAŁ], BÁRON (1794-1865), Hungarian novelist, was born on the 28th of April 1794 at Torda in Transylvania, of aristocratic and wealthy parents. After finishing the usual course of legal studies at Kolozsvár (Klausenburg), he in 1811 entered the army, joining a cavalry regiment, with which he subsequently took part in the Italian campaign. On the battlefield of Mínco (February 8, 1814) he was promoted to the grade of lieutenant. He served in the campaign against Napoleon, and was present at the entry of the Allied Troops into Paris (March 31, 1814). In 1818 JósiKA resigned his commission, returned to Hungary, and married his first wife...

JOSSIPON—JOURBET, B. C.  521

Elizabeth Kalai. The union proving an unhappy one, Jósika parted from his wife, settled on his estate at Szurdok in Transylvania, and devoted himself to agricultural and literary pursuits. Drawn into the sphere of politics, he took part in the memorable Transylvanian diet of 1834. About this time Jósika first began to attract attention as a writer of fiction. In 1836 his Abah laid the foundation of his literary reputation. This novel gives a vivid picture of Transylvania in the time of Sigismond Bátori. Jósika was soon afterwards elected member of the Hungarian Academy of Sciences and of the Kisfaludy Society; of the latter he became, in 1841, director, and in 1842 vice-president. In 1847 he appeared at the Transylvanian diet as second deputy for the county of Szolnok, and zealously supported the movement for the union of Transylvania with Hungary proper. In the same year he was converted to Protestantism, was formally divorced from his wife, and married Baroness Julia Podmaniczky, herself a writer of considerable merit, with whom he lived happily until his death. So great was Jósika's literary activity that by the time of the revolution (1848) he had already produced about sixty volumes of romances and novels, besides numerous contributions to periodicals. Both as magnate of the upper house of the Hungarian diet, and as writer of Jósika aided and abetted the revolution, with which he was politically identified, being chosen one of the members of the committee of national defence. Consequently, after the capitulation at Világos (Aug. 13, 1849) he found it necessary to flee the country, and settled first at Dresden and then, in 1850, at Brussels, where he resumed his literary pursuits anonymously. In 1864 he removed to Dresden, in which city he died on the 27th of February 1865. The romances of Jósika, written somewhat at the style of Sir Walter Scott, are chiefly of an historical and social-political character, his materials being drawn almost entirely from the annals of his own country. Among his more important works may be specially mentioned, besides Abah—The Poet Zrinjy (1843); The Last of the Bátoris (1857); The Bohemians in Hungary (1839); Esther (1853); Francis Rákóczy II. (1861); and A Vegevár-tok, a tale of the time of the Transylvanian prince Bethlen Gábor, 1864. Many of Jósika's novels have been translated into German.

JOSSIPON, the name usually given to a popular chronicle of Jewish history from Adam to the age of Titus, attributed to an author Josippus or Joseph ben Gorion. The name, though at one time identified with that of the historian Josephus, is perhaps a corruption of Hegesippus, from whom (according to Tryeber) the author derived much of his material. The chronicle was probably compiled in Hebrew early in the 10th century, by a Jewish native of south Italy. The first edition was printed in Mantua in 1476. Jossipon subsequently appeared in many forms, one of the most popular being in Yiddish (Judaeo-German), with quaint illustrations. Though the chronicle is more legendary than historical, it is not unlikely that some good and even ancient sources were used by the first compiler, the Jossipon known to us having passed through the hands of many interpolators. The book enjoyed much vogue in England. Peter Morvyn in 1558 translated an abbreviated version into English, and edition after edition was called for. Lucien Wolff has shown that the English translations of the Bible aroused so much interest in the Jews that there was a widespread desire to know more about them. This led to the circulation of many editions of Jossipon, which thus formed a link in the chain of events which culminated in the readmission of the Jews to England by Cromwell. (I. A.)

JOSS, in the pidgin-English of the Chinese seaports, the name given to idols and deities. It is used adjectively in regard to many things connected with religious rites, such as "joss-house," a temple; "joss-stick," a stick which when burned gives forth a fragrant odour and is used as incense; "joss-paper," paper cut to resemble money (and sometimes with prayers written upon it) burned in funeral and other ceremonies. "Joss" is not a Chinese word, and is probably a corruption of Port. deos, god, applied by Portuguese navigators in the 16th century to the idols worshipped in the East Indies. The Dutch form is joosge (diminutive of jossed), whence the Javanese deojis, and the English joss, later joss. The word seems to have been carried to China by English seamen from Batavia.

JOST, ISAAC MARKUS (1793-1860), Jewish historical writer, was born on the 22nd of February 1793 at Bernburg, and studied at the universities of Göttingen and Berlin. In Berlin he began to teach, and in 1815 received the appointment of upper master in the Jewish commercial school (called the Philanthropin) at Frankfort-on-the-Main. Here he remained until his death, on the 22nd of November 1860. The work by which he is chiefly known is Geschichte der Israeliten seit der Zeit der Maccabaeer, in 9 vols. (1829-1839), which was afterwards supplemented by Neuere Geschichte der Israeliten von 1815-1845 (1846-1847), and Geschichte der Juden (1847-1859). He subsequently published an abridgment under the title Allgemeine Geschichte des israelitischen Volkes (1831-1832), and an edition of the Mishnah, with a German translation and notes (6 vols., 1832-1834). The Israelitische Annalen were edited by him from 1839 to 1841, and he contributed extensively to periodicals.

See Ziebold, Isaak Markus Jost und seine Freunde (Cincinnati, 1886).

JOTUNHEIM, or JOTUNFJELDE, a mountainous region of southern Norway, lying between Gudbrandsdal on the east and Jostedalsbreen and the head of the Sogne fjord on the west. Within an area of about 950 sq. m. it contains the highest mountain in the Scandinavian Peninsula—Galdhøpiggen (8390 ft.)—and several others but little inferior. Such are Glittertind or Gliertretind (8580), and Memurutind (7906), which face Galdhøpiggen across the northward-sloping Videsal; Knutshuls- tind (7812) and several other peaks exceeding 7000 ft., to the south, between lakes Gjende and Bygland, and Skagastólstind (7723) in the west of the region, above the Utladal, the chief branch of the magnificent Horns Svarthalsfjell. The upper part of the main valleys are of characteristic form, not ending in lofty mountain-walls but comparatively low and level, and bearing lakes. The name Jotunheim (giants' home) is a modern memorial of the mountain-dwelling giants of Norse fable; the alternative name Jotun Fjelde was the bestowal on the region, when it was explored in 1820 by the geologist Balthasar Matthias Kellhau (1797-1838). In modern times, the region has attracted mountaineers and many visitors accustomed to rough lodging and difficult travelling.

JOUTHEM, BARTHELEMY CATHERINE (1769-1799), French general, the son of an advocate, was born at Pont de Vaux (Ain) on the 14th of April 1769. In 1784 he ran away from school to enlist in the artillery, but was brought back and sent to study law at Lyons and Dijon. In 1791 he joined the volunteers of the Ain, and was elected by his comrades successively corporal and sergeant. In January 1792 he became sub-lieutenant, and in November lieutenant, having in the meantime made his first campaign with the army of Italy. In 1793 he distinguished himself by the brilliant defence of a retrenchment by the Col de Penda, with only thirty men against a battalion of the enemy. Wounded and made prisoner in this affair, Joubert was released on parole by the Austrian commander-in-chief, Devins, soon afterwards. In 1794 he was again actively engaged, and in 1795 he rendered such conspicuous service as to be made general of brigade. In the campaign of 1796 the young general commanded a brigade under Augereau, and soon attracted the special attention of Bonaparte, who caused him to be made a general of division in December, and repeatedly selected him for the command of important detachments. Thus he was in charge of the retaining force at the battle of Rivoli, and in the campaign of 1799

1 A prefect of Jerusalem of this name is mentioned by Josephus, Bel. Jud. ii. 20 3
JOUBERT, J.—JOUFFROY, J.

(1453-1459) he commanded the detached left wing of Bonaparte's army in Tirol, and fought his way through the mountains to rejoin his chief in Styria. He subsequently held various commands in Holland, on the Rhine and in Italy, where up to January 1799 he commanded in chief. Resigning the post in consequence of a dispute with the civil authorities, Joubert returned to France and married (June) Mlle de Montholon. But he was almost immediately summoned to the field again. He took over the command in Italy from Moreau about the middle of July, but he persuaded his predecessor to remain at the front and was largely guided by his advice. The odds against the French troops in the disastrous campaign of 1799 (see French Revolutionary Wars) were too heavy. Joubert and Moreau were quickly compelled to give battle by their great antagonist, Suworov. The battle of Novi was disastrous to the French arms, not merely because it was a defeat, but above all because Joubert himself was amongst the first to fall (Aug. 13, 1799). Joubert died before it could be shown whether his genius was of the first rank, but he was at any rate marked out as a future great captain by the greatest captain of all ages, and his countrymen intuitively associated him with Hoche and Moreau as a great leader whose early death disappointed their highest hopes. After the battle his remains were brought to Toulon and buried in Fort La Malgue, and the revolutionary government paid tribute to his memory by a ceremony of public mourning (Sept. 16). A monument to Joubert at Bourg was rased by order of Louis XVIII, but another memorial was afterwards erected at Pont de Vaux.

Sec Guibert, Notice sur la vie de B. C. Joubert; Chevrier, Le Général Joubert d'après sa correspondance (2nd ed. 1884).

JOUBERT, JOSEPH (1754-1824), French moralist, was born at Montignac (Corrèze) on the 6th of May 1754. After completing his studies at Toulouse he spent some years there as a teacher. His delicate health proved unequal to the task, and after two years spent at home in study Joubert went to Paris at the beginning of 1778. He allied himself with the chiefs of the philosophical party, especially with Diderot, of whom he was in some sort a disciple, but his closest friendship was with the abbé de Fontanes. In 1790 he was recalled to his native place to act as juge de paix, and carried out the duties of his office with great fidelity. He had made the acquaintance of Mme de Beaumont in a Burgundian cottage where she had taken refuge from the Terror, and it was under her inspiration that Joubert's genius was at its best. The atmosphere of serenity and affecion with which she surrounded him seemed necessary to the development of what Sainte-Beuve calls his "esprit aïlé, ami du ciel et des hauteurs." Her death in 1803 was a great blow to him, and his literary activity, never great, declined from that time. In 1809, at the solicitation of Joseph de Bonald, he was made an inspector-general of education, and his professional duties practically absorbed his interests during the rest of his life. He died on the 3rd of May 1824. His manuscripts were intrusted by his widow to Chateaubriand, who published a selection of Pensées from them in 1838 for private circulation. A more complete edition was published by Joubert's nephew, Paul de Raynal, under the title Pensées, essais, maximes et correspondance (2 vols. 1842). A selection of letters addressed to Joubert was published in 1883. Joubert constantly strove after perfection, and the small quantity of his work was partly due to his desire to find adequate and luminous expression for his discriminating criticism of literature and morals.

If Joubert's readers in England are not numerous, he is well known at second hand through the sympathetic essay devoted to him in Matthew Arnold's Essays in Criticism (1st series). See Sainte-Beuve, Causiers du lundi, vol. i.; Portraits littéraires, vol. ii.; and a notice by Paul de Raynal, prefixed to the edition of 1842.

JOUBERT, PETRUS JACOBUS (1834-1900), commandant-general of the South African Republic from 1880 to 1900, was born at Cango, in the district of Oudtshoorn, Cape Colony, on the 20th of January 1834, a descendant of a French Huguenot who fled to South Africa soon after the revocation of the Edict of Nantes by Louis XIV. Left an orphan at an early age, Joubert migrated to the Transvaal, where he settled in the Wakkerstroom district near Laing's Nek and the north-east angle of Natal. There he not only farmed with great success, but turned his attention to the study of the law. The esteem in which his shrewdness in both farming and legal affairs was held led to his election to the Volksraad as member for Wakkerstroom early in the sixties, Marthinus Pretorius being then in his second term of office as president. In 1870 Joubert was again elected, and the use to which he put his slender stock of legal knowledge secured him the appointment of attorney-general of the republic, while in 1875 he acted as president during the absence of T. F. Burgers in Europe. During the first British annexation of the Transvaal, Joubert earned for himself the reputation of a consistent irreconcilable by refusing to hold office under the government, as Paul Kruger and other prominent Boers were doing. Instead of accepting the lucrative post offered him, he took a leading part in creating and directing the agitation which led to the war of 1880-1881, eventually becoming, as commandant-general of the Boer forces, a member of the triumvirate that administered the provisional Boer republic from July 1880 to December 1881. He was in command of the Boer forces at Laing's Nek, Ingogo, and Majuba Hill, subsequently conducting the earlier peace negotiations that led to the conclusion of the Pretoria Convention. In 1883 he was a candidate for the presidency of the Transvaal, but received only 1171 votes as against 3421 cast for Kruger. In 1883 he again opposed Kruger in the contest for the presidency, standing as the representative of the comparatively progressive section of the Boers, who wished in some measure to redress the grievances of the Uitlander population which had grown up on the Rand. The poll (though there is good reason for believing that the voting lists had been manipulated by Kruger's agents) was declared to have resulted in 7911 votes being cast for Kruger and 7246 for Joubert. After a protest Joubert acceeded in Kruger's continued presidency. He stood again in 1888, but the Jameson raid had occurred meantime and the voting was 13,858 for Kruger and 2041 for Joubert. Joubert's position had then become much weakened by accusations of treachery and of sympathy with the Uitlander agitation. He took little part in the negotiations that culminated in the ultimatum sent to Great Britain by Kruger in 1899, and though he immediately assumed nominal command of the operations on the outbreak of hostilities, he gave up to others the chief share in the direction of the war, through his inability or neglect to impose upon them his own will. His cautious nature, which had in early life gained him the sobriquet of "Slim Piet," joined to a lack of determination and assertiveness that characterized his whole career, led him to act mainly on the defensive; and the strategically offensive movements of the Boer forces, such as Elandslaagte and Willow Grange, appear to have been neither planned nor executed by him. As the war went on, physical weakness led to Joubert's virtual retirement, and, though two days earlier he was still reported as being in supreme command, he died at Pretoria from peritonitis on the 25th of March 1900.

Sir George White, the defender of Ladysmith, summed up Joubert's character when he called him "a soldier and a gentleman, and a brave and honourable opponent."

JOUFFROY, JEAN (c. 1422-c. 1473), French prelate and diplomatist, was born at Luxeuil (Haute-Saône). After entering the Benedictine order and teaching at the university of Paris from 1435 to 1438, he became almoner to Philip the Good, duke of Burgundy, who entrusted him with diplomatic missions in France, Italy, Portugal and Castile. Jouffroy was appointed abbot of Luxeuil (1451?) bishop of Arras (1453), and papal legate (1459). At the French court his diplomatic duties brought him to the notice of the dauphin (afterwards Louis XI.). Jouffroy entered Louis's service, and obtained a cardinal's hat (1461), the bishopric of Albi (1462), and the abbacy of St Denis (1464). On several occasions he was sent to Rome to negotiate the abolition of the Pragmatic Sanction and to defend the interests of the Anges at Naples. Attached by King Louis to the sieur de Beaufieu in the expedition against John V., count
of Armagnac, Jouffroy was accused of taking the town of Locleure by treachery, and of being a party to the murder of the count of Armagnac (1473). He died at Reuilly the same year.

JOUFFROY, THÉODORE SIMON (1796–1842), French philosopher, was born at Pontets, near Mouthe, department of Doubs. In his tenth year, his father, a tax-gatherer, sent him to an uncle at Pontarlier, under whom he commenced his classical studies. At Dijon his compositions attracted the attention of an inspector, who had him placed (1814) in the normal school, Paris. He there came under the influence of Victor Cousin, and in 1817 he was appointed assistant professor of philosophy at the normal and Bourbon schools. Three years later, being thrown upon his own resources, he began a course of lectures in his own house, and formed literary connexions with Le Courrier français, Le Globe, L'Encyclopédie moderne, and La Revue européenne. The variety of his pursuits at this time carried him over the whole field of ancient and modern literature. But he was chiefly attracted to the philosophical system represented by Reid and Stewart. The application of "common sense" to the problem of substance supplied a more satisfactory analytic for him than the scepticism of Hume which reached him through a study of Kant. He thus threw in his lot with the Scottish philosophy, and his first dissertations are, in their leading position, adaptations from Reid's Inquiry. In 1826 he wrote a preface to a translation of the Moral Philosophy of Stewart, demonstrating the possibility of a scientific statement of the laws of consciousness; in 1828 he began a translation of the works of Reid, and in his preface estimated the influence of Scottish criticism upon philosophy, giving a biographical account of the movement from Hutcheson onwards. Next year he was returned to parliament by the arrondissement of Pontarlier; but the work of legislation was ill-suited to him. Yet he attended to his duties conscientiously, and ultimately broke his health in their discharge. In 1833 he was appointed professor of Greek and Roman philosophy at the college of France and a member of the Academy of Sciences; he then published the Mélanges philosophiques (4th ed. 1866; Brit. trans. G. Ripley-Bodin, 1835 and 1838), a collection of fugitive papers in criticism and philosophy and history. In them is foreshadowed all that he afterwards worked out in metaphysics, psychology, ethics and aesthetics. He had already demonstrated in his prefaces the possibility of a psychology apart from physiology, of the science of the phenomena of consciousness distinct from the perceptions of sense. He now classified the mental faculties, premising that they must not be confounded with capacities or properties of mind. They were, according to his analysis, personal will, primitive instincts, voluntary movement, natural and artificial signs, sensibility and the faculties of intellect; on this analytic he founded his scheme of the universe. In 1835 he published a Cours de droit naturel (4th ed. 1866), which, for precision of statement and logical coherence, is the most important of his works. From the conception of a universal order in the universe he reasons to a Supreme Being, who has created it and who has conferred upon every man in harmony with it the aim of his existence, leading to his highest good. Good, he says, is the fulfilment of man's destiny, evil the thwarting of it. Every man being organized in a particular way has, of necessity, an aim, the fulfilment of which is good; and he has faculties for accomplishing it, directed by reason. The aim is good, however, only when reason guides it for the benefit of the majority, but that is not absolute good. When reason rises to the conception of universal order, when actions are submitted, by the exercise of a sympathy working necessarily and intuitively to the idea of the universal order, the good has been reached, the true good, good in itself, absolute good. But he does not follow his idea into the details of human duty, though he passes in review fatalism, mysticism, pantheism, scepticism, egoism, sentimentalism and rationalism. In 1835 Jouffroy's health failed and he went to Italy, where he continued to translate the Scottish philosophers. On his return he became librarian to the university, and took the chair of recent philosophy at the faculty of letters. He died in Paris on the 4th of February 1842. After his death were published Nouveaux mélanges philosophiques (3rd ed. 1872) and Cours d'esthétique (3rd ed. 1875). The former contributed nothing new to the system except a more emphatic statement of the distinction between psychology and physiology. The latter formulated his theory of beauty.

Jouffroy's claim to distinction rests upon his ability as an expositor of other men's ideas. He founded no system; he contributed nothing of importance to philosophical science; he initiated nothing which has survived him. But his enthusiasm for mental science, and his command over the language of popular exposition, made him a great international medium for the transfusion of ideas. He stood between Scotland and France and Germany and France; and, though his expositions are vitiated by loose reading of the philosophers he interpreted, he did serviceable, even memorable work.

JOUGS, JOUGS, or JOUGS (O. Fr. jug, from Lat. jugum, a yoke), an instrument of punishment formerly in use in Scotland, Holland and possibly other countries. It was an iron collar fastened by a short chain to a wall, often of the parish church, or to a tree. The collar was placed round the offender's neck and fastened by a padlock. The jougs was practically a pillory. It was used for ecclesiastical as well as civil offences. Examples may still be seen in Scotland.

Joule, James Prescott (1818–1889), English physicist, was born on the 24th of December 1818, at Salford, near Manchester. Although he received some instruction from John Dalton in chemistry, most of his scientific knowledge was self-taught, and this was especially the case with regard to electricity and electro-magnetism, the subjects in which his earliest researches were carried out. From the first he appreciated the importance of accurate measurement, and all through his life the attainment of exact quantitative data was one of his chief considerations. At the age of nineteen he invented an electro-magnetic engine, and in the course of examining its performance dissatisfaction with vague and arbitrary methods of specifying electrical quantities caused him to adopt a convenient and scientific unit, which he took to be the amount of electricity required to decompose nine grains of water in one hour. In 1840 he was thus enabled to give a quantitative statement of the law according to which heat is produced in a conductor by the passage of an electric current, and in succeeding years he published a series of valuable researches on the agency of electricity in transformations of energy. One of these contained the first intimation of the achievement with which his name is most widely associated, for it was in a paper read before the British Association at Cork in 1843, and entitled "The Calorific Effects of Magneto-electricity and the Mechanical Value of Heat," that he expressed the conviction that whenever mechanical force is expended an exact equivalent of heat is always obtained. By rotating a small electro-magnet in water, between the poles of another magnet, and then measuring the heat developed in the water and other parts of the machine, the current induced in the coils, and the energy required to maintain rotation, he calculated that the quantity of heat capable of warming one pound of water one degree F. was equivalent to the mechanical force which could raise 83.8 lb. through the distance of one foot. At the same time he brought forward another determination based on the heating effects observable when water is forced through capillary tubes; the number obtained in this way was 770. A third method, depending on the observation of the heat evolved by the mechanical compression of air, was employed a year or two later, and yielded the number 708; and a fourth—the well-known frictional one of stirring water with a sort of paddle-wheel—yielded the result 890 (see Brit. Assoc. Report, 1843), though 781.5 was obtained by subsequent repetitions of the
experiment. In 1849 he presented to the Royal Society a memoir which, together with a history of the subject, contained details of a long series of determinations, the result of which was 772. A good many years later he was entrusted by the committee of the British Association on standards of electric resistance with the task of deducing the mechanical equivalent of heat from the thermal effects of electric currents. This inquiry yielded (in 1867) the result 783, and this Joule himself was inclined to regard as more accurate than his old determination by the frictional method; the latter, however, was repeated with every precaution, and again indicated 772-55 foot-pounds as the quantity of work that must be expended at sea-level in the latitude of Greenwich in order to raise the temperature of one pound of water, weighed in vacuo, from 60° to 61° F. Ultimately the discrepancy was traced to an error which, not by Joule's fault, vitiated the determination by the electrical method, for it was found that the standard ohm, as actually defined by the British Association committee and as used by him, was slightly smaller than was intended; when the necessary corrections were made the results of the two methods were almost precisely congruent, and thus the figure 772-55 was vindicated. In addition, numerous other researches stand to Joule's credit—the work done in compressing gases and the thermal changes they undergo when forced under pressure through small apertures (with Lord Kelvin), the change of volume on solution, the change of temperature produced by the longitudinal extension and compression of solids, &c. It was during the experiments involved by the first of these inquiries that Joule was incidentally led to appreciate the value of surface condensation in increasing the efficiency of the steam engine. A new form of condenser was tested on the small engine employed, and the results it yielded formed the starting-point of a series of investigations which were aided by a special grant from the Royal Society, and were described in an elaborate memoir presented to it on the 13th of December 1866. His results, according to Kelvin, led directly and speedily to the present practical method of surface-condensation, one of the most important improvements of the steam engine, especially for marine use, since the days of James Watt. Joule died at Sale on the 11th of October 1889.

His scientific papers were collected and published by the Physical Society of London: the first volume, which appeared in 1884, contained the researches for which he was alone responsible, and the second, dated 1887, those which he carried out in association with other workers.

JOURDAN, JEAN BAPTISTE, COUNT (1752-1833), marshal of France, was born at Limoges on the 29th of April 1752, and in his boyhood was apprenticed to a silk merchant of Lyons. In 1776 he enlisted in a French regiment to serve in the American War of Independence, and after being invalidated in 1784 he married and set up in business at Limoges. At the outbreak of the revolutionary wars he volunteered, and as a subaltern took part in the first campaigns in the north of France. His rise was even more rapid than that of Hoche and Moreau. By 1783 he had become a general in the army of the archduke, and in 1784 he succeeded Houchard as commander-in-chief of the Army of the North; and on the 15th-16th of October 1793 he won the brilliant and important victory of Wattignies (see French Revolution Wars). Soon afterwards he became a "suspect," the moderation of his political opinions and his misgivings as to the future conduct of the war being equally distasteful to the turbulent and enthusiastic Committee of Public Safety. Warned in time by his friend Carnot and by Barère, he avoided arrest and resumed his business as a silk-mercer in Limoges. He was soon reinstated, and early in 1794 was appointed commander-in-chief of the Army of Sambre-et-Meuse. After repeated attempts to force the passage of the Sambre he failed and several severe general actions had been fought without result, Jouard and his army were discouraged, but Carnot and the civil commissioners urged the general, even with threats, to a last effort, and this time he was successful not only in crossing the Sambre but in winning a brilliant victory at Fleurs (June 26, 1794), the consequence of which was the extension of the French sphere of influence to the Rhine, on which river he waged an indecisive campaign in 1795.

In 1796 his army formed the left wing of the advance into Bavaria. The whole of the French forces were ordered to advance on Vienna, Jouard on the extreme left and Moreau in the centre by the Danube valley, Bonaparte on the right by Italy and Styria. The campaign began brilliantly, the Austrians under the Archduke Charles being driven back by Moreau and Jouard almost to the Austrian frontier. But the archduke, slipping away from Moreau, threw his whole weight on Jouard, who was defeated at Amberg and Würzburg, and forced over the Rhine after a severe rearguard action, which cost the life of Moreau. Moreau had to fall back in turn, and, apart from Bonaparte's marvellous campaign in Italy, the operations of the year were disastrous. The chief cause of failure was the vicious plan of campaign imposed upon the generals by their government. Jouard was nevertheless made the scapegoat of the government's mistakes and was not employed for two years. In those years he became prominent as a politician and above all as the framers of the famous conscription law of 1798. When the war was renewed in 1799 Jouard was placed at the head of the army on the Rhine, but again underwent defeat at the hands of the archduke Charles at Stockach (March 25), and, disappointed and broken in health, handed over the command to Masséna. He at once resumed his political duties, and was a prominent opponent of the coup d'état of 18 Brumaire, after which he was expelled from the Council of the Five Hundred. Soon, however, he became formally reconciled to the new régime, and accepted from Napoleon fresh military and civil employment. In 1800 he became inspector-general of cavalry and infantry and representative of French interests in the Cisalpine Republic, and in 1804 he was made a marshal of France. He remained in the new kingdom of Italy until 1806, when Joseph Bonaparte, whom his brother made king of Naples in that year, selected Jouard as his military adviser. He followed Joseph into Spain in the same capacity in 1808. But Joseph's throne had to be maintained by the French army, and throughout the Peninsular War Jouard served as one of the other marshals, who depended directly upon Napoleon, paid little heed either to Joseph or to Jouard. After the battle of Vitoria he held no important command up to the fall of the Empire. Jouard gave in his adhesion to the restoration government of 1814, and though he rejoined Napoleon in the Hundred Days and commanded a minor army, he submitted to the Bourbons again after Waterloo. He refused, however, to be a member of the court which tried Marshal Ney. He was made a count, a peer of France (1819), and governor of Grenoble (1816). In politics he was a prominent opponent of the royalist reactionaries and supported the revolution of 1830. After this event he held the portfolio of foreign affairs for a few days, and then became governor of the Invalides, where his last years were spent. Marshal Jouard died on the 23rd of November 1833, and was buried in the Invalides.

He wrote Opérations de l'armée du Danube (1799); Mémoires pour servir à l'histoire de la campagne de 1797 (1819); and unpublished personal memoirs.

JOURNAL (through Fr. from late Lat. diurnalis, daily), a daily record of events or business. A private journal is usually an elaborated diary. When applied to a newspaper or other periodical the word is strictly used of one published each day; but any publication issued at stated intervals, such as a magazine or the record of the transactions of a learned society, is commonly called a journal. The word "journalist" for one whose business is writing for the public press (see Newspapers) seems to be as old as the end of the 17th century.

"Journal" is particularly applied to the record, day by day, of the business and proceedings of a public body. The journals of the British houses of parliament contain an official record of the business transacted day by day in either house. The record does not take note of speeches, though some of the earlier volumes contain references to them. The journals are a lengthened account written from the "votes and proceedings" (in the House of Lords called "minutes of the proceedings"), made day
by day by the assistant clerks, and printed on the responsibility of the clerk to the house, after submission to the "subcommittee on the journals." In the Commons the journal is passed by the Speaker before publication. The journals of the House of Commons begin in the first year of the reign of Edward VI. (1547), and are complete, except for a short interval under Elizabeth. Those of the House of Lords date from the first year of Henry VIII. (1509). Before that date the proceedings in parliament were entered in the rolls of parliament, which extend from 1278 to 1503. The journals of the Lords are "records" in the judicial sense, those of the Commons are not (see Erskine May, Parliamentary Practice, 1906, pp. 201-202).

The term "journal" is used, in business, for a book in which an account of transactions is kept previous to a transfer to the ledger (see Book-keeping), and also as an equivalent to a ship's log, as a record of the daily run, observations, weather changes, &c. In mining, a journal is a record describing the various strata passed through in sinking a shaft. A particular use of the word is that, in machinery, for the parts of a shaft which are in contact with the bearings; the origin of this meaning, which is firmly established, has not been explained.

JOURNEY (through O. Fr. jornee or joumr, mod. Fr. journe, from med. Lat. diurnata, Lat. diurnus, of or belonging to days, day), properly that which occupies a day in its performance, and so a day's work, particularly a day's travel, and the distance covered by such, usually reckoned in the middle ages as twenty miles. The word is now used of travel covering a certain amount of distance or lasting a certain amount of time, frequently defined by qualifying words. "Journey" is usually applied to travel by land, as opposed to "voyage," travel by sea. The early use of "journey" for a day's work, or the amount produced by a day's work, is still found in glassmaking, and also at the British Mint, where a "journey" is taken as equivalent to the coinage of 15 lb of standard gold, 70 lb of silver, and of 60 lb of silver. The term "journeyman" also preserves the original significance of the word. It distinguishes a qualified workman or mechanic from an "apprentice" on the one hand and a "master" on the other, and is applied to one who is employed by another person to work at his trade or occupation at a day's wage.

JOUVENET, JEAN (1647-1717), French painter, born at Rouen, came of a family of artists, one of whom had taught Poussin. He early showed remarkable aptitude for his profession, and, on arriving in Paris, attracted the attention of Le Brun, by whom he was employed at Versailles, and under whose auspices, in 1675, he became a member of the Académie Royale, of which he was elected professor in 1681, and one of the four perpetual rectors in 1707. The great mass of works that he executed, chiefly in Paris, many of which, including his celebrated Miraculous Draught of Fishes (engraved by Audran; also Landon, Aquarelles, i, 43), are now in the Louvre, show his fertility in invention and execution, and also that he possessed in a high degree that general dignity of arrangement and style which distinguished the school of Le Brun. Jouvenet died on the 5th of April 1717, having been forced by paralysis during the last four years of his life to work with his left hand.

See Mém. inéd. acad. roy. de p. et de sc., 1854, and D'Argenville, Vies des peintres.

JOY, VICTOR JOSEPH ÉTIENNE (1764-1846), French dramatist, was born at Jouy, near Versailles, on the 12th of September 1764. At the age of eighteen he received a commission in the army, and sailed for South America in the company of the governor of Guiana. He returned almost immediately to France to complete his studies, and re-entered the service two years later. He was sent to India, where he met with many romantic adventures which were afterwards turned to literary account. On the outbreak of the Revolution he returned to France and served with distinction in the early campaigns, attaining the rank of adjutant-general. He drew suspicion on himself, however, by refusing to honour the toast of Marat, and had to fly for his life. At the fall of the Terror he resumed his commission but again fell under suspicion, being accused of treasonable correspondence with the English envoy, James Hastings, 1st earl of Malmsbury who had been sent to France to negotiate terms of peace. He was acquitted of this charge, but, weary of repeated attacks, resigned his position on the pretext of his numerous wounds. Jouy now turned his attention to literature, and produced in 1807 with immense success his opera La vestale (music by Spontini). The piece ran for a hundred nights, and was characterized by the Institute of France as the best lyric drama of the day. Other operas followed, but none obtained so great a success. He published in the Gazette de France a series of satirical sketches of Parisian life, collected under the title of L'Ermité de la Chaussée d'Antin, ou observations sur les mœurs et les usages français au commencement du xixè siècle (1812-1814, 5 vols.), which was warmly received. In 1821 his tragedy of Sylva gained a triumph due in part to the genius of Talma, who had studied the title rôle from Napoleon. Under the Restoration Jouy consistently fought for the cause of freedom, and if his work was overrated by his contemporaries, they were probably influenced by their respect for the author himself. He died in rooms set apart for his use in the palace of St Germain-en-Laye on the 4th of September 1846.

Out of the long list of his operas, tragedies and miscellaneous writings may be mentioned, Fernand Cortes (1809), opera, in collaboration with J. E. Esménard, music by Spontini; Tippo Sabh, tragedy (1813); Bélisaire, tragedy (1818); Les Héros de mon enfance (1837), in collaboration with Antoine Javonel; La princesse inconnue, tragedy (1842); Guillaume Tell (1829), with Hippolyte Bis, for the music of Rossini. Jouy was also one of the founders of the Biographie nouvelle des contemporains.

JOVELLANOS (or Jove LLanos), GASPAR MELCHOR DE (1744-1811), Spanish statesman and author, was born at Gijon in Asturias, Spain, on the 5th of January 1744. Selecting as his profession, he studied at Oviedo, Avila, and Alcalá, and in 1767 became criminal judge at Seville. His integrity and ability were rewarded in 1778 by a judgeship in Madrid, and in 1780 by appointment to the council of the Audiencia of the island of Cuba. In the early years of his life Jovellanos took a good place in the literary and scientific societies; for the society of friends of the country he wrote in 1787 his most valuable work, Informe sobre un proyecto de ley agraria. Involved in the disgrace of his friend, Francois Cabarrus, Jovellanos spent the years 1790 to 1797 in a sort of banishment at Gijon, engaged in literary work and in founding the Asturian institution for agricultural, industrial, social and educational reform throughout his native province. This institution continued his darling project up to the latest hours of his life. Summoned again to public life in 1797, Jovellanos refused the post of ambassador to Russia, but accepted that of minister of state and justice, under the "prince of the peace," whose attention had been directed to him by Cabarrus, then a favourite of Godoy. Displeased with Godoy's policy and conduct Jovellanos combined with his colleague Saavedra to procure his dismissal. Godoy returned to power in 1798; Jovellanos was again sent to Gijon, but in 1801 was thrown into prison in Majorca. The revolution of 1808, and the advance of the French into Spain, set him once more at liberty. Joseph Bonaparte, on mounting the Spanish throne, made Jovellanos the most brilliant offers; but the latter, sternly refusing them all, joined the patriotic party, became a member of the central junta, and contributed to reorganize the cortes. This accomplished, the junta at once fell under suspicion, and Jovellanos was involved in its fall. To expose the conduct of the cortes, and to defend the junta and himself were the last labours of his pen. In 1811 he was enthusiastically welcomed to Gijon; but the approach of the French drove him forth again. The vessel in which he sailed was compelled by stress of weather to put in at Vega in Asturias, and there he died on the 27th of November 1811.

The poetical works of Jovellanos comprise a tragedy El pelelo, the comedy El deslucinado honrado, satire, and miscellaneous pieces, including a translation of the first book of Paradise Lost. His prose works, especially those on political and legislative economy, constitute his real title to literary fame. In them depth of thought and clear-sighted sagacity are couched in a certain Ciceronian
JOVELLAR Y SOLER, JOAQUIN (1819-1892), captain-general of Spain, was born at Palma de Mallorca, on the 28th of December 1819. At the close of his studies at the military academy he was appointed sub-lieutenant, went to Cuba as captain in 1842, returned to the War Office in 1851, was promoted major in 1853, and went to Morocco as private secretary to Marshal O'Donnell, who made him colonel in 1860 after Jovellar had been wounded at the battle of Wad el Ras. In 1863 Jovellar became under-secretary-general, in 1864 under-secretary for war; he was severely wounded in fighting the insurgents in the streets of Madrid, and rose to the rank of general of division in 1866. Jovellar adhered to the revolution, and King Amadeus made him a lieutenant-general in 1872. He absented himself from Spain when the federal republic was proclaimed, and returned in the autumn of 1873, when Castelar sent him to Cuba as governor-general. In 1874 Jovellar came back to the Peninsula, and was in command of the Army of the Centre against the Carlists when Marshal Campos went to Sagunto to proclaim Alfonso XII. General Jovellar became war minister in the first cabinet of the restoration under Canovas, who sent him to Cuba again as governor-general, where he remained until the 18th of June 1878, when the ten years' insurrection closed with the peace of Zaulon. Alfonso XII made him a captain-general, president of the council, life-senator, and governor-general of the Philippines. Jovellar died in Madrid on the 17th of April 1893.

JOVIAN (FLAVIUS JOVIANUS) (c. 332-364), Roman emperor from June 363 to February 364, was born at Singidunum in Moesia about 332. As captain of the imperial bodyguard he accompanied Julian in his Persian expedition; and on the day after that emperor's death, when the aged Sallust, prefect of the East, declined the purple, the choice of the army fell upon Jovian. His election caused considerable surprise, and it is suggested by Ammianus Marcellinus that he was wrongly identified with another Jovian, chief notary, whose name also had been put forward, or that, during the acclamations, the soldiers mistook the name Jovianus for Julianus, and imagined that the latter had recovered from his illness. Jovian at once continued the retreat begun by Julian, and, continually harassed by the Persians, succeeded in reaching the banks of the Tigris, where a junction of forces was concluded with the Persian king Shapur II. (q.v.). Five provinces which had been conquered by Galerius in 298 were surrendered, together with Nisibis and other cities. The Romans also gave up all their interests in the kingdom of Armenia, and abandoned its Christian prince Arsacis to the Persians. During his return to Constantinople Jovian was found dead in his bed at Dadastana, halfway between Anzycra and Nicaea. A surfeit of mushrooms or the fumes of a charcoal fire have been assigned as the cause of death. Under Jovian, Christianity was established as the state religion, and the Labarum of Constantine again became the standard of the army. The statement that he issued an edict of toleration, to the effect that, while the exercise of magical rites would be severely punished, his subjects should enjoy full liberty of conscience, rests on insufficient evidence. Jovian entertained a great regard for Athanasius, whom he reinstated on the archiepiscopal throne, despite the fact that he had been a state-sinner in the Catholic faith. In Syriac literature Jovian became the hero of a Christian romance (G. Hoffmann, Juliusus der Abtrünnige, 1880).

Jovinianus, or Jovianus, a Roman monk of heterodox views, who flourished during the latter half of the 4th century. All our knowledge of him is derived from a passionately hostile polemic of Jerome (Adv. Jovianum, Libri II.), written at Bethlehem in 393, and without any personal acquaintance with the man assailed. According to this authority Jovinian in 388 was living at Rome the celibate life of an ascetic monk, possessed a good acquaintance with the Bible, and was the author of several minor works, but, undergoing an heretical change of view, afterwards became a self-indulgent Epicurean and unrefined sensualist. The views which excited this denunciation were mainly these: (1) Jovinian held that in point of merit, so far as their domestic state was concerned, virgins, widows and married persons who had been baptized into Christ were on a precisely equal footing; (2) those who with full faith have been regenerated in baptism cannot be overthrown (or, according to another reading, tempted) of the devil; (3) to abstain from meats is not more praiseworthy than thankfully to enjoy them; (4) all who have preserved their baptismal grace shall receive the same reward in the kingdom of heaven. Jovinian thus indicates a natural and vigorous reaction against the exaggerated asceticism of the 4th century, a protest shared by Helvidius and Vigilantius. He was condemned by a Roman synod under Bishop Siricius in 398, and afterwards excom municated by another at Milan under the presidency of Ambrose. The year of his death is unknown, but he is referred to as no longer alive in Jerome's Contra Vigilantium (406).

JOVUS, PAULUS, or PAOLO GIOVIO (1483-1552), Italian historian and biographer, was born of an ancient and noble family at Como on the 19th of April 1483. His father died when he was a child, and Giovio owed his education to his brother Benedetto. After studying the humanities, he applied himself to medicine and philosophy at his brother's request. He was Pomponazzi's pupil at Padua; and afterwards he took a medical degree in the university of Pavia. He exercised the medical profession in the Abruzzi for a time, and the attractions of the study led him irreversibly to Giovio, and he was bent upon becoming the historian of his age. He presented a portion of his history to Leo X., who read the MS., and pronounced it superior in elegance to anything since Livy. Thus encouraged, Giovio took up his residence in Rome, and attached himself to Cardinal Giulio de' Medici, the pope's nephew. The next pope, Adrian VI., gave him a canonry in Como, on the condition, it is said, that Giovio should mention him with honour in his history. This patronage from a pontiff who was averse from the current tone of Italian humanism proves that Giovio at this period passed for a man of sound learning and sober manners. After Adrian's death, Giulio de' Medici became pope as Clement VII. and assigned him chambers in the Vatican, with maintenance for servants befitting a courtier of rank. In addition to other benefits, he finally, in 1528, bestowed on him the bishopric of Nocera. Giovio had now become in a special sense dependent on the Medici. He was employed by that family on several missions—as when he accompanied Ippolito to Bologna on the occasion of Charles V's coronation, and Caterina to Marseilles before her marriage to the duke of Orleans. During the siege of Rome in 1527 he attended Clement in his flight from the Vatican. While crossing the bridge which connected the palace with the castle of S. Angelo, Giovio threw his mantle over the pope's shoulders in order to disguise his master.

In the sack he suffered a serious pecuniary and literary loss, if we may credit his own statement. The story runs that he deposited the MSS. of his history together with some silver in a box at San Giovanni Minerva for safety. This box was discovered by two Spaniards, one of whom secured the silver, while the other, named Herrera, knowing who Giovio was, preferred to hold the MSS. for ransom. Herrera was elated, however, as to throw away the shreds he found in paper, reserving only that portion of the work which was transcribed on parchment. This he subsequently sold to Giovio in exchange for a benefice at Cordova, which Clement VII. conceded to the Spaniard. The value of the MSS. to Giovio was immense; he bought them back, and paid the Spaniard who sold them to him. Herrera, being asked how he found the MSS. Giovio contented himself with indicating their substance in a summary. Perhaps he was not unwilling that his work should resemble that of Livy, even in its imperfection. But

1 See, more fully, Harnack, Hist. of Dogma, v. 57.
doubt rests upon the whole of this story. Apostle Zeno affirms that in the middle of the last century three of the missing books turned up among family papers in the possession of Count Giov. Batt. Giovio, who wrote a panegyric on his ancestor. It is therefore not improbable that Giovio possessed his history intact, but preferred to withhold from publication those portions which might have involved him in difficulties with living persons of importance. The omissions were afterwards made good by Curtio Marinello in the Italian edition, published at Venice in 1581. But whether Marinello was the author of these additions is not known.

After Clement's death Giovio found himself out of favour with the next pope, Paul III. The failure of his career is usually ascribed to the irregularity of the life he led in the literary society of Rome. We may also remember that Paul had special causes for animosity against the Medici, whose servant Giovio had been. Despairing of a cardinal's hat, Giovio retired to his villa on the lake of Como, where he spent the wealth he had acquired from donations and benefices in adorning his villa with curiosities, antiquities and pictures, including a very important collection of portraits of famous soldiers and men of letters, now almost entirely dispersed. He died upon a visit to Florence in 1532.

Giovio's principal work was the History of His Own Times, from the invasion of Charles VIII. to the year 1547. It was divided into two parts, the first containing from the year 1426 to 1494, the second from 1495-1547. Of the first part only v.-x. of part i. were said by him to have been lost in the sack of Rome, while books xix.-xxiv. of part ii., which should have embraced the period from the death of Leo to the sack, were never written. Giovio's history of the Lateran was written by his friar, S. Adrian, Alfonso I. of Ferrara, and several other personages of importance. But he alleged that the history of that period was too painful to be written in full. His first published work, printed in 1536, was the treatise De priore romae. On his retirement to Como he produced a valuable series of biographies, entitled Elogia virorum illustrium. They commemorate men distinguished for letters and arms, selected from all periods, and are said to have been written in illustration of portraits collected for the museum of his villa at Como. Besides these books, we may mention a biographical history of the Visconti, lords of Milan, an essay on mottoes and badges; a dissertation on the state of Turkey; a large collection of familiar epistles; together with descriptions of British society, the Lake of Como, and Giovio's own villa. The titles of these miscellanies will be found in the bibliographical note appended to this article.

Giovio preferred Latin in the composition of his more important works. Though contemporary with Machiavelli, Guicciardini and Varchi, he adhered to humanistic usages, and cared more for the Latinity than for the matter of his histories. His style is fluent and sonorous rather than pointed or grave. Parly owing to the rhetorical defects inherent in this choice of Latinity, when Italian had gained the day, but more to his own untrustworthy and shallow character, Giovio takes a lower rank as historian than the bulk and prestige of his writings would seem to warrant. He professed himself a flatterer and a ham- pooner, writing fulsome eulogies on the princes who paid him well, while he ignored or criticized those who proved less generous. The old story that he said he kept a golden and an iron pen, to use according as people paid him, condenses the truth in epigram. His private morals were of a dubious character, and as a writer he had the faults of the elder humanists, in combination with that literary cynicism which reached its height in Aretino; and therefore his histories and biographical essays are not to be used as authorities, without corroboration. Yet Giovio's works, taken in their entirety and with proper reservation, have real value. To the student of Italy they yield a lively picture of the manners and the feeling of the times in which he lived, and in which he played no obscure part. They abound in vivid sketches, telling anecdotes, fugitive comments, which unite a certain charm of autobiographical romance with the worldly wisdom of an experienced courtier. A flavour of personality makes them not unpleasant reading. While we learn to despise and mistrust the man in Giovio, we appreciate the author. It would not be difficult to sketch him described as a sort of 16th-century Horace Walpole.

BIBLIOGRAPHY. The sources of Giovio's biography are: his own works; Traboschi's History of Italian Literature; I'ta's Genealogy of Illustrious Italian Families; and Giov. Batt. Giovio's Uomini illustri della diocesi Comasco, Modena (1784). Cicogna, in his Delle inserzioni Venesiane raccolta (Venice, 1830), gives a list of Giovio's works, from which the following notices are extracted: 1. Works in Latin: (1) Pauli Josii historiarum sui temporis, ab anno 1404 ad an. 1547 (Florence 1550-1552), the same translated into Italian by L. Domenichi, and first published at Florence (1551), afterwards at Venice; (2) Historiae Helveticae, published at Florence (1548), translated by Domenichi (Florence, 1549); (3) Vitae XII. vicecomitum Mediolani principum (Paris, 1540), translated by Domenichi (Venice, 1549); (4) Vita Sforiae clariss.ducis (Rome, 1549), translated by Domenichi (ibid., 1551); (5) Vita magni Consilii (ibid., 1549), translated by Domenichi (ibid., 1550); (6) Alensi Atieni., &c. (ibid., 1550), Italian translation by Giov. Tanasius; (7) Vitae gentis de Domenichi (ibid., 1551), translated by Domenichi (ibid., 1554); (8) Elogia clarorum virorum, &c. (Venice, 1546) (these are biographies of men of letters, translated by Hippolito Orio of Ferrara (Florence, 1552); (10) Libellus de vita et morte Beat. Monsignori Leonis (Venice, 1546); (11) Descrip. Luris Lucis (Venice, 1550); (12) Descrip. Britanniacae, &c. (Venice, 1548); (13) De piscibus romanis (Rome, 1524); (14) Descrip. incogniti quorum etiam regionum atque locorum (Basel, 1571).

JOWETT, BENJAMIN (1817-1893), English scholar and theologian, master of Balliol College, Oxford, was born in Cambridge on the 15th of April 1817. His father was one of a Yorkshire family who, for three generations, had been supporters of the Evangelical movement in the Church of England. His mother was a Langhorne, in some way related to the poet and translator of Plutarch. At twelve the boy was placed on the foundation of St Paul's School (then in St Paul's Churchyard), and in his nineteenth year he obtained an open scholarship at Balliol. In 1838 he gained a fellowship, and graduated with first-class honours in 1840. Brought up amongst pious Evangelicals, he came to Oxford at the height of the Tractarian movement, and the friendship of W. G. Ward was drawn for a time in the direction of High Anglicanism; but a stronger and more lasting influence was that of the Arnold school, represented by A. P. Stanley. Jowett was thus led to concentrate his attention on theology, and in the summers of 1845 and 1846, spent in Germany with Stanley, he became an eager student of German criticism and speculation. Amongst the writings of that period he was most impressed by those of F. C. Baur. But he never ceased to exercise an independent judgment, and his work on St Paul, which appeared in 1855, was the result of much original reflection and inquiry. He was appointed to the Greek professorship in the autumn of that year. He had been a tutor of Balliol and a clergyman since 1842, and had devoted himself to the work of tuition with unexampled zeal. His pupils became his friends for life. He discerned their capabilities, studied their characters, and sought to remedy their defects by frank and searching criticism. Like another Socrates, he taught them to know themselves, helping them to judge their own strength and weakness by themselves and by others. He was singularly successful, and attaching all alike by his unobtrusive sympathy. This work gradually made a strong impression, and those who cared for Oxford began to speak of him as "the great tutor." As early as 1839 Stanley had joined with Tait, the future archbishop, in advocating certain university reforms. From 1846 onwards Jowett threw himself into this movement, which in 1848 became general amongst the younger and more thoughtful fellows, until it took effect in the commission of 1850 and the act of 1854. Another educational reform, the opening of the Indian civil service to competition, took place at the same time, and Jowett was one of the commission. He had two brothers who served and died in India, and he never ceased to take a deep and practical interest in Indian affairs. A great disappointment, his repulse for the mastership of Balliol, also in 1854, appears to have roused him into the completion of his book on The Epistles of St Paul. This work, described by one of his friends as "a miracle of boldness," is full of originality and suggestiveness, but its publication

(Continued on next page)
awakened against him a storm of theological prejudice, which followed him more or less through life. Instead of yielding to this, he joined with Henry Bristow Wilson and Rowland Williams, who had been similarly attacked, in the production of the volume known as Essays and Reviews. This appeared in 1860 and gave rise to a strange outbreak of fanaticism. Jowett's loyalty to those who were prosecuted on this account was no less characteristic than his persistent silence while the augmentation of his salary as Greek professor was withheld. This petty persecution was continued until 1865, when E. A. Freeman and Charles Elton discovered by historical research that a breach of the conditions of the professorship had occurred, and Christ Church raised the endowment from £40 a year to £500. Meanwhile Jowett's influence at Oxford had steadily increased. It culminated in 1864, when the country clergy, provoked by the final acquittal of the essayists, had voted in convocation against the endowment of the Greek chair. Jowett's pupils, who were now drawn from the university at large, supported him with the enthusiasm which young men feel for the victim of injustice. In the midst of other labours Jowett had been quietly exerting his influence so as to conciliate all shades of liberal opinion, and bring them to bear upon the abolition of the theological test, which was still required for the M.A. and other degrees, and for university and college offices. He spoke at an important meeting upon this question in London on the 10th of June 1864, which laid the ground for the University Tests Act of 1871. In connexion with the Greek professorship Jowett had undertaken a work on Plato which grew into a complete translation of the Dialogues, with introductory essays. At this he laboured in vacation time for at least ten years. But his interest in theology had not abated, and his thoughts found an outlet in occasional preaching. The university pulpit, indeed, was closed to him, but several congregations in London delighted in his sermons, and from 1866 until the year of his death he preached annually in Westminster Abbey, where Stanley had become dean in 1863. Three volumes of selected sermons have been published since his death. The years 1865-1870 were occupied with assiduous labour. Amongst his pupils at Balliol were men destined to high positions in the state, whose parents had thus shown their confidence in the supposed heretic, and gratitude on this account was added to other motives for his unspurning efforts in tuition. In 1870, by an arrangement which he attributed to his friend Robert Lowe, afterwards Lord Sherbrooke (at that time a member of Gladstone's ministry), Scott was promoted to the deanship of Rochester and Jowett was elected to the vacant mastership by the fellows of Balliol. From the vantage-ground of this long-occupied position the Plato was published in 1871. It had a great and well-deserved success. While scholars criticized particular renderings (and there were many small errors to be removed in subsequent editions), it was generally agreed that he had succeeded in making Plato an English classic.

If ever there was a beneficent despotism, it was Jowett's rule as master. Since 1866 his authority in Balliol had been really paramount, and various reforms in college had been due to his initiative. The opposing minority were now powerless, and the younger fellows who had been his pupils were more inclined to follow him than others would have been. There was no obstacle to the continued exercise of his firm and reasonable will. He still knew the undergraduates individually, and watched their progress with a vigilant eye. His influence in the university was less assured. The pulpit of St Mary's was no longer closed to him, but the success of Balliol in the schools gave rise to jealousy in other colleges, and old prejudices did not suddenly give way; while a new movement in favour of "the endowment of research" ran counter to his immediate purposes. Meanwhile, the tutorships in other colleges, and some of the headships also, were being filled with Balliol men, and Jowett's former pupils were prominent in both houses of parliament and at the bar. He continued the practice, which he had commenced in 1848, of taking with him a small party of undergraduates in vacation time, and working with them in one of his favourite haunts, at Askrigg in Wensleydale, or Tumbl Bridge, or later at West Malvern. The new hall (1876), the organ there, entirely his gift (1885), and the cricket ground (1880), remain as external monuments of the master's activity. Neither business nor the many claims of friendship interrupted literary work. The six or seven weeks of the long vacation, during which he had pupils with him, were mainly employed in writing. The translation of Aristotle's Politics, the revision of Plato, and, above all, the translation of Thucydides many times revised, occupied several years. The edition of the Republic, undertaken in 1856, remained unfinished, but was continued with the help of Professor Lewis Campbell. Other literary schemes of larger scope and deeper interest were long in contemplation, but were not destined to take effect—an Essay on the Religions of the World, a Commentary on the Gospels, a Life of Christ, a volume on Moral Ideas. Such plans were frustrated, not only by his practical avocations, but by his determination to finish what he had begun, and the fastidious self-criticism which it took so long to satisfy. The book on Morals might, however, have been written but for the heavy burden of the vice-chancellorship, which he was induced to accept in 1882, by the hope, only partially fulfilled, of securing useful improvements for the university. The vice-chancellor was ex officio a delegate of the press, where he hoped to effect much; and a plan for draining the Thames Valley, which he had now the power of initiating, was one on which his mind had dwelt for many years. The exhausting labours of the vice-chancellorship were followed by an illness (1887); and after this he relinquished the hope of producing any great original writing. His literary industry was thenceforth confined to his commentary on the Republic of Plato, and some essays on Aristotle which were to have formed a companion volume to the translation of the Politics. The essays which should have accompanied the translation of Thucydides were never written. Jowett, who never married, died on the 1st of October 1893. The funeral was one of the most impressive ever seen in Oxford. The pall-bearers were seven heads of colleges and the provost of Eton, all old pupils.

Theologian, tutor, university reformer, a great master of a college, Jowett's best claim to the remembrance of succeeding generations was his greatness as a moral teacher. Many of the most prominent Englishmen of the day were his pupils and owed much of what they were to his precept and example, his penetrative sympathy, his insistent criticism, and his unwearying friendship. Seldom have ideal aims been so steadily pursued with so clear a recognition of practical limitations. Jowett's theological work was transitional, and yet has an element of permanence. As has been said of another thinker, he was "one of those deeply religious men who, when crude theological notions are being revised and called in question seek to put new life into theology by wider and more humane ideas." In earlier life he had been a zealous student of Kant and Hegel, and to the end he never ceased to cultivate the philosophic spirit; but he had little confidence in metaphysical systems, and sought rather to translate philosophy into the wisdom of life. As a classical scholar, his scorn of littlenesses sometimes led him into the neglect of minutaæ, but he had the higher merit of interpreting ideas. His place in literature rests really on the essays in his Plato. When their merits are fully recognized, it will be found that his work, as a teacher of his countrymen, extends far beyond his own generation.

See The Life and Letters of Benjamin Jowett, by E. A. Abbott and Lewis Campbell (1897); Benjamin Jowett, by Lionel Tollemache (1895).

JOYEUSE, a small town in the department of Ardèche, France, situated on the Baume, a tributary of the Ardèche, is historically important as having been the seat of a noble French family which derived its name from it. The lordship of Joyeuse came, in the 13th century, into the possession of the house of Châteauneuf-Randon, and was made into a viscountship in 1432. Guillaume, viscount of Joyeuse, was bishop of Alet, but afterwards left the church, and became a marshall of France; he died in 1592. His eldest son Anne de Joyeuse (1561-1589), was one of the favourites of Henry III. of France, who created him duke
and peer (1581), admiral of France (1582), and governor of Normandy (1586), and married him to Marguerite de Lorraine-Vaudemont, younger sister of the queen. He gained several successes against the Huguenots, but was recalled by court intrigues at an inopportune moment, and when he marched a second time against Henry of Navarre he was defeated and killed at Coutras. Guillaume had three other sons: François de Joyeuse (d. 1613), cardinal and archbishop of Narbonne, Lorraine, and Rouen, who brought about the marriage of Henry IV. with the pape; Henri, count of Bouchage, and later duke of Joyeuse, who first entered the army, then became a Capuchin under the name of Père Ange, left the church and became a marshal of France, and finally re-entered the church, dying in 1608; Antoine Scipion, grand prior of Toulouse in the order of the knights of Malta, who was one of the leaders in the League, and died in the retreat of Villeroy (1592). Henriette Catherine de Joyeuse, daughter of Henri, married in 1611 Charles of Lorraine, duke of Guise, to whom she brought the duchy of Joyeuse. On the death of her great-grandson, François Joseph de Lorraine, duke of Guise, in 1675, without issue, the duchy of Joyeuse was declared extinct, but it was revived in 1714, in favour of Louis de Melun, prince of Épinoy. (M. P.)

JOYEUSE ENTRÉE, a famous charter of liberty granted to Brabant by Duke John III. in 1354. John summoned the representatives of the cities of the duchy to Louvain to announce to them the marriage of his daughter and heiress Jeanne of Brabant to Wenceslaus duke of Luxembourg, and he offered them liberal concessions in order to secure their assent to the change of dynasty. John III. died in 1355, and Wenceslaus and Jeanne on the occasion of their state entry into Brussels solemnly swore to observe all the provisions of the charter, which had been drawn up. From the occasion on which it was first proclaimed this charter has since been known in history as La Joyeuse Entrée. By this document the dukes of Brabant undertook to maintain the integrity of the duchy, and not to wage war, make treaties, or impose taxes without the consent of their subjects, as represented by the municipalities. All members of the duke's council were to be native-born Brabanters. This charter became the model for other provinces and the bulwark of the liberties of the Netherlands. Its provisions were modified from time to time, but remained practically unchanged from the reign of Charles V. onwards. The ill-advised attempt of the emperor Joseph II. in his reforming zeal to abrogate the Joyeuse Entrée caused a revolt in Brabant, before which he had to yield.

See E. Poulet, La Joyeuse entrée, ou constitution Brabanconne (1862).

JUAN FERNANDEZ ISLANDS, a small group in the South Pacific Ocean, between 33° and 34° S., 80° W., belonging to Chile and included in the province of Valparaiso. The main island is called Mas-a-Tierra (Span. “more to land”) to distinguish it from a smaller island, Mas-a-Fuera (“more to sea”), 100 m. farther west. Off the S.W. of Mas-a-Tierra lies the islet of Santa Clara. The aspect of Mas-a-Tierra is beautiful; only 13 m. in length by 4 m. in width, it consists of a series of precipitous rocks rudely piled into irregular blocks and pinacles, and strongly contrasting with a rich vegetation. The highest of these, 3225 ft., is called, from its massive form, El Yunque (the anvil). The rocks are volcanic. Cumberland Bay on the north side is the only fair anchorage, and even there, from the great depth of water, there is some risk. A wide valley collecting streams from several of the ravines on the north side of the island opens into Cumberland Bay, and is partially enclosed and cultivated. The inhabitants number only some twenty.

The flora and fauna of Juan Fernandez are in most respects Chilean. There are few trees on the island, for most of the valuable indigenous trees have been practically exterminated, such as the sandalwood, which the earlier navigators found one of the most valuable products of the island. Ferns are prominent among the flora, about one-third of which consists of endemic species. There are no indigenous land mammals. Pigs and goats, however, with cattle, horses, asses and dogs, have been introduced, have multiplied, and in considerable numbers run wild. Sea-urchins and fur-seals were formerly plentiful. Of birds, a tyrant and a humming-bird (Eupetomena fernandensis) are peculiar to the group, while another humming bird (E. galerites), a thrush, and some birds of prey also occur in Chile. E. fernandensis has the peculiarity that the male is of a bright cinnamon colour, while the female is green. Both sexes are green in E. galerites. The latter was discovered by a Spanish pilot of that name in 1563. Fernandez obtained from the Spanish government a grant of the islands, where he resided for some time, stocking them with goats and pigs. He soon, however, appears to have abandoned his possessions, which were afterwards for many years only visited occasionally by fishermen from the coasts of Chile and Peru. In 1610 Jacob le Maire and Willem Cornelis Schouten called at Juan Fernandez for water and fresh provisions. Pigs and goats were then abundant on the islands. In February 1700 Dampier called at Juan Fernandez and while there Captain Stradling of the “Cinque Porte” galley quarrelled with his men, forty-two of whom deserted but were afterwards taken on board by Dampier; five seamen, however, remained on shore. Other parties had previously colonized the islands but none had remained permanently. In October 1704 the “Cinque Porte” returned and found two of these men, the others having been apparently captured by the French. On this deal, after avoir Andersteds quarrelled with his men (a.E.), who, at his own request, became the island’s most famous colonist, for his adventures are commonly believed to have inspired Daniel Defoe’s Robinson Crusoe. Among later visits, that of Commodore Anson, in the “Centurion” (June 1741) led, on his return home, to a proposal to form an English settlement on Juan Fernandez; but the Spaniards, hearing that the matter had been mooted in England, gave orders to occupy the island, and it was garrisoned accordingly in 1750. Philip Carteret first observed this settlement in May 1767, and on account of the hostility of the Spaniards preferred to put in at Mas-a-Fuera. After the establishment of the independence of Chile at the beginning of the 19th century, Juan Fernandez passed into the possession of that country. On more than one occasion before 1840 Mas-a-Tierra was used as a state prison by the Chilean government.

JUANGS (Patuas, literally “leaf-wearers”), a jungle tribe of Orissa, India. They are found in only two of the tributary states, Madiakul and Koenjhar, most of them in the latter. Their language belongs to the Munda family. They have no traditions which connect them with any other race, and they repudiate all connexion with the Hos or the Santals, declaring themselves the aborigines. They say the headquarters of the tribe is the Gonasika. In manners they are among the most primitive people of the world, representing the Stone age in our own day. They do not till the land, but live on the game they kill or on snakes and vermin. Their huts measure about 6 ft. by 8 ft., with very low doorways. The interior is divided into two compartments. In the first of these the father and all the females of a family huddle together; the second is used as a store-room. The boys have a separate hut at the entrance to the village, which serves as a guest-house and general assembly place where the musical instruments of the village are kept. Physically they are small and weak-looking, of a reddish-brown colour, with flat faces, broad noses with wide nostrils, large mouths and thick lips, the women being rudely and frizzly. The women until recently wore nothing but girdles of leaves, the men, a diminutive bandage of cloth. The Juangs declare that the river goddess, emerging for the first time from the Gonasika rock, surprised a party of naked Juangs dancing, and ordered them to wear leaves, with the threat that they should die if they ever gave up the custom. The Juangs’ weapons are the bow and arrow and a primitive sling made entirely of cord. Their religion is a vague belief in forest spirits. They offer fowls to the sun when in trouble and to the earth for a bountiful harvest. Polygamy is rare. They burn their dead and throw the ashes into any running stream. The most sacred oaths a Juang can take are those on an ant-hill or a tiger-skin.

See E. W. Dalton, Descriptive Ethnology of Bengal (1872).
JUAN MANUEL, DON (1282-1349), infante of Castile, son of the infante Don Manuel and Beatriz of Savoy, and grandson of St. Ferdinand, was born at Escalonza on the 5th of May 1282. He father died in 1284, and the young prince was educated at the court of his cousin, Sancho IV., with whom his precocious ability made him a favourite. In 1294 he was appointed adelantado of Murcia and in his fourteenth year served against the Moors at Granada. In 1304 he was entrusted by the queen-mother, Doña Maria de Molina, to conduct political negotiations with James II. of Aragon on behalf of her son, Ferdinand IV., then under age. His diplomacy was successful and his marriage to James II.'s daughter, Constantina, added to his prestige. On the death of Ferdinand IV. and of the regents who governed in the name of Alphonso XI., Don Juan Manuel acted as guardian of the king who was proclaimed of age in 1325. His ambitious design of continuing to exercise the royal power was defeated by Alphonso XI., who married the ex-regent's daughter Constanza, and removed his father-in-law from the scene by nominating him adelantado mayor de la frontera. Alphonso XI.'s repudiation of Constanza, whom he imprisoned at Toro, drove Don Juan Manuel into opposition, and a long period of civil war followed. On the death of his wife Constantina in 1327, Don Juan Manuel strengthened his position by marrying Doña Blanca de la Cerda; he secured the support of Juan Núñez, alferez of Castile, by arranging a marriage between him and Maria, daughter of Don Juan el Tuerto; he won over Portugal by promising the hand of his daughter, the ex-queen Constantia, to the infant of that kingdom, and he entered into alliance with Mahomet III. of Granada. This formidable coalition compelled Alphonso XI. to sue for terms, which he accepted in 1328 without any serious intention of complying with them; but he was compelled to release Doña Constanza. War speedily broke out anew, and lasted till 1332, when Alphonso XI. invited Juan Manuel and Juan Núñez to a banquet at Villahumbras with the intention, it was believed, of assassinating them; the plot failed, and Don Juan Manuel joined forces with Peter IV. of Aragon. He was besieged by Alphonso XI. at Garci-Núñez, whence he escaped on the 30th of July 1336, fled into exile, and kept the rebellion alive till 1338, when he made his peace with the king. He proved his loyalty by serving in further expeditions against the Moors of Granada and Africa, and died a tranquil death in the first half of 1349.

Distinguished as an astute politician, Don Juan Manuel is an author of the highest eminence, and, considering the circumstances of his stormy life, his voluminousness is remarkable. The Libro de los cabios, a treatise called Engenos de Guerra and the Crónica abreviada, are composed between 1320 and 1327; but they have disappeared together with the Libro de la caballería (written during the winter of 1326, and the Reglas como se debe tratar, a moral treatise assigned to 1328-1334. Of his surviving writings, Juan Manuel's Crónica abreviada was compiled between 1310 and 1325, while the Libro de la casa must have been written between 1320 and 1325; and during this period of nine years the Crónica, de España, the Crónica completa, and the Tratado sobre las armas were produced. The Libro del caballero et del escudero was finished before the end of 1326; the first book of the Libro de los estados was finished on the 22nd of May 1330, while the second was begun five days later; the first book of El Conde Lucanor was written in 1338, the second in 1339, and the fourth is dated 12th of June 1335. We are unable to assign to any precise date the devotum Tractado on the Virgin, dedicated to the prior of the monastery at Penañel, to which Don Juan Manuel bequeathed his manuscripts; but it seems probable that the Libro de los frailes predicadores is slightly later than the Libro de los estados; that the Libro de los castigos (left unfinished, and therefore known by the alternative title of Libro infinito) was written not later than 1333, and that the treatise De las maneras de amor was composed between 1334 and 1337.

The historical summaries, pious dissertations and miscellaneous writings are of secondary interest. The Libro del caballero et del escudero is on another plane; it is no doubt suggested by Lull's Libre del orde de cavalleria, but the points of resemblance have been exaggerated; the morbid mysticism of Lull is rejected, and the carefully finished style justifies the special pride which the author took in this performance. The influence of Lull's Blanquerna is likewise visible in the Libro de los estados; but there are marked divergences of substance which go to prove Don Juan Manuel's acquaintance with some version (not yet identified) of the Barlaam and Josaphat legend. Nothing is more striking than the curious and varied erudition of the turbulent prince who weaves his personal experiences with historical or legendary incidents, with reminiscences of Aesop and Phaedrus, with the Disciplina clericalis, with Kallah and Dimnah, with countless Oriental traditions, and with all the material of anecdotic literature which he embodies in the Libro de patronios, best known by the title of El Conde Lucanor (the name Lucanor being taken from the prose Triton). This work (also entitled the Libro de exemplars) was first printed by Gonzalo Argo de Molina at Seville in 1575, and it revealed Don Juan Manuel as a master in the art of prose composition, and as the predecessor of Boccaccio in the province of romantic narrative. The Cento novelle antiche are earlier in date, but these anonymous tales, derived from popular stories diffused throughout the world, lack the personal character which Don Juan lends to all he touches. They are simple, unadorned variants of folk-lore items; El Conde Lucanor is essentially the production of a conscious artist, deliberate and selective in his methods. Don Juan Manuel has not Boccaccio's festive fancy nor his constructive skill; he is too persistently didactic and concerned to point a moral; but he excels in knowledge of human nature, in the faculty of ironical presentation, in tolerant wisdom and in luminous consciousness. He naturalizes the Eastern apology in Spain, and by the lasonic picturesque of his expression imports a new quality into Spanish prose which attains its full development in the hands of Juan de Valdés and Cervantes. Some of his themes are utilized for dramatic purposes by Lope de Vega in La Pobreza estimada, by Ruiz de Alarcón in La Prueba de las promesas, by Calderón in La Vida es sueño, and by Canizares in Don Juan de Espina en Milán: there is an evident, though remote, relation between the tale of the mancobe que casó con una mujer muy fuerte y muy brava and The Taming of the Shrew; and a more direct connexion exists between some of Don Juan Manuel's exemplars and some of Anderson's fairy tales.

Hirschfeld; Libro de la casa (Halle, 1880), edited by F. Hansens, Notas a la verificación de D. Juan Manuel (Santiago de Chile, 1902). The Conde Lucanor has been translated by J. Eichendorf into German (1840), by A. Puibisque into French (1854) and by J. York into English (1868). (J. F. K.)

JUAREZ, BENITO PABLO (1806-1872), president of Mexico, was born near Ixtlan, in the state of Oajaca, Mexico, on the 21st of March 1806, of full Indian blood. Early left in poverty by the death of his father, he received from a charitable friar a good general education, and afterwards the means of studying law. Beginning to practise in 1834, Juarez speedily rose to professional distinction, and in the stormy political life of his time took a prominent part as an exponent of liberal views. In 1832 he sat in the state legislature; in 1846 he was one of a legislative triumvirate for his native state and a deputy to the Mexican congress (1847-1848), and in 1847 the Mexican congress elected him governor of Oajaca. Banished in 1853 by Santa Anna, he returned to Mexico in 1855, and joined Alvarez, who, after Santa Anna's defeat, made him minister of justice. Under Comonfort, who then succeeded Alvarez, Juarez was governor of Oajaca (1855-57), and in 1857 chief Justice and secretary of the interior; and, when Comonfort was unconstitutionally replaced by Zuloaga in 1858, the chief justice, in virtue of his office, claimed to be legal president of the republic. It was not, however, till the beginning of 1861 that he succeeded in finally defeating the
unconstitutional party and in being duly elected president by congress. His decree of July 1861, suspending for two years all payments on public debts of every kind, led to the landing in Mexico of English, Spanish and French troops. The first two powers were soon induced to withdraw their forces; but the French remained, declared war in 1862, placed Maximilian upon the throne as emperor, and drove Juarez and his adherents to the northern limits of the republic. Juarez maintained an obstinate resistance, which resulted in final success. In 1867 Maximilian was taken at Querétaro, and shot; and in August Juarez was once more elected president. His term of office was far from tranquil; discontented generals stirred up ceaseless revolts and insurrections; and, though he was re-elected in 1871, his popularity seemed to be on the wane. He died of apoplexy in the city of Mexico on the 18th of July 1872. He was a statesman of integrity, ability and determination, whose good qualities are too apt to be overlooked in consequence of his connexion with the unhappy fate of Maximilian.

JUBA, the name of two kings of Numidia.

Juba I. (1st century B.C.), son and successor of Hiempsal, king of Numidia. During the civil wars at Rome he sided with Pompey, partly from gratitude because he had reinstated his father on his throne (Appian, B.C., i. 80), and partly from enmity to Caesar, who had insulted him at Rome by pulling his beard (Suet., Caesar, 71). Further, C. Scribonius Curio, Caesar's general in Africa, had openly proposed, 50 B.C., when tribune of the people, that Numidia should be sold to colonists, and the king reduced to a private station. In 49 Juba inflicted on the Caesarean army a crushing defeat, in which Curio was slain (Vell. Pat. ii. 54; Caesar, B.C. ii. 40). Juba's attention was distracted by a counter invasion of his territories by Bocchus the younger and Sittius; but, finding that his lieutenant Sabura was able to defend his interests, he rejoined the Pompeians with a large force, and shared the defeat at Thapsus. Fleeing from the field with the Roman general M. Petreius, he wandered about as a fugitive. At length, in despair, Juba killed Petreius, and sought the aid of a slave in despatching himself (46). Juba was a thorough savage; brave, treacherous, insolent and cruel. (See NUMIDIA.)

Juba II., son of the above. On the death of his father in 46 B.C. he was carried to Rome to grace Caesar's triumph. He seems to have received a good education under the care of Augustus who, in 29, after Mark Antony's death, gave him the hand of Cleopatra Selene, daughter of Antony and Cleopatra, and placed him on his father's throne. In 25 however, he transferred him from Numidia to Mauretania, to which was added a part of Gaetulia (see NUMIDIA). Juba seems to have reigned in considerable prosperity, though in A.D. 6 the Gaetulians rose in a revolt of sufficient importance to afford the surname Gaeticus to Cornelius Lentulus Cossus, the Roman general who helped to suppress it. The date of Juba's death is by no means certain; it has been put between A.D. 19 and 24 (Strabo, xvii. 828; Dio Cassius, li. 15; liti. 26; Plutarch, Ant. 87; Caesar, 55). Juba, according to Pliny, who constantly refers to him, is mainly memorable for his writings. He has been called the African Varro.

He wrote many historical and geographical works, of which some seem to have been voluminous and of considerable value on account of the sources to which their authors had access: (1) "Romaicai ἱστορίαι"; (2) "Ἀραβικαί;" (3) "Ἁλδαί;" (4) "De Arabia sive De expeditione arabica;" (5) "Πυθικαὶ ἱστορίαι;" (6) "Περὶ ὁμοίων;" (7) "Περὶ ἀγαθομοιοίων;" (8) "Θεοτοκικαί ἱστορίαι;" (9) Ομοθέτης; (11) "Περὶ ὅθος ἐλευθερίας;" (12) "Εὐτυχομελία." Fragments and life in Müller, Frag. Hist. Graec., vol. iii.; see also Sevigné, Mém. de l'Acad. royale des inscriptions, iv.; Hullemann, De vita et scriptis Jubaee (1846). For the death of Juba II. found in El Ksar on the coast of Morocco see Dieudonné in Revue Numism., (1908), pp. 350 seq. They are interesting mainly as throwing light on the chronology of the reign.

JUBA, or JUB, a river of East Africa, exceeding 1000 m. in length, rising on the S.E. border of the Abyssinian highlands and flowing S. across the Galla and Somali countries to the sea. It is formed by the junction of three streams, all having their source in the mountain range N.E. of Lake Rudolf which is the water-parting between the Nile basin and the rivers flowing to the Indian Ocean.

Of the three headstreams, the Web, the Ganale and the Daua, the Ganale (or Caesara) is the central river and the true upper course of the Juba. It has two chief branches, the Black and the Great Ganale. The last-named, the most remote source of the river, rises in 7° 30' N., 38° E. at an altitude of about 750 ft., the crest of the mountains rising to 2500 ft. A steep rocky section, cut by a sheet of water flowing at a brisk and rapid pace, is bounded with a swift current and many rapids. The banks are clothed with dense jungle and the hills beyond with thorn-bush. Lower down the river has formed a narrow valley, 1500 to 2000 ft. below the level of the country, long the course of the Ganale has the limits of a grass plain which extends south of the valley of the Daua and occupies all the country eastward to the junction of the two rivers. In this plain the Ganale makes a more or less straight course towards its general S.-E. course. East of 42° E. in 12° 12' N. it is joined by the Web on the left or eastern bank, and about 10 m. lower down the Daua enters on the right bank.

The Web rises in the mountains chain a little S. and E. of the sources of the Ganale, and some 40 m. from its source passes, first, through a cañon 300 ft. deep, and then through a series of remarkable underground caves hollowed out of a quartz mountain and, with their arches and white columns, presenting the appearance of a carved temple. The Daua (or Dava) is formed from the mountain torrents which have their rise S. and W. of the Ganale and is of similar character to that river. It has few feeders and none of any size. The descent to the open country is somewhat abrupt. In its middle reaches the Luba has a water fall about 200 ft. below on the left, over which the river cascades, and continues on its way, somewhat shallow and meandering, as far as the mouth of the Gana. Lower down the Luba has a depth of 45 m. The country is somewhat hilly, and the river is too meandering and too sluggish to be navigable. Lower than the mouth of the Luba the Daua is navigable for some 50 m.

Below the Daua the river now known as the Juba, receives no tributary of importance. It flows in a broad channel, especially towards the west, by the escarpments of a high plateau, and containing the towns of Lugh (in 3° 50' N., the centre of active trade), Bardera, 357 m. above the mouth, and Saranli—last two on opposite banks—below which the Luba enters on the right. Beyond 1° 45' S., the country becomes more level and the course of the river very tortuous. On the west a series of small lakes and backwaters receives water from the Juba during the rains. Just south of the equator channels from the long branching Lake Deshekwama or Hardingie, fed by the Lakderia river, enter from the west, and in 0° 15' S. the Juba enters the sea across a dangerous bar, which has only one fathom of water at high tide.

From its mouth to 20 m. above Bardera, where at 5° 35' N. rapids occurs, the Juba is navigable by shallow-draught steamers, having a general depth of from 4 to 12 ft., though shallower in places. Just above its mouth it is a fine stream 250 yds. wide, with a current of 2½ knots. Below the mountainous region of the headstreams the Juba and its tributaries flow through a country generally arid away from the banks of the streams. The soil is sandy, covered either with thorn-scrub or rank grass, which in the rainy season affords herbage for the herds of cattle, sheep and camels owned by the Boran Gallas and the Somali who inhabit the district. But by the banks of the lower river the character of the country changes. In this district, known as Gosha, are considerable tracts of forest, and the level of flood plain is sometimes higher than that of the low-lying fertile belt stretches along the river for about 300 m., but is not more than a mile or two wide. In the river valley maize, rice, cotton and other crops are cultivated. From Goobwen, a trading settlement about 3 m. above the mouth of the Juba, a road runs S.W. to the seaport of Kismayu, 10 m. distant.

The lower Juba was ascended in 1865 in a steamer by Baron Karl von der Decken, who was murdered by Somali at Bardera, but the river system remained otherwise almost unknown until after 1890. In 1891 a survey of its lower course was executed by Captain F. G. Dundas of the British navy, while in 1892–1893 its headstreams were explored by the Italian officers, Captains Vittorio, Bottego and Grixoni, the former of whom discovered the supposed connexion of the Omo (see Rudolf, Lake) with the Juba system. It has since been further explored by Prince Eugenio Kuspoli, by Bottego's second expedition (1895), by Donaldson Smith, A. E. Butter, Captain P. Maud of the British army, and others. The river, from its mouth to the confluence of the Daua and Ganale, forms the frontier between the
JUBBULPORE—JUBILEE

British East Africa protectorate and Italian Somaliland; and from that point to about 4° 20' N. the Daua is the boundary between British and Abyssinian territory.

JUBBULPORE, or JABALPUR, a city, district, and division of British India in the Central Provinces. The city is 616 m. N.E. of Bombay by rail, and 220 m. S.W. of Allahabad. Pop. (1901), 90,316. The numerous gorges in the neighbouring rocks have been taken advantage of to surround the city with a series of lakes, which, shaded by fine trees and bordered by fantastic crags, add much beauty to the suburbs. The city itself is modern, and is laid out in wide and regular streets. A streamlet separates the civil station and cantonment from the native quarter; but, though the climate is mild, a swampy hollow beneath renders the site unhealthy for Europeans. Formerly the capital of the Saugar and Nerbudda territories, Jubbulpore is now the headquarters of a brigade in the 5th division of the southern army. It is also one of the most important railway centres in India, being the junction of the Great Indian Peninsula and the East Indian systems. It has a steam cotton-mill. The government college educates for the science course of the Allahabad University, and also contains law and engineering classes; there are three aided high schools, a law class, an engineering class and normal schools for male and female teachers. A native association, established in 1869, supports an orphanage, with help from government. A zenana mission manages 13 schools for girls. Waterworks were constructed in 1882.

The District of Jubbulpore lies on the watershed between the Nerbudda and the Son, but mostly within the valley of the former river, which here runs through the famous gorge known as the Marble rocks, and falls 30 ft. over a rocky ledge (the Dhamon dhur, or "misty shoot"). Area, 3912 sq. m. It consists of a long narrow plain running north-east and south-west, and shut in on all sides by highlands. This plain, which forms an offshoot from the great valley of the Nerbudda, is covered in its western and southern portions by a rich alluvial deposit of black cotton-soil. At Jubbulpore city the soil is sandy, and water plentiful near the surface. The north and east belong to the Ganges and Jumna basins, the south and west to the Nerbudda basin. In 1901 the population was 680,585, showing a decrease of 9% since 1891, due to the results of famine. The principal crops are wheat, rice, pulse and oil-seeds. A good deal of iron-smelting with charcoal is carried on in the forests, mangansore ore is found, and limestone is extensively quarried. The district is traversed by the main railway from Bombay to Calcutta, and by new branches of two other lines which meet at Katni Junction. Jubbulpore suffered severely in the famine of 1896-1897, the distress being aggravated by immigration from the adjoining native states. Fortunately the famine of 1900 was less severely felt.

The early history of Jubbulpore is unknown; but inscriptions record the existence during the 11th and 12th centuries of a local line of princes of that Haidai race which is closely connected with the history of Gondwana. In the 16th century the Gond raja of Garha Mandla extended his power over fifty-two districts, including the present Jubbulpore. During the minority of his grandson, Asaf Khan, the viceroy of Malwa, conquered the Gond principality, and, at first as an independent chief. Eventually he submitted to the emperor Akbar. The Delhi power, however, enjoyed little more than a nominal supremacy; and the princes of Garha Mandla maintained a practical independence until their subjugation by the Mahatta governors of Saugar in 1781. In 1708 the pasha granted the Nerbudda valley to the Bhonsla princes of Nagpur, who continued to hold the district until the British occupied it in 1818.

The Division of Jubbulpore lies mainly among the Vindhyan and Satpura hill systems. It comprises the five following districts: Jubbulpore, Saugar, Damoh, Seoni and Mandla. Area, 18,050 sq. m.; pop. (1901), 2,081,490.

JUBB, the French architectural term (taken from the imperative of Lat. jubere, to order) for the chancel or choir screen, which in France is known as the chauve souris screen (see Rosso). Above the screen was a gallery or loft, from which the words "Jube Domine benedicere" were spoken by the deacon before the reading of the Gospel, and hence probably the name. One of the finest jubes in France is that of the church of the Madeleine at Troyes, in rich flamboyant Gothic. A later example, of the Renaissance period, c. 1600, is in the church of St Étienne du Mont, Paris. In the Low Countries there are many fine examples in marble, of which one of the most perfect from Bois-le-Duc is now in the Victoria and Albert Museum.

JUBILEE (or JUBILE), Year of, in the Bible, the name applied in the Holiness section of the Priestly Code of the Hexateuch (Lev. xxv.) to the observance of every 50th year, determined by the lapse of seven seven-year periods as a year of perfect rest, when there was to be no sowing, nor even gathering of the natural products of the field and the vine. At the beginning of the jubilee-year the liberation of all Israelitish slaves and the restoration of ancestral possessions was to be proclaimed. As regards the meaning of the name "jubilee" (Heb. yohéél modern scholars agree that it signifies "ram" or "ram's horn." "Year of jubilee" would then mean the year that is inaugurated by the blowing of the ram's horn (Lev. xxv. 9).

According to Lev. xxv. 8-12, at the completion of seven sabbaths of years (i.e. 7 X 7 = 49 years) the trumpet of the jubilee is to be sounded "throughout the land" on the 10th day of the seventh month (Tisri 10), the great Day of Atonement. The 50th year thus announced is to be "hallowed," i.e. liberty is to be proclaimed everywhere to everyone, and the people are to return "every man unto his possession and unto his family." As in the sabbatical year, there is to be no sowing, nor reaping that which grows of itself, nor gathering of grapes.

As regards real property (Lev. xxv. 13-34) the law is that if any Hebrew under pressure of necessity shall alienate his property he is to get for it a sum of money reckoned according to the number of harvests to be reapaid between the date of alienation and the first jubilee-year: should he or any relation desire to redeem the property before the jubilee this can always be done by repaying the value of the harvests between the redemption and the jubilee.

This legal enactment, though it is not found (nor anything like it) in the earlier collections of laws, is evidently based on (or modified from) an ancient custom which conferred on a near kinsman the right of pre-emption as well as of buying back (cf. Jer. xxxii. 6 sqq.). The tendency to impose checks upon the alienation of landed property was exceptionally strong in Israel. The fundamental principle is that the land is a sacred possession belonging to Yahweh. As such it is not to be alienated from Yahweh's people, to whom it was originally assigned. In Ezekiel's restoration programme "crown lands presented by the 'prince' to any of his officials revert to the crown in the year of liberty (7 jubilee year)"; only to his sons may any portion of his inheritance be alienated in perpetuity (Ezek. xlvi. 16-18; cf. Code of Hammurabi § 38, see above).

The same rule applies to dwelling-houses of unwalled villages; the case is different, however, as regards dwelling-houses in walled cities. These may be redeemed within a year after transfer, but if not redeemed within that period they continue permanently in possession of the purchaser, and this may well be an echo of ancient practice. An exception to this last rule is made for the houses of the Levites in the Levitical cities.

As regards property in slaves (Lev. xxv. 35-55) the Hebrew whom necessity has compelled to sell himself into the service of his brother Hebrew is to be treated as a hired servant and sojourner, and to be released absolutely at the jubilee; non-Hebrew bondmen, on the other hand, are to be bondmen for ever. But the Hebrew who has sold himself to a stranger or sojourner is entitled to freedom at the year of jubilee, and at any time redeemable by any of his kindred—the redemption price being calculated with the number of years run between the redemption and the jubilee, according to the ordinary wage of hired servants.

Such were the enactments of the Priestly Code—which, of course, represents the latest legislation of the Pentateuch (post-exilic). These enactments, in order to be understood rightly, must be viewed in relation to the earlier 1 Heb. de'orō. The same word (dúrodí) is used in the Code of Hammurabi in the similar enactment that wife, son or daughter sold into slavery for debt are to be restored to liberty in the fourth year (§ 117).
similar provisions in connexion with the sabbatical (seventh) year. "The foundations of Lev. xxv. are laid in the ancient provisions of the Book of the Covenant (Exod. xxii. 2 seq.; xxiii. 10 seq.) and in Deuteronomy (xxv). The Book of the Covenant enjoined that the land should lie fallow and Hebrew slaves be liberated in the seventh year; Deuteronomy required in addition the remission of debts" (Benzinger). Deuteronomy, it will be noticed, in accordance with its humanitarian tendency, not only liberates the slave but remits the debt. It is evident that these enactments proved impracticable in real life (cf. Jer. xxxiv. 8 seq.), and so it became necessary in the later legislation of P, represented in the present form of Lev. xxv., to relegate them to the 50th year, the year of jubilee. The latter, however, was a purely theoretic development of the Sabbath idea, which could never have been reduced to practice (its actual observance would have necessitated that for two consecutive years—the 40th and 50th—absolutely nothing could be reaped, while in the first single year fruits could be obtained, sowing being prohibited in the 50th year). That in practice the enactments for the jubilee-year were disregarded is evidenced by the fact that, according to the unanimous testimony of the Talmudists and Rabbinists, although the jubilee-years were "reckoned" they were not observed.

The conjecture of Kuenen, supported by Wellhausen, that originally Lev. xxv. 8 seq. had reference to the seventh year is a highly probable one. This may be the case also with Ezek. xlv. 10-18 (cf. Jer. xxxiv. 14). A later Rabbinical device for evading the provisions of the law was the proscul (ascribed to Hadai)—i.e., a condition made in the presence of the judge securing to the creditor the right of demanding repayment at any time, irrespective of the year of remission. Further enactments regarding the jubilee are found in Lev. xxvi. 17-25 and Num. xxxvi. 4. (W. R. S.; G. H. Bo.)

JUBILEES, BOOK OF, an apocryphal work of the Old Testament. The Book of Jubilees is the most advanced pre-Christian representative of the Midrashic tendency, which had already been at work in the Old Testament Chronicles. As the chronicler had rewritten the history of Israel and Judah from the standpoint of the Priests' Code, so our author re-edited the Pharisaeic standpoint of his time the history of the world from the creation to the publication of the Law on Sinai. His work constitutes the oldest commentary in the world on Genesis and part of Exodus, an enlarged Targum on these books, in which difficulties in the biblical narrative are solved, gaps supplied, dogmatically offensive elements removed and the genuine spirit of later Judaism infused into the primitive history of the world.

TITLES OF THE BOOK.—The book is variously entitled. First, it is known as 7 αἰωνιαῖα, οἱ οἰκονόμαι, Heb. הימים. This name is admirably adapted to our book, as it divides into jubilee periods of forty-nine years each the history of the world from the creation to the legislation on Sinai. Secondly, it is frequently designated 7 The Little Genesis," 7 περί τῶν τιμίων, Heb. מ trờiים. This title may have arisen from its dealing more fully with details and minutiae than the biblical work. For the other names by which it is referred to, such as The Apocalypse of Moses, The Testament of Moses, The Book of Adam's Daughters and the Life of Adam, the reader may consult Charles's The Book of Jubilees of xii.-xxvii.

OBJECT.—The object of our author was the defence and exposition of Judaism from the Pharisaeic standpoint of the 2nd century B.C. against the disintegrating effects of Hellenism. In his elaborate defence of Judaism our author glorifies circumcision and the sabbath, the bulwarks of Judaism, as heavenly ordinances, the sphere of which was so far extended as to embrace Israel on earth. The Law, as a whole, was to our author the realization in time of what was in a sense timeless and eternal. Though revealed in time it was superior to time. Before it had been made known in sundry portions to the fathers, it had been kept in heaven by the angels, and to its observance there was no limit in time or in eternity. Our author next defends Judaism by his glorification of Israel. Whereas the various nations of the Gentiles were subject to angels, Israel was subject to God alone, Israel was God's son, and not only did the nation stand in this relation to God, but also its individual members. Israel received the dispensation as from the Lord's, and this privilege of circumcision they enjoyed in the midst of the two orders of angels. Hence Israel was to unite with God and these two orders in the observance of the sabbath. Finally the destinies of the world were bound up with Israel. The world was renewed in the creation of the true man Jacob, and its final renewal was to synchronize with the setting-up of God's sanctuary in Zion and the establishment of the Messianic kingdom. In this kingdom the Gentiles had neither part nor lot.

VERSIONS: Greek, Syriac, Ethiopic and Latin.—Numerous fragments of the Greek Version have come down to us in Justin Martyr, Origen, Diodorus of Ani, Isidore of Alexandria, Epiphanius, John of Malala, Syr优于s and others. This version was the parent of the modern versions in Greek, Syriac, Arabic, Ethiopic and Latin, and is the most ancient and trustworthy, and indeed, as a rule, slavishly literal. It has naturally suffered from the corruptions incident to transmission through MSS. Thus dialects are frequently and lacunae of occasional passages are supposed to have been filled in by the glosses and corrections of unscrupulous scribes. The Latin Version, of which about one-fourth has been preserved, is where it exists of almost equal value with the Ethiopic. It has, however, suffered more from corruption than the other versions, its array of passages in which it preserves the true text against corruptions or omissions in the Ethiopic Version. Finally, as regards the Syriac Version, the evidence for its existence is not conclusive, and if it is based on a Museum MS, as the fragment entitled "Names of the wives of the Patriarchs according to the Hebrew Book of Jubilees." The Ethiopic and Latin Versions: Translations from the Greek.—The Ethiopic version seems to have been in existence from the time, as the 12 = 87 names of the Patriarchs according to the Hebrew, the Ethiopian and the Latin, and the 13 = 48 names of the Patriarchs according to the Greek. That the Latin is also a translation from the Greek is less obvious. Thus in xxxix. 12 horim = bešelak, corrupt for bodolak; in xxxvii. 13 horonem = ṣʼāph, but ṣ̄āph should here be rendered by tynthia, as the Ethiopic and the context require; in xxxvi. 26, cetlalak, correctly translated from the Greek. The Greek a Translation from the Hebrew.—The early date of our book—the 2nd century B.C.—and its place of composition speak for a Semitic original, and the evidence bearing on this subject is conclusive. But the question at once arises, was the original Aramæan or Hebrew? Certain proper names in the Latin Version ending in -tes seem to bespeak an Aramaic original, as Cettia, Filistia, &c. But since in all these cases the Ethiopic translations end in -ités and the Syriac in -tes it is presumed that the Latin Version is due to the translator, who, it has been concluded on other grounds, was a Palestinian Jew.1 The grounds, on the other hand, for a Hebrew original are weighty and numerous. (1) A work which claims to be a theology of the Ancient Law should be as Hebrew as possible. (2) The book is a translation from Hebrew according to our author was the sacred and national language. (3) The revival of the national spirit of a nation is universally, so far as we know, accompanied by a revival of the national languages. (4) The text must be retranslated into Hebrew in order to explain untranslatable expressions and restore the true text. One instance will sufficiently illustrate this statement. In xlii. 11 a certain Ethiopic expression = śār frō, which is a misreading of a śār in the parallel passage in Gen. xiv. 18, which our text reproduces almost verbally, ṣārā. We might observe here that our text attests the presence of dialects already existing in the Hebrew text. (4) Hebrewisms survive in the Ethiopic and Latin, and are corruptions in the Greek. (5) The text of the Latin Original in Latin b is a reproduction of zābān and in qua in xiii. 8 = ṣārā. If one could, of course, be explained on the hypothesis of an Aramaic original. (5) The use of a paraphrase discover themselves on retranslation into Hebrew. Textual Affinities.—A minute study of the text shows that it attests an independent form of the Hebrew text of the Pentateuch. For example, in the case of 1 Kings 4:1, 2 and 2 Kings 4:1, 2, we find that the Septuagint, or Vulgate, or even with Onkelos against all the rest. To be more exact, our book represents some form of the Hebrew text of the Pentateuch midway between the forms presupposed by the Septuagint and the Syro-Israelite; for it agrees more frequently with the Septuagint, or with combinations into which the Septuagint enters, than with 1 In the Ethiopic Version in xlii. 12 it should be observed that in the list of the twelve trees suitable for burning on the altar are translat. Aramaic names of trees. But in the Latin Hebrew work (2nd century B.C.) the popular names of such objects would naturally be used. In certain cases the Hebrew may have been rendered, or, where the tree was of late introduction, been non-existent.
any other single authority, or with any combination excluding the Septuagint. Next to the Septuagint it agrees most often with the Syrian or with combinations into which the Syriac enters. On the other hand, its independence of the Septuagint is shown in a large number of cases, and it has the advantage of the Massoretic, or of these with various combinations of the Syriac Vulgate and Onkelos. From these and other considerations we may conclude that the textual evidence points to the composition of our Book before the 200's B.C. and A.D. 100, and at a time nearer the earlier date than the later.

**Date.**—The book was written between 135 B.C. and the year of Hyrcanus’s breach with the Pharisees. This conclusion is drawn from the following facts:—(1) The book was written during the pontificate of the Maccabean family, and not earlier than 135 B.C. For in xxxii. 1 Levi is called a “priest of the Most High God.” Now the only high priests who bore this title were the Maccabaeans, who appear to have assumed it as reviving the order of Melchizedek when they displaced the Zadokite order of Aaron. Jewish tradition ascribes the assumption of this title to John Hyrcanus. It was retained by his successors down to Hyrcanus II. (2) It was written before 96 B.C. or some years earlier in the reign of John Hyrcanus; for since our author is of the strictest sect a Pharisee and at the same time an upholder of the Maccabean pontificate, Jubilees cannot have been written after 96 when the Pharisees and Alexander Jannaeus came to open strife. Nay more, it cannot have been written after the open breach between Hyrcanus and the Pharisees, when the former joined the Sadducean party.

The above conclusions are confirmed by a large mass of other evidence postulating the same date. We may, however, observe that our book points to the period already past,—of stress and persecution that preceded the recovery of national independence under the Maccabees, and so affords us a historical basis, perhaps the most flourishing period of the Maccabean hegemony.

**Author.**—Our author was a Pharisee of the strictest sect. He maintained the everlasting validity of the law, he held the strictest views on circumcision, the sabbath, and the duty of shunning all intercourse with the Gentiles; he believed in angels and in a blessed immortality. In the next place he was an upholder of the Maccabean pontificate. He glorifies Levi’s successors as high-priests and civil rulers, and applies to them the title assumed by the Maccabean princes, though he does not, like the author of the Testaments of the Twelve Patriarchs, expect the Messiah to come forth from among them. He may have been a priest.

The *Views of the Author on the Messianic Kingdom and the Future Life.*—According to our author the Messianic kingdom was to be brought about gradually by the progressive spiritual development of man and a corresponding transformation of nature. Its members were to reach the limit of 1000 years in happiness and peace. During its continuance the powers of evil were to be restrained, and the last judgment was apparently to take place at its close. As regards the doctrine of a future life, our author adopts a position novel for a Palestinian writer. He abandons the hope of a resurrection of the body. The souls of the righteous are to enjoy a blessed immortality after death. This is the earliest attested instance of this expectation in the last two centuries B.C.

**Literature.**—*Ethiopic Text and Translation.* This text was first edited by Dillmann in the two MSS. of 1850, and in later MSS. by R.H. Charles from four (The *Ethiopic Version of the Hebrew Book of Jubilees ... with the Hebrew, Syriac, Greek and Latin fragments*). In the latter edition, the Greek and Latin fragments are printed together with the Ethiopic. The book was translated into German by Dillmann from one MS. in Ewald’s *Jahrbücher*, vols. ii. and iii. (1850, 1851), and by Littmann (in *Kautzsch’s Abh. und Pseud.* ii. 39–119) from Charles’s Ethiopic text; into English by Scholde (Bibl. Sac., 1851, 1854); and by Charles from Quarterly Review, vols. vi., vii. (1863–1865) from the text afterwards published in 1895, and finally in his commentary, *The Book of Jubilees* (1902).

**Critical Inquiries.**—Dillmann, *Das Buch der Jubiläen* (Ewald’s *Jahrbücher*, 1851, pp. 72–86); Charles, *Das Buch der Jubiläen* (1874); Singer, *Das Buch der Jubiläen* (1890); Bohn, *Die Bedeutung des Buches der Jubiläen* (Theol. Stud. und Kritikten, 1900, pp. 167–184). A full bibliography will be found in Schürer or in R. H. Charles’s commentary, *The Book of Jubilees or the Little Genesis* (1902), which deals exhaustively with all the questions treated in this article.

(R.H.C.)

**JUBILEE YEAR,** an institution in the Roman Catholic Church, observed every twenty-fifth year, from Christmas to Christmas. During its continuance plenary indulgence is obtainable by all the faithful, on condition of their penitently confessing their sins and visiting certain churches a stated number of times, or doing an equivalent amount of meritorious work. The institution dates from the time of Boniface VIII., whose bull *Antiquorum habit fidem* is dated the 22nd of February 1300. The circumstances in which it was promulgated are related by a contemporary authority, Jacobus Cajetanus, according to whom the bull is described in *his account* (**Relatio de centesimo s. jubilaeo anno** in the *Bibliotheca Patrum*), as a rumour spread through Rome at the close of 1299 that every one visiting St Peter’s on the 1st of January 1300 would receive full absolution. The result was an enormous influx of pilgrims to Rome, which stirred the pope’s attention. Nothing was found in the archives, but an old peasant 157 years of age avowed that his father had been similarly benefited a century previously. The bull was then issued, and the pilgrims became even more numerous, to the profit of both clergy and citizens. Originally the churches of St Peter and St Paul in Rome were the only jubilee churches, but the privilege was afterwards extended to the Lateran Church and that of St Maria Maggiore, and it is now shared also for the year immediately following that of the Roman jubilee by a number of specified provincial churches. At the request of the Roman people, which was supported by St Bridget of Sweden and by Petrarch, Clement VI. in 1343 appointed, by the bull *Unigenitus Dei filius*, that the jubilee should recur every fifty years instead of every hundred years as had been originally contemplated in the constitution of Boniface; Urban VI., who was badly in need of money, by the bull *Salutor noster* in 1349 reduced the interval still further to thirty-three years (the supposed duration of the earthly life of Christ); and Paul II. by the bull *Ineffabilis* (April 19, 1470) finally fixed it at twenty-five years. Paul II. also permitted foreigners to substitute for the pilgrimage to Rome a visit to some specified church in their own country and a contribution towards the expenses of the Holy Wars. According to the special ritual prepared by Alexander VI. in 1500, the pope on the Christmas Eve with which the jubilee begins goes in solemn procession to a particular walled-up door ("*Porta aures*”) of St Peter’s and knocks three times using at the same time the words of Ps. cxviii. 19 (Apertis portis in aures justitiae). The door is opened and sprinkled with holy water, and the pope passes through. A similar ceremony is conducted by cardinals at the other jubilee churches of the city. At the close of the jubilee, the special doorway is again built up with appropriate solemnities.

The last ordinary jubilee was observed in 1900. "Extraordinary" jubilees are sometimes appointed on special occasions, e.g. the accession of a new pope, or that proclaimed by Pope Leo XIII. for the 12th of March 1881, "in order to obtain from the mercy of Almighty God help and succour in the weighty necessities of the Church, and comfort and strength in the battle against her numerous and mighty foes." These are not so much jubiles in the ordinary sense as special grants of plenary indulgences for particular purposes (Indulgentiae plenariae in forma jubilae).

**JUCAR,** a river of eastern Spain. It rises in the north of the province of Cuenca, at the foot of the Cerro de San Felipe (596 ft.), and flows south past Cuenca to the borders of Albacete; here it bends towards the east, and maintains this direction for the greater part of its remaining course. On the right it is crossed by the road to the Mediterranean and by the chief canal. After entering Valencia, it receives on the left its chief tributary, the Cabriel, which also rises near the Cerro de San Felipe, in the Montes Universales. Near Alcira the Jucar turns south-eastward, and then sharply north, curving again to the south-east before it enters the Mediterranean Sea at Cullera, after a total course of 314 m. Its estuary forms the harbour of Cullera, and its lower waters are freely utilized for purposes of irrigation.

**JUD, LEO** (1452–1542), known to his contemporaries as Meister Leu, Swiss reformer, was born in Alsace and educated...
at Basel, where after a course in medicine he turned to the study of theology. This change was due to the influence of Zwingli whose colleague at Zürich Jud became after serving for four years (1518–1522) as pastor of Einsiedeln. His chief activity was as a translator; he was the leading spirit in the translation of the Zürich Bible and also made a Latin version of the Old Testament. He died at Zürich on the 19th of June 1542. See Life by C. Pestalozzi (1866); art. in Herzog-Hauck's Realencyclopädie, vol. ix. (1901).

Juda, the name given to the southern part of Palestine as occupied by the Jewish community in post-exilic days under Persian, Greek and Roman overlordship. In Luke and Acts the term is sometimes used loosely to denote the whole of western Palestine. The limits of Judah were never very precisely defined and some post-exilic population movements had found time to time. After the death of Herod, Archelaus became ethnarch of Samaria, Judea, and Idumea, and when he was deposed Judaea was merged in Syria, being governed by a procurator whose headquarters were in Caesarea. For a description of the natural features of the country see Palestine; for its history see Jews and Judaism. CI. T. Mommsen, The Provinces of the Roman Empire, ch. xi.

JUDAH, a district of ancient Palestine, to the south of the kingdom of Israel, between the Dead Sea and the Philistine plain. It falls physically into three parts: the hill-country from the Dead Sea towards Jerusalem, the lowland (Heb. Shē'phelah) on the west, and the "dry land" (Heb. Negeb) on the south. The district is one of striking contrasts, with a lofty and stony table-land in the centre (which reaches a height of 3300 ft. just north of Hebron), with a strategically important valley dividing the central mountains from the lowland, and with the most desolate of tracts to the east (by the Dead Sea) and south. Some parts, especially around Hebron, are extremely fertile, but the land as a whole has the characteristics of the southern wilderness—the so-called "desert" is not a sterile Sahara—and was more fitted for pastoral occupations; see further G. A. Smith, Hist. Geog. Holy Land, chs. x.—xv. Life in ancient Judah is frequently depicted in the Bible, but much of the Judaean history is obscure. In the days of the old Hebrew monarchy there were periods of conflict and rivalry between Judah and Israel—even times when the latter incorporated, or at least claimed supremacy over, the former. Later, from the 5th century B.C., there was a breach between the Jews (the name is derived from Judah) and the Samaritans (q.v.). The intervening years after the fall of Samaria (722 B.C.) and after the destruction of Jerusalem (586 B.C.) were marked by closer intercourse, similar to the period of union in the popular traditions relating to the pre-monarchical age. The course of Judaean history was conditioned, also, by the proximity of the Philistines in the west, Moab in the east, and by Edom and other southern peoples extending from North Arabia to the delta of the Nile. Judah's stormy history, continued under Greek and Roman domination, reached its climax in the birth of Christianity, and ended with the fall of Jerusalem in A.D. 70 (see Jews, Palestine).

In conformity with ancient methods of genealogy (q.v.), Judah is traced back to a son of Jacob or Israel by Leah and along with other "tribes" (Dan, Levi, Simeon, &c.) included under the collective term Israel. Thus it shares the general traditions of the Israelites, although Judah appears as an individual in the story of his "brother" Joseph (on ch. xxxvii. seq., see Genesis). Its boundaries in Joshua xix. are manifestly artificial or imaginary; they include the Philistines and number places which are elsewhere ascribed to Simeon or Dan. The origin of the name (Yehudah) is quite uncertain; the interpretation "praised" is suggested in Gen. xxxviii. (cf. xxix. 8 seq.), but some connexion with allied names, as Yehud (Yudh) and E'hud (a Benjamite clan) seems more probable. That Judah, whatever its original connotation, underwent development through the incorporation of other clans from 1 Chron. iv., iv., where it is found to contain a large number of unrelated personal names, some so-called clans or parallels in Simeonite, Edomite and other southern lists. Indeed, underlining the account of the Israelite exodus (q.v.) there are traces of a separate movement of certain clans—apart from the Israelite invasion of Palestine—who are ultimately found in the south of Judah; and the traditions in Chronicles themselves allow the view that the kingdom had begun in Judah, and that Judah first occupies a prominent position in biblical history (cf. Cheyne, Ency. Bib., col. 2618 seq., and see CALEB, JERASHMEEL, KENITES). But such movements were not necessarily limited to one single period, and definite evidence concerning the ancient Israelite clans of Judah with Levites, and (b) both with the south, is limited. There are other traditions regarding several different ages and might point to an unceasing relationship with the south. On the other hand, clans, which in the traditions of David's time were in the south of Judah, about five hundred years later (in the time of Hezekiah) are found in the north; and if either of these survived the strenuous vicissitudes of half a millennium or all perspective of their early history has been lost. In Gen. xxxviii., a curious narrative points to the separation of Judah "from his brethren" and his migration with the sons of Judah and the sons of Benjamin to the land of Gilead, and from Jericho to Bethel; and the sons of Efraim, and the sons of Manasseh, and the sons of Benjamin, and the sons of Jephthah of Gilead, and the sons of the half tribe of Manasseh were brought into the land of Gilead, and to the city of Bashan. The number of other motives, appears to reflect the growth of the tribe of Judah and its fluctuations, but that the reference is to any very early period is unlikely, partly because the interest of the story is in post-exilic, and partly because the scenes (Adullam, Chez ib, and Timnah) overlap with David's own fights between Hebron and Jerusalem (2 Sam. xxi. xxxii.; see David, ad fin.). Even David's conquest of Jerusalem (2 Sam. v.) conflicts both with the statement in the Tanach as to the admission of the tribe (Judges i. 8), and with the traditions of the Israelite kingdom. Joshua, in the reconquest of Canaan, naturally excludes the tribe of Judah, and, consequently, the few surviving data are too uncertain for any decisive conclusions regarding the origin of the tribe of Judah. Judah as a tribe may have taken its name from a limited district, in which case its growth finds a parallel in the exodus from Samaria from the city to the province. The location of Yehud and E'hud in the light of 1 Kings iv. 18-19 (perhaps the subdivisions of the Israelite kingdom, see Solomon), would necessitate the assumption of a separation from Judah; but this, however, is quite conceivable (see Jews, §§ 11–13). On the bearing of South Judah upon the historical criticism of the Old Testament, see especially N. Schmidt, Hibbert Journal (1908), pp. 322–342. The Jerahmeel Theory and the Jerahmeelite Important, J. H. M. Morgan, was an account of the " discovery of the country "; also Jews, § 20. (S. A. C.)

Judas Iscariot (Ἰωάννης Ἰσκαριώτης or Ισκαριώτιδος) in the Bible, the son of Simon Iscariot (John vi. 71, xii. 26), and one of the twelve apostles. He is always enumerated last with the special mention of the fact that he was the betrayer of Jesus. If the generally accepted explanation of his surname ("man of Kerioth"; see Josh. xv. 25) be correct, he was the only original member of the apostolic band who was not a Galilean. The circumstances which led to his admission into the apostolic circle are not stated; while the motives by which he was acted in enabling the Jewish authorities to arrest Jesus without tumult have been variously analysed by scholars. According to some (as De Quincey in his famous Essay) the sole object of Judas was to place Jesus in a position in which He should be compelled to make what had seemed to His followers the too tardy display of His Messianic power: according to others (and this view seems more in harmony with the Gospel narratives) Judas was an avaricious and dishonest man, who had already abused the confidence placed in him (John xii. 6), and who was now concerned to get back what furthering. He was a man of many parts.

As regards the effects of his subsequent remorse and the use to which his ill-gotten gains were put, the strikingly apparent discrepancies between the narratives of Matt. xxvii. 3, 10 and Acts i. 18, 19 have attracted the attention of biblical scholars, ever since Papias, in his fourth book, of which a fragment has been preserved, discussed the subject. The simplest explanation is that they represent different traditions, the Gospel narrative being composed with more special reference to prophetic fulfilments, and being probably nearer the truth than the short explanatory note inserted by the author of the Acts (see Bernard, Expositor, June 1904, p. 422 seq.). In ecclesiastical legend and

1 See especially Wellhausen, De gentibus et familias Judaorum (Göttingen, 1896), the articles on the relative proper names in the Ency. Bib., and E. Meyer, Die Israeliten u. ihre Nachbarstämme, pp. 399–417 (much valuable matter).
in sacred art Judas Iscariot is generally treated as the very incarnation of treachery, ingratitude and impiety. The Middle Ages, after their fashion, supplied the lacunae in what they deemed his too meagre biography. According to the common form of their story, he belonged to the tribe of Reuben. 1 Before he was born his mother Cyberea had a dream that he was destined to murder his father, commit incest with his mother, and sell his God. The attempts made by her and her husband to avert this curse simply led to its accomplishment. At his birth Judas was enclosed in a chest and flung into the sea; picked up on a foreign shore, he was educated at the court until a murder committed in a moment of passion compelled his flight. Coming to Judaea, he entered the service of Pontius Pilate as page, and during this period committed the first two of the crimes which had been expressly foretold. Learning the secret of his birth, he, full of remorse, sought the prophet who, he had heard, had power on earth to forgive sins. He was accepted as a disciple and promoted to a position of trust, where avarice, the only vice in which he had hitherto been unpunctuated, gradually took possession of his heart, and led to the complete fulfilment of his evil destiny.

This Judas legend, as given by Jacobus de Voragine, obtained no small popularity; and it is to be found in various shapes in every important literature of Europe.

For the history of its genesis and its diffusion the reader may consult D’Ancona, La legenda di Vergona e la legenda di Giuda (1869), and papers by W. Creizenach in Paul and Braune’s Beitr. zur Geschichte der deutschen Literatur, vol. iii. (1875), and Victor Diederich in Russische Revue (1880). Cholevius, in his Geschichte der deutschen Poesie nach ihren antiken Elementen (1854), pointed out the connexion of the legend with the Oedipus story. According to Daub (Juda, Iscariot, und die Betrachtungen über das Verhdtniss des Guten, 1816, 1818) Judas is the brother of the devil,” to whom “mercy and blessedness are alike impossible.”

The popular hatred of Judas has found strange symbolical expression in various parts of Christendom. In Conu, for instance, the people, as a given signal on Easter Eve throw vast quantities of crockery from their windows and roofs into the streets, and thus execute an imaginary stoning of Judas (see Kirkwall, Ionian Islands, ii. 47). At one time (according to Miastoki, Delle cose concrete) the tradition prevailed that the traitor’s house and country villa existed in the island, and that his descendants were to be found among the local Jews.

Dissimilar to some Judas legends and superstitions are given in Notes and Queries, 2nd series, v., vi., and vii.; 3rd series, vii.; 4th series, i.; 5th series, vi. See also a paper by Professor Hendel Harris entitled “Did Judas really commit suicide?” in the American Journal of Theology, March 1902. In an essay by Arthur Arnold’s poem “St. Brandon” gives fine expression to the old story that, according to a tradition, the body of the saint was buried at Joppa, Judas was allowed an hour’s respite from hell once a year.

JUDAS-TREE, the Cercis siliquastrum of botanists, belonging to the section Collasphaneae of the natural order Leguminosae. It is a native of the south of France, Spain, Portugal, Italy, Greece and Asia Minor, and forms a handsome low tree with a flat spreading head. In Spring it is covered with a profusion of purplish-pink flowers, which appear before the leaves. The flowers have an agreeable acid taste, and are eaten mixed with salad or made into fritters. The tree was frequently figured by the older herbalists. One woodcut by Castor Durante has the figure of Judas Iscaroi suspended from one of the branches, illustrating the popular tradition regarding this tree. A second species, C. canadensis, is common in North America from Canada to Alabama and eastern Texas, and differs from the European species in its smaller size and pointed leaves. The flowers are also used in salads and for making pickles, while the branches are used to dye wool a nankeen colour.

JUDG., SYLVESTER (1813-1883) American Unitarian clergyman and author, was born in Westhampton, Massachusetts, on the 23d of July 1813. He bore the same name as his father and grandfather; the former (1789-1860) made an especial study of local history of the towns of the Connecticut valley, and wrote a History of Hadley (1863). The son lived in Northampton after his tenth year, was converted in a revival there in 1826, graduated from Yale in 1836, and taught in 1836 at Templeton, Mass., where he first met Unitarians and soon found the solution of his theological difficulties in their views. He entered the Harvard divinity school, from which he graduated in 1840. In the same year he was ordained pastor of the Unitarian church of Augusta, Maine, where he died on the 26th of January 1853. His widest reputation was as the author of Margaret, a Tale of the Real and the Ideal, including Sketches of a place not before described, called Moss Christi (1845; revised 1851), written to exhibit the errors of Calvinistic and all trinitarian theology, and the evils of war, intemperance, capital punishment, the prison system of the time, and the national treatment of the Indians. This story, published anonymously, attracted much attention by its true descriptions of New England life and scenery as well as by its author’s earnest purpose. Richard Edney and the Governor’s Family (1850) is in much the same vein as Margaret. A poem entitled Philo, an Evangelist (1850) is a versified defence of Unitarianism. He published, besides, The Church, in a Series of Discourses (1854). As a preacher and pastor he urged the desirability of infant baptism. He lectured frequently on international peace and opposed slavery.

See Arethusa Hall, Life and Character of the Rev. Sylvester Judd (Boston, 1857) published anonymously.

JUDGEN, THE GENERAL EPISCOPAL OF, a book of the New Testament. As with the epistle of James, the problems of the writing centre upon the superscription, which addresses in Pauline phraseology (1 Thess. i. 4; 2 Thess. ii. 13; Rom. i. 7; Gal. i. 1) to the “church of the Philippians” and “Jude, the brother of James” (Matt. xiii. 55; Mark vi. 3). The historical situation depicted must then fall within the lifetime of this Jude, whose two grandchildren Zoker and James (Hegesippus ab. Phil. Sidetes) by their testimony before the authorities brought to an end the (Palestinian) persecution of Donimian (Hegesippus ab. Eus. II. E. iiii. 20, 7). These two grandsons of Jude thereafter “lived until the time of Trajan,” ruling the churches “because they had (thus) been witnesses (martyrs) and were also relatives of the Lord.” But in that case we must either reject the testimony of the same Hegesippus that up to their death, and that of Symeon son of Clopas, successor in the Jerusalem see of James the Lord’s brother, “ who suffered martyrdom at the age of one hundred and twenty years while Trajan was emperor and Atticus governor,” “the church (universal) had remained a pure and uncorrupted virgin free from “the folly of heretical teachers”; or else, as he suggests, the name of Symeon is simply given to the grandfather in vehement conflict with the very heresies in question. For the testimony of Hegesippus is explicit that at the time of the arrest of Zoker and James they were all who survived of the kindred of the Lord. True, there is confusion in the narrative of Hegesippus, and even a probability that the martyrdom of Symeon dated under Trajan really took place in the persecution of Donimian, before the arrest of the grandsons of Jude, for apart from the alleged age of Symeon (the traditional Jewish limit of human life, Gen. vi. 3, Deut. xxix. 7), the cause of his apprehension “on the ground that he was a descendant of David and a Christian” (Hegesippus ab. Eus. II. E. iii. 32, 3) is inconsistent with both the previous statements regarding the “martyrdom” of Zoker and James, that they were cited as the only surviving Christian Davididae, and that the persecution on this ground collapsed through the manifest absurdity of the accusation. But even if we date the rise of heresies in the reign of Donimian instead of Trajan, the attributing of this epistle against

2 On this point (date of the outbreak of heresy) there is some inconsistency in the reported fragments of Hegesippus. In that quoted below from Eus. H. E. iii. 32, 7 seq., it is expressly stated after mentioning of Symeon the son of Clopas, that in the reign of the grandsons of Jude under Trajan. In iii. 19 the “ancient tradition” attributing the denunciation of these to “some of the heretics” is perhaps not from Hegesippus; but in iv. 22 the beginning of heresy is traced to a certain Thebuthis, a candidate for the bishopric after the death of James, as rival to Symeon. The same figure of the church as a pure virgin is also used as in iii. 32. But as it is only the envious feeling of Thebuthis which is traced to this early date, Hegesippus doubtless means to place the outbreak later.

3 Other forms make him a Danite, and consider the passage in Genesis (lix. 17) a prophecy of the traitor.
corrupting heresy to "Jude the brother of James" will still be incomparable with the statements of Hegesippus, our only informant regarding his or her history.

The Greek of Jude is also such as to exclude the idea of authorship in Palestine by an un schooled Galilaean, at an early date in church history. As F. H. Chase has pointed out: (1) the terms αὐθεντός, συντριβή, τιμίων, have attained their later technical sense; (2) "the writer is steeped in the language of the LXX...", employing its phraseology independently of other N.T. writers, and not that of the canonical books alone, but of the broader non-Palestinian canon; (3) "he has at his command a large stock of stately, sonorous, sometimes poetical words," proving him a "man of some culture, and, as it would seem, not without acquaintance with Greek writers."

If the superscription be not from the hand of the actual brother of Jesus, the question may well be asked why some apostolic name was not chosen which might command greater authority. The text is in the same direction toward which the principal defenders of orthodoxy in 100-150 turned for "the deposit of the faith" (Jude 3) in its purity. The Pastoral Epistles point to "the pattern of sound words, even the sayings of our Lord Jesus Christ," (1 Tim. vi. 3, &c.), as the arsenal of orthodoxy against the same foe (with 1 Tim. vi. 3-10; cf. Jude 4, 11, 16, 18 seq.). Ignatius's motto is to be "inseparable from Jesus Christ and from your bishop" (ad Traill. vii.), Polycarp's, to "turn unto the word delivered unto us from the beginning" (cf. Jude 3; 1 John ii. 7, iii. 23, iv. 21), "the oracles of the Lord," which the false teachers "pervert to their own lusts." Papias, his ἵστος (Irenaeus), turns in fact from "the vain talk of the many, and from the "alien commandments" to such as were "delivered by the Lord to the faith," offering to the Christian world his Interpretation of the Lord's Oracles based upon personal inquiry from those who "came his way," who could testify as to "apostolic tradition." Hegesippus, after a journey over all the principal seats of Christian tradition, testifies that all are holding to the true doctrine as transmitted at the original seat, where it was witnessed first by the apostles and afterwards by the kindred of the Lord and "witnesses" of the first generation. All these writers in one form or other revert to the historic tradition against the licence of innovators. Hegesippus indicates plainly the seat of its authority. For the period before the adoption of a written standard the resort was not so much to "apostles" as to "disciples" and "witnesses." The appeal was to "those who from the beginning had been eye-witnesses and ministers of the word" (Luke i. 2); and these were to be found primarily (until the complete destruction of that church during the revolt of Barcochebas and its suppression by Hadrian) in the mother community in Jerusalem (cf. Acts xv.2). Its life is the measure of the period of oral tradition, whose requiem is sung by Papias. Hegesippus (ap. Eus. H. E. iii. 32, 7 seq.) looks back to the "apostolic deposition," and the "faith," against all the depredations of heresy which "when the sacred college of apostles had suffered death in various forms, and the generation of those that had been deemed worthy to hear the inspired wisdom with their own ears had passed away... attempted thenceforth with a bold face, to proclaim, in opposition to the preaching of the truth, the knowledge which is falsely so-called (ψευδόψωμος γραφέων)."

For an appeal like that of our epistle to the authority of the past against the moral laxity and antinomian teaching of degenerate Pauline churches in the Greek world, the natural resort after Paul himself (Pastoral Epp.) would be the "kindred of the Lord" who were the "leaders and witnesses in every church" in Palestine. Doubtless the framer of Jude 1 would have preferred the aegis of "James the Lord's brother," if this, like that of Paul, had not been already appropriated. Failing this, the next most imposing was "Judas, the brother of James" (cf. Jude 1).

The superscription in the case of Jude, unlike that of James, takes hold of the substance of the book. Verse 3 and the farewell (v. 24 seq.) show that Jude was composed from the start as an "epistle." If this appearance be not fallacious, the obvious relation between the two superscriptions will be best explained by the supposition that the author of Jude gave currency to the existing homily (James) before composing under the pseudonym of Jude. On the interconnexion of the two see Siefert, z.B. "Judasbrief" in Hauck, Realencycl. vol. ix.

Judas is conceived as cherishing the intention of discussing for the benefit of the Christian world (for no mere local church is addressed) the subject of "our common salvation" (the much desiderated authoritative definition of the orthodox faith), but diverted from this purpose by the growth of heresy.

Few writings of this compass afford more copious evidence of date in their literary affinities. The references to Enoch (principally ver. 14 seq. =Eph. En. i. 6, but cf. F. H. Chase, s.v. "Jude" in Hastings's Dict. Bible) and the Assumption of Moses (v. 9) have more a geographical than a chronological bearing, the stricter canon of Palestine excluding these apocryphal books of 90 B.C. to A.D. 40; but the Pauline writings are freely employed, especially 1 Cor. x. 13, Rom. xvi. 25 seq., and probably Eph. and Col. Moreover, the author explicitly refers to the apostolic age as already past, and to the fulfilment of the Pauline prediction (1 Tim. iv. 1 seq.) of the advent of heresy (v. 17 seq.). The Pauline doctrine of "grace" has been perverted to lasciviousness, as by the heretics whom Polycarp opposes (Ep. Polyc. vii.), and this doctrine is taught for "hire" (v. 11, 12, 16; cf. 1 Tim. vi. 3). The unworthy "shepherds" (v. 12; cf. Ezek. xxxiv. 8; John x. 12 seq.) live at the expense of their flocks, polluting the "love-feasts," corrupting the true disciples. According to Clement of Alexandria this was written prophetically to apply to the Carpocratians, an antinomian Gnostic sect of c. 150; but hyper-Paulinists had given occasion to similar complaints already in Rev. ii. 14, 20 (195). Thus Paulinism and its perversion alike are in the past. As regards the undeniable contact of Didache ii. 7 with Jude 22 seq. (cf. Didache, iv. 1, Jude 8) priority cannot be determined; and the use of 1 John likely in Jude 13 is doubtful.

On the other hand, practically the whole of Jude is taken up into 2 Pet., the author merely avoiding, so far as he discovers them, the quotations from apocryphal writings, and prefiguring and affixing sections of his own to refute the heretical eschatology. On the priority of Jude see especially against Spitta Zur Gesch. Litt. d. Urchristenthums, ii. 409-411, F. H. Chase, loc. cit. p. 803. (On 2 Pet. see Peter Epistles Of.) Unfortunately, the date of 2 Pet. cannot be determined as earlier than late in the second century, so that we are thrown back upon internal evidence for the inferior limit.

The treatment of the heresy as the anti-Christ who precedes the "last hour" (v. 18), reminds us of 1 John ii. 18, but it is indicative of conditions somewhat less advanced that the heretics have not yet "gone out from" the church. The treatment of the apostolic age as past, and the deposit of the faith as a regula fidei (cf. Ign. ad Traill. ix.), the presence of antinomian Gnosticism, denying the doctrine of Christ and the glories (v. 8), with "discriminations" between "psychic" and "pneumatic" (v. 9), strongly oppose a date earlier than 100.

Siefert, on account of the superscription, would date as early as 70-80, but acknowledges the super-Pauline affinity of the heresy, its propagation as a doctrine, and close relation to the Nicolaitan of Rev. ii. 14. To these phenomena he gives accordingly a correspondingly early date. The nature of the heresy, opposed, however, and the resort to the authority of Jude "the brother of James" against it, favour rather the period of Polycarp and Papias (117-150).

The history of the superscription of the epistle into church canons is similar to that of James, beginning with a quotation of it as the work of Jude by Clement of Alexandria (Paed. iii. 8), a reference by Tertullian (De cult. fem. i. 3), and a more or less literal endorsement by Origen ("is one might adduce the epistle of Jude," in Milt. tom. xvii. 30) and by the Muratorianum (c. 200), which excepts Jude and 2 and 3 John from its condemnation of apocryphal literature, placing it on a par with the Wisdom of Solomon "which was written by friends of his in his honour." The use of apocryphal literature in Jude itself
JUDGE—JUDGES, BOOK OF

may account for much of the critical disposition toward it of many subsequent writers. Eusebius classed it among the "disputed" books, declaring that as with James "not many of the ancients have mentioned it" (H. E. ii. 23, 25).

The Intro. to the New Test. by Holtzmann, Julicher, Weiss, Zahn, Davidson, Salmon, Bacon and the Standard Commentaries of Meyer and Holtzmann, the International (Big) and other series, contain full and learned discussions on the subject. The articles in Hastings's Dict. Bible (Chase) and the Ency. Bib. (Cony) are full and scholarly. In addition the Histories of the Apostolic Age, by Haus- rath, Weissecker, McGiffert, Bartlett, Ropes and others, and the kindred works of Bartle, Schwegler and Piezeder should be consulted. Moffat's Historical Notes on the Gospels, with p. 158, contains a succinct summary of the evidence with copious bibliography. One of the most thorough of conservative treatments is the Commentary on Jude and Second Peter by J. B. Mayor (1907). (B. W. B.)

JUDGE (Lat. iudex, Fr. juge), in the widest legal sense an officer appointed by the sovereign power in a state to administer the law; in English practice, however, justices of the peace and magistrates are not usually regarded as "judges" in the titular sense. The duties of the judge, whether in a civil or a criminal matter, are to hear the statements on both sides in open court, to arrive at a conclusion as to the truth of the facts submitted to him or, when a jury is engaged, to direct the jury to find such a conclusion, to apply to the facts so found the appropriate rules of law, and to certify by his judgment the relief to which the parties are entitled or the obligations or penalties which they have incurred. With the judgment the office of the judge is at an end, but the judgment sets in motion the executive forces of the state, whose duty it is to carry it into execution.

Such is the type of a judicial officer recognized by mature systems of law, but it is not to be accepted as the universal type, and the following qualifying circumstances should be noticed: (1) in primitive systems of law the judicial is not separated from the legislative and other governing functions; (2) although the judge is assumed to take the law from the legislative authority, yet, as the existing law never at any time contains provision for all cases, the judge may be obliged to invent or create principles applicable to the case—this is called by Bentham and the English jurists judge-made and judiciary law; (3) the separation of the function of judge and jury, and the exclusive charge of questions of law given to the judge, are more particularly characteristic of the English judicial system. During a considerable period in the history of Roman law an entirely different distribution of parts was observed. The adjudication of a case was divided between the magistratus and the iudex, neither of whom corresponds to the English judge. The former was a public officer charged with the execution of the law, and the arbitrator whom the magistrates commissioned to hear and report upon a particular set.

The following are points more specially characteristic of the English system and its kindred judicial systems: (1) Judges are absolutely protected from action for anything that they may do in the discharge of their judicial duties. This is true in the fullest sense of judges of the supreme courts. "It is a principle of English law that no action will lie against a judge of one of the superior courts for a judicial act, though it be alleged to have been done maliciously and corruptly." Other judicial officers are also protected, though not to the same extent, against actions. (2) The highest class of judges are irremovable except by what is in effect a special act of parliament, viz. a resolution passed by both houses and assented to by the sovereign. The inferior judges and magistrates are removable for misconduct by the head of the department (3). The judiciary in England is not a separate profession. The judges are appointed from the class of advocates, and almost entirely according to their eminence at the bar. (4) Judges are in England appointed for the most part by the crown. In a few cases municipal corporations may appoint their own judicial officer.

See also LORD HIGH CHANCELLOR; LORD CHIEF JUSTICE; MASTER OF THE ROLLS, &c., &c., and the accounts of judicial systems under country headings.

JUDGE-ADVOCATE-GENERAL, an officer appointed in England to assist the crown with advice in matters relating to military law, and more particularly as to courts-martial. In the army the administration of justice as pertaining to discipline is carried out in accordance with the provisions of military law, and it is the function of the judge-advocate-general to ensure that these disciplinary powers are exercised in strict conformity with that law. Down to 1793 the judge-advocate-general acted as secretary and legal adviser to the board of general officers, but on the reconstitution of the office of commander-in-chief in that year he ceased to perform secretarial duties, but remained chief legal adviser. He retained his seat in parliament and in 1806 he was made a member of the government and a privy councillor. The office ceased to be political in 1892, on the recommendation of the select committee of 1888 on army estimates, and was conferred on Sir F. Jeune (afterwards Lord St. Helier). There was no salary attached to the office when held by Lord St. Helier, and the duties were for the most part performed by deputy. On his death in 1905, Thomas Milvain, K.C., was appointed, and the terms and conditions of the post were rearranged as follows: (1) A salary of £2000 a year; (2) the holder to devote his whole time to the duties of the post; (3) the retention of the post until the age of seventy, subject to continued efficiency—but with claim to gratuity or pension on retirement. The holder was to be subordinate to the secretary of state for war, without direct access to the sovereign. The appointment is conferred by letters-patent, which define the exact functions attaching to the office, which practically are the reviewing of the proceedings of all field-general, general and district courts-martial held in the United Kingdom, and advising the sovereign as to the confirmation of the finding and sentence. The deputy judge-advocate is a salaried official in the department of the judge-advocate-general and acts under his letters-patent. A separate judge-advocate-general's department is maintained in India, where at one time deputy judge-advocates were attached to every important command. All general courts-martial held in the United Kingdom are sent to the judge-advocate-general, to be by him submitted to the sovereign for confirmation; and all district courts-martial, after having been confirmed and promulgated, are sent to his office for examination and custody. The judge-advocate-general and his deputy, being judges in the last resort of the validity of the proceedings of courts-martial, take no part in their conduct; but the deputy judge-advocates frame and revise charges and attend at courts-martial, swear the court, advise both sides on law, look after the interests of the prisoner and record the proceedings. In the English navy there is an official whose functions are somewhat similar to those of the judge-advocate-general. He is called the legal and judge-advocate of the fleet.

In the United States there is also a judge-advocate-general's department. In addition to being a bureau of military justice, and keeping the records of courts-martial, courts of inquiry and military commissions, it has the custody of all papers relating to the title of lands under the control of the war department. The officers of the department, in addition to acting as prosecutors in all military trials, sometimes represent the government when cases affecting the army come up in civil courts.

See further MILITARY LAW, and consult C. M. Clode, Administration of Justice under Military and Martial Law (1872); Military Forces of the Crown (2 vols., 1869).

JUDGES, THE BOOK OF, in the Bible. This book of the Old Testament, which, as we now read it, constitutes a sequel to the book of Joshua, covering the period of history between the death of this conqueror and the birth of Samuel, is so called because it contains the history of the Israelites before the establishment of the monarchy, when the government was in the hands of certain leaders who appear to have formed a continuous succession of judges, and one office was not hereditary. The only other biblical source ascribed to this period is Ruth, whose present position as an appendix to Judges is not original (see BIBLE and RUTH).

Structure.—It is now generally agreed that the present adjustment of the older historical books of the Old Testament to form a continuous record of events from the creation to the Babylonian
exile is due to an editor, or rather to successive redactors, who pieced together and reduced to a certain unity older memoirs of very different dates; and closer examination shows that the continuity of many parts of the narrative is more apparent than real. This is very clearly the case in the book of Judges. It consists of three main portions: (1) an introduction, presenting one view of the occupation of Palestine by the Israelites (i. 1–ii. 5); (2) the history of the several judges (ii. 6–xvi.); and (3) an appendix containing two narratives of the period.

1. The first section relates events which are said to have taken place after the death of Joshua, but in reality it covers the same ground with the book of Joshua, giving a brief account of the occupation of Canaan, which in some particulars repeats the statements of the previous book, while in others it is quite independent (see Joshua). It is impossible to regard the warfare as described in this section as a war of expansion campaigns undertaken after Joshua's death; they are plainly represented as the first efforts of the Israelites to gain a firm footing in the land (at Hebron, Debir, Bethel), in the very cities which Joshua is related to have subdued (Josh. x. 39). Here then we have an account of the settlement of Israel west of the Jordan which is parallel to the book of Joshua, but makes no mention of Joshua himself, and places the tribe of Judah in the forefront of the operations. Some of the operations may be his history in his eye at all, and the words "and it came to pass after the death of Joshua" in Judg. i. 1 are from the hand of the later editor, who desired to make the whole book of Judges, including ch. i., read continuously with that which now precedes it in the canon of the earlier prophets.

2. The second and main section (ii. 6–xvi.) stands on quite another footing. According to Josh. xxiv. 31 the people "served Yahweh" during the lifetime of the great conqueror and his contemporaries. In Judg. ii. 7 this statement is repeated, and the writer proceeds to explain that subsequent generations fell away from the faith, and served the gods of the nations among which they dwelt (ii. 6–ii. 6). The worship of other gods is represented, not so much as something which went on side by side with Yahweh-worship (cf. x. 6), but as a revolt against Yahweh, periodically repeated and regularly chastised by foreign invasion. The history, therefore, falls into recurring cycles, each of which begins with religious corruption, followed by chastisement, which continues until Yahweh, in answer to the groans of his oppressed people, raises up a "judge" to deliver Israel, and recalling them to the true faith. On the death of the "judge" no new settlement of Israel is attempted, and the same vicissitudes follow. This religious explanation of the course of the history, formally expounded at the outset and repeated in more or less detail from chapter to chapter (especially vi. 1–10, x. 6–18), determines the form of the whole narrative. It is in general agreement with the spirit as also with the language of Deuteronomy, and on this account this section may be conveniently called "the Deuteronomic Book of Judges." But the main religious ideas are not so late and are rather akin to those of Josh. xxiv; in particular the worship of the high places is not condemned, nor is it excused as in i Kings iii. 2. The sources of the narrative are obviously older than the theological exposition of its lessons, and herein lies the value and interest of Judges. The importance of such documents for the scientific historian lies not so much in the events they record as in the unconscious witness they bear to the state of society in which the narrator or poet lived. From this point of view the parts of the book are by no means all of equal value; critical analysis shows that often parallel or distinct narratives have been fused together, and that, whilst the older stories gave more prominence to ordinary human motives and combinations, the later are coloured by religious reflection and show the characteristic tendency of the Old Testament to re-tell the stories of Israel in a manner that lays a heavier weight on the work of Yahweh for his people. The Deuteronomic sources are to be identified with the Judaean (J, or Yahwist) and Ephraimitic (E, or Elohist) strands of the Hexateuch, however, not certain.

To the unity of religious pragmatism in the main stock of the book of Judges corresponds a unity of chronological scheme. The "judges," in spite of the fact that most of them had clearly no more than a local influence, are all represented as successive rulers in Israel, and the history is dated by the years of each judgeship and those of the intervening periods of oppression. But it is impossible to reconcile the numbers with the statement elsewhere that the fourth year of Solomon was the 48th from the exodus (i Kings vi. 1). See Bible: Chronology.

The general introduction (ii. 6–iii. 6) is a blend of Deuteronomic and other sources. The intimate relation between it and the separate narratives (Josh. xxiv. 1–27; a late [Ephraimitic] record inserted by a second Deuteronomic hand, and xxiii., D) appears both from their contents and from the fact that Judg. ii. 6–10 is almost identical with the narrative appended to Joshua's address (Joshua xxvii. 28–31). Judg. i. ii. 5, however, is not touched by D, and hence was probably written before the Deuteronomic redaction. It is possible to the highly intricate introduction the Hebrews were oppressed: (a) to familiarize them with warfare—"it is assumed that they had intermarried with the Canaanites and worshipped their gods (lii. 2, 6); (b) to gain their loyalty to Yahweh (lii. 22, iii. 1); or (c) to punish them for their marriage with the Canaanites and their apostasy (D in lii. 12; cf. Josh. xxiii., and ibid. v. 2).

To this succeeds a noteworthy example of the Deuteronomic treatment of tradition in the achievement of Othniel (g.e.) the only judge of Judah (i.e.) Yahweh is regarded as the agent of the improbability of the situation, renders its genuineness doubtful, and the passage is one of the indications of a secondary Deuteronomic redaction. The case, however, is exceptional; the stories of the other "judges" were not rewritten or to any great extent revised by the Deuteronomic redactor, and his hand appears chiefly in the framework. Thus, in the story of Ehud and the defeat of Moab only ii. 12–19, 29–30 are Deuteronomic. But the rest is not homogeneous, m. 19 and 20 appear to be variants, and the mention of Israel (v. 27) is characteristic of the tendency to treat local troubles as national oppressions, whereas other records represent little national unity at this period (i., v.). See further Ehud.

According to the Septuagint addition to Josh. xxiv. 33, Moab was the successor of Israel's garrison of Shobak, notice of Shamgar, who delivered Israel from the Philistines (iii. 31), is one of the later insertions, and in some MSS. of the LXX. it stands after xvi. 31. The story of the defeat of Sisera appears in two distinct forms, an earlier, in previous narratives (e.g. viii. 27, 28), and a later, in the form of vii. 1–40; the former is to be recognized in i. 1–4, 23 seq., v. 1 (probably) 31 (last clause); see further Deborah. The Midianite oppression (vi.–viii.) is contained in the usual frame (vi. 1–vi.; vii. 27 seq.), but is not homogeneous, since the second part of vii. 1–22 is not the sequel of the first (vii. 17, where they have been slain), and viii. 33–35 ignores ix. The structure of vi. 1–viii. is particularly intricate; vi. 25–32 does not continue vii. 11–24 (there are two accounts of Gideon's introduction and diversifications of Yahweh-worship); vi. 34 forms the sequel of the latter, and vi. 36–40 (with "God") is strange after the description of the miracle in vii. 21 seq. (with "Yahweh"). Further, there are difficulties in vi. 34, vii. 23 seq., viii. 1, when compared with vii. 28, 8 and viii. 22 the second account is inserted. There are two sequences: vi. 23 seq. and viii. 1; with the former contrast vi. 35: vi. 3–13 cf. xi. 1–6, and see below. Chapter viii. 22 seq. comes unexpectedly, and the refusal of the offer of the king expresses later ideas (cf. vii. 1, 7; viii. 12, xii. 17, 17). The conclusion, however, shows that the deputation of the Israelites to the temple is a later, and the condemnation of the ephod as part of the worship of Yahweh (viii. 27) agrees with the thought in vi. 25–32 as against that in vi. 11–24. (See Ephod; Gideon;) Chapter ix. (see Abrishchek) appears to be a later addition, and the story of the introduction of Josue is inserted later perhaps by means of the introduction, vii. 30–32 (post-exilic). It has two accounts of the attack upon Shechem (x. 26–41 and 42–49).

After a brief notice of two "minor judges" (see below), follows the story of Jephthah. It concludes with the usual Deuteronomic

---

Hence, it is to be inferred that the reviser had older written records before him. Had these been in the oral stage he would scarcely incorporate traditions which did not agree with his views; at all events they would hardly have been written down by him in the form in which they have survived. The narratives of the monarchy which are preserved only in Chronicles, on the other hand, illustrate the manner in which tradition was reshaped and re-written under the influence of a later religious standpoint.
JUDGMENT

Judges (xii. 7), but is prefaced by a detailed introduction to the oppression of Israel (x, 6 sq.). By the inclusion of the Philistines among the oppressors, and of Judah, Benjamin and Ephraim among the oppressed (x. 7, 9), it appears to have in view not merely the story of local history, but the period of history which ended with Samuel's great victory and the institution of the monarchy. But this belongs to a later scheme (see Samuel), and the introduction in the later form must have been prefixed to the history of the northern tribes, and particularly of the tribe of Benjamin, where Ammon is linked to the preceding introduction by x. 17 seq.; for the framework see x. 6 (above), xii. 7. Chapter xi. 12-28 (cf. Num. xx. seq.) is applicable only to Moab, vv. 29 and 32 are variants, and Jeph- thah (xii. 6 sq.) is inserted variously in Tob. (xii. 3) and Micr. (xii. 34). In xi. 1-10 the outline stipulates that he shall be chief of Gilead if successful, but in ... on behalf of Israel. Both Moab and Ammon had good reason to be hostile to Gilead (Numb. xx. seq.).

The old stories of Samson the Danite have been slightly touched by the redaction (xiii. 1; xv. 20; xvi. 31, where he is a "judge"); only xiii. 25-30 represents him as the hero of the "Song of Samson and Saul," and gives a rather different impression of the hero of the folk-tales. The cycle illustrates some interesting customs and is in every way valuable as a specimen of popular narration.

Grouped among these narratives are the five so-called "minor judges" (x. 1-5; xii. 8-15). By the addition of Shamgar (iii. 11) the number is made to agree with the six more important names. They are not represented as having any immediate religious importance, and in that respect the Danites are the equal of the tribes. Their history is not related from such lively and detailed reminiscence as gives charm to the longer episodes of the book. The notices are drawn up in the form of song, and some of the verses, in harmony with a characteristic feature of early Hebrew history, are those of personified families of communities rather than of families.

3. The third and last section of the book embraces chapters xvii.-xxi., and consists of two narratives independent of one another and of the main stock of the book, with which they are not brought into any chronological connexion. They appear to owe their position to the latest redactor (akin to the latest stratum in the Hexateuch) who has heavily worked over xii.-xxi. and has lifted into its present form by the addition of i.-ii. 5, ix. and possibly of v.

The first narrative, that of Micah and the Danites, is of the highest interest both as a record of the state of religion and for the picture it gives of the way in which one clan passed from the condition of an invading band into settled possession of land and city. Its interest (xvii. seq.) lies in the foundation of the Ephraimite sanctuary at Micah the Levite's house of Dan. There are some repetitions in the account, but there is not enough evidence to restore two complete stories. The history of the Levite and the Danites is of quite another character, and presents the same point of view quite characteristic of its form. It is supposed that the passage referred to were already obsolete when the narrative was composed. It appears to consist of an old story which has been heavily revised to form an edifying piece of exposition. The older parts are preserved in the story of the Levite of Mt Ephraim who was driven from Bethel in Judah was outraged, not by the non-Israelite Jews of Jerusalem, but by the Benjaminites of Gibeah; there are traces of another source in vv. 6-8, 10, 13, 15. The older portions of xvii. seq. include the vengeance taken by Israel on their oppressors, and the reconstruction of the tribe by intermarriage with the women of Shiloh (xii. 1, 15, 17-19, 21-23). The post-exilic expansions (found chiefly in xii., xx. 2-14, 16, 24 seq.) describe the punishment of Benjamin by the religious assembly and the massacre of Jabesh-Gilead for its refusal to join Israel, four hundred villages of the Gileadites being saved for Benjamin. How much old tradition underlies these stories is questionable. It is very doubtful whether Hosea's allusion to the depopulation of Gibeah (ix. 6; x. 9) is to be referred hither, but it is noteworthy that whilst Gibeah and Jabesh-Gilead, which appear here in a bad light, are known to be associated with Saul, the sufferer is a Benjaminite. The tabernacle at Jabesh, the traditional home of David. The account of the great fight in xv. is reminiscent of Joshua's battle at Ai (Josh. vii.-viii.).

Historical Value. The book of Judges consists of a number of narratives collected by Deuteronomic editors; to the same circles are due accounts of the invasions of Palestine and settlement in Joshua, and of the foundation of the monarchy in Samuel. The connexion has been broken by the later insertion of matter (not necessarily of late date itself), and the whole was finally formed into a distinct book by a post-exilic hand. The dates of the older stories preserved in ii. 6-xvi. 6 are quite unknown. If they are trustworthy for the period to which they are relegated (approximately 14th-12th cent. B.C.) they are presumably of very great antiquity, but if they belong to the sources J, E of the Hexateuch (at least some four or five centuries later) their value is seriously weakened. On the other hand, the belief that the monarchy had been preceded by national "judges" may have led to the formation of the collection. It is evident that there was more than one period in Israelite history in which one or other of these stories of local heroes would be equally suitable. They reflect tribal rivalry and jealousy (cf. Isa. ix. 21, and the successors of Jeroboam 2), attacks by nomads and wars with Ammon and Moab; conflicts between newly settled Israelites and indigenous Canaanites have been suspected in the story of Abimelech, and it is not impossible that the post-Deuteronomic writer who inserted ch. ix. so understood the record. An striking exception to the lack of unity among the tribes is afforded by the account of the defeat of Sisera, and here the old poem represents a combined effort of the Ephraimite and Danite editor, while the later prose version approximates the standpoint of Josh. xi. 1-15, with its defeat of the Canaanites. The general stand-point of the stories (esp. Judg. v. ) is that of central Palestine; the exceptions are Othniel and Samson—the latter interrupting the introduction in x., and its sequel, the former now entirely due to the Deuteronomic editor. Of the narratives which precede and follow, ch. i. represents central Palestine separated by Canaanite cities from tribes to the south and north; it is the situation recognized in Judg. xii. 10-12, as well as in passages imbedded in the latest portions of the book of Joshua, though it is in contradiction to the older traditions of Joshua himself. Chapters xvii. seq. (like the preceding story of Samson) deals with Danites, but the migration can hardly be earlier than David's time; and xix.-xxi., by describing the extermination of Benjamin, form a link between the presence of the tribe in the later narratives of the exodus and its new prominence in the traditions of Saul (q.e.). As an historical source, therefore, the value of Judges will depend largely upon the question whether the Deuteronomic editor (about 600 B.C. at the earliest) would have access to trustworthy documents relating to a period some six or seven centuries previously. See further Jews, §§ 6, 8; and Samuel, Books of.

Literature. Biblical scholars are in agreement regarding the preliminary literary questions of the book, but there is divergence of opinion on points of detail, and on the precise growth of the document, the twofold Deuteronomic redaction. See further W. R. Smith, Encyc. Brit. 9th ed. (upon which the present article is based); G. F. Moore, International Critical Com. (1895); Encyc. Bibl. art. "Judges"; K. Budde, Kurzer Handkommentar (1897); Lagrange, Livre des Juifs, 1884; 2 vols.; S. R. Driver, Lit. of Old Testament (1900); Moore, in the Sacred Books of Old Testament (1898); C. F. Kent, The Student's Old Testament, vol. i. (1904).

S. A. C.}

JUDGMENT, in law, a term used to describe (1) the adjudication by a court of justice upon a controversy submitted to it inter partes (post litem contentam) and determining the rights of the parties and the relief to be awarded by the court as between them; (2) the formal document issuing from the court
in which that adjudication is expressed; (5) the opinions of the judges expressed in a review of the facts and law applicable to the controversy leading up to the adjudication expressed in the formal document. When the judgment has been passed and entered and recorded it binds the parties: the controversy comes to an end (transis in rem judicatam), and the person in whose favour the judgment is entered is entitled to enforce it by the appropriate method of "execution." There has been much controversy among lawyers as to the meaning of the expressions "final" and "interlocutory" as applied to judgments, and as to the distinction between a "judgment," a "decree," and an "order." These disputes arise upon the wording of statutes or rules of court and with reference to the appropriate times or modes of appeal or of execution.

The judgments of one country are not as a rule directly enforceable in another country. In Europe, by treaty or arrangement, foreign judgments are in certain cases and on compliance with certain formalities made executory in various states. A similar provision is made as between England, Scotland and Ireland, for the registry and execution in each country of certain classes of judgments given in the others. But as regards the rest of the king's dominions and foreign states, a "foreign" judgment is in England recognized only as constituting a cause of action which may be sued upon in England. If given by a court of competent jurisdiction it is treated as creating a legal obligation to pay the sum adjudged to be due. Summary judgment may be entered in an English action based on a foreign judgment unless the defendant can show that the foreign court had no jurisdiction over the parties or the subject matter of the action, or that there was fraud on the part of the foreign court or the successful party, or that the foreign proceedings were contrary to natural justice, e.g. concluded without due notice to the parties affected. English courts will not enforce foreign judgments as to foreign criminal or penal or revenue laws.

Judgment Debtor. In English law, a person against whom a judgment ordering him to pay a sum of money has been obtained and remains unsatisfied. Such a person may be examined as to whether any and what debts are owing to him, and if the judgment debt is of the necessary amount he may be made bankrupt if he fails to comply with a bankruptcy notice served on him by the judgment creditors, or he may be committed to prison or have a receiving order made against him in a judgment summons under the Debtors Act 1869.

Judgment Summons. In English law, a summons issued under the Debtors Act 1869, on the application of a creditor who has obtained a judgment for the payment of a sum of money by instalments or otherwise, where the order for payment has not been complied with. The judgment summons cites the defendant to appear personally in court, and be examined on oath as to the means he has, or has had, since the date of the order or judgment made against him, to pay the same, and to show cause why he should not be committed to prison for his default. An order of commitment obtained in a judgment summons remains in force for a year only, and the extreme term of imprisonment is six weeks, dating from the time of lodging in prison. When a debtor has once been imprisoned, although for a period of less than six weeks, no second order of commitment can be made against him in respect of the same debt. But if the judgment be for payment by instalments a power of committal arises on default of payment for each instalment. If an order of commitment has never been executed, or becomes inoperative through lapse of time, a fresh commitment may be made. Imprisonment does not operate as a satisfaction or extinguishment of a debt, or deprive a person of a right of execution against the land or goods of the person imprisoned in the same manner as if there had been no imprisonment.

Judicature Acts, an important series of English statutes having for their object the simplification of the system of judicature in its higher branches. They are the Supreme Court of Judicature Act 1873 (36 & 37 Vict. c. 66) and the Supreme Court of Judicature Act 1875 (38 & 39 Vict. c. 77), with various amending acts, the twelfth of these being in 1899. By the act of

1874 the court of chancery, the court of queen's (king's) bench, the court of common pleas, the court of exchequer, the high court of admiralty, the court of probate and the court of divorce and matrimonial causes were consolidated into one Supreme Court of Judicature (sec. 3), divided into two permanent divisions, called "the high court," with (speaking broadly) original jurisdiction, and "the court of appeal" (sec. 4). The objects of the act were threefold—first, to reduce the historically independent courts of common law and equity into one supreme court; secondly, to establish for all divisions of the court a uniform system of pleading and procedure; and thirdly, to provide for the enforcement of the same rule of law in those cases where chancery and common law recognized different rules. It can be seen at once how bold and revolutionary was this new enactment. By one section the august king's bench, the common pleas, in which serjeants only had formerly the right of audience, and the exchequer, which had its origin in the reign of Henry I., and all their jurisdiction, criminal, legal and equitable, were vested in the same court. This must be understood, however, that law and equity were not fused in the sense in which that phrase has generally been employed. The chancery division still remains distinct from the common law division, having a certain range of legal questions under its exclusive control, and possessing to a certain extent a peculiar machinery of its own for carrying its decrees into execution. But all actions may now be brought in the high court of justice, and, subject to such special assignments of business as that alluded to, may be tried in any division thereof.

There were originally three common law divisions of the High Court corresponding with the three former courts of common law. But after the death of Lord Chief Baron Kelly on the 17th of September 1880, and of Lord Chief Justice Cockburn on the 20th of November 1880, the common pleas and exchequer divisions were (by order in council, 10th December 1880) consolidated with the division de Grande Bretagne into the chief division of the presidency of the lord chief justice of England, to which, by the 25th section of the Judicature Act 1881, all the statutory jurisdiction of the chief baron and the chief justice of the common pleas was transferred. The high court, therefore, now consists of the chancery division, the common law division, under the name of the king's bench division; and the probate, divorce and admiralty division. To the king's bench division is also attached, by order of the lord chancellor (Jan. 1, 1884), the business of the London court of bankruptcy.

For a more detailed account of the composition of the various courts, see Chancery; King's Bench; and Probate, Divorce and Admiralty Court.

The keystone of the structure created by the Judicature Acts was a strong court of appeal. The House of Lords remained the last court of appeal, as before the acts, but its judicial functions were virtually transferred to an appeal committee, consisting of the lord chancellor and other peers who have held high judicial office, and certain lords of appeal in ordinary created by the act of 1873 (see Appeal).

The practice and procedure of the Supreme Court are regulated by rules made by a committee of judges, to which have been added the president of the incorporated law society and a practising barrister and one other person nominated by the lord chancellor. The acts of 1873, with some subsequent amendments. With the appendices they fill a moderate-sized volume. Complaints are made that they go into too much detail, and place a burden on the time and temper of the busy practitioner whom they are intended to afford to. It is possible that the authors of the rules attempted too much, and it might have been better to provide a simpler and more elastic code of procedure. Rules have sometimes been made to meet individual cases of hardship, and rules of procedure have been passed up from time to time, sometimes embodying a new experiment, and not always consistent with former rules.

1 The comte de Franqueville in his interesting work, Le Système judiciaire de Grande Bretagne, criticizes the use of the word "supreme" as a designation of this court, inasmuch as its judgments are subject to appeal to the House of Lords, but in the act of 1873 the appeal to the House of Lords was abolished. He is also severe on the illegible use of the words "division" and "court" in many different senses (I. 180-181).
The most important matter dealt with by the rules is the mode of pleading. The authors of the Judicature Act had before them two systems of pleading, both of which were open to criticism. The common law pleadings (it was said) did not state the facts on which the plaintiff depended, the legal or relevant issues were not made plain, and it was easy to plead away the salient defects in the case. The common law pleading was, therefore, unsuitable for the purpose of trials by jury and was, in their opinion, of one of the greatest defects, and to a large extent irrelevant and useless, there was no exaggeration in both statements. In pursuing the fusion of law and equity and in the attempt to simplify pleading, the framers of the rules devised a system which they thought would meet the defects of both systems, and be appropriate for both the common law and the chancery divisions. In a normal case the plaintiff had one of two courses open to him, either he was to set forth concisely the facts on which he relied, and the relief which he asked. The defendant then delivered his statement of defence, in which he was to say whether he admitted or denied the facts averred by the plaintiff (except allegations of special facts, admitted), and any additional facts and legal defences on which he relied. The plaintiff might then reply, and the defendant rejoin, and so on until the pleadings had exhausted themselves. This system of continuous pleadings had an obvious defect, if the right of either party to demur to his opponent’s pleading, i.e., to say, admitting all your averments of fact to be true, you still have no cause of action, or defence (as the case may be). It may be, however, that in the earlier stages of the case, the system was found to work so well that it even had the disadvantage of immediately making plain the issues of the case, and the feeble defences of the defendant (as it had been by the Common Law Procedure Acts), was an admirable instrument for defining the issue between the parties though unsuited for the more complicated cases which might arise in any event. It was to overcome this defect that the new system was devised. In an ordinary case it may be better to try the new system in the first instance in the chancery division only. It should be added that the rules contain provisions for actions being tried without pleadings if the defendant does not require a statement of claim. The judge may dismiss the case in an instance of an judgment unless the defendant gets leave to defend. In the chancery division there are of course no pleadings in those matters which by the rules can be disposed of by summons in chambers instead of by ordinary suit as formerly, as in many cases, there might be set down and disposed of before the trial (Order xxi, rules 1, 2). This, in the opinion of Lord Davey in 1902 (Ency. Brit., to vol. ed., xxx, 146), was a disastrous change. The right of either party to demurrer where the pleading is a mere matter of form, and where the facts alleged are not one of fact or law, is a matter of such importance that the remedy of demurrer was abolished, and instead thereof it was provided that any point of law raised by the pleadings should be disposed of at or after the trial, provided that by consent or otherwise a party may, so long as there is no breach of any rule of court, be agreed to by both parties and was consequently more difficult and expensive. It is obvious that a rule which makes the normal time for decision of questions at law the trial or subsequently, and of questions of fact at law the time of the trial, and in regard to expenses certain cases, is a poor substitute for a demurrer as of right, and it has proved so in practice. The editors of the Yearly Practice for 1901 (Muir MacKenzie, Lishing, M R I A) disapproved of the new system, and said: “The ordinary course is to issue a summons for directions, to have the matter tried by the court, or to have it referred to a tribunal appointed for the purpose.” A similar view was expressed by Mr Justice Sir William Wilson. He said that “the new system has not been of much use.” It is believed to have a prejudicial effect on the standard of legal accuracy and knowledge required in practitioners. Formerly the pleadings did not state the facts on which they depended, but now they do. Formerly the pleadings did not state the legal issues, but now they do. Formerly there was no trial by jury, but now there is. Formerly the pleadings did not state the facts on which the plaintiff depended, but now they do. Formerly the pleadings did not state the legal issues, but now they do. Formerly there was no trial by jury, but now there is. Formerly the pleadings did not state the facts on which the plaintiff depended, but now they do. Formerly the pleadings did not state the legal issues, but now they do. Formerly there was no trial by jury, but now there is. Formerly the pleadings did not state the facts on which the plaintiff depended, but now they do. Formerly the pleadings did not state the legal issues, but now they do. Formerly there was no trial by jury, but now there is.
JUDSON—JUEL, J. 543

sumptuous entertainment invites her to remain within his tent over night. No sooner is he overcome with sleep than Judith, seizing his sword, strikes off his head and gives it to her maid; both now leave the camp (as they had previously been accustomed to do, ostensibly for prayer) and return to Bethulia, where the trophy is displayed amid great rejoicings and thank-givings. Achior now publicly professes Judaism, and at the instance of Judith the Israelites make a sudden victorious onslaught on the enemy. Judith now sings a song of praise, and all go up to Jerusalem to worship with sacrifice and rejoicing.

The book concludes with a brief notice of the closing years of the heroine.

Versions.—Judith was written originally in Hebrew. It is shown to be of the numerous Hexaglotta, but also by misspelling of the Greek translation, as in ii. 3, 3, 9, and other passages (see Fritzsch and Ball in loc.), despite the statement of Origen (Ep. ad Afr. 13) that the book was not received by the Jews among their apocryphal writings. In his preface to Judith, Jerome says that he based his Latin version on the Chaldee, which the Jews reckoned among their Hagiographa. Ball (Speaker’s Apocrypha, i. 243) holds that the Chaldee text used by Jerome was a free translation or adaptation of the Hebrew. The book exists in two forms: the shorter, which is preserved only in Hebrew (see under Midrashim below), is, according to Scholz, Lipsius, Ball and Gaster, the older; the longer form is that contained in the versions.

Greek Text.—The text found in the three recensions: (1) in A. B.; (2) in codices 19, 108 (Lucian’s text); (3) in codex 58, the source of the old Latin and Syriac.

Syriac and Latin Versions.—Two Syriac versions were made from the Greek—the first, that of the Psalms; and the second, of Paul of Tella, the so-called Hexaplar. The Old Latin was derived from the Greek, as we have remarked above, and Jerome’s from the Old Latin, under the control of a Chaldee version.

Life of Judith.—These are printed in Jellinek’s Bet ha-Midrash, i. 130-131; ii. 12-22; and by Gaster in Proceedings of the Society of Biblical Archeology (1894), pp. 156-163.

Date.—The book in its fuller form was most probably written in the 2nd century B.C. The writer places his romance two centuries earlier, in the time of Ochs, as we may reasonably infer from the attack made by Holofernes and Bagos on Judaea; for Artaxerxes Ochs made an expedition against Phoenicia and Egypt in 370 B.C., where his chief generals were Holofernes and Bagos.

Recent Literature.—Ball, Speaker’s Apocrypha (1888), an excellent piece of work; Scholz, Das Buch Judith (1896); Lohr, Apok. und Pseude (1900), ii. 147-164; Porter in Hastings’s Dict. Bible, ii. 822-824; Gaster, Encyc. Bibl., ii. 2642-2646. See Ball, pp. 260-261, and the bibliography in his full bibliography.

JUDDS, ADONIRAM (1788-1850), American missionary, was born at Malden, Massachusetts, on the 9th of August 1788, the son of a Congregational minister. He graduated at Brown University in 1807, was successively a school teacher and an actor, completed a course at the Andover Theological Seminary in September 1810, and was at once licensed to preach as a Congregational clergyman. In the summer of 1810 he went with several of his fellows students at Andover had petitioned the general association of ministers to be sent to Asiatic missionary fields. This application resulted in the establishment of the American board of commissioners for foreign missions, which sent Judson to England to secure, if possible, the co-operation of the London Missionary Society. His ship fell into the hands of a French privateer and he was for some time a prisoner in France, but finally, in 1812, America, where he was considered without anything being decided. He then returned to New York, where he found the board ready to act independently. His appointment to Burma followed, and in 1812, accompanied by his wife, Ann Hasscotine Judson (1759-1826), he went to Calcutta. On the voyage both became advocates of baptism by immersion, and being thus cut off from Congregationalism, they began independent work. In 1814 they began to receive support from the American Baptist missionary union, which had been founded with the primary object of keeping them in the field. After a few months at Madras, they settled at Rangoon. There Judson mastered Burmese, into which he translated part of the Gospels with his wife’s help. In 1824 he removed to Ava, where during the war between the East India Company and Burma he was imprisoned for almost two years. After peace had been brought about (largely, it is said, through his exertions) Mrs. Judson died. In 1827 Judson removed his headquarters to Maulmain, where school buildings and a church were erected, and where in 1843 he married Sarah Hall Boardman (1803-1845). In 1833 he compiled his translation of the Bible; in succeeding years he compiled a Burmese grammar, a Burmese dictionary, and a Pali dictionary. In 1845 his wife’s dying health decided Judson to return to America, but she died during the voyage, and was buried at St. Helena. In the United States Judson married Emily Chubbuck (1817-1854), well-known as a poet and novelist under the name of “Fanny Forrester,” who was one of the earliest advocates in America of the higher education of women. She returned with him in 1846 to Burma, where the rest of his life was devoted largely to the rewriting of his Burmese dictionary. He died at sea on the 13th of April 1850, while on his way to Martinique, in search of health. Judson was perhaps the greatest, as he was practically the first, of the many missionaries sent from the United States into foreign fields; his fervour, his devotion to duty, and his fortitude in the face of danger mark him as the prototype of the American missionary.

The Judson Memorial, an institutional church, was erected on Washington Square South, New York City, largely through the exertions of his son, Rev. Edward Judson (b. 1844), who became its pastor in 1866 and died in 1899. The church was founded in 1885; its new ed. was built (1907). An outstanding Bible is that of the late Mrs. Judson, a Professor of Foreign Missions (1879). See also Robert T. Middletich’s Life of Adoniram Judson, Burmah’s Great Missionary (New York, 1899). For the three Mrs. Judson’s, see Knowles, Life of Ann Hasscotine Judson (1829); Emily C. Judson, Life of Sarah Hall Boardman Judson (1849); Asahel C. Kendrick, Life and Letters of Emily Chubbuck Judson (1861).

JUEL, JENS (1662-1700), Danish statesman, born on the 15th of July 1631, began his diplomatic career in the suite of Count Christian Rantzau, whom he accompanied to Vienna and Regensburg in 1652. In August 1657 Juel was accredited to the court of Poland, and though he failed to prevent King John Casimir from negotiating separately with Sweden he was made a privy councillor on his return home. But it was the reconciliation of Juel’s uncle Hannibal Sehested with King Frederick III. which secured Juel’s future. As Sehested’s representative, he concluded the peace of Copenhagen with Charles X., and after the Danish revolution of 1660 was appointed Danish minister at Stockholm, where he remained for eight years. Subsequently the chancellor Griffenfeldt, who had become warmly attached to him, sent him to 1672, and again in 1674, as ambassador extraordinary in London, ostensibly to bring about a closer union between the two northern kingdoms, but really to consolidate Griffenfeldt’s far-reaching system of alliances. Juel had sympathised with Griffenfeldt’s Scandinavian policy, which aimed at weakening Sweden sufficiently to re-establish something like an equilibrium between the two states. Like Griffenfeldt, Juel also feared, above all things, a Swed-Dano war. After the unlucky Scanian War of 1675-79, Juel was one of the Danish plenipotentiaries who negotiated the peace of Lund. Even then he was for an alliance with Sweden “till we can do better.” This policy he consistently followed, and was largely instrumental in bringing about the marriage of Charles XI. with Christian V.’s daughter Ulrica Leonora. But for the death of the like-minded Swedish statesman Johan Gyllenstierna in June 1680, Juel’s “Scandinavian” policy might have succeeded, to the infinite advantage of both kingdoms. Juel represented Denmark at the coronation of Charles XII. (December 1697), when he concluded a new treaty of alliance with Sweden. He died in 1700.

Juel, a man of very few words and a sworn enemy of phrase-making, was perhaps the shrewdest and most cynical diplomatist of his day. His motto was: “We should wish for what we can get.” Throughout life he regarded the political situation of Denmark with absolute pessimism. She was, he often said, the cat’s-paw of the Great Powers. While Griffenfeldt would have obviated this danger by an elastic political system, adaptable to all circumstances, Juel preferred seeing whatever he could get in favourable conjunctures. In domestic affairs Juel was an
adherent of the mercantile system, and laboured vigorously for the industrial development of Denmark and Norway. For an aristocrat of the old school he was liberally inclined, but only favoured petty reforms, especially in agriculture, while he regarded emancipation of the serfs as quite impracticable. Juel made no secret of his preference for absolutism, and was one of the few patrons who accepted the title of baron. He saw some military service during the Scanian War, distinguishing himself at the siege of Vensborg, and by his swift decision at the critical moment materially contributing to his brother Niels's naval victory in the Bay of Kjøge. To his great honour he retained faithful to Griffenfeld after his fall, enabled his daughter to marry handsomely, and did his utmost, though in vain, to obtain the ex-chancellor’s release from his dungeon.

JUEL, NIELS (1629-1667), Danish admiral, brother of the preceding, was born on the 8th of May 1629, at Christiania. He served his naval apprenticeship under Van Tromp and De Ruyter, taking part in all the chief engagements of the war of 1652-54 between England and Holland. During a long indisposition at Amsterdam in 1655-56 he acquired a thorough knowledge of ship-building, and returned to Denmark in 1656 a thoroughly equipped seaman. He served with distinction during the Swedo-Danish wars of 1658-60 and took a prominent part in the defence of Copenhagen against Charles X. During fifteen years of peace, Juel, as admiral of the fleet, laboured assiduously to develop and improve the Danish navy, though he bitterly resented the setting over his head in 1663 of Cort Adelaar on his return from the Turkish wars. In 1661 Juel married Margrethe Uelfelt. On the outbreak of the Scanian War he served at first under Adelaar, but on the death of the latter in November 1675 he was appointed to the supreme command. He then won a European reputation, and raised Danish sea-power to unprecedented eminence, by the system of naval tactics, afterwards perfected by Nelson, which consists in cutting off a part of the enemy’s force and concentrating the whole attack on it. He first employed this manoeuvre at the battle of Jasmund off Rügen (May 25, 1676) when he broke through the enemy’s line in close column and cut off five of their ships, which, however, nightfall prevented him from pursuing. Juel’s operations were considerably hampered at this period by the overbearing conduct of his Dutch auxiliary, Philip Almonde, who falsely accused the Danish admiral of cowardice. A few days after the battle of Jasmund, Cornelis Van Tromp the younger, with 17 fresh Danish and Dutch ships of the line, superseded Juel in the supreme command. Juel took a leading part in Van Tromp’s great victory off Öland (June 1, 1676), which enabled the Danes to invade Scania unopposed. On the 1st of June 1677 Juel defeated the Swedish admiral Sjöblad off Mön; on the 30th of June 1677 he won his greatest victory, in the Bay of Kjøge, where, with 23 ships of the line and 1207 guns, he routed the Swedish admiral Evert Horn with 36 ships of the line and 1800 guns. For this great triumph, the just reward of superior seamanship and strategy—at an early stage of the engagement Juel’s experienced eye told him that the wind in the course of the day would shift from S.W. to W., and he took extraordinary risks accordingly—he was made lieutenant admiral general and a privy councillor. This victory, besides permanently crippling the Swedish navy, gave the Danes a self-confidence which enabled them to keep their Dutch allies in their proper place. In the following year Van Tromp, whose high-handedness had become unbearable, was discharged by Christian V., who gave the supreme command to Juel. In the spring of 1678 Juel put to sea with 84 ships carrying 2400 cannon, but as the Swedes were not longer strong enough to encounter such a formidable armament on the open sea, his operations were limited to blockadeing the Swedish ports and transporting troops to Rügen. After the peace of Lund Juel showed himself an administrator and reformer of the first order, and under his energetic supervision the Danish navy ultimately reached imposing dimensions, especially after Juel became chief of the admiralty in 1683. Personally Juel was the noblest and most amiable of men, unusually beloved and respected by his sailors, simple, straightforward and unpretentious all his life. During his latter years he was popularly known in Copenhagen as “the good old knight.” He died on the 8th of April 1697.

JUG, a vessel for holding liquid, usually with one handle and a lip, made of earthenware, glass or metal. The origin of the word in this sense is uncertain, but it is probably identical with a shortened form of the feminine name Joan or Joanna; cf. the similar use of Jack and Jill or Gill for a drinking-vessel or a liqueur measure. It has also been used as a common expression for a homely woman, a servant-girl, a sweetheart, sometimes in a sense of dispensation. In slang, "jug" or "stone-jug" is used to denote a prison; this may possibly be an adaptation of Fr. fris. yoke, Lat. jugum. The word "jug" is probably onomatopoetic when used to represent a particular note of the nightingale’s song, or applied locally to various small birds, as the hedge-jug, &c.

The British Museum contains a remarkable bronze jug which was found at Kumasi during the Ashanti Expedition of 1866. It dates from the reign of Richard II, and is decorated in relief with the arms of England and the badge of the king. It has a lid, spout and handle, which ends in a quatrefoil. An inscription on three raised bands round the body of the vessel, modernized runs:—"He that will not spare when he may shall not spend when he would. Deem the best in every doubt till the truth be tried out." The British Museum Guide to the Medieval Room contains an illustration of this vessel.

A particular form of jug is the "ewer," the precursor of the ordinary bedroom jug (an adaptation of O. Fr. etwerk, and Lat. aquaria, water-pitcher, from aqua, water). The ewer was a jug with a wide spout, and was principally used at table for pouring water over the hands after eating, a matter of some necessity before the introduction of forks. Early ewers are sometimes mounted on three feet, and bear inscriptions such as Venes laver. A basin of similar material and design accompanied the ewer. In the 13th and 14th centuries a special type of metal ewer takes the form of animals, men on horseback, &c.; these are generally known as aquamaniles, from med. Lat. aqua manile or aqua manale (aqua, water, and monare, to trickle, pour, drip). The British Museum contains several examples.

In the 18th and early 19th centuries were made the drinking-vessels of pottery known as "Toby jugs," properly Toby Filpots or Philpots. These take the form of a stout old man, sometimes seated, with a three-cornered hat, the corners of which act as spouts. Similar drinking-vessels were also made representing characters popular at the time, such as "Nelson jugs," &c.

JUGE, BOFFILLE DE (c. 1502), French-Italian adventurer and statesman, belonged to the family of del Giudice, which came from Amalfi, and followed the fortunes of the Angevin dynasty. When John of Anjou, duke of Calabria, was conquered in Italy (1461) and fled to Provence, Boffille followed him. He was given by Duke John and his father, King René, the charge of upholding by force of arms their claims on Catalonia. Louis XI., who had joined his troops to those of the princes of Anjou, attached Boffille to his own person, made him his chamberlain and conferred on him the vice-royalty of Roussillon and Cerdagne (1471), together with certain important lordships, among others the countship of Castres, confiscated from James of Armagnac, duke of Nemours (1476), and the temporalities of the bishopric of Castres, confiscated from John of Armagnac. He also entrusted him with diplomatic negotiations with Flanders and England. In 1480 Boffille married Marie d’Albret, sister of Alain the Great, thus confirming the feudal position which the king had given him in the south. He was appointed as one of the judges in the trial of René of Alençon, and showed such zeal in the discharge of his functions that Louis XI. rewarded him with fresh gifts. However, the bishop of Castres recovered his diocese (1493), and the heirs of the duke of Nemours took legal proceedings for
the recovery of the countship of Castres. Boffille, with the object of escaping from his enemies, applied for the command of the victorious general of the Spanish army. His application was refused, and he further lost the vicereignty of Roussillon (1401). His daughter Louise married against his will a gentleman of no rank, and this led to terrible family dissensions. In order to disinherit his own family, Boffille de Juge gave up the countship of Castres to his brother-in-law, Alain d'Albret (1494). He died in 1502.

See P. M. Perret, Boffille de Juge, comte de Castres, et la république de Venise (1891); F. Pasquier, Inventaire des documents concernant Boffille de Juge (1905).

JUGGERNAUT, a corruption of Sans. JAGANNĀTHA, "Lord of the World," the name under which the Hindu god Vishnu is worshipped at Puri in Orissa. The legend runs that the sacred blue-stone image of Jagannātha was worshipped in the solitude of the jungle by an outcast, a Savara mountaineer, called Basu. The king of Malwa, Indradyumna, had despatched Brahmans to all quarters of the peninsula, and at last discovered Basu. Thereafter the image was taken to Puri, and a temple, begun in 1174, was completed fourteen years later at a cost of upwards of half a million sterling. The site had been associated for centuries before and after the Christian era with Buddhism, and the famous Car festival is probably based on the Tooth festival of the Buddhists, of which the Chinese pilgrim Fa-Hien gives an account. The present temple is a pyramidal building, 192 ft. high, crowned with the mystic wheel and flag of Vishnu. Its inner enclosure, nearly 400 ft. by 300 ft., contains a number of small temples and shrines. The main temple has four main rooms—the hall of offerings, the dancing hall, the audience chamber, and the shrine itself—the two latter being each 80 ft. square. The three principal images are those of Vishnu, his brother and his sister, grotesque wooden figures roughly hewn. Elaborate services are daily celebrated all the year round, the images are dressed and redressed, and four meals a day are served to them. The attendants on the god are divided into 36 orders and 97 classes. Special servants are assigned the tasks of putting the god to bed, of dressing and bathing him. The annual rent-roll of the temple was put at 168,000 by Sir W. W. Hunter; but the pilgrims' offerings, which form the bulk of the income, are quite unknown and have been said to reach as much as £100,000 in one year. Ranjit Singh bequeathed the Koh-i-nor to Jagannath. There are four chief festivals, of which the famous Car festival is the most important.

The terrible stories of pilgrims crushed to death in the god's honour have made the phrase "Car of Juggernaut" synonymous with the merciless sacrifice of human lives, but these have been shown to be based on themselves under the wheels in a frenzy of excitement, but such instances have always been rare, and are now unknown. The few suicides that did occur were, for the most part, cases of diseased and miserable objects who took this means to put themselves out of pain. The official returns now place this beyond doubt. Nothing could be more opposed to the spirit of Vishnu-worship than self-immolation. Accidental death within the temple renders the whole place unclean. According to Chaitanya, the apostle of Jagannath, the worship of the least of God's creatures is a sin against the Creator."

See also Sir W. W. Hunter's Orissa (1872); and District Gazetteer of Puri (1908).

JUGGLER (Lat. jocolator, jester), in the modern sense a performer of sleight-of-hand tricks and dexterous feats of skill in tossing balls, plates, knives, &c. The term is practically synonymous with conjurer (see CONJURING). The jocolatores were the mimics of the middle ages (see DRAMA); the French use of the word jongleurs (an erroneous form of jongleur) included the singers known as trouvères; and the humbler English minstrels of the same type gradually passed into the strolling jugglers, from whose exhibitions the term came to cover loosely any acrobatic, pantomimic and sleight-of-hand performances. In ancient Rome various names were given to what we call jugglers, e.g. ventilatores (knife-throwers), and pilarii (ball-players).

JUGURTHA (Gr. Ἰογορθὰς), king of Numidia, an illegitimate son of Mastanabal, and grandson of Massinissa. After his father's death he was brought up by his uncle Micipas together with his cousins Adherbal and Hiempsal. Jugurtha grew up strong, handsome and intelligent, a skilful rider, and an adept in warlike exercises. He inherited much of Massinissa's political ability. Micipas, naturally afraid of him, sent him to Spain (134 B.C.) in command of a Numidian force, to serve under his cousin Scipio. When Jugurtha returned to Africa, he was joined by Scipio and the Roman nobles, some of whom put into his head the idea of making himself sole king of Numidia, with the help of Roman money.

In 118 B.C. Micipas died. By his will, Jugurtha was associated with Adherbal and Hiempsal in the government of Numidia. Scipio had written to Micipas a strong letter of recommendation in favour of Jugurtha; and to Scipio, accordingly, Micipas entrusted the execution of his will. None the less, his testamentary arrangements utterly failed. The princes soon quarrelled, and Jugurtha claimed the entire kingdom. Hiempsal he contrived to have assassinated; Adherbal he quickly drove out of Numidia. He then sent envoys to Rome to defend his usurpation on the ground that he was the injured party. The senate decided that Numidia was to be divided, and gave the western, the richer and more populous half, to Jugurtha, while the sands and deserts of the eastern half were left to Adherbal. Jugurtha's envoys appear to have found several of the Roman nobles and senators accessible to bribery. Having secured the best of the bargain, Jugurtha at once began to provoke Adherbal to a war of self-defence. He completely defeated him near the modern Philippeville, and Adherbal sought safety in the fortress of Cirta (Constantine). Here he was besieged by Jugurtha, who, notwithstanding the interposition of a Roman embassy, forced the place to capitulate, and treacherously massacred all the inhabitants, among them his cousin Adherbal and a number of Italian merchants resident in the town. There was great wrath at Rome and throughout Italy; and the senate, a majority of which still clung to Jugurtha, were persuaded in the same year (111) to declare war. An army was despatched to Africa under the consul L. Calpurnius Bœhia, several of the Numidian towns voluntarily surrendered, and Bocchus, the king of Mauretania, and Jugurtha's father-in-law, offered the Romans his alliance. Jugurtha was alarmed, but having at his command the accumulated treasures of Massinissa, he was successful in arranging with the Roman general a peace which left him in possession of the whole of Numidia. When the facts were known at Rome, the tribune Memmius insisted that Jugurtha should appear in person and be tried as to the negotiations. Jugurtha appeared under a safe conduct, but was conducted as a traitor, as the tribune C. Bœhia, who took care that his mouth should be closed. Soon afterwards he caused his cousin Massiva, then resident at Rome and a claimant to the throne of Numidia, to be assassinated. The treaty was thereupon set aside, and Jugurtha was ordered to quit Rome. On this occasion he uttered the well-known words, "A city for sale, and doomed to perish as soon as it finds a purchaser!" (Livy, Epit. 64). The war was renewed, and the consul Spurius Albinus entrusted with the command. The Roman army in Africa was thoroughly demoralized. An unsuccessful attempt was made on a fortified town, Suthul, in which the royal treasures were deposited. The army was surprised by the enemy in a night attack, and the camp was taken and
plundered. Every Roman was driven out of Numidia, and a disgraceful peace was concluded (109).

By this time the feeling at Rome and in Italy against the corruption and incapacity of the nobles had become so strong that a number of senators were prosecuted and Bestia and Albinus sentenced to exile. The war was now entrusted to Quintus Metellus, an able soldier and stern disciplinarian, and from the year 109 to its close in 106 the contest was carried on with credit to the Roman arms. Jugurtha was defeated on the river Muthul, after an obstinate and skilful resistance. Once again, however, he succeeded in surprising the Roman camp and forcing Metellus into winter quarters. There were fresh negotiations, but Metellus insisted on the surrender of the king's person, and this Jugurtha refused. Numidia on the whole seemed disposed to assert its independence, and Rome had before her the prospect of a troublesome guerrilla war. Negotiations, reflecting little credit on the Romans, were set on foot with Bocchus (q.v.) who for a time played fast and loose with both parties. In 106, Marius was called on by the vote of the Roman people to supersede Metellus, but it was through the perfidy of Bocchus and the diplomacy of L. Cornelius Sulla, Marius's quaestor, that the war was ended. Jugurtha fell into an ambush, and was conveyed a prisoner to Rome. Two years afterwards, in 104, he figured with his two sons in Marius's triumph, and in the subterranean prison beneath the Capitol—"the bath of ice," as he called it—he was either strangled or starved to death.

Though doubtless for a time regarded by his countrymen as their deliverer from the yoke of Rome, Jugurtha mainly owes his historical importance to the full and minute account of him which we have from the hand of Sallust, himself afterwards governor of Numidia.

See A. H. J. Greenidge, Hist. of Rome (1904); T. Mommseu, Hist. of Rome, book iv, ch. v.; the chief ancient authorities (besides those of Sallust) are: Plutarch, Marius and Sulla; Velleius Paterculus, ii.; Diod. Sic., Excerpta, xxxiv.; Florus, iii. 1. See also MARIUS, SULLA, NUMIDIA.

**JUJU**, a West African word held by some authorities to be a corruption of Mandingo *gru-gru*, a charm. It is more generally believed to have been adapted by the Mandingos directly from Fr. *joujou*, a toy or plaything. The word, as used by Europeans on the Guinea coast, was originally applied to the objects which it was supposed the negroes worshipped, and was transferred from the objects themselves to the spirits or gods who dwelt in them, and finally to the whole religious beliefs of the West Africans. It is currently used in each of these senses, and more loosely to indicate all the manners and customs of the negroes of the Guinea coast, particularly the power of interdiction exercised in the name of spirits (see FETISHISM and TABOO).

**JUJUBE.** Under this name the fruits of at least two species of *Zizyphus* are usually described, namely, *Z. vulgaris* and *Z. Jujuba.* The genus is a member of the natural order Anacardiaceae. The species are small trees or shrubs, armed with sharp, straight, or hooked spines, having alternate leaves, and fruits which are in most of the species edible, and have an agreeable acid taste; this is especially the case with those of the two species mentioned above.

*Z. vulgaris* is a tree about 20 ft. high, extensively cultivated in many parts of Southern Europe, also in Western Asia, China, and Japan. In India it extends from the Punjab to the northwestern frontier, ascending in the Punjab Himalaya to a height of 6500 ft., and is found both in the wild and cultivated state. The plant is grown almost exclusively for the sake of its fruit, which both in size and shape resembles a moderate-sized plum; at first the fruits are green, but as they ripen they become of a reddish-brown colour on the outside and yellow within. They ripen in September, when they are gathered and preserved by storing in Lith-place; after that the pulp becomes much softer and sweeter than when fresh. Jujube fruits when carefully dried will keep for a long time, and retain their refreshing acid flavour, on account of which they are much valued in the countries of the Mediterranean region as a winter dessert fruit; and, besides, they are nutritious and demulcent. At one time a decoction was prepared from them and recommended in pectoral complaints. A kind of thick paste, known as jujube paste, was also made of a composition of gum arabic and sugar dissolved in a decoction of jujube fruit evaporated to the proper consistence.

*Z. Jujuba* is a tree averaging from 30 to 50 ft. high, found both wild and cultivated in China, the Malay Archipelago, Ceylon, India, tropical Africa and Australia. Many varieties are cultivated by the Chinese, who distinguish them by the shape and size of their fruits, which are not only much valued as dessert fruit in China, but are also occasionally exported to England. As seen in commerce jujube fruits are about the size of a small filbert, having a reddish-brown, shining, somewhat wrinkled exterior, and a yellow or gingerbread coloured pulp enclosing a hard elongated stone.

The fruits of *Zizyphus* do not enter into the composition of the lozenges now known as jujubes which are usually made of gum-arabic, gelatin, &c., and variously flavoured.

**JU-JUTSU or JU-JITSU** (a Chino-Japanese term, meaning muscle-science), the Japanese method of offence and defence without weapons in personal encounter, upon which is founded the system of physical culture universal in Japan. Some historians assert that it was founded by a Japanese physician who learned its rudiments while studying in China, but most writers maintain that ju-jutsu was in common use in Japan centuries earlier, and that it was known in the 7th century B.C. Originally it was an art practised solely by the nobility, and particularly by the samurai who, possessing the right, denied to commoners, of carrying swords, were thus enabled to show their superiority over common people even when without weapons. It was a secret art, jealously guarded from those not privileged to use it, until the feudal system was abandoned in Japan, and now ju-jutsu is taught in the schools, as well as in public and private gymnasium. In the army, navy and police it receives particular attention. About the beginning of the 20th century, masters of the art began to attract attention in Europe and America, and schools were established in Great Britain and the United States, as well as on the continent of Europe.

Ju-jutsu may be briefly defined as "an application of anatomical knowledge to the purpose of offence and defence. It differs from wrestling in that it does not depend upon muscular strength. It differs from the other forms of attack in that it uses no weapon. Its feat consists in clutching or striking such part of an enemy's body as will make him numb and incapable of resistance. Its object is not to kill, but to incapacitate one for action for the time being" (Inazo Nitobe, *Bushido: The Soul of Japan*).

Many writers translate the term ju-jutsu "to conquer by yielding" (Jap. *ju, pliant*), and this phrase well expresses a salient characteristic of the art, since the weight and strength of the opponent are employed to his own undoing. When, for example, a big man rushes at a smaller opponent, the smaller man, instead of seeking to oppose strength to strength, falls backwards or sidewards, pulling his heavy adversary after him and taking advantage of his loss of balance to gain some lock or hold known to the science. This element of yielding in order to conquer is thus referred to in Lafcadio Hearn's *Out of the East*:

"In ji-jitsu there is a sort of counter for every twist, wrench, pull, push or bend: only the ji-jitsu expert does not oppose such movements. No; he yields to them. But he does much more than that. He aids them with a wicked sleight that causes the assailant to put out his own shoulder, to fracture his own arm, or, in a desperate case, even to break his own neck or back."

The knowledge of anatomy mentioned by Nitobe is acquired in order that the combatant may know the weak parts of his adversary's body and attack them. Several of these sensitive places, for instance the partially exposed nerve in the elbow popularly known as the "funny-bone" and the complex of nerves over the stomach called the solar plexus, are familiar to the European, but the ju-jutsu expert is acquainted with many
JUJUY—JULIAN

547

others which, when compressed, struck, or pinched, cause temporary paralysis of a more or less complete nature. Such places are the arm-pit, the ankle and wrist bones, the tendon running downward from the ear, the “Adam's apple,” and the nerves of the upper arm. In serious fighting almost any hold or attack is resorted to, and a broken or badly sprained limb is the least that can befall the victim; but in the practice of the art as a means of physical culture the knowledge of the different grips is assumed on both sides, as well as the danger of resisting too long. For this reason the combatant, when he feels himself on the point of being disabled, is instructed to signal his acknowledgment of defeat by striking the floor with hand or foot. The bout then ends and both combatants rise and begin afresh. It will be seen that a victory in jujutsu does not mean that the opponent shall be placed in some particular position, as in wrestling, but in any position in which his judgment or knowledge tells him that, unless he yields, he will suffer a disabling injury. This difference existed between the wrestling and the panaramit of the Olympic games. In the panaramit the fight went on until one combatant acknowledged defeat, but, although many a man allowed himself to be beaten in insensibility rather than suffer this humiliation, it was nevertheless held to be a disgrace to kill an opponent.

A modern bout at jujutsu usually begins by the combatants taking hold with both hands upon the collars of each other's jackets or kimonos, after which, upon the word to start being given, the maneuvering for an advantageous grip begins by pushes, pulls, jerks, falls, grips or other movements. Once the wrist, ankle, neck, arm or leg of an assailant is firmly grasped so that added force will dislocate it, there is nothing for the seized man to do, in case he is still on his feet, but go to the floor, often being thrown clean over his opponent’s head. A fall of this kind does not necessarily mean defeat, for the struggle proceeds upon the floor, where indeed most of the combat takes place, and the jujutsu expert receives a long training in the art of falling without injury. Blows are delivered, not with the fist, but with the open hand, the exterior edge of which is hardened by exercises.

The physical training necessary to produce expertness is the most valuable feature of jujutsu. The system includes a light and nourishing diet, plenty of sleep, deep-breathing exercises, an abundance of fresh air and general moderation in habits, in addition to the actual gymnastic exercises for the purpose of muscle-building and the cultivation of agility of eye and mind as well as of body. It is practised by both sexes in Japan.

Many attempts have been made in England and America to match jujutsu experts against wrestlers, mostly of the “catch-as-catch-can” school, but these trials have, almost without exception, proved unsatisfactory, since many of the most efficacious tricks of jujutsu, such as the strange holds and twists of wrists and ankles, are accounted foul in wrestling. Nevertheless the Japanese athletes, even when obliged to forgo these, have usually proved more than a match for European wrestlers of their own weight.

JUJUY, a northern province of the Argentine Republic, bounded N. and N.W. by Bolivia, N.E., E., and S.W. by Salta, and W. by the Los Andes territory. Pop. (1895), 49,713; (1905, estimate), 55,450, including many mestizos. Area, 18,977 sq. m., the greater part being mountainous. The province is traversed from N. to S. by three distinct ranges belonging to the great central Andean plateau: the Sierra de Santa Catalina, the Sierra de Humahuaca, and the Sierras de Zenta and Santa Victoria. In the S.E. angle of the province are the low, isolated ranges of Alumbre and Santa Barbara. Between the more eastern of these ranges are valleys of surpassing fertility, watered by the Rio Grande de Jujuy, a large tributary of the Bermejo. The western part, however, is a high plateau (parts of which are 11,500 ft. above sea-level), whose general characteristics are those of the puna regions farther west. The surface of this high plateau is broken, semi-arid and desolate, having a very scanty population and no important industry beyond the breeding of a few goats and the fur-bearing chinchilla. There are two large saline lagoons: Toro, or Pozuelos, in the N., and Casas bindo, or Guayatayoc, in the S. The climate is cool, dry and healthy, with violent tempests in the summer season. (For a vivid description of this interesting region, see F. O'Driscoll, "A Journey to the North of the Argentine Republic," Geogr. Jour. xxiv. 1904.) The agricultural productions of Jujuy include sugar cane, wheat, Indian corn, alfalfa and grapes. The breeding of cattle and mules for the Bolivian and Chilean markets is an old industry. Coffee has been grown in the department of Ledesma, but only to a limited extent. There are also valuable forest areas and undeveloped mineral deposits. Large borax deposits are worked in the northern part of the province, the output in 1901 having been 8000 tons. The province is traversed from S. to N. by the Central Northern railway, a national government line, which has been extended to the Bolivian frontier. It passes through the capital and up the picturesque Humahuaca valley, and promises, under capable management, to be an important international line, affording an outlet for southern Bolivia. The climate is the least healthy of any in the tropical, and irrigation is employed in some places in the long dry season.

The capital, Jujuy (estimated pop. 1905, 5000), is situated on the Rio Grande at the lower end of the Humahuaca valley, 942 m. from Buenos Aires by rail. It was founded in 1503 and is 4035 ft. above sea-level. It has a mild, temperate climate and picturesque natural surroundings, and is situated on the old route between Bolivia and Tucuman, but its growth has been slow.

JUKES, JOSEPH BEETE (1811-1890), English geologist, was born at Summer Hill, near Birmingham, on the 10th of October 1811. He took his degree at Cambridge in 1836. He began the study of geology under Sedgwick, and in 1839 was appointed geological surveyor of Newfoundland. He returned to England at the end of 1840, and in 1842 sailed as naturalist on board H.M.S. "Fly," despatched to survey Torres Strait, New Guinea, and the east coast of Australia. Jukes landed in England again in June 1846, and in August received an appointment on the long survey of Great Britain. The district to which he was first sent was North Wales. In 1847 he commenced the survey of the South Staffordshire coal-field and continued this work during successive years after the close of field-work in Wales. The results were published in his Geology of the South Staffordshire Coal-field (1853; 2nd ed. 1859), a work remarkable for its accuracy and philosophic treatment. In 1850 he accepted the post of local director of the geological survey of Ireland. The exhausting nature of this work slowly but surely wore out even his robust constitution and on the 29th of July 1869 he died. For many years he lectured as professor of geology, first at the Royal Dublin Society's Museum of Irish Industry, and afterwards at the Royal College of Science in Dublin. He was an admirable teacher, and his Student's Manual was the favoured textbook of British students for many years. During his residence in Ireland he wrote an article on the Mode of Formation of some of the River-valleys in the South of Ireland (Quart. Journ. Irish Geol. Soc., 1852), and a paper on the Pluvial Theory which first clearly sketched the origin and development of rivers. In later years he devoted much attention to the relations between the Devonian system and the Carboniferous rocks and Old Red Sandstone.

Jukes wrote many papers that were printed in the London and Dublin geological journals and other periodicals. He edited, and in great measure wrote, forty-two memoirs explanatory of the maps of the south, east and west of Ireland, and prepared a geographical map of Ireland in the later part of his life. He was the author of Excursions in and about Newfoundland (2 vols., 1842); Narrative of the Surveying Voyage of H. M. S. "Fly" (2 vols., 1847); A Sketch of the Physical Structure of Australia (1850); Popular Physical Geography (1853); Student's Manual of Geology (1857; 2nd ed. 1862; a later edition was revised by J. Bryce and published in the Encyc. Brit. 8th ed. (1858) and School Manual of Geography (1863). See Letters, &c., of J. Beele Jukes, edited, with Connecting Memorial Notes, by his Sister (C. A. Browne) (1871), to which is added a chronological list of Jukes's writings.

JULIAN (Flavius Claudius Julianus) (331-363), commonly called Julian the Apostate, Roman emperor, was born in
Constantine in 334,¹ the son of Julius Constantius and his wife Basilia, and nephew of Constantine the Great. He was thus a member of the dynasty under whose auspices Christianity became the established religion of Rome. The name Flavius he inherited from his paternal grandfather Constantius Chlorus; Julianus came from his maternal grandfather; Claudius had been assumed by Constantine's family in order to assert a connexion with Claudius Gothicus.

Julian lost his mother not many months after he was born. He was only six when his imperial uncle died; and one of his earliest memories must have been the fearful massacre of his father and kinsfolk, in the interest and more or less at the instigation of the sons of Constantine. Only Julian and his elder half-brother Gallus were spared, Gallus being too ill and Julian too young to excite the fear or justify the cruelty of the murderers.

Gallus was banished, but Julian was allowed to remain in Constantinople, where he was carefully educated under the supervision of the family eunuch Mardonius, and of Eusebius, bishop of Nicomedia. About 344 Gallus was recalled, and the two brothers were removed to Macellum, a remote and lonely castle in Cappadocia. Julian was trained to the profession of the Christian religion; but he became early attracted to the old faith, or rather to the idealized amalgam of paganism and philosophy which was current among his teachers, the rhetoricians. Cut off from all sympathy with the reigning belief by the terrible fate of his family, and with no prospect of a public career, he turned with all the eagerness of an enthusiastic temperament to the literary and philosophic studies of the time. The old Hellenic world had an irresistible attraction for him. Love for its culture was in Julian's mind intimately associated with loyalty to its religion.

In the meantime the course of events had left as sole autocrat of the Roman Empire his cousin Constantius, who, feeling himself unequal to the enormous task, called Julian's brother Gallus to a share of power, and in March 350 appointed him Caesar. At the same time Julian was permitted to return to Constantinople, where he studied grammar under Nicocles and rhetoric under the Christian sophist Hebeclius. After a short stay in the capital Julian was ordered to remove to Nicomedia, where he made the acquaintance of some of the most eminent rhetoricians of the time, and became confirmed in his secret devotion to the pagan faith. He promised not to attend the lectures of Libanius, but bought and read them. But his definite conversion to paganism was attributed to the neoplatonist Maximus of Ephesus, who may have visited him at Nicomedia. The downfall of Gallus (354), who had been appointed governor of the East, again exposed Julian to the greatest danger. By his rash and headstrong conduct Gallus had incurred the enmity of Constantius and the eunuchs, his confidential ministers, and was put to death. Julian fell under a like suspicion, and narrowly escaped the same fate. For some months he was confided at Milan (Mediolanum) till at the persuasion of the emperor Eusebius, who always felt kindly towards him, permission was given him to retire to a small property in Bithynia. While he was on his way, Constantius recalled him, but allowed—or rather ordered—him to take up his residence at Athens. The few months he spent there (July–October 355) were probably the happiest of his life.

The emperor Constantius and Julian were now the sole surviving male members of the family of Constantine; and, as the emperor again felt himself oppressed by the cares of government, there was no alternative but to call Julian to his assistance. At the instance of the empress he was summoned to Milan, where Constantius bestowed upon him the hand of his sister Helena, together with the title of Caesar and the government of Gaul.

A task of extreme difficulty awaited him beyond the Alps. During recent troubles the Alamanni and other German tribes had invaded the Rhine; they had burned many flourishing cities.

1 For the date of Julian's birth see Gibbon's Decline and Fall (ed. Bury), ii. 247, note 11. The choice seems to lie between May 331 and May 332. If the former be adopted, Julian must have died in the thirty-third, not the thirty-second, year of his age (as stated in Ammianus Marcellinus, xiv. 3, 23). and extended their ravages far into the interior of Gaul. The internal government of the province had also fallen into great confusion. In spite of his inexperience, Julian quickly brought affairs into order. He completely overthrew the Alamanni in the great battle of Strassburg (August 357). The Frankish tribes which had settled on the western bank of the lower Rhine were reduced to submission. In Gaul he rebuilt the cities which had been laid waste, re-established the administration on a just and secure footing, and as far as possible lightened the taxes, which weighed so heavily on the poor provincials. Paris was the usual residence of Julian during his government of Gaul, and his name has become inseparably associated with the early history of the city.

Julian's reputation was now established. He was general of a victorious army enthusiastically attached to him and governor of a province which he had saved from ruin; but he had also become an object of fear and jealousy at the imperial court. Constantius accordingly resolved to weaken his power. A threatened invasion of the Persians was made an excuse for withdrawing some of the best legions from the Gallic army. Julian recognized the covert purpose of this, yet proceeded to fulfill the commands of the emperor. A sudden movement of the legions themselves decided otherwise. At Paris, on the night of the parting banquet, they forced their way into Julian's tent, and, proclaiming him emperor, offered him the alternative either of accepting the lofty title or of an instant death. Julian accepted the empire, and sent an embassy with a deferential message to Constantius. The message being contemptuously disregarded, both sides prepared for a decisive struggle. After a march of unexampled rapidity through the Black Forest and down the Danube, Julian reached Sirmium, and was on the way to Constan- tinople, when he received news of the death of Constantius, who had set out from Syria to meet him, at Mopsucrene in Cilicia (Nov. 3, 361). Without further trouble Julian found himself everywhere acknowledged as the sole ruler of the Roman Empire. It is even asserted that Constantius himself on his death-bed had designated him his successor. Julian entered Constantinople on the 11th of December 361.

Julian had already made a public avowal of paganism, of which he had been a secret adherent from the age of twenty. It was no ordinary profession, but the expression of a strong and even enthusiastic conviction; the restoration of the pagan worship was to be the great aim and controlling principle of his government. His reign was too short to show what precise form the pagan revival might ultimately have taken, how far his feelings might have become embittered by his conflict with the Christian faith, whether persecution, violence and civil war might not have taken the place of the moral suasion which was the method he originally adopted. He issued an edict of universal toleration; but in many respects he used his imperial influence unfairly to advance the work of restoration. In order to deprive the Christians of all the advantages of culture, and to discredit them as an ignorant sect, he forbade them to teach rhetoric. The symbols of paganism and of the imperial dignity were so artfully interwoven on the standards of the legions that they could not pay the usual homage to the emperor without seeming to offer worship to the gods; and, when the soldiers came forward to receive the customary donative, they were required to throw a handful of incense on the altar. Without directly excluding Christians from the high offices of state, he held that the worshippers of the gods ought to have the preference. In short, though there was no direct persecution, he exerted much more than a moral pressure to restore the power and prestige of the old faith.

Having spent the winter of 361–362 at Constantinople, Julian proceeded to Antioch to prepare for his great expedition against Persia. His stay there was a curious episode in his life. It is doubtful whether his pagan convictions of his ascetic life, after the fashion of an antique philosopher, gave most offence to the so-called Christians of the dissolute city. They soon grew heartily tired of each other, and Julian took up his winter quarters at Tarsus, from which in early spring he marched against
Persia. At the head of a powerful and well-appointed army he advanced through Mesopotamia and Assyria as far as Ctesiphon, near which he crossed the Tigris, in face of a Persian army which he defeated. Misled by the treacherous advice of a Persian nobleman, he desisted from the siege, and set out to seek the main army of the enemy under Shapur II. (q.v.). After a long, useless march he was forced to retreat, and found himself enveloped by the whole Persian army in a terrible encircling movement, near Ctesiphon, at the hottest season of the year. The Romans repulsed the enemy in many an obstinate battle, but on the 26th of June 363 Julian, who was ever in the front, was mortally wounded.

The same night he died in his tent. In the most authentic historian of his reign, Ammianus Marcellinus, we find a noble speech, which is said to have addressed to his afflicted officers. Soon after his death the rumor spread that the fatal wound had been inflicted by a Christian in the Roman army. The well-known statement, first found in Theodoret (fl. 5th century), that Julian threw his blood towards heaven, exclaiming, "Thou hast conquered, O Gallienus!" is probably a development of the account of his death in the poems of Ephraem Syrus.

From Julian's unique position as the last champion of a dying polytheism, his character has always excited interest. Authors and biographers who have treated him have often anathematised him; but a just and sympathetic criticism finds many noble qualities in his character. In childhood and youth he had learned to regard Christianity as a persecuting force. The only sympathetic friends he met were among the pagan rhetoricians and philosophers; and he found a suitable outlet for his restless and inquiring mind only in the studies of ancient Greece. In this way he was attracted to the old paganism; but it was a paganism idealized by the philosophy of the time.

In other respects Julian was no unworthy successor of the Antonines. Though brought up in a studious and pedantic solitude, he was no sooner called to the government of Gaul than he displayed all the energy, the hardihood and the practical sagacity of an old Roman. In temperament, self-control and zeal for the public good, as he understood it, he was unsurpassed. To these Roman qualities he added the culture, literary instinct and speculative curiosity of a Greek. One of the most remarkable features of his public life was the perfect ease and mastery with which he associated the cares of war and statesmanship with the assiduous cultivation of literature and philosophy.

Yet even his devotion to culture was not free from pedantry and diletantism. His contemporaries observed in him a want of naturalness. He had not the moral health or the composed and refticent manhood of a Roman, or the spontaneity of a Greek. He was never at rest; in the rapid torrent of his conversation he was apt to run himself out of breath; his manner was jerky and spasmodic. He showed quite a deferential regard for the sophists and rhetoricians of the time, and advanced them to high offices of state; there was real cause for fear that he would introduce the government of pedants into an Roman empire. Last of all, his love for the old philosophy was sadly disfigured by his devotion to the old superstitions. He was greatly given to divination; he was noted for the number of his sacrificial victims. Wits applied to him the joke that had been passed on Marcus Aurelius: "The white cattle to Marcus Caesar, greeting. If you conquer, there is an end of us."

BIBLIOGRAPHY.—The works of Julian, of which there are complete editions by E. Spanheim (Leipzig, 1866) and C. F. Hettling (Teubner series, 1875-1876), consist of the following: (1) Letters, of which more than eighty have been preserved under his name, although the genuineness of several has been disputed. For his views on religious toleration and his attitude towards Christians and Jews the most important are 35-37, 51, 52, and the fragment in Hettling, i. 371. The whole number of letters, which are, with the exception of one to heathenism, is probably a Christian forgery. Six new letters were discovered in 1884 by A. Papadopoulos Kerameus in a monastery on the island of Chalcis near Constantiople (see Rhenesches Museum, xxiv. 1884, 163-182). Also see also J. Bidez and F. Cumont, "Recherches sur la tradition MS. des lets de l'empereur Julian," in Memoires couronnées... publies par l'Acad. royale de Belgique, lxxvi. (1888) and F. Cumont, Sur l'autenticite de quelques lettre de Julien (1894). (2) Orations, eight in number—two panegyricus on Constantius, one on the empress Eusebia, two theosophical declamations on King Helios and the Mother of the Gods, two essays on true and false cynicism, and a consolatory letter to the Bishop of Antioch on the death of his father.

(3) Caesars or Symposium, a satirical composition after the manner of Seneca's Apocolocyntosis, in which the deified Caesars appear in succession at a banquet given in Olympus, to be cursed for their excesses (see the letters by other authors (4) Misopogen (the beard of) Theodosius II. ordered all copies of it to be destroyed, and our knowledge of its contents is derived almost entirely from the Contra Julianum of Cyril, bishop of Alexandria, written sixty years later (see Juliani librorum contra Christianos quaestiones, ed. C. J. Neumann 1880). English Translations: Select works by J. Duncombe (1784) containing all except the first seven orations (vi. and vii. are also included): the theosophical addresses to King Helios and the Mother of the Gods by Thomas Taylor (1793) and C. W. King in Bohn's Classical Library (1888); the public letters, by E. J. Chinnock (1901).

JULICHER.—1. Pagan writers. Of these the most trustworthily and impartial is the historian Ammianus Marcellinus (xv. 8—xvii.), a contemporary and in part an eye-witness of the events he describes (other historians are Zosimus and Eutropius); the later Libanius, who composed the work about Julian of Nazianzus, the author of two violent invectives against Julian; Rufinus; Socrates; Sozomen; Theodoret; Philostorgius; the poems of Ephraem Syrus written in 363: Zonaras; Cedrenus; and later Byzantine chronographers (e.g. Nicephorus the Monophysite of Nazianzus, who was an eye-witness of the persecution of Julian; and Juvenal, who was a friend of Zosimus), who were less trustworthy but whose works are very important. The works of the Christians of the East is reflected in two Syriac romances published by J. G. E. Hoffmann, Julianus der Abtrünnige (1880; see also Th. Nöldeke in Zeitschrift der deutschen morgenländischen Gesellschaft, xxvii. 1884—xxavernis, 1892).

JULICH (Fr. Juliers), a town of Germany, in the Prussian Rhine province, on the right bank of the Roer, 16 m. N.E. of Aix-la-Chapelle. Pop. (1900), 5459. It contains an Evangelical and two Roman Catholic churches, a gymnasium, a school for non-commissioned officers, which occupies the former ducal palace, and a museum of local antiquities. Its manufactures include sugar, leather and paper. Jülich (formerly also Gúlich, Gülche) the capital of the former duchy of that name, is the Julicum of the Antonini Itinera; some have attributed its origin to Julius Caesar. It became a fortress in the 17th century, and was captured by the archduke Leopold in 1609, by the Dutch under Maurice of Orange in 1610, and by the Spaniards in 1622. In 1794 it was taken by the French, who held it until the peace of Paris in 1814. Till 1860, when its works were demolished, Jülich ranked as a fortress of the second class.

JULICH, or JULIERS, DUCHY OF. In the 9th century a certain Matfrid was count of Jülich (pagus Jülicensis), and towards the end of the 11th century one Gerhard d'Jülich founded a family of baronial counts, who held Jülich as immediate vassals of the emperor, and in 1356 the county was raised to the rank of a duchy. The older and reigning branch of the family died in 1423, when Jülich passed to Adolph, duke of Berg (d. 1437), who belonged to a younger branch, and who had obtained Berg by virtue of the marriage
of one of his ancestors. Nearly a century later Mary (d. 1543), the heiress of these two duchies, married John, the heir of the duchy of Cleves, and in 1521 the three duchies, Jülich, Berg and Cleves, together with the counties of Ravensberg and La Marek, were united under John's sway. John died in 1539 and was succeeded by his son William who reigned until 1552.

At the beginning of the 17th century the duchies became very prominent in European politics. The reigning duke, John William, was childless and insane, and several princes were only waiting for his demise in order to seize his lands. The most prominent of these princes were two Protestant princes, Philip Louis, count palatine of Neuburg, who was married to the duke's sister Anna, and John Sigismund, elector of Brandenburg, whose wife was the daughter of another sister. Two other sisters were married to princes of minor importance. Moreover, by virtue of an imperial promise made in 1485 and renewed in 1495, the elector of Saxony claimed the duchies of Jülich and Berg, while the proximity of the coveted lands to the Netherlands made their fate a matter of great moment to the Dutch. Where it is remembered that at this time there was a great deal of tension between the Roman Catholics and the Protestants, who were fairly evenly matched in the duchies, and that the rivalry between France and the Empire was very keen, it will be seen that the situation lacked no element of discord. In March 1609 Duke John William died. Having assured themselves of the support of Henry IV. of France and of the Evangelical Union, Brandenburg and Neuburg at once occupied the duchies. To counter this stroke and to support the Saxon claim, the emperor Rudolph II ordered some imperialist and Spanish troops to seize the disputed lands, and it was probably only the murder of Henry IV. in May 1610 and the death of the head of the Evangelical Union, the elector palatine, Frederick IV., in the following September, which prevented, or rather delayed, a great European war. About this time the emperor adjudged the Archbishopric of Salzburg, while the Dutch captured the fortress of Jülich; but for all practical purposes victory remained with the "possessing princes," as Brandenburg and Neuburg were called, who continued to occupy and to administer the lands. These two princes had made a compact at Dortmud in 1609 to act together in defence of their rights, but proposals for a marriage alliance between the two houses broke down and differences soon arose between them. The next important step was the timely conversion of the count palatine's heir, Wolfgang William of Neuburg, to Roman Catholicism, and his marriage with a daughter of the powerful Roman Catholic prince, Duke Maximilian of Bavaria. The rupture between the possessing princes was now complete. Each invited foreign aid. Dutch troops marched to assist the elector of Brandenburg and Spanish ones came to aid the count palatine, but through the intervention of England and France peace was made and the treaty of Xanten was signed in November 1614. By this arrangement Brandenburg obtained Jülich and Berg, the rest of the lands falling to the count palatine. In 1666 the great elector, Frederick William of Brandenburg, made with William, count palatine of Neuburg, a treaty of mutual succession to the duchies, providing that in case the male line of either house became extinct the other should inherit its lands.

The succession to the duchy of Jülich was again a matter of interest in the earlier part of the 18th century. The family of the counts palatine of Neuburg was threatened with extinction and the emperor Charles VI. promised the succession to Jülich to the Prussian king, Frederick William I., in return for a guarantee of the pragmatic sanction. A little later, however, he promised the same duchy to the count palatine of Sulzbach, a kinsman of the count palatine of Neuburg. Then Frederick the Great, having secured Silesia, abandoned his claim to Jülich, which thus passed to Sulzbach when, in 1742, the family of Neuburg became extinct. From Sulzbach the duchy came to the electors palatine of the Rhine, and, when this family died out in 1799, to the elector of Bavaria, the head of the other branch of the house of Wittelsbach. In 1806 Jülich was seized by France, and by the settlement of 1815 it came into the hands of Prussia.
and the transcriptions in Chinese of Sanskrit words and proper names, he began the study of Sanskrit, and in 1853 brought out his Voyages du pélerin Hsouen-tsong, which is regarded by some critics as his most valuable work. Six years later he published Les Asadânas, contes et apologues Indiens inconnus jusqu'à ce jour, suivis de poésies et de nouvelles chinoises. For the benefit of future students he disclosed his system of deciphering Sanskrit words occurring in Chinese books in his Méthode pour déchiffrer et transcrire les noms sanscrits qui se rencontrent dans les livres chinois (1861). This work, which contains much of interest and importance, falls short of the value which its author was accustomed to attach to it. It had escaped his observation that, since the translations of Sanskrit works into Chinese were undertaken in different parts of the empire, the same Sanskrit words were of necessity differently represented in Chinese characters in accordance with the dialectical variations. No hard and fast rule can therefore possibly be laid down for the decipherment of Chinese translations of Sanskrit words, and the effect of this impropriety was felt though not recognized by Julien, who in order to make good his rule was occasionally obliged to suppose that wrong characters had by mistake been introduced into the texts. It was, perhaps, such a slip as occurred in the translation of Joseph Tournier's Reinaud, which was certainly not free from the gall of bitterness. Among the many subjects to which he turned his attention were the native industries of China, and his work on the Histoire et fabrication de la porcelaine chinoise is likely to remain a standard work on the subject. In another volume he also published an account of the Industries anciennes et modernes de l'empire chinois (1869), translated from native authorities. In the intervals of more serious undertakings he translated the San tseu King (Le Livre des trois mots); Thsien tsseu wen (Le Livre de mille mots); Les Deux cousins; Nouvelles chinoises; the Ping chan ling yen (Les Deux jeunes filles lettrées); and the Dialoghi Cinesi, Ji-t'oh'ang k' eou-t' eou-koa. His last work of importance was Système nouvelle de la langue chinoise (1869), in which he gave the result of his study of the language, and collected a vast array of facts and of idiomatic expressions. A more scientific arrangement and treatment of his subject would have added much to the value of this work, which, however, contains a mine of matter which amply repays exploration. One great secret by which Julien acquired his grasp of Chinese, was, as we have said, his methodical collection of phrases and idiomatic expressions. Whenever in the course of his reading he met with a new phrase or expression, he entered it on a card which took its place in regular order in a long series of boxes. At his death, which took place on the 14th of February 1873, he left, it is said, 250,000 of such cards, about the fate of which, however, little seems to be known. In politics Julien was imperialist, and in 1863 he was made a commander of the legion of honour in recognition of the services he had rendered to literature during the second empire.

See notice and bibliography by Wallon, Mém. de l'Acad. des Ins. (1884), xxxi. 409-458.

**JULIUS (POPE)**

551

**JULIUS,** the name of three popes.

**JULIUS I.,** pope from 337 to 352, was chosen as successor of Marcus after the Roman see had been vacant four months. He is chiefly known by the part which he took in the Arian controversy. After the Winter council, at a synod held in Antioch, renewed their deposition of Athanasius they received papal delegates to Constans, emperor of the West, and also to Julius, setting forth the grounds on which they had proceeded. The latter, after expressing an opinion favourable to Athanasius, adroitly invited both parties to lay the case before a synod to be presided over by himself. This proposal, however, the Eastern bishops declined to accept. On his second banishment from Alexandria, Athanasius came to Rome, and was recognized as a regular bishop by the synod held in 340. It was through the influence of Julius that, at a later date, the council of Sardica in Illyria was held, which was attended only by seventy-six Eastern bishops, who speedily withdrew to Philippopolis and deposed Julius, along with Athanasius and others. The Western bishops who remained confirmed the previous decisions of the Roman synod; and by its 3rd, 4th and 5th decrees relating to the rights of revision, the council of Sardica endeavoured to settle the procedure of ecclesiastical appeals. Julius on his death in April 352 was succeeded by Liberius.

**JULIUS II.** (Giuliano della Rovere), pope from the 1st of November 1503 to the 21st of February 1513, was born at Savona in 1443. He was at first intended for a commercial career, but later was sent by his uncle, subsequently Sixtus IV., to be educated among the Franciscans, although he does not appear to have joined that order. He was loaded with favours during his uncle's pontificate, being made bishop of Carpentras, bishop of Bologna, bishop of Vercelli, archbishop of Avignon, cardinal-priest of S. Pietro in Vincoli and of St. Dodici Apostoli, and cardinal-bishop of Sabina, of Frascati, and finally of Ostia and Velletri. In 1480 he was made legate to France, mainly to settle the question of the Burgundian inheritance, and acquired himself with such ability during his two years' stay that he acquired an influence in the college of cardinals which became paramount during the pontificate of Innocent VIII. A rivalry, however, growing up between him and Roderigo Borgia, he took refuge at Ostia after the latter's election as Alexander VI., and in 1494 went to France, where he incited Charles VIII. to undertake the recovery of Milan. He promulgated a bull in his name, the 'regal campaign, and sought to convocate a council to inquire into the conduct of the pope with a view to his deposition, but was defeated in this through Alexander's machinations. During the remainder of that pontificate Della Rovere remained in France, nominally in support of the pope, for whom he negotiated the treaty of 1498 with Louis XII., but in reality bitterly hostile to him. On the death of Alexander (1503) he returned to Italy and supported the election of Pius III., who was then suffering from an incurable malady, of which he died shortly afterwards. Della Rovere then won the support of Cesare Borgia and was unanimously elected pope. Julius II. from the beginning repudiated the system of nepotism which had flourished under Sixtus IV., Innocent VIII. and Alexander VI., and set himself with courage and determination to restore, consolidate and extend the temporal possessions of the Church. By dexterous diplomacy he first succeeded (1504) in rendering it impossible for Cesare Borgia to remain in Italy. He then pacified Rome and the surrounding country by reconciling the powerful houses of Orsini and Colonna and by winning the other nobles to his own cause. In 1504 he arbitrated on the differences between France and Germany, and concluded an alliance with them in order to oust the Venetians from Faenza, Rimini and other towns which they occupied. The alliance at first resulted only in compelling the surrender of a few unimportant fortresses in the Romagna; but Julius freed Perugia and Bologna in the brilliant campaign of 1506. In 1508 he concluded against Venice the famous league of Cambrai with the emperor Maximilian, Louis XII. of France and Ferdinand of Aragon, and in the following year placed the city of Venice under an interdict. By the single battle of Agnadello the Italian dominion of Venice was practically lost; but as the allies were not satisfied with merely effecting his purposes, the pope entered into a combination with the Venetians against those who immediately before had been engaged in his behalf. He absolved the Venetians in the beginning of 1510, and shortly afterwards placed the ban on Francis I. At a general council convoked by Louis XII. at Tours in September, the French bishops announced their withdrawal from the papal obedience and resolved, with Maximilian's co-operation, to seek the deposition of Julius. In November 1511 a council actually met at Pisa for this object, but its efforts were fruitless. Julius forthwith formed the Holy league with Ferdinand of Aragon and with Venice against France, in which both Henry VIII. and the emperor ultimately joined. The French were driven out of Italy in 1512 and papal authority was once more securely established in the states immediately around Rome. Julius had already issued, on the 18th of July 1511, the summons for a general council to deal with France, with the reform of the Church, and with a war against the Turks. This council, which is known as the Fifth Lateran, assembled on the 3rd of May 1512, condemned the celebrated pragmatic sanction of the French church, and was
still in session when Julius died. In the midst of his combats, Julius never neglected his ecclesiastical duties. His bull of the 14th of January 1505 against simony in papal elections was re-acted by the Lateran council (February 16, 1513). He condemned dwelling by bull of the 24th of February 1509. He effected some reforms in the monastic orders; urged the conversion of the sectaries in Bohemia; and sent missionaries to America, Asia, Abyssinia and the Congo. His government of the Papal States was excellent. Julius is deserving of particular honour for his patronage of art and literature. He did much to improve and beautify Rome; he laid the foundation-stone of St. Peter's (April 18, 1506); he founded the Vatican museum; and he was a friend and patron of Bramante, Raphael and Michelangelo.

While moderate in personal expenditure, Julius resorted to objectionable means of replenishing the papal treasury, which had been exhausted by Alexander VI., and of providing funds for his numerous contemporaries; since and when in 1551, the means were increasingly prevalent. Julius was undoubtedly in energy and genius one of the greatest popes since Innocent III., and it is a misfortune of the Church that his temporal policy eclipsed his spiritual office. Though not despising the Machiavellian arts of statecraft so universally practised in his day, he was nevertheless by nature plain-spoken and sincere, and in his last years grew violent and crabbed. He died of a fever on the 21st of February 1553, and was succeeded by Leo X.

(C. H. HA.)

JULIUS III. (Giovanni Maria del Monte), pope from 1550 to 1555, was born on the 10th of September 1487. He was created cardinal by Paul III. in 1536, filled several important legations, and was elected pope on the 7th of February 1550, despite the opposition of Charles V., whose enmity he had incurred as president of the council of Trent. Love of ease and desire for peace moved him, however, to adopt a conciliatory attitude, and to yield to the emperor's desire for the retaining of the See of Bologna. (September 1551), Nevertheless, he continued to write reformation documents and publish them as papal letters. But despite Charles' further demands inconvenient, he soon found occasion in the renewal of hostilities to suspend the council once more (April 1552). As an adherent of the emperor he suffered in consequence of imperial reverses, and was forced to confirm Parma to Ottavio Farnese, the ally of France (1552). Weary of politics, and obeying a natural inclination to pleasure, Julius then virtually abdicated the management of affairs, and gave himself up to enjoyment, amusing himself with the adornment of his villa, near the Porta del Popolo, and often so far forgetting the proprieties of his office as to participate in entertainments of a questionable character. His nepotism was of a less ambitious order than that of Paul III.; but he provided for his family out of the offices and revenues of the Church, and advanced unworthy favourites to the cardinalate. What progress reform made during his pontificate was due to its momentum, rather than to the zeal of the pope. Yet under Julius steps were taken to abolish plurality of benefices and to restore monastic discipline; the Collegium Germanicum, for the conversion of Germans, was established in Rome, 1552; and England was absolved by the cardinal-legate Pole, and received again into the Roman communion (1554). Julius died on the 23rd of March 1555, and was succeeded by Marcellus II.

See Panvinio, continuator of Platina, De Vitis Pontif. Rom.; Ciacioiu, Vite e tre geste summorum Pontifi, Rom. (Rome, 1601-1602) (both contemporaries of Julius III.); Ranke, Papes (Eng. trans., Austin), i. 276 seq.; v. Keumann, Gesch. der Stadt Rom, iii. (Eng. trans., 1890); Gesch. der kais. und röm. Reichs- und it. l. 180 seq. and extended bibliography in Herzog-Hauck, Realencyclopaedie, s.v. "Julius III."

JULIEN, LOUIS ANTOINE (1812-1860), musical conductor, was born at Sisteron, Basses Alpes, France, on the 23rd of April 1812, and studied at the Paris conservatoire. His fondness for the lightest forms of music cost him his position in the school, and after conducting the band of the Jardin Turc he was compelled to leave Paris to escape his creditors, and came to London, where he formed a good orchestra and established promenade concerts. Subsequently he travelled to Scotland, Ireland and America with his orchestra. For many years he was a familiar figure in the world of popular music in England, and his portly form with its gorgeous waistcoats occurs very often in the early volumes of Punch. He brought out an opera, Pietro il Grande, at Covent Garden (1852) on a scale of magnificence that ruined him, for the piece was a complete failure. He was in America until 1854, when he returned to London for a short time; ultimately he went back to Paris, where, in 1856, he was arrested for debt and put into prison. He lost his reason soon afterwards, and died on the 14th of March 1860.

JULLUNDUR, or JALANDHAR, a city of British India, giving its name to a district and a division in the Punjab. The city is 260 m. by rail N.W. of Delhi. Pop. (1901), 67,735. It is the headquarters of a brigade in the 3rd division of the northern army. There are an American Presbyterian mission, a government normal school, and high schools supported by Hindu bodies.

The District of Jullundur occupies the lower part of the tract known as the Jullundur Doab, between the rivers Sutlej and Beas, except that it is separated from the Beas by the state of Kapurthala. Area, 1,431 sq. m. Pop. (1901), 975,857, showing an increase of 1% in the decade; the average density is 641 persons per square mile, being the highest in the province. Cotton-weaving and sugar manufacture are the principal industries for export trade, and silk goods and wheat are also exported. The district is crossed by the main line of the North-Western railway from Phillaur towards Amritsar.

The Jullundur Doab in early times formed the Hindu kingdom of Katoch, ruled by a family of Rajputs whose descendants still exist in the petty princes of the Kangra hills. Under Mahomedan rule the Doab was generally attached to the province of Lahore, in which it is included as a circar or governorship in the great revenue survey of Akbar. Its governors seem to have held an autonomous position, subject to the payment of a fixed tribute into the imperial treasury. The Sikh revival extended to Jullundur at an early period, and a number of petty chieftains made themselves independent throughout the Doab. In 1766 the town of Jullundur fell into the hands of the Sikh confederacy of Faiz-ull-puria, then presided over by Khushal Singh. His son and successor built a mansion fort in the town, while several other chieftains similarly fortified themselves in the suburbs. Meanwhile, Ranjit Singh was consolidating his power in the south, and in 1811 he annexed the Faiz-ull-puria dominions. Henceforth Jullundur became the capital of the Lahore possessions in the Doab until the British annexation at the close of the first Sikh war (1846).

The Division of Jullundur comprises the five districts of Kangra, Hoshiarpur, Jullundur, Ludhiana and Ferozepore, all lying along the river Sutlej. Area, 19,410 sq. m. Pop. (1901), 4,306,662.

See Jullundur District Gazetteer (Lahore, 1908).

JULY, the seventh month in the Christian calendar, consisting of thirty-one days. It was originally the fifth month of the year, and as such was called by the Romans Quintilis. The later name of Julius was given in honour of Julius Caesar (who was born in this month) to come into use in the year of his death.

The Anglo-Saxons called July Hegmēnā, "hay-month," or Maed-mōnath, "mead-month," the meadings being then in bloom. Another name was aftera ɪða, "the latter mild month," in contradistinction to June, which was named "the former mild month." Chief dates of the month: 3rd July, Dog Days begin; 15th July, St Swithin; 25th July, St James.

JUMALA, the supreme god of the ancient Finns and Lapps. Among some tribes he is called Num or Jilibeambaertje, as protector of the flocks. Jumala indicates rather godhead than
Jumièges—Jumping

553

a divine being. In the runes Ukko, the grandfather, the sender of the thunder, takes the place of Jumala.

Jumièges, a village of north-western France, in the department of Seine-Inférieure, 17 m. W. of Rouen by road, on a peninsula formed by a bend of the Seine. Pop. (1906), 244.

Jumièges is famous for the imposing ruins of its abbey, one of the great establishments of the Benedictine order. The principal remains are those of the abbey-church, built from 1040 to 1067; these comprise the façade with two towers, the walls of the nave, a wall and sustaining arch of the great central tower and débris of the choir (restored in the 13th century). Among the minor relics, preserved in a small museum in a building of the 14th century, are the stone which once covered the grave of Agnes Sorel, and two recumbent figures of the 13th century, commonly known as the Écorcs, and representing, according to one legend, two sons of Clovis II., who, as a punishment for revolt against their father, had the tendons of their arms and legs cut, and were set adrift in a boat on the Seine. Another tradition states that the statues represent Thassiolo, duke of Bavaria, and Theodo his son, relegated to Jumièges by Charlemagne. The church of St. Pierre, which adjoins the south side of the abbey-church, was built in the 14th century as a continuation of a previous church of the time of Charlemagne, of which a fragment still survives. Among the other ruins, those of the chapter-house (13th century) and refectory (12th and 15th centuries) also survive.

The abbey of Jumièges was founded about the middle of the 7th century by St. Philibert, whose name is still to be read on gold and silver coins obtained from the site. The abbey was destroyed by the Normans, but was rebuilt in 928 by William Longsword, duke of Normandy, and continued to exist till 1790. Charles VII. often resided there with Agnes Sorel, who had a manor at Mesnil-sous-Jumièges in the neighbourhood, and died in the monastery in 1450.

Jumilla, a town of eastern Spain, in the province of Murcia, 40 m. N. by W. of Murcia by road, on the right bank of the Arroyo del Jua, a left-bank tributary of the Segura. Pop. (1905), 16,446. Jumilla occupies part of a narrow valley, enclosed by mountains. An ancient citadel, several churches, a Franciscan convent, and a hospital are the principal buildings. The church of Santiago is noteworthy for its fine paintings and frescoes, some of which are attributed, though on doubtful authority, to Peter Paul Rubens and other illustrious artists. The local trade is chiefly in coarse cloth, esparto fabrics, wine and farm produce.

Jumna, or Jamuna, a river of northern India. Rising in the Himalayas in Tehri state, about 5 m. N. of the Jamnottir hot springs, in 31° 3′ N. and 78° 30′ E., the stream first flows S. for 7 m., then S.W. for 32 m., and afterwards due S. for 26 m., receiving several small tributaries in its course. It afterwards turns sharply to the W. for 14 m., when it is joined by the large river Tons from the north. The Jumna here emerges from the Himalayas into the valley of the Dun, and flows in a S.W. direction for 22 m., dividing the Kiarda Dun on the W. from the Dehra Dun on the E. It then, at the 95th mile of its course, forces its way through the Siwalik hills, and debouches upon the plains of India at Fyzabad in Saharanpur district. By this time a large river, it gives off, near Fyzabad, the eastern and western Jumna canals. From Fyzabad it flows 65 m. in a S.S.W. direction, receiving the Maskarar stream from the east. Near Bidhauji, in Muzaffarnagar district, it turns due S. for 80 m. to Delhi city, thence S.E. for 27 m. to near Dankaur, receiving the waters of the Hindon river on the east. From Dankaur it resumes its southerly course for 100 m. to Mahaban near Murtra, where it turns E. for nearly 200 m., passing the towns of Agra, Ferozabad and Etawah, receiving on its left bank the Karwan-nadi, and on its right the Banganga (Uttangan). From Etawah it flows 140 m. S.E. to Hamirpur, being joined by the Sengar on its north bank, and on the south by the great river Chambal from the west, and by the Sind. From Hamirpur, the Jumna flows nearly due E., until it enters Allahabad district and passes Allahabad city, below which it falls into the Ganges in 25° 25′ N. and 81° 55′ E. In this last part of its course it receives the waters of the Betwa and the Ken. Where the Jumna and the Ganges unite is the prayag, or place of pilgrimage, where devout Hindus resort in thousands to wash and be sanctified.

The Jumna after issuing from the hills, has a longer course through the United Provinces than the Ganges, but is not so large nor so important a river; and above Agra in the hot season it dwindles to a small stream. This is no doubt partly caused by the eastern and western Jumna canals, of which the former, constructed in 1823-1830, irrigates 300,000 acres in the districts of Saharanpur, Muzaffarnagar and Meerut, in the United Provinces; while the latter, consisting of the re-opened channels of two canals dating from about 1350 and 1628 respectively, extends through the districts of Umballa, Karnal, Hisar, Rohtak and Delhi, and the native states of Patiala and Jind in the Punjab, irrigating 600,000 acres. The headworks of the two canals are situated near the point where the river issues from the Siwaliks.

The traffic on the Jumna is not very considerable; in its upper portion timber, and in the lower stone, grain and cotton are the chief articles of commerce, carried in the clumsy barges which navigate its stream. Its waters are clear and blue, while those of the Ganges are yellow and muddy; the difference between the streams can be discerned for a short distance below the point at which they unite. Its banks are high and rugged, often attaining the proportions of cliffs, and the ravines which run into it are deeper and larger than those of the Ganges. It traverses the extreme edge of the alluvial plain of Hindustan, and in the latter part of its course it almost touches the Bundelkhand offshoots of the Vindhyé range of mountains. Its passage is therefore more tortuous, and the scenery along its banks more varied and pleasing, than is the case with the Ganges.

The Jumna at its source near Jamnotri is 10,849 ft. above the sea-level; at Kotur, 16 m. lower, it is only 5036 ft.; so that, between these two places, it falls at the rate of 314 ft. in a mile. At its junction with the Tons it is 1686 ft. above the sea; at its junction with the Asan, 1470 ft.; and at the point where it issues from the Siwalik hills into the plains, 1276 ft.

The catchment area of the river is 118,000 sq. m.; its flood discharge at Allahabad is estimated at 1,533,000 cub. ft. per second. Near Allahabad the Jumna is crossed by railway bridges at Delhi, Muttra, Agra and Allahabad, while bridges of boats are stationed at many places.

Jumping, a branch of athletics which has been cultivated from the earliest times (see Athletic Sports). Leaping competitions formed a part of the pentathlon, or quintuple games, of the Olympic festivals, and Greek chronicles record that the athlete Phylus jumped a distance of 55 Olympian, or more than 30 English, feet. Such a leap could not have been made without weights carried in the hands and thrown backwards at the moment of springing. These were in fact employed by Greek jumpers and were called halteres. They were masses of stone or metal, nearly semicircular, according to Pausanias, and the fingers grasped them like the handles of a shield. Halteres were also used for general exercise, like modern dumb-bells. The Olympic jumping took place to the music of lutes.

Jumping has always been popular with British athletes, and the Australian jumpers have handed down the record of certain leaps that bear on the incredible. Two forms of jumping are included in modern athletic contests, the running long jump and the running high jump; but the same jumps, made from a standing position, are also common forms of competition, as well as the hop step and jump, two hops and jump, two jumps, three jumps, five jumps and ten jumps, either with a run or from a standing position. These events are again divided into two categories by the use of weights, which are not allowed in championship contests.

1 The verb "to jump," only dates from the beginning of the 16th century. The New English Dictionary takes it to be of onomatopoetic origin and does not consider a connexion with Dan. jumpæ, Icel. goppa, &c., possible. The earlier English word is "leap" (O.E. leapan, to run, jump, cf. Ger. laufen).
In the running long jump anything over 18 ft. was once considered good, while Peter O’Connor’s world’s record (1901) was 24 ft. 11 in. The jump is made, after a short fast run on a cinder path, from a jotk sunk into the ground flush with the path, the jumper landing in a pit filled with loose earth, its level a few inches below that of the path. The jotk, called the “take-off,” is painted white, and all jumps are measured from its edge to the nearest mark made by any part of the jumper’s person in landing.

In the standing long jump, well spiked shoes should be worn, for it is in reality nothing but a push against the ground, and a perfect purchase is of the greatest importance. Weights held in the hands of course greatly aid the jumper. Without weights J. Darby (professional) jumped 12 ft. 1½ in. and R. C. Ewry (American amateur) 11 ft. 4¾ in. With weights J. Darby covered 14 ft. 6 in. at Liverpool in 1892, while the amateur record is 12 ft. 9¾ in., made by J. Chandler and G. L. Helligsw (U.S.A.).

The standing two, three, five and ten jumps are merely repetitions of the single jump, care being taken to land with the proper balance to begin the next leap. The record for two jumps without weights is 22 ft. 2½ in., made by H. M. Johnson (U.S.A.); for three jumps without weights, R. C. Ewry, 35 ft. 7½ in.; with weights J. Darby, 41 ft. 7 in.

The hop step and jump is popular in Ireland and often included in the programmes of minor meetings, and so is the two hops and a jump. The record for the first, made by W. McManus, is 40 ft. 2½ in. with a run and without weights; for the latter, also with a run and without weights, 40 ft. ¾ in., made by J. B. Conolly.

In the running high jump also the standard has improved. In 1864 a jump of 5 ft. 6 in. was considered excellent. The Scotch professional Donald Dinnie, on hearing that M. J. Brooks of Oxford had jumped 6 ft. 2½ in. in 1876, wrote to the newspapers to show that upon a priori grounds such an achievement was impossible. Since then many jumpers who can clear over 6 ft. have appeared. In 1895 M. F. Sweeney of New York accomplished a jump of 6 ft. 5½ in. Ireland has produced many first-class high jumpers, nearly all tall men, P. Leahy winning the British amateur record in Dublin in 1895 with a jump of 6 ft. 4½ in. The American A. Bird Page, however, although only 5 ft. 6 in. in height, jumped 6 ft. 4 in. High jumping is done over a light stair or lattice resting upon pins fixed in two uprights upon which a scale is marked. The “take-off,” or ground immediately in front of the uprights from which the spring is made, is usually grass in Great Britain and cinders in America. Some jumpers run straight at the bar and clear it with body facing forward, the knees being drawn up almost to the chin as the body clears the bar; others run and spring sideways, the feet being thrown upwards and over the bar first, to act as a kind of lever in getting the body over. There should be a shallow pit of loose earth or a mattress to break the fall.

The standing high jump is rarely seen in regular athletic meetings. The jumper stands sideways to the bar with his arms extended upwards. He then swings his arms down slowly, bending his knees at the same time, and, giving his arms a violent upward swing, springs from the ground. As the body rises the arms are brought down, one leg is thrown over the bar, and the other pulled, almost jerked, after it. The record for the standing high jump without weights is 6 ft. 6 in., by J. Darby in 1892.

By the use of a spring-board many extraordinary jumps have been made, but this kind of leaping is done only by circus gymnasts and is not recognized by athletic authorities.

JUMPING-HARE, the English equivalent of springhaas, the Boer name of a large leaping south and east African rodent mammal, Pedetes caffer, typifying a family by itself, the Pedetidae. Originally classed with the jerboas, to which it has no affinity, this remarkable rodent approximates in the structure of its skull to the porcupine-group, near which it is placed by some naturalists, although others consider that its true position is with the African scaly-tailed flying squirrels (Anomaluridae). The colour of the creature is bright rufous fawn; the eyes are large; and the bristles round the muzzle very long, the former having a fringe of long hairs. The front limbs are short, and the hind ones very long; and although the fore-feet have five toes, those of the hind-feet are reduced to four. The bones of the lower part of the hind leg (tibia and fibula) are united for a great part of their length. There are four pairs of cheek-teeth in each jaw, which do not develop roots. The jumping-hare is found in open or mountainous districts, and has habits very like a jerboa. It is nocturnal, and dwells in composite burrows excavated and tenanted by several families. When feeding it progresses on all four legs, but if frightened takes gigantic leaps on the hind-pair alone; the length of such leaps frequently reaches twenty feet, or even more. The young are generally three or four in number, and are born in the summer. A second smaller species has been named. (See Rodentia)

JUMPING-MOUSE, the name of a North American mouse-like rodent, Zapus hudsonius, belonging to the family Jaculidae (Dipodidae), and the other members of the same genus. Although mouse-like in general appearance, these rodents are distinguished by their elongated hind limbs, and, typically, by the presence of four pairs of cheek-teeth in each jaw. There are five toes to all the feet, but the first in the fore-feet is rudimentary, and furnished with a flat nail. The cheeks are provided with pouches. Jumping-mice were long supposed to be confined to North America, but a species is now known from N.W. China. It is noteworthy that whereas E. Coues in 1877 recognized but a single representative of this genus, ranging over a large area in North America, A. Preble distinguishes no fewer than twenty North American species and sub-species, in addition to the one from Szechuen. Among these, it may be noted that Z. insignis differs from the typical Z. hudsonius by the loss of the premolar, and has accordingly been referred to a sub-genus apart. Moreover, the Szechuen jumping-mouse differs from the typical Zapus by the closer envelope-folds of the molars, the shorter ears, and the white tail-tip, and is therefore made the type of another sub-genus. In America these rodents inhabit forest, pasture, cultivated fields or swamps, but are nowhere numerous. When disturbed, they start off with enormous bounds of eight or ten feet in length, which soon diminish to three or four; and in leaping the feet scarcely seem to touch the ground. The nest is placed in crevices of rocks, among timbers or in hollow trees, and there are generally three litters in a season. (See Rodentia)

JUMPING-SHREW, a popular name for any of the terrestrial insectivora of the African family Macroscelididae, of which there are a number of species ranging over the African continent, representing the tree-shrews of Asia. They are small long-nosed gerbill-like animals, mainly nocturnal, feeding on insects, and characterized by the great length of the metatarsal bones, which have been modified in accordance with their leaping mode of progression. In some (constituting the genus Rhyncocyon) the muzzle is so much prolonged as to resemble a proboscis, whence the name elephant-shrews is sometimes applied to the members of the family.

JUNAGARH, or JUNAGAD, a native state of India, within the Gujarat division of Bombay, extending inland from the southern coast of the peninsula of Kathiawar. Area, 328 sq. m.; pop. (1901), 395,428, showing a decrease of 19% in the decade, owing to famine; estimated gross revenue, £174,900; tribute to the British government and the gaekwar of Baroda, £400; considerable sum is also received as tribute from minor states in Kathiawar. The state is traversed by a railway from Rajkot, to the seaport of Veravall. It includes the sacred mountain of Girnar and the ruined temple of Somnath, and also the forest of Gir, the only place in India where the lion survives. Junagarh ranks as a first-class state among the many chieftains of Kathiawar, and its ruler first entered into engagements with the British.
in 1807. Nawab Sir Rasul Khanji, K.C.S.I., was born in 1858 and succeeded his brother in 1892.

The modern town of Junagadh (34, 251), 60 m. by rail S. of Rajkot, is handsomely built and laid out. In November 1897 the foundation-stones of a hospital, library and museum were laid, and an arts college has recently been opened.

JUNCACEAE (rush family), in botany, a natural order of flowering plants belonging to the series Liliiflorae of the class Monocotyledons, containing about two hundred species in seven genera, widely distributed in temperate and cold regions. It is well represented in Britain by the two genera which comprise nearly the whole order—Juncus, rush, and Luella, wood-rush. They are generally perennial herbs with a creeping underground stem and erect, unbranched, aerial stems, bearing slender leaves which are grass-like or cylindrical or reduced to membranous sheaths. The small inconspicuous flowers are generally more or less crowded in terminal or lateral clusters, the form of the inflorescence varying widely according to the manner of branching and the length of the pedicels. The flowers are hermaphrodite and regular, with the same number and arrangement of parts as in the order Liliaceae, from which they differ in the inconspicuous membranous character of the perianth, the absence of honey or smell, and the brushlike stigmas with long papillose-adaptations to wind-pollination as contrasted with the methods of pollination by insect agency, which characterize the Liliaceae. Juncaceae are, in fact, a less elaborated group of the same series as Liliaceae, but adapted to a simpler and more uniform environment than that larger and much more highly developed family.

JUNCTION CITY, a city and the county-seat of Geary county, Kansas, U.S.A., between Smoky Hill and Republican rivers, about 3 m. above their confluence to form the Kansas, and 72 m. by rail W. of Topeka. Pop. (1900), 4605, of whom 545 were foreign-born and 292 were negroes; (1905), 5494; (1910), 5598. Junction City is served by the Union Pacific and the Missouri, Kansas & Texas railways. It is the commercial centre of a region in whose fertile valleys great quantities of wheat, Indian corn, oats and hay are grown and live stock is raised, and whose uplands contain extensive beds of limestone, which is quarried for building purposes. Excellent water-power is available and is partly utilized by flour mills. The municipality owns and operates the waterworks. At the confluence of Smoky Hill and Republican rivers and connected with the city by an electric railway is Fort Riley, a U.S. military post, which was established in 1853 as Camp Centre but was renamed in the same year in honour of General Bennett Riley (1787–1853); in 1887 the mounted service school of the U.S. army was established here. Northward from the post is a rugged country over which extends a military reservation of about 16,000 acres. Adjoining the reservation and about 5 m. N.E. of Junction City is the site of the short-lived settlement of Pawnee, where from the 2nd to the 6th of July 1855 the first Kansas legislature met, in a building the ruins of which still remain; the establishment of Pawnee (in December 1854) was a speculative pro-slavery enterprise conducted by the command of Fort Riley, other army officers and certain territorial officials, and when a government survey showed that the site lay within the Fort Riley reservation, the settlers were ordered (August 1855) to leave, and the command of Fort Riley was dismissed from the army; one of the charges brought against Governor A. H. Reeder was that he had favoured the enterprise. Junction City was founded in 1857 and was chartered as a city in 1859.

JUNE, the sixth month in the Christian calendar, consisting of thirty days. Ovid (Fasti, vi. 25) makes Junicus assert that the name was expressly given in her honour. Elsewhere (Fasti, vi. 87) he gives the derivation a junioribus, as May had been derived from majores, which may be explained as in allusion either to the two months being dedicated respectively to youth and age in general, or to the seniors and juniors of the government of Rome, the senate and the comitia curiata in particular. Others connect the term with the gentile name Junius, or with the consulate of Junius Brutus. Probably, however, it originally denoted the month in which crops grow to ripeness. In the old Latin calendar June was the fourth month, and in the so-called year of Romulus it is said to have had thirty days; but at the time of the Julian reform of the calendar its days were only twenty-nine. To these Caesar added the thirtieth. The Anglo-Saxons called June "the dry month," "midsummer month," and, in contradistinction to July, "the earlier mild month." The summer solstice occurs in June. Principal festival days in this month: 11th June, St Barnabas; 24th June, Midsummer Day (Nativity of St John the Baptist); 29th June, St Peter.

JUNEAU, formerly HARRISBURG, a mining and trading town picturesquely situated at the mouth of Gold Creek on the east side of the southeast shore of Gastineau Channel, Alaska, and the capital of Alaska. Pop. (1900), 1864 (450 Indians); (1910), 1644. It has a United States custom-house and court-house. The city has fishing, manufacturing and trading interests, but its prosperity is chiefly due to the gold mines in the adjacent Silver Bow basin, the source of Gold Creek, and the site of the great Perseverance mine, and to those on the Treadwell lode on Douglas Island, 2 m. from Juneau. Placer gold was found at the mouth of the creek in 1879, and the city was settled in 1880 by two prospectors named Joseph Juneau and Richard Harris. The district was called Juneau and the camp Harrisburg by the first settlers; exploring naval officers named the camp Rockwell, in honour of Commander Charles Henry Rockwell, U.S.N. (b. 1840). A town meeting then adopted the name of Juneau. The town was incorporated in 1900. In October 1906 the seat of government of Alaska was removed from Sitka to Juneau.

JUNGHAN, JOHANN HEINRICH (1710–1787), best known by his assumed name of HEINRICH STILTING, German author, was born in the village of Grund near Hilchenburg in Westphalia on
JUNG BAHADUR—JUNIPER

the 12th of September 1740. His father, Wilhelm Jung, schoolmaster and tailor, was the son of Eberhard Jung, charcoal-burner, and his mother was Dortchen Moritz, daughter of a poor clergyman. Jung became, by his father's desire, schoolmaster and tailor, but found both pursuits equally wearisome. After various teaching appointments he went in 1768 with "half a French dollar" to study medicine at the university of Strassburg. There he met Goethe, who introduced him to Herder. The acquaintance with Goethe ripened into friendship; and it was by his influence that Jung's first and best work, *Heinrich Stellings Jugend* was written. In 1772 he settled at Elberfeld as physician and oculist, and soon became celebrated for operations in cases of cataract. Surgery, however, was not much more to his taste than tailoring or teaching; and in 1778 he was glad to accept the appointment of lecturer on "agriculture, technology, commerce, and the veterinary art" in the newly established Kammerschule at Kaiserslautern, a post which he continued to hold when the school was absorbed in the university of Heidelberg. In 1787 he was appointed professor of economical, financial, and statistical science in the university of Marburg. In 1793 he resigned his professorship and returned to Heidelberg, where he remained until 1806, when he received a pension from the grand-duke Charles Frederick of Baden, and removed to Karlsruhe, where he remained until his death on the 2nd of April 1817. He was married three times, and left a numerous family. Of his works his autobiography *Heinrich Stellings Leben*, from which he came to be known as Stilling, is the only one now of any interest, and is the chief authority for his life. His early novels reflect the piety of his early surroundings.

A complete edition of his numerous works, in 14 vols. 8vo, was published at Stuttgart in 1835-1838. There are English translations by Sam. Jackson of the Leben (1835) and of the *Theorie der Geisterkunde* (London, 1834, and New York, 1842); and of Theobald, *The Star地理*, religious romance, by the Rev. Sam. Schaeffer (1848).

JUNG BAHADUR, SIR, MAHARAJA (1816-1877), prime minister of Nepal, was a grand-nephew of Bhum sena Thapa (Bhim sen Thapa), the famous military minister of Nepal, who from 1804 to 1839 was *de facto* ruler of the state under the rani Tripuri and her successor. Bhimsena's supremacy was threatened by the Kala Pandry, and many of his relations, including Jung Bahadur, went into exile in 1838, thus escaping the cruel fate which overtook Bhimsena in the following year. The Pandry leaders, who then reverted to power, were in turn assassinated in 1843, and Matbar Singh, uncle of Jung Bahadur, was created prime minister. He appointed his nephew general and chief judge, but shortly afterwards he was himself put to death. Fateh Jung thereon formed a ministry, of which Jung Bahadur was made military member. In the following year, 1846, a quarrel was fomented, in which Fateh Jung and thirty-two other chiefs were assassinated, and the rani appointed Jung Bahadur sole minister. The rani quickly changed her mind, and planned the death of her new minister, who at once appealed to the maharajah. But the plot failed. The rani and the rani's family sought safety in India, and Jung Bahadur firmly established his own position by the removal of all dangerous rivals. He succeeded so well that in January 1850 he was able to leave for a visit to England, from which he did not return to Nepal until the 6th of February 1851. On his return, and frequently on subsequent dates, he frustrated conspiracies for his assassination. The reform of the penal code, and a desultory war with Tibet, occupied his attention until news of the Indian Mutiny reached Nepal. Jung Bahadur resisted all overtures from the rebels, and sent a column to Gorakpur in July 1857. In December he furnished a force of 8000 Gurkhas, which reached Lucknow on the 11th of March 1858, and took part in the siege. The moral support of the Nepalese was more valuable than the military service rendered by them. Jung Bahadur was made a G.C.B., and a tract of country annexed in 1851 was restored to Nepal. Various frontier disputes were settled, and in 1875 Sir Jung Bahadur was on his way to England when he had a fall from his horse in Bombay and returned home. He received a visit from the Prince of Wales in 1876. On the 25th of February 1877 he died, having reached the age of sixty-one. Three of his widowsimmolated themselves on his funeral pyre.

JUNG-BUNZLAU (Czech, Mladá Boleslav), a town of Bohemia, 44 m. N.N.E. of Prague by rail. Pop. (1900), 13,479, mostly Czech. The town contains several old buildings of historical interest, notably the castle, built towards the end of the 10th century, and now used as barracks. There are several old churches. In that of St Maria the celebrated bishop of the Bohemian brethren, Johann August, was buried in 1595; but his tomb was destroyed in 1621. The church of St Bonaventura with the convent, originally belonging to the friars minor and later to the Bohemian brethren, is now a Piarist college. The church of St Wenceslaus, once a convent of the brotherhood, is now used for military stores. Jung-Bunzlau was built in 995, under Boleslaus II., as the seat of a *gaufreg* or royal court. Early in the 13th century it was given the privileges of a town and pledged to the lords of Mbachov. In the Hussite wars Jung-Bunzlau adhered to the Taborites and became later the metropolis of the Bohemian Brethren. In 1595 Bohuslav of Lobkovic sold his rights as over-lord to the town, which was made a royal city by Rudolf II. During the Thirty Years' War it was twice burned, in 1631 by the imperialists, and in 1640 by the Swedes.

JUNGFRAU, a well-known Swiss mountain (13,669 ft.), admirably seen from Interlaken. It rises on the frontier between the cantons of Bern and of the Valais, and is reckoned among the peaks of the Bernese Oberland, two of which (the Finsteraarhorn, 14,026 ft., and the Aletschhorn, 13,721 ft.) surpass it in height. It was first ascended in 1811 by the brothers Meyer, and again in 1812 by Gottlieb Meyer (son of J. R. Meyer), in both cases by the eastern or Valais side, the foot of which (the final ascent being made by the 1811-1812 route) was reached in 1828 over the Mönchjoch by six peasants from Grindelwald. In 1841 Principal J. D. Forbes, with Agassiz, Desor and Du Châtelier, made the fourth ascent by the 1812 route. It was not till 1865 that Sir George Young and the Rev. H. B. George succeeded in making the first ascent from the west or Interlaken side. This is a far more difficult route than that from the east, the latter being now frequently taken in the course of the summer.

JUNGLE (Sans. jangala), an Anglo-Indian term for a forest, a thicket, a tangled wilderness. The Hindustani word means strictly waste, uncultivated ground; then such ground covered with trees or long grass; and thence again the Anglo-Indian application is to forest or other wild growth, rather than to the fact that it is not cultivated.

JUNIN, an interior department of central Peru, bounded N. by Huancuco, E. by Loreto and Cuzco, S. by Huancavelica, and W. by Lima and Ancachs. Pop. (1906 estimate), 305,700. It lies wholly within the Andean zone and has an area of 23,353 sq. m. It is rich in minerals, including silver, copper, mercury, bismuth, molybdenum, lead and coal. The Huallaga and Mantaro rivers have their sources in this department, the latter in Lake Junin, or Chanchaycocha, 13,230 ft. above sea-level. The capital of Junin is Cerron de Pasco, and its two principal towns are Jauja and Tarma (pop., 1906, about 12,000 and 5000 respectively).

JUNIPER. The junipers, of which there are twenty-five or more species, are evergreen bushy shrubs or low columnar trees, with a more or less aromatic odour, inhabiting the whole of the cold and temperate northern hemisphere, but attaining their maximum development in the Mediterranean region, the North Atlantic islands, and the eastern United States. The leaves are usually articulated at the base, spreading, sharp-pointed and needle-like in form, destitute of oil-glands, and arranged in alternating whorls of three; but in some the leaves are minute and scale-like, closely adhering to the branches, the apex only being free, and furnished with an oil-gland on the back.
Sometimes the same plant produces both kinds of leaves on different branches, or the young plants produce acicular leaves, while those of the older plants are squariform. The male and female flowers are usually produced on separate plants. The male flowers are developed at the ends of short lateral branches, are rounded or oblong in form, and consist of several antheriferous scales in two or three rows, each scale bearing three or six almost spherical pollen-sacs on its under side. The female flower is a small bud-like cone situated at the apex of a small branch, and consists of two or three whorls of two or three scales. The scales of the upper or middle series each bear one or two erect ovules. The mature cone is fleshy, with the succulent scales fused together and forming the fruit-like structure known to the older botanists as the *gallocate*, or berry of the juniper. The berries are red or purple in colour, varying in size from that of a pea to a nut. They thus differ considerably from the cones of other members of the order Coniferae, of Gymnosperms (q.v.), to which the junipers belong. The seeds are usually three in number, sometimes fewer (1), rarely more (8), and have the surface near the middle or base marked with large glands containing oil. The genus occurs in a fossil state, four species having been described from rocks of Tertiary age.

The genus is divided into three sections, *Sabina*, *Oxycedrus* and *Caryocedrus*. *Juniperus Sabina* is the savin, abundant on the mountains of central Europe, an irregularly spreading much-branched shrub with scale-like glandular leaves, and emitting a disagreeable odour when bruised. The plant is poisonous, acting as a powerful local and general stimulant, diaphoretic, emmenagogue and antihelmintic; it was formerly employed both internally and externally. The oil of savin is now occasionally used criminally as an abortifacient. *J. bernduliana*, a tree about 40 or 50 ft. in height, yields a fragrant red wood, which was used for the manufacture of "cedar" pencils. The tree is now very scarce in Bermuda, and the "red cedar," *J. virginiana*, of North America is employed instead for pencils and cigar-boxes. The red cedar is abundant in some parts of the United States and in Virginia is a tree 50 ft. in height. It is very widely distributed from the Great Lakes to Florida and round the Gulf of Mexico, and extends as far west as the Rocky Mountains and beyond to Vancouver Island. The wood is applied to many uses in the United States. The fine red fragrant heart-wood takes a high polish, and is much used in cabinet-work and inlaying, and the small size of the planks prevents its more extended use. The galls produced at the ends of the branches have been used in medicine, and the wood yields cedar-camphor and oil of cedar-wood. *J. thurifera* is the incense juniper of Spain and Portugal, and *J. phoenicea* (*J. lycia*) from the Mediterranean district is stated by Loudon to be burned as incense.

*J. communis*, the common juniper (see fig.), and several other species, belong to the section *Oxycedrus*. The common juniper is a very widely distributed plant, occurring in the whole of northern Europe, central and northern Asia to Kamchatka, and east and west North America. It grows at considerable elevations in southern Europe, in the Alps, Apennines, Pyrenees and Sierra Nevada (4000 to 5000 ft.). It also grows in Asia Minor, Persia and at great elevations on the Himmals. In Great Britain it is usually a shrub with spreading branches, less frequently a low tree. In former times the juniper seems to have been a very well-known plant, the name occurring almost unaltered in many languages. The Lat. *juniperus*, probably formed from *juni*—crude form of *juvenis*, fresh, young, and *pere*, to produce, if represented by Fr. *geniere*, Sp. *enebro*, Ital. *ginipe*, &c. The dialectical names, chiefly in European languages, were collected by Prince L. L. Bonaparte, and published in the *Academy* (July 17, 1780, No. 428, p. 45). The common juniper is official in the British pharmacopoeia and in that of the United States, yielding the oil of juniper, a powerful diuretic, distilled from the unripe fruits. This oil is closely allied in composition to oil of turpentine and is given in doses of a half to three minims. The *Spiritus juniperi* of the British pharma-

copoeia is given in doses up to one drachm. Much safer and more powerful diuretics are now in use. The wood is very aromatic and is used for ornamental purposes. In Lapland the bark is made into rope. The fruits are used for flavouring gin (a name derived from *juniper*, through Fr. *genière*); and in some parts of France a kind of beer called *genévrier* was made from them by the peasants. *J. Oxycedrus*, from the Mediterranean district and Madeira, yields cedar-oil which is official in most of the European pharmacopoeias, but not in that of Britain. This oil is largely used by microscopists in what is known as the "oil-immersion lens."

The third section, *Caryocedrus*, consists of a single species, *J. drupacea* of Asia Minor. The fruits are large and edible: they are known in the East by the name *habbel*.

---

**JUNIUS,** the pseudonym of a writer who contributed a series of letters to the London *Public Advertiser*, from the 21st of January 1769 to the 21st of January 1772. The signature had been already used by him in a letter of the 21st of November 1768, which he did not include in his collection of the *Letters of Junius* published in 1772. The name was chosen in all probability because he had already signed "Lucius" and "Brutus," and wished to exhaust the name of Lucius Junius Brutus the Roman patriot. Whoever the writer was, he wrote under other pseudonyms before, during, and after the period between January 1769 and January 1772. He acknowledged that he had written as "Philo-Junius," and there is evidence that he was identical with "Veteran," "Nemesis" and other anonymous correspondents of the *Public Advertiser*. There is a marked distinction between the "letters of Junius" and his so-called miscellaneous letters. The second deal with a variety of subjects, some of a purely personal character, as for instance the alleged injustice of Viscount Barrington the secretary at war to the officials of his department. But the "letters of Junius" had a definite object—to discredit the ministry of the duke of Grafton. This administration had been formed in October 1768, when the earl of Chatham was compelled by ill health to retire from office, and was a reconstruction of his cabinet of July 1766. Junius
JUNIUS fought for the return to power of Chatham, who had recovered and was not on good terms with his successors. He communicated with Chatham, with George Grenville, with Wilkes, all enemies of the duke of Grafton, and also with Henry Sampson Woodfall, printer and part owner of the Public Advertiser. This private correspondence has been preserved. It is written in the disguised hand used by Junius.

The letters are of interest on three grounds—political in their significance, their style, and the mystery which long surrounded their authorship. As political writings they possess no intrinsic value. Junius was wholly destitute of insight, and of the power to disentangle, define and advocate principles. The matter of his letters is always invective. He began by a general attack on the ministry for their personal immorality or meanness. An ill-judged defence of one of the body—the marquess of Granby, commander-in-chief—volunteered by Sir William Draper, gave him an easy victory over a vulnerable opponent. He then went on to pour acrimonious abuse on Grafton, on the duke of Bedford, on King George III. himself, in the letter of the 16th of December 1769, and ended with the most malignant and ignorant assaults on Lord Chief Justice Mansfield. Several of his accusations were shown to be unfounded. The practical effect of the letters was insignificant. They were noticed and talked about. They provoked anger and retorts. But the letter to the king aroused indignation, and though Grafton’s administration fell in January 1770, it was succeeded by the long-lived cabinet of Lord North. Junius confessed himself beaten, in his private letter to Woodfall of the 10th of January 1773. He had materially contributed to his own defeat by his brutal violence. He sinned indeed in a large company. The employment of personal abuse had been habitual in English political controversy for generations, and in the 18th century there was a strong taste for satire. Latin literature, which was not only studied but imitated, supplied the inspiration and the models, in the satires of Juvenal, and the speeches of Cicero against Verres and Catiline.

If, however, Junius was doing what others did, he did it better than anybody else—a fact which sufficiently explains his rapid popularity. His superiority lay in his style. Here he was by no means original, and he was unequal. There are passages in his writings which can be best described in the words which Burke applied to another writer: “A mere mixture of vinegar and water, at once vivid and sour.” But at his best Junius attains to a high degree of artificial elegance and vigour. He shows the influence of Bolingbroke, of Swift, and above all of Tacitus, who appears to have been his favourite author. The imitation is never slavish. Junius adapts, and does not only repeat. The white heat of his malignity animates the whole. No single sentence will show the quality of a style which produces its effect by persistence and repetition, but such a typical passage as follows displays at once the method and the spirit. It is taken from Letter LIX. to the duke of Grafton, June 22, 1771:

“The profound respect I bear to the gracious prince who governs this country with no less honour to himself than satisfaction to his subjects, and who restores you from his rank under his standard, will save you from a multitude of reproaches. The attention I should have paid to that noble object is certainly attributed to the hand which rewards them; and though I am not so partial to the royal judgment as to affirm that the favour of a king can remove mountains of infamy, it serves to lessen at least, for undoubtedly the divine vengeance followed. While I remember how much is due to his sacred character, I cannot, with any decent appearance of propriety, call you the meanest and the basest fellow in the kingdom. I protest, my Lord, I do not think you so. You will have a dangerous rival to your name to whom you have handed down directing your ambition, as long as there is one man living who thinks you worthy of his confidence, and fit to be trusted with any share in his government. . . . With any other prince, the shameful duplicity of a minister of state, of which you have become the heir, created, in the very crisis of danger, when he fancied he saw the throne already surrounded by men of virtue and abilities, would have outweighed the memory of your former services. But his majesty is full of justice, and understands the doctrine of compensations; he remembers with gratitude how soon you had accommodated your morals to the necessities of his service, how cheerfully you had abandoned the engagements of private friendship, and renounced the most solemn professions to the public. The sacrifice of Lord Chatham was not lost on him. Even the cowardice and perfidy of deserting him may have done you no disservice in his esteem. The instance was painful, but the principle might please.”

What is artificial and stilted in this style did not offend the would-be classic taste of the 18th century, and does not now conceal the fact that the laboriously arranged words, and artfully counterbalanced clauses, convey a venomous hate and scorn.

The pre-established harmony between Junius and his readers accounts for the rapidity of his success, and for the importance attributed to him by Burke and Johnson, far better writers than himself. Before 1772 there appeared at least twelve unauthorized republications of his letters, made by speculative printers. In that year he revised the collection named “Junius: Stat nominis umbra,” with a dedication to the English people and a preface. Other independent editions followed in quick succession. In 1801 one was published with annotations by Robert Heron. In 1806 another appeared with notes by John Almon. The first new edition of real importance was issued by the Woodfall family in 1812. It contained the correspondence of Junius with H. S. Woodfall, selections of the more valuable letters attributed to Junius, facsimiles of his handwriting, and notes by Dr Mason Good. Curiosity as to the mystery of the authorship began to replace political and literary interest in the writings. Junius himself had been early aware of the advantage he secured by concealment. “The mystery of Junius increases his importance” is his confession in a letter to Wilkes dated the 18th of September 1771. The calculation was a sound one. For two generations after the appearance of the letter of the 21st of January 1769, speculations as to the authorship of Junius were rife, and discussion had hardly ceased in 1910. Joseph Parke, author with Herman Merivale of the Memoirs of Sir Philip Francis (1867), gives a list of more than forty persons who had been supposed to be Junius. They are: Edmund Burke, Lord George Sackville, Lord Chatham, Colonel Barré, Hugh Macaulay Boyd, Dr Butler, John Wilkes, Lord Chesterfield, Henry Flood, William Burke, Gibbon, W. E. H. Mansfield, Charles Lloyd, Charles Lee (general in the American War of Independence), John Roberts, George Grenville, James Grenville, Lord Temple, Duke of Portland, William Grafton, Richard Glover, Sir William Jones, James Hallis, Laughlin Maclean, Philip Rosenhagen, Horne Took, John Kent, Henry Grattan, Daniel Wray, Horace Walpole, Alexander Wedderburn (Lord Loughborough), Dunning (Lord Ashburton), Licut.-General Sir R. Rich, Dr Philip Francis, a “junto” or committee of writers who used a common name, De Lolme, Mrs Catherine Macaulay (1733–91), Sir Philip Francis, Lord Littleton, Wolfram Cornwall and Gov. Thomas Powall. In the great majority of cases the attribution is based on nothing more than a vague guess. Edmund Burke denied that he could have written the letters of Junius if he would, or would have written them if he could. Grattan pointed out that he was young when they appeared. More plausible claims, such as those made for Lord Temple and Lord George Sackville, could not stand the test of examination. Indeed after 1812 the question “Who wrote Junius?” as “Was Junius Sir Philip Francis, or some undiscoverable man?” In that year John Taylor was led by a careful study of Woodfall’s edition of 1812 to publish The identity of Junius with a distinguished living character established, in which he claimed the letters for Sir Philip Francis. He had at first been inclined to attribute them to Sir Philip’s father, Dr Francis, the author of translations of Horace and Demosthenes. Taylor applied to Sir Philip, who did not die till 1818, for leave to publish, and received from him answers which to an unwise person might appear to constitute denial of the authorship, but were in fact evasions.

The reasons for believing that Sir Philip Francis (q.v.) was Junius are very strong. His evasions were only to be expected. Several of the men he attacked lived nearly as long as himself, the sons of others were conspicuous in society, and King George III. survived him. Sir Philip, who had held office, who had been decorated, and who in his later years was ambitious to obtain
the governor-generalship of India, dared not confess that he
was Junius. The similarity of his handwriting to the disguised
hand used by the writer of the letters is very close. If Sir
Philip Francis did, as his family maintain, address a copy of
verses to a Miss Giles in the handwriting of Junius (and the
evidence that he did is weighty) there can be no further question
as to the identity of the two. The similarity of Junius and
Francis in regard to their opinions, their likes and dislikes, their
knowledge and their known movements, amount, apart from
the handwriting, almost to proof. It is certain that many
felons have been condemned on circumstantial evidence less
complete. The opposition to his claim is based on such asser-
tions as that his known handwriting was inferior to the feigned
hand of Junius, and that no man can make a disguised hand
better than his own. But the first assertion is unfounded, and
the second is a mere expression of opinion. It is also said that
Francis must have been guilty of baseness if he wrote Junius,
but if that explains why he did not avow the authorship it can
be shown to constitute a moral impossibility only by an exami-
nation of his life.

AUTHORS.—The best edition of the Letters of Junius, properly
so called, with the Miscellaneous Letters, is that of J. Ward (1854).
The most valuable contributions to the controversy as to the authorship are:
R. M. Thomson, Junker Franchisi, Chaloner Chudleigh, with preface and
collateral evidence by the Hon. E. Twisleton (1871); Memoirs of Sir Philip
Francis, K.C.B., by Parkes and Merivale (1867); Junius Revealed by his
Surviving Grandson, by H. R. Francis (1864); The Francis Letters, edited by
Beata Frantica and Eliza Keary, with a note on the Junius controversy by
C. F. Keary (1901); and "Francis, Sir Philip," by Sir Leslie Stephen, in
Dict. of Nat. Biog.

(1) JUNIUS, FRANZ (in French, François du Jon), the name of
two Huguenot scholars.

He was a voluminous writer on theological subjects, and translated
and composed many exegetical works. He is best known from
his own edition of the Latin Old Testament, slightly altered from
the former joint edition, and with a version of the New Testament
and Psalms, 1596, 1597. The Opera Theologica, Francisci
Junii Biturigis were published at Geneva (2 vols., 1613),
to which is prefixed his autobiography, written about 1592 (new ed.,
deleted by Abraham Kuyper, 1882 seq.). His autobiography had
been set forth at Leiden (1592), and is reprinted in the Miscellanea
Groningana, vol. I, along with a list of the author's other writings.

(2) FRANZ JUNIUS (1589–1677), son of the above, was born
at Heidelberg, and brought up at Leiden. His attention was
diverted from military to theological studies by the peace of
1660 between Spain and the Netherlands. In 1617 he became
pastor at Hillengsberg, but in 1620 went to England, where
he became librarian to Thomas Howard, earl of Arundel, and
tutor to his son. He remained in England thirty years, devoting
himself to the study of Anglo-Saxon, and afterwards of the
cogate old Teutonic languages. His work, intrinsically valu-
able, is important as having aroused interest in a frequently
neglected subject. In 1651 he returned to Holland; and for
two years lived in Friesland in order to study the old dialect.
In 1675 he returned to England, and during the next year
resided in Oxford; in 1677 he went to live at Windsor with
his friend, Isaac Vossius, in whose house he died on the 9th of
November 1677. He was buried at Windsor in St. George's
Chapel.

He was pre-eminently a student. He published De picture
veterum (1637) (in English by the author, 1638; enlarged and
improved edition, edited by J. G. Graevius, who prefixed a life
of Junius, with a catalogue of architects, painters, &c., and their
works, Rotterdam, 1664); Observationes in Willemari Abbi-
ae, franciscam paraphrasis cantici cantorum (Amsterdam, 1655);
Annationes in harmoniam latino-francicam quatuor evangelis-
tum, latin e Tattiano confectam (Amsterdam, 1655); Caedmon's
monopsychophoriae poeticae generis (Amsterdam, 1658); and
Dictionarium Vergiliani, (Amsterd., 1670), with an essay on
the feasibility of restoring a Latin text which is close to
the original (see criticism under CAEDMON); Quatuor D.N.I.C. evangeli-
erum versiones pentagrita due, gogho scilicet et anglo-saxonica (Dort, 2 vols.,
1665) (the Gothic version in this book Junius transcribed from the
Silver Codex of Ulfilas; the Anglo-Saxon version from an edition
by Thomas Marshall, whose notes to both versions are given, and a
Gothic glossary by Junius); Etymologicum anglicanum, edited by
Edward Lyc, and preceded by a life of Junius and George Hickey's
Anglo-Saxon grammar (Oxford, 1743) (its results require careful
verification in the light of modern research). His rich collection
of ancient MSS., edited and annotated by him, Junius bequeathed
to the university of Oxford. Graevius gives a list of them, the most
important being the version of the O. Testament (in 6 vols.,
and 9 volumes containing Glossarium v. linguarum septentrionalium.

JUNK. (1) (Through Port. junco, adapted from Javanese
djiong, or Malayen adjoon, ship), the name of the native saising
vessel, common to the far eastern seas, and especially used by
the Chinese and Javanese. It is a flat-bottomed, high-sterned
vessel with square bows and masts carrying lug-sails, often made
of matting. (2) A nautical term for small pieces of disused
rope or cable, cut up to make fenders, oaksim, &c., hence applied
colloquially by sailors to the salt beef and pork used on board
ship. The word is of doubtful origin, but may be connected with
"junk" (Lat. junco), a reed, or rush. This word is now
obsolete except as applied to a form of surgical appliance, used
as a support in cases of fracture where immediate setting is
impossible, and consisting of a shaped pillow or cushion stuffed
with straw or horsehair, formerly with rushes or reeds.

WILLIAM JUNKER, WILLIAM (1831–1908), explorer of Africa,
was born at Moscow on the 6th of April 1830. He studied med-
cine at Dorpat, Göttingen, Berlin and Prague, but did not
practise for long. After a series of short journeys to Iceland,
Tunis and Lower Egypt, he remained almost continuously in
eastern Equatorial Africa from 1875 to 1886, making first
Khartoum and afterwards Lado the base of his expeditions,
Junker was a leisurely traveller and a careful observer; his main
object was to study the peoples with whom he came into contact,
and to collect specimens of plants and animals, and the result
of his investigations in these particulars is given in his Reisen in
Afrika (3 vols., Vienna, 1889–1891), a work of high merit.
An English translation by A. H. Keane was published in 1890–1892.
Perhaps the greatest service he rendered to geographical science

JUNIUS, F.—JUNKER 559
was his investigation of the Nile-Congo watershed, when he successfully combated Georg Schweinfurth's hydrographical theories and established the identity of the Welle and Ubangi. The Mahdist rising prevented his return to Europe through the Sudan, as he had planned to do, in 1884, and an expedition, fitted out in 1885 by his brother in St Petersburg, failed to reach him. Junker then determined to go south. Leaving Wadelai on the 2nd of January 1886 he travelled by way of Uganda and Tabora and reached Zanzibar in December 1886. In 1887 he received the gold medal of the Royal Geographical Society. As an explorer Junker is entitled to high rank, his ethnographical observations in the Niam-Niam (Azande) country being especially valuable. He died at St Petersburg on the 13th of February 1892.

JUNKET, a dish of milk curdled by rennet, served with clotted cream and flavoured with nutmeg, which is particularly associated in England with Devonshire and Cornwall. The word is of somewhat obscure history. It appears to come through O. Fr. "jouquete," a rush-basket, from Lat. "juncus," rush. In Norman dialect this word is used of a cream of cheese. The commonly accepted origin is that it refers to the rush-basket on which such cream cheeses or curds were served. "Juncade" appears in Rabelais, and is explained by Cotgrave as "spoon-meat, rose-water and sugar." Nicholas Udall (in his translation of Erasmus' "Apophthegms," 1542) speaks of "marchepaines or wafers with other like junkerie." The word "junket" is also used for a festivity or picnic.

JUNO, the chief Roman and Latin goddess, and the special object of worship by women at all the critical moments of life. The etymology of the name is not certain, but it is usually taken as a shortened form of "Jovina," answering to Jovis, from a root "dis," shining. Under Greek influence Juno was early identified with the Greek Hera, with whose cult and characteristics she has many points of resemblance. The goddess, however, was with whom we are familiar in Latin literature is not the true Roman deity. In the "Aeneid," for example, her policy is antagonistic to the plans of Jupiter for the conquest of Latium and the future greatness of Rome; though in the fourth Eclogue, as Lucina, she appears in her proper rôle as assisting at childbirth. It was under Greek influence again that she became the wife of Jupiter, the mother of Mars; the true Roman had no such personal interest in his deities as to invent family relations for them.

That Juno was especially a deity of women, and represents in a sense the female principle of life, is seen in the fact that as every man had his genius, so every woman had her Juno; and the goddess herself may have been a development of this conception. The various forms of her cult all show her in close connexion with women. As Juno Lucina she was invoked in childbirth, and on the 1st of March, the old Roman New Year's day, the matrons met and made offerings at her temple in a grove on the Esquiline; hence the day was known as the "Matria Julia." As Caprotina she was especially worshipped by female slaves on the 7th of July ("Nonae Caprotinae"); as Sospita she was invoked all over Latium as the saviour of women in their perils, and later as the saviour of the state; and under a number of other titles, Ciusia, Uxia, Pronuba, &c., we find her taking a leading part in the ritual of marriage. Her real or supposed connexion with the moon is explained by the alleged influence of the moon on the lives of women; thus she became the deity of the Kalends, or day of the new moon, when the regina sacrorum offered a lamb to her in the regia, and her husband the rex made known to the people the day on which the Nones would fall. Thus she is brought into close relation with Junus, who also was worshipped on the Kalends by the rex sacrorum, and it may be that in the oldest Roman religion these two were more closely connected then Juno and Jupiter. But in historical times she was associated with Jupiter in the great temple on the Capitoline hill as Juno Regina, the queen of all Junones or queen of heaven, as Jupiter there was Optimus Maximus (see Jupiter), and under the same title she was enticed from Veil after its capture in 392 B.C., and settled in a temple on the Aventine. Thus exalted above all other female deities, she was prepared for that identification with Hera which was alluded to above. That she was in some sense a deity of light seems certain; as Lucina, e.g., she introduced new-born infants "in luminis oras."

See Roscher’s article "Juno" in his Lexicon of Mythology, and his earlier treatise on Juno and Hera; Wissowa, "Religion und Kultur der Römer," 113 foll.; also a fresh discussion by Walter Otto in "Philologus" for 1905 (p. 161 foll.).

JUNOT, ANDOCHÉ, DUKE OF ABRANTES (1771–1813), French general, was born at Bussy-le-Grand (Côte d’Or), on the 23rd of October 1771. He went to school at Chatillon, and was known among his comrades as a blustering but lovable creature, with a pugnacious disposition. He was studying law in Paris at the outbreak of the Revolution and joined a volunteer battalion. He distinguished himself by his valor in the first year of the Revolutionary wars, and came under the special notice of Napoleon Bonaparte during the siege of Toulon, while serving as his secretary. It is related that as he was taking down a despatch, a shell burst hard by and covered the paper with sand, whereupon he exclaimed, "Bien nous n’avions pas de sable pour sècher l’encre! en voilà!" He remained the faithful companion of his chief during the latter’s temporary disgrace, and went with him to Italy as aide-de-camp. He distinguished himself so much at the battle of Millesimo that he was selected to carry back the captured colours to Paris; returning to Italy he went through the campaign with honour, but was badly wounded in the head at Lonato. Many rash incidents in his career may be traced to this wound, from which he never completely recovered. During the expedition to Egypt he became a general of brigade. His devotion to Bonaparte involved him in a duel with General Lanusse, in which he was again wounded. He had to be left in Egypt to recover, and in crossing to France was captured by English cruisers. On his return to France he was made commandant of Paris, and afterwards promoted to the rank of brigadier general. In 1801 he was sent to Peron (see JUNOT, LAURE). He next served at Arras in command of the grenadiers of the army destined for the invasion of England, and made some alterations in the equipment of the troops which received the praise of the emperor. It was, however, a bitter mortification that he was not appointed a marshal of France when he received the grand cross of the legion of honour. He was made colonel-general of hussars instead and sent as ambassador to Lisbon, his entry into which city resembled a royal progress. But he was so restless and dissatisfied in the Portuguese capital that he set out, without leave, for the army of Napoleon, with which he took part in the battle of Austerlitz, behaving with his usual courage and zeal. But he soon gave fresh offence. Although his early devotion was never forgotten by the emperor, his uncertain temper and want of self-control made it dangerous to employ him at court or headquarters, and he was sent to Parma to put down an insurrection and to be out of the way. In 1806 he was recalled and became governor of Paris. His extravagance and prodigality shocked the government, and some rumours of an intrigue with a lady of the imperial family—it is said Pauline Bonaparte—made it desirable again to send him away. He was therefore appointed to lead an invading force into Portugal. For the first time Junot had a great task to perform, and only his own resources to fall back upon for its achievement. Early in November 1807 he set out from Salamanca, crossed the mountains of Beira, rallied his wearied forces at Abrantes, and, with 1500 men, dashed upon Lisbon, in order, if possible, to seize the Portuguese fleet, which had, however, just sailed away with the regent and court to Brazil. The whole movement only took a month; it was undoubtedly bold and well-conducted, and Junot was made duke of Abrantes and invested with the governorship of Portugal. But administration was his weak point. He was a good governor, but a "rabatteur," brave, truthful, and also dissipated and rapacious, though in the last respect he was far from being the worst offender amongst the French generals in Spain. His hold on Portugal was never supported by a really adequate force, and his own conduct, which resembled that of
an eastern monarch, did nothing to consolidate his conquest. After Wellesley encountered him at Vimeira (see Peninsula War) he was obliged to conclude the so-called convention of Cintra, and to withdraw from Portugal with all his forces. Napoleon was furious, but, as he said, was spared the necessity of sending his old friend before a court martial by the fact that the English put their own generals on their trial. Junot was sent back to Spain, where, in 1810–1811, acting under Masséna, he was once more seriously wounded. His last campaign was made in Russia, and he received more than a just share of discredit for it. Napoleon next appointed him to govern Illyria. But Junot's mind had become deranged under the weight of his misfortunes, and on the 29th of July 1813, at Montbard, he threw himself from a window in a fit of insanity.

JUNOT, LAURE, DUCHESS OF ABRANTES (1753–1834), wife of the preceding, was born at Montpellier. She was the daughter of Mme. Permon, to whom during her widowhood the young Bonaparte made an offer of marriage—such at least is the version presented by the daughter in her celebrated Memoirs. The Permon family, after various vicissitudes, settled at Paris, and Bonaparte certainly frequented their house a good deal after the downfall of the Jacobin party in Thermidor 1794. Mlle. Permon was married to Junot early in the consulate, and at once entered eagerly into all the gaieties of Paris, and became noted for her beauty, her caustic wit, and her extravagance. The first consul nicknamed her petite peste, but treated her and Junot with the utmost generosity, a fact which did not restrain her sarcasms and slanders in her portrayal of him in her Memoirs. During Junot's diplomatic mission to Lisbon, his wife displayed her prodigality so that on his return to Paris in 1806 he was burdened with debts, which his own intrigues did not lessen. She joined him again at Lisbon after he had entered that city as conqueror at the close of 1807; but even the presents and spoils won at Lisbon did not satisfy her demands; she accompanied Junot through part of the Peninsular War. On her return to France she displeased the emperor by her vivaciousicals, and by receiving guests whom he disliked. The mental malady of Junot thereafter threatened her with ruin; this perhaps explains why she took some part in the intrigues for bringing back the Bourbons in 1814. She did not side with Napoleon during the Hundred Days. After 1815 she spent most of her time at Rome amidst artistic society, which she enlivened with her sprightly converse. She also compiled her spirited but somewhat spiteful Memoirs, which were published at Paris in 1831–1834 in 18 volumes. Many editions have since appeared.

Of her other books the most noteworthy are Histoires contemporaines (2 vols., 1835); Scènes de la vie espagnole (2 vols., 1836); Histoire des salons de Paris (6 vols., 1837–1838); Souvenirs d'ambassadeur et d'un séjour en Espagne et en Portugal, de 1808 à 1815 (2 vols., 1837).

JUNOT (from junctus, to join), a Spanish word meaning (1) any meeting for a common purpose; (2) a committee; (3) an administrative council or board. The original meaning is now lost in the two derivative significations. The Spaniards have even begun to make use of the barbarism maitín, corrupted from the English "meeting." The word junta has always been and still is used in the other senses. Some of the boards by which the Spanish administration was conducted under the Habsburgs and the earlier Bourbon kings were styled juntas. The superior governing body of the Inquisition was the junta suprema. The provincial committees formed to organize resistance to Napoleon's invasion in 1808 were so called, and so was the general committee chosen from among them to represent the nation. In the War of Independence (1808–1814), and in all subsequent civil wars or revolutionary disturbances in Spain or Spanish America, the local executive bodies, elected, or in some cases self-chosen, to appoint officers, raise money and soldiers, look after the wounded, and discharge the functions of an administration, have been known as juntas.

The form "Junto," a corruption due to other Spanish words ending in -to, came into use in English in the 17th century, often in a disparaging sense, of a party united for a political purpose, a faction or cabal; it was particularly applied to the advisers of Charles I., to the Rump under Cromwell, and to the leading members of the great Whig houses who controlled the government in the reigns of William III. and Anne.

JUPITER, the chief deity of the Roman state. The great and constantly growing influence exerted from a very early period on Rome by the superior civilization of Greece not only caused a modification of the Roman god on the analogy of Zeus, the supreme deity of the Greeks, but led the Latin writers to identify the one with the other, and to attribute to Jupiter myths and family relations which were purely Greek and never belonged to the real Roman religion. The Jupiter of actual worship was a Roman god; the Jupiter of Latin literature was more than half Greek. This identification was facilitated by the community of character which really belonged to Jupiter and Zeus as the Roman and Greek developments of a common original conception of the god of the light and the heaven.

That this was the original idea of Jupiter, not only in Rome, but among all Italian peoples, admits of no doubt. The earliest form of his name was Dives pater, or Diespiter, and his special priest was the flamen dialis; all these words point to a root die, shining, and the connexion with dies, day, is obvious (cf. JUNO). One of his most ancient epithets is Lucetius, the light-bringer; and later literature has preserved the same idea in such phrases as sub iove, under the open sky. All days of the full moon (idas) were sacred to him; all emanations from the sky were due to him and in the oldest form of religious thought were probably believed to be manifestations of the god himself. As Jupiter Eliacus he was propitiated, with a peculiar ritual, to send rain in time of drought; as Jupiter Pulgur he had an altar in the Campus Martius, and all places struck by lightning were made his property and guarded from the profane by a circular wall. The vintage, which needs especially the light and heat of the sun, was under his particular care, and in the festivals connected with it ( Vitalia urbana and Mediolanalia, he was the deity invoked, and his flamen the priest employed. Throughout Italy we find him worshipped on the summits of hills where he being intervened between earth and heaven, and where all the phenomena of the sky could be conveniently observed. Thus on the Alban hill south of Rome was an ancient seat of his worship as Jupiter Latiaris, which was the centre of the league of thirty Latin cities of which Rome was originally an ordinary member. At Rome itself it is on the Capitoline hill that we find his oldest temple, described by Livy (i. 10); here we have a tradition of his sacred tree, the oak, common to the worship both of Zeus and Jupiter, and here too was kept the lapis silex, perhaps a celt, believed to have been a thunderbolt, which was used symbolically by the fetiales when officially declaring war and making treaties on behalf of the Roman state. Hence the curious form of oath, Jovem lapidem jurare, used both in public and private life at Rome.

In this oldest Jupiter of the Latins and Romans, the god of the light and the heaven, and the god invoked in taking the most solemn oaths, we must undoubtedly see not only the great protecting deity of the race, but one, and perhaps the only one, whose worship embodies a distinct moral conception. He is specially concerned with oaths, treaties and leagues, and it was in the presence of his priest that the most ancient and sacred form of marriage, confarreatio, took place. The lesser deities, Dios Fidius and Fides, were probably originally identical with him, and only gained a separate existence in course of time by a process familiar to students of ancient religion. This connexion with the conscience, with the sense of obligation and right dealing, was never quite lost throughout Roman history. In Virgil's great poem, though Jupiter is in many ways as much Greek as Roman, he is still the great protecting deity who keeps the hero in the path of duty (pietas) towards gods, state and family.

But this aspect of Jupiter gained a new force and meaning at the close of the monarchy with the building of the famous temple on the Capitol, of which the foundations are still to be seen. It was dedicated to Jupiter Optimus Maximus, i.e. the best and greatest of all the Jupiters, and with him were associated
JUPITER

Juno and Minerva, in a fashion which clearly indicates a Graeco-Etruscan origin; for the combination of three deities, while in one temple was foreign to the ancient Roman religion, while it is found both in Greece and Etruria. This temple was built on a scale of magnificence quite unknown to primitive Rome, and was beyond doubt the work of Etruscan architects employed, we may presume, by the Tarquini. Its three cellae contained the statues of the three deities, with Jupiter in the middle holding his thunderbolt. Henceforward it was the centre of the religious life of the state, and symbolised its unity and strength. Its dedication festival fell on the 13th of September, on which day the consuls originally succeeded to office; accompanied by the senate and other magistrates and priests, and in fulfilment of a vow made by their predecessors, they offered to the great god a white heifer, his favourite sacrifice, and after rendering thanks for the preservation of the state during the past year, made the same vow as that by which they themselves had been bound. Then followed the eplum Jovis or feast of Jupiter, in which the three deities seem to have been visibly present in the form of their statues, Jupiter having a couch and each goddess a sella, and shared the meal with senate and magistrates. In later times this day became the central point of the great Roman games (ludi Romani), originally games vowed in honour of the god if he brought a war to a successful issue. When a victorious army returned home, it was to this temple that the triumphal procession passed, and the triumph of which we hear so often in Roman history may be taken as a religious ceremonial in honour of Jupiter. The general was dressed and painted to resemble the statue of Jupiter himself, and was drawn on a gilded chariot by four white horses through the Porta Triumphalis to the Capitol, where he offered a solemn sacrifice to the god, and laid on his knees the victor's laurels (see TRUMPPY).

Throughout the period of the Republic the great god of the Capitol in his temple looking down on the Forum continued to overshadow all other worship as the one in which the whole state was concerned, in all its length and breadth, rather than any one gens or family. Under Augustus and the new monarchy it is sometimes said that the Capitoline worship suffered to some extent an eclipse (J. B. Carter, The Religion of Numa, p. 160 seq.); and it is true that as it was the policy of Augustus to identify the state with the interests of his own family, he did what was feasible to direct the attention of the people to the worship in which he and his family were specially concerned; thus his temple of Apollo on the Palatine, and that of Mars Ultor in the Forum Augusti, took over a few of the prerogatives of the cult on the Capitol. But Augustus was far too shrewd to attempt to oust Jupiter Optimus Maximus from his paramount position; and yet he preserved the protecting deity of the reigning emperor as representing the state, as he had been the protecting deity of the free republic. His worship spread over the whole empire; it is probable that every city had its temple to the three deities of the Roman Capitol, and the fact that the Romans chose the name of Jupiter in almost every case, by which to indicate the chief deity of the subject peoples, proves that they continued to regard him, so long as his worship existed at all, as the god whom they themselves looked upon as greatest.

See ZEUS, ROMAN RELIGION. Excellent accounts of Jupiter may be found in Roscher's Mythological Lexicon, and in Wissowa's Religion und Kultus der Römer (p. 100 seq.). (W. M. RA.; W. W. F.)

JUPITER, in astronomy, the largest planet of the solar system; his size is so great that it exceeds the collective mass of all the others in the proportion of 5 to 2. He travels in his orbit at a mean distance from the sun exceeding that of the earth 5:2 times, or 483,000,000 miles. The eccentricity of this orbit is considerable, amounting to 0.048, so that his maximum and minimum distances are 504,000,000 and 462,000,000 miles respectively. When in opposition and at his mean distance, he is situated 390,000,000 miles from the earth. His orbit is inclined about 1° 18' 40'' to the ecliptic. His sidereal revolution is completed in 4332-585 days or 11 years 314-9 days, and his synodical period, or the mean interval separating his returns to opposition, amounts to 308-87 days. His real polar and equatorial diameters measure 84,570 and 90,190 miles respectively, so that the mean is 87,380 miles. His apparent diameter (equatorial) as seen from the earth varies from about 32'', when in conjunction with the sun, to 50'' in opposition to that luminary. The oblateness, or compression, of his globe amounts to about 1/10; his volume exceeds that of the earth 1330 times, while his mass is about 300 times greater. These values are believed to be as accurate as the best modern determinations allow, but there are some differences amongst various observers and absolute exactness cannot be obtained.

The discovery of telescopic construction early in the 17th century and the practical use of the telescope by Galileo and others greatly enriched our knowledge of Jupiter and his system. Four of the satellites were detected in 1610, but the dark bands or belts on the globe of the planet did not appear to have been noticed until twenty years later. Though Galileo first sighted the satellites and perseveringly studied the Jovian orb, he failed to distinguish the belts, and we have to conclude either that these features were unusually faint at the period of his observations, or that his telescopes were insufficiently powerful to render them visible. The belts were first recognized by Nicolas Zucchi and Daniel Bartoli on the 17th of May 1630. They were seen also by Francesco Fontana in the same and immediately succeeding years, and by other observers of about the same period, including Zuppi, Giovanni Battista Riccioli and Francesco Maria Grimaldi. Improvements in telescopes were quickly introduced, and between 1655 and 1666 C. Huygens, R. Hooke and J. D. Cassini made more effective observations. Hooke discovered a large dark spot in the planet's southern hemisphere on the 19th of May 1664, and from this object Cassini determined the rotation period, in 1665 and later years, as 9 hours 56 minutes. The belts, spots and irregular markings on Jupiter have now been assiduously studied during nearly three centuries. These markings are extremely variable in their tones, tints and relative velocities, and there is little reason to doubt that they are atmospheric formations floating above the surface of the planet in a series of different currents. Certain of the markings appear to be fairly durable, though their rates of motion exhibit considerable anomalies and prove that they must be quite detached from the actual sphere of Jupiter. At various times determinations of the rotation period were made as follows:

<table>
<thead>
<tr>
<th>Date</th>

</table>

A great number of Jovian features have been traced in more recent years and their rotation periods ascertained. According to the researches of Stanley Williams the rates of motion for different latitudes of the planet are approximately as under:

<table>
<thead>
<tr>
<th>Latitude</th>
<th>Rotation Period</th>
</tr>
</thead>
<tbody>
<tr>
<td>+85° to +28°</td>
<td>9 h. 55 m. 37-5 s.</td>

<td>9 h. 55 m. 7 s.</td>
</tr>
</tbody>
</table>
The above are the mean periods derived from a large number of markings. The bay or hollow in the great southern equatorial belt north of the red spot has perhaps been observed for a longer period than any other feature on Jupiter except the red spot itself. H. Schwabe saw the hollow in the belt on the 3rd of September 1828 and on many subsequent dates. The rotation period of this object during the seventy years to the 3rd of September 1901 was 9 h. 55 m. 36 s. from 61,813 rotations. Since 1901 the mean period has been 9 h. 55 m. 40 s., but it has fluctuated between 9 h. 55 m. 38 s. and 9 h. 55 m. 42 s. The motion of the various features is not therefore dependent upon their latitude, though at the equator the rate seems swifter as a rule than in other zones. But exceptions occur, for in 1880 some spots appeared in about 25° N. which rotated in 9 h. 48 m. though in the region immediately N. of this the spot motion is ordinarily the slowest of all and averages 9 h. 55 m. 53±8 s. (from twenty determinations). These differences of speed remind us of the sun-spots and their proper motions. The solar envelope, however, appears to show a pretty regular retardation towards the poles, for according to Gustav Spörer's formula, while the equatorial period is 25 d. 2 h. 15 m. the latitudes 46° N. and S. give a period of 28 d. 15 h. 0 m.

The Jovian currents flow in a due east and west direction as though mainly influenced by the swiftest rotatory movement of the globe, and exhibit little sign of deviation either to N. or S. These currents do not blend and pass gradually into each other, but seem to be definitely bounded and controlled by separate phenomena well capable of preserving their individuality. Occasionally, it is true, there have been slanting belts on Jupiter (a prominent example occurred in the spring of 1861), as though the materials were evolved with some force in a polar direction, but these oblique formations have usually spread out in longitude and ultimately formed bands parallel with the equator. The longitudinal currents do not individually present us with an equable rate of motion. In fact they display some curious irregularities, the spots carried along in them apparently oscillating to and fro without any reference to fixed periods or cyclical variations. Thus the equatorial current in 1880 moved at the rate of 9 h. 50 m. 6 s. whereas in 1905 it was 9 h. 50 m. 33 s. The red spot in the S. tropical zone gave 9 h. 55 m. 34 s. in 1878-1880, whereas during 1900-1908 it has varied a little on either side of 9 h. 55 m. 40±6 s. Clearly there is no fixed period of rotation to be applied for any spot since it is subject to drifts E. or W. and these drifts sometimes come into operation suddenly, and may be either temporary or durable. Between 1878 and 1900 the red spot in the planet's S. hemisphere showed a continuous retardation of speed.

It must be remembered that in speaking of the rotation of these markings, we are simply alluding to the irregularities in the vapporous envelope of Jupiter. The rotation of the planet itself is another matter and its value is not yet exactly known, though it is probably little different from that of the markings, and especially from those of the most durable character, which indicate a period of about 9 h. 50 m. We never discern the actual landscape of Jupiter or any of the individual forms really diversifying it.

Possibly the red spot which became so striking an object in 1878, and which still remains faintly visible on the planet, is the same feature as that discovered by R. Hooke in 1664 and watched by Cassini in following years. It was situated in approximately the same latitude of the planet and appears to have been hidden temporarily during several periods up to 1713. But the lack of fairly continuous observations of this particular marking makes its identity with the present spot extremely doubtful. The latter was seen by W. R. Dawes in 1857, by Sir W. Huggins in 1858, by J. Baxendell in 1859, by Lord Rosse and R. Copeland in 1873, by H. C. Russell in 1876-1877, and in later years it has formed an object of general observation. In fact it may safely be said that no planetary marking has ever aroused such widespread interest and attracted such frequent observation as the great red spot on Jupiter.

The slight inclination of the equator of this planet to the plane of his orbit suggests that he experiences few seasonal changes. From the conditions we are, in fact, led to expect a prevailing calm in his atmosphere, the more so from the circumstance that the amount of the sun's heat poured upon each square mile of it is (on the average) less than the 27th part of that received by each square mile of the earth's surface. Moreover, the seasons of Jupiter have nearly twelve times the duration of ours, so that it would be naturally expected that changes in his atmosphere produced by solar action take place with extreme slowness. But this is very far from being the case. Telescopes reveal the indications of rapid changes and extensive disturbances in the aspect and material forming the belts. New spots covering large areas frequently appear and as frequently decay and vanish, implying an agitated condition of the Jovian atmosphere, and leading us to admit the operation of causes much more active than the heating influence of the sun.

When we institute a comparison between Jupiter and the earth on the basis that the atmosphere of the former planet bears the

**Fig. 2.—Jupiter, 1903, July 10, 2-50 a.m.**

**Fig. 3.—Jupiter, 1906, April 15, 5-50 p.m.**

same relation to his mass as the atmosphere of the earth bears to her mass, we find that a state of things must prevail on Jupiter very dissimilar to that affecting our own globe. The density of the Jovian atmosphere we should expect to be fully six times as great as the density of our air at sea-level, while it would be comparatively shallow. But the telescopic aspect of Jupiter apparently negates the latter supposition. The belts and spots grow faint as they approach the limb, and disappear as they near the edge of the disk, thus indicating a dense and deep atmosphere.

R. A. Proctor considered that the observed features suggested inherent heat, and adopted this conclusion as best explaining the surface phenomena of the planet. He regarded Jupiter as belonging, on account of his immense size, to a different class of bodies from the earth, and was led to believe that there existed greater analogy between Jupiter and the sun than between Jupiter and the earth. Thus the density of the sun, like that of Jupiter, is small compared with the earth's; in fact, the mean density of the sun is almost identical with that of Jupiter, and the belts of the latter planet may be much more aptly compared with the spot zones of the sun than with the trade zones of the earth.

In support of the theory of inherent heat on Jupiter it has been said that his albedo (or light reflected from his surface) is much greater than the amount would be were his surface similar to that of the moon, Mercury or Mars, and the reasoning has been applied to the large outer planets, Saturn, Uranus and Neptune, as well as to Jupiter. The average reflecting capacity of the moon and five outer planets would seem to be (on the assumption that they possess no inherent light) as follows:

- **Moon**: 0-1736
- **Jupiter**: 0-628

JUPITER

These values were considered to support the view that the four larger and more distant orbs shine partly by inherent lustre, and the more so as spectroscopic analysis indicates that they are each involved in a deep vapour-laden atmosphere. But certain observations furnish a contradiction to Proctor's views. The absolute extinction of the satellites, even in the most powerful telescopes, while in the shadow of Jupiter, shows that they cannot receive sufficient light from their primary to render them visible, and the darkness of the shadows of the satellites when projected on the planet's disk proves that the latter cannot be self-luminous except in an insensible degree. It is also to be remarked that, were it only moderately self-luminous, the colour of the light which it sends to us would be red, such light being at first emitted from a heated body when its temperature is raised. Possibly, however, the great red spot, when the colouring was intense in 1878 and several following years, may have represented an opening in the jovian atmosphere, and the ruddy belts may be extensive rifts in the same envelope. If Jupiter's actual globe emitted a good deal of heat and light we should probably distinguish little of it, owing to the obscuring vapours floating above the surface. Venus reflects relatively more light than Jupiter, and there is little doubt that the albedo of a planet is dependent upon atmospheric characteristics, and in no case a direct indication of inherent light and heat.

The colouring of the belts appears to be due to seasonal variations, for Stanley Williams has shown that their changes have a cycle of twelve years, and correspond as nearly as possible with a sidereal revolution of Jupiter. The variations are of such character that the two great equatorial belts are alternately affected; when the S. equatorial belt displays maximum redness the N. equatorial is at a minimum and vice versa.

The most plausible hypothesis with regard to the red spot is that it is of the nature of an island floating upon a liquid surface, though its great duration does not favour this idea. It is an open question whether the visible Jupiter indicates a liquid or gaseous condition of the visible surface. The difficulty in the way of the liquid hypothesis is the great difference in the times of rotation between the equatorial portions of the planet and the spots in temperate latitudes. The latter usually rotate in periods between 9 h. 55 m. and 9 h. 56 m., while the equatorial markings make a revolution in about five minutes less, 9 h. 50 m. to 9 h. 51 m. The difference amounts to 7·5° in a terrestrial day and proves that an equatorial spot will circulate right round the enormous sphere of Jupiter (circumference 283,000 m.) in 48 days. The motion is equivalent to about 6000 m. per day and 250 m. per hour.

(W. F. D.)

Satellites of Jupiter.

Jupiter is attended by eight known satellites, resolvable as regards their visibility into two widely different classes. Four satellites were discovered by Galileo and were the only ones known until 1892. In September of that year E. E. Barnard, at the Lick Observatory, discovered a fifth extremely faint satellite, performing a revolution in somewhat less than two hours. In 1904 two yet fainter satellites, far outside the other five, were photographically discovered by C. D. Perrine at the Lick Observatory. The eighth satellite was discovered by F. J. Melotte of Greenwich on the 28th of February 1908. It is of the 17th magnitude and apparently more than a million miles distant from Jupiter; a re-observation on the 16th of January 1909 proved it to be retrograde, and to have a very eccentric orbit. These bodies are usually numbered in the order of their discovery, the nearest to the sun being V. In apparent brightness each of the four Galilean satellites may be roughly classified as of the sixth magnitude; they would therefore be visible to a keen eye if the brilliancy of the planet did not obscure them. Some observers profess to have seen one or more of the naked eye notwithstanding this drawback, but the evidence can scarcely be regarded as conclusive. It does not however seem unlikely that the third, which is the brightest, might be visible when in conjunction with one of the others.

Under good conditions and sufficient telescopic power the satellites are visible as disks, and not mere points of light. Measures of the apparent diameter of objects so small, however, is difficult and uncertain. The results for the Galilean satellites range between 0°-9 and 1°-5, corresponding to diameters of between 3000 and 5000 kilometres. The smallest is therefore about the size of our moon. Satellite I. has been found to exhibit marked variations in its brightness and aspect, but the law governing them has not been satisfactorily worked out. It seems probable that one hemisphere of this satellite is brighter than the other, or that there is a large dark region upon it. A revolution on its axis corresponding with that of the orbital revolution around the planet has also been suspected, but is not yet established. Variations of light somewhat similar, but less in amount, have been noticed in the second and third satellites.

The most interesting and easily observed phenomena of these bodies are their eclipses and their transits across the disk of Jupiter. The four inner satellites pass through the shadow of Jupiter at perigee, when the moon is at apogee, and across its disk at every inferior conjunction. The outer Galilean satellite does the same when the conjunctions are not too near the line of nodes of the satellites' orbit. When most distant from the nodes, the satellites pass above or below the shadow and below or above the disk. These phenomena for the four Galilean satellites are predicted in the nautical almanacs.

When one of the four Galilean satellites is in transit across the disk of Jupiter it can generally be seen projected on the face of the planet. It is commonly brighter than Jupiter when it first enters upon the limb but sometimes darker near the centre of the disk. This is owing to the fact that the planet is much darker at the limb. During these transits the shadow of the satellites can also be seen projected on the planet as a dark point.

The theories of the motion of these bodies form one of the most interesting problems of celestial mechanics. Owing to the great ellipticity of Jupiter, growing out of its rapid rotation, the influence of this ellipticity upon the motions of the five inner satellites is much greater than that of the sun, or of the satellites on each other. The inclination of the orbits to the equator of Jupiter is quite small but the inclination of each of the nodes is uniformly near 18°. It follows that the same relative subaspects are the mean motions. The cause of this was pointed out by Laplace. If we put L1 L4 and L5 for the mean longitudes, and define an angle U as follows:

\[ U = L - 3L + 2L_4 \]

it was shown mathematically by Laplace that if the longitudes and mean motions were such that the angle U differed a little from 180°, there was a minute residual force arising from the mutual actions of the several bodies tending to bring this angle towards the value 180°. Consequently, if the mean motions were such that this angle increased only with great slowness, it would after a time become equal to the value 180°, and then beyond it, exactly as a pendulum drawn out of the perpendicular oscillates towards and beyond it. Thus an oscillation would be engendered in virtue of which the angle would oscillate very closely about 180°, each time increasing the extraneous value. Computation of the mean longitude from observations has indicated that this angle does differ from 180°, but it is not certain whether this deviation is greater than the possible result of the errors of observation. However the inclination of the plane of the satellites, and its period if it does exist, are still unknown.

The following are the principal elements of the orbits of the five inner satellites, arranged in the order of distance from Jupiter. The mean longitudes are for 1891, 20th of October, G.M.T., and are referred to the equinox of the epoch, 1891, 1st of October:

The following numbers relating to the planet itself have been supplied mostly by Professor Hermann Struve.
JUR (Djur), the Dinka name for a tribe of negroes of the upper Nile valley, whose real name is Luoh, or Lwo. They appear to be immigrants, and tradition places their home in the south; they now occupy a district of the Bahr-el-Gazal between the Bongo and Dinka tribes. Of a reddish black colour, fairer than the Dinka, they are well proportioned, with the hair short. Tattooing is not common, but when found is similar to that of the Dinka; they Pierce the ears and nose, and in addition to the ornaments found among the Dinka (q.v.) wear a series of iron rings on the forearm covering it from wrist to elbow. They are mainly agricultural, but hunt and fish to a considerable extent; they also are skilful smiths, smelting their own iron, of which they supply quantities to the Dinka. They are a prosperous tribe and in consequence spinners are unknown among them. Their chief currency is spears and hoe-blades, and cowrie shells are used in the purchase of wares. Their chief weapons are spears and bows.

JURA, a department of France, on the eastern frontier, forming the southern portion of the old province of Franche-Comté. It is bounded N. by the department of Haute-Saône, N.E. by Doubs, E. by Switzerland, S. by Ain, and W. by Saône-et-Loire and Côte d'Or. Pop. (1906), 257,775. Area, 1,951 sq. m. Jura comprises four distinct zones with a general direction from north to south. In the S.E. lie high eastern chains of the central Jura, containing the Crêt Pela (4015 ft.), the highest point in the department. More to the west there is a chain of forest-clad plateaus bordered on the E. by the river Ain. Westward of these runs a range of hills, the slopes of which are covered with vineyards. The north-west region of the department is occupied by a plain which includes the fertile Finage, the northern portion of the Bresse, and is traversed by the Doubs and its left affluent the Loue, between which lies the fine forest of Chaux, 76 sq. m. in area. Jura falls almost wholly within the basin of the Rhone. Besides those mentioned, the chief rivers are the Valouze and the Bienne, which water the south of the department. There are several lakes, the largest of which is that of Chalin, about 12 m. E. of Lons-le-Saunier. The climate is, on the whole, cold; the temperature is subject to sudden and violent changes, and among the mountains winter sometimes lingers for eight months. The rainfall is much above the average of France.

Jura is an agricultural department: wheat, oats, maize and barley are the chief cereals, the culture of potatoes and rape being also of importance. Vines are grown mainly in the cantons of Arbois, Poligny, Salins and Voulteur. Woodlands occupy a fifth of the area: the oak, hornbeam and beech, and, in the mountains, the spruce and fir, are the principal varieties. Natural pasture is abundant on the mountains. Forests, gorges, torrents and cascades are characteristic features of the scenery. Its minerals include iron and salt and there are stone-quarries.PEAT is also worked. Lons-le-Saunier and Salins have mineral springs. Industries include the manufacture of Gruyère, Septmoncel and other cheeses (made in co-operative cheese factories or fromites), metal founding and forging, saw-milling, flour-milling, the cutting of precious stones (at Septmoncel and elsewhere), the manufacture of nails, tools and other iron goods, paper, leather, briar-pipes, toys and fancy wooden-ware and basket-work. The making of clocks, watches, spectacles and measures, which are largely exported, employs much labour in and around Morez. Imports consist of grain, cattle, wine, leaf-copper, horn, ivory, fancy-wood; exports of manufactured articles, wine, cheese, stone, timber and salt. The department is served chiefly by the Paris-Lyon-Méditerranée railway, the main line from Paris to Neuchâtel traversing its northern region. The canal from the Rhone to the Rhine, which utilizes the channel of the Doubs over portions of its course, traverses it for 25 m. Lons-le-Saunier is the chief town of Jura, which embraces four arrondissements named after the towns of Lons-le-Saunier, Dôle, Poligny and St Claude, with 32 cantons and 584 communes. The department forms the diocese of St Claude and part of the ecclesiastical province of Besançon; it comes within the region of the VIIth army corps and the educational circumscription of Besançon, where is its court of appeal. Lons-le-Saunier, Dôle, Arbois, Poligny, St Claude and Salins, the more noteworthy towns, receive separate notices. At Baume-les-Messieurs, 8 m. N.E. of Lons-le-Saunier, there is an ancient abbey with a fine church of the 12th century.

JURA ("deer island"), an island of the interior Hebrides, the fourth largest of the group, on the west coast of Argyllshire, Scotland. Pop. (1901), 560. On N. it is separated from the island of Scarba by the whirlpool of Corrrieveckan, caused by the rush of the tides, often running over 13 m. an hour, and sometimes accelerated by gales, on the E. from the mainland by the sound of Jura, and on the S. and S.W. from Islay by the sound of Islay. At Kinuachdrach there is a ferry to Aird in Lorne, in Argyllshire, and at Faolin there is a ferry to Port Askaig in Islay. Its area is about 160 sq. m., the greatest length is about 27 m., and the breadth varies from 2 m. to 8 m. The surface is mountainous and the island is the most rugged of the Hebrides. A chain of hills culminating in the Paps of Jura—Beinn-an-Oir (2571 ft.) and Beinn Chalois (2407 ft.)—runs the whole length of the island, interrupted only by Tarbert loch, an arm of the sea, which forms an indentation nearly 6 m. deep and almost cuts the island in two. Jura derived its name from the red deer which once abounded on it. Cattle and sheep are raised; oats, barley and potatoes are cultivated along the eastern shore, and there is some fishing. Granite is quarried and silicious sand, employed in glass-making is found. The parish of Jura comprises the islands of Balnahuia, Fladda, Garvelloch, Jura, Langa, Scarba and Skervule.

JURA, a range which may be roughly described as the block of mountains rising between the Rhone and the Rhine, and forming the frontier between France and Switzerland. The gorges by which these two rivers force their way to the plains cut off the Jura from the Swabian and Franconian ranges to the north and those of Dauphiné to the south. But in very early days, before these gorges had been carved out, there were no openings in the Jura at all, and even with its three chief rivers—the Doubs, the Loue and the Ain—flow down the western slope, which is both much longer and but half as steep as the eastern. Some geographers extend the name Jura to the Swabian and Franconian ranges between the Danube and the Neckar and the Main; but, though these are similar in point of composition and direction to the range to the south, it is most convenient to limit the name to the mountain ridges lying between France and Switzerland, and this narrower sense will be adopted here.

The Jura has been aptly described as a huge plateau about 156 m. long and 38 m. broad, hewn into an oblong shape, and raised by internal forces to an average height of from 1550 to 2600 ft. above the surrounding plains. The shock by which it was raised and the vibration caused by the elevation of the great chain of the Alps, produced many transverse gorges or "cluses," while on the plateaus between these subalpine agencies have exercised their ordinary influence.

Geologically the Jura Mountains belong to the Alpine system; and the same forces which crumpled and tore the strata of the zone produced the folds and faults in the other. Both chains
JURA

owe their origin to the mass of crystalline and unyielding rock which forms the central plateau of France, the Vosges and the Black Forest, and which, between the Vosges and the central plateau, lies at no great depth beneath the surface. Against this mass the more yielding strata which lay to the south and west were crushed and folded, and the Alps and the Jura were carved from the ridges which were raised. But the folding decreases in intensity towards the north; the folding in the Alps is much more violent than the folding in the Jura, and in the Jura itself the folding is most marked along its southern flanks.

The Jura is composed chiefly of Jurassic rocks—it is from this chain that the Jurassic system derives its name—but Triassic, Cretaceous and Tertiary beds part in its formation. It may be divided into three zones which run parallel to the length of the chain and differ from one another in their structure. The innermost zone, which rises directly from the plain of Switzerland, is the folded Jurassic plate (Kettenjura), formed of narrow parallel undulations which diminish in intensity towards the French border. This is followed by the Jura plateau (Jura tabulaire, Tafeljura), in which the beds are approximately horizontal but are broken up into blocks by fractures or faults. Finally, along its western face there is a zone of numerous dislocations, and the range descends abruptly to the plain of the Saône. This is the Région du vignoble and is well shown at Arbois.

Owing to the convergence of the faults which bound it, the plateau zone decreases in width towards the south, while towards the north it forms a large proportion of the chain. The folded zone is more constant. Along its inner margin the folds are frequently overthrown, leaning towards France, but elsewhere they are simple anticlinal and synclinal, parallel to the length of the chain, and as a rule there is a remarkable freedom from dislocations of any importance, except towards Neuchâtel and Biéville.

The countless blocks of gneiss, granite and other crystalline formations which are found in such numbers on the slopes of the Jura, and go by the name of “erotic blocks” (of which the best-known instance—the Pierre à Bot—is 40 ft. in diameter, and rests on the side of a hill 800 ft. above the Lake of Neuchâtel), have been transported thither from the Alps by ancient glaciers, which have left their mark on the Jura range itself in the shape of striations and moraines.

The general direction of the chain is from north-east to south-west, but a careful study reveals the fact that there were in reality two main lines of upheaval, viz. north to south and east to west, the former best seen in the southern part of the range and the latter in the northern; and it was by the union of these two forces that the lines north-east to south-west (seen in the greater part of the chain), and north-west to south-east (seen in the western range at Belfort) were produced. This is best realized if we take Besançon as a centre; to the north the ridges run east and west, to the south, north and south, while to the east the direction is north-east to south-west.

Before considering the topography of the interior of the Jura, it may be convenient to take a brief survey of its outer slopes.

1. The northern face dominates on one side the famous “Trouée” (the Vosges or the Palatinate Forest) of the north-west of Europe, whence routes run north down the Rhine to the North Sea, south-east to the Danube basin and Black Sea, and south-west into France, and so to the Mediterranean basin. It is now so strongly focused that it becomes a question of great strategical importance to prevent its being turned by means of the great central plateau of the Jura, which, as we shall see, is a network of roads and railways. On the other side it overhangs the “Trouée” of the Black Forest toward the South, containing the lands of Freiburg, Basle, Waldshut, through which the central plain of Switzerland is easily gained. On this north slope two openings offer routes into the interior of the range—the valley of the Doubs belonging to France, and the valley of Birse belonging to Switzerland. Before and after the military, Mulhausen the industrial, and Basel the commercial centre of this slope.

2. The eastern and western faces offer many striking parallels. The eastern face, through which flow the Aar and the Saône, has each been the bed of an ancient lake, traces of which remain in the lakes of Neuchâtel, Bienne and Morat. The west face runs mainly north and south like its great river, and for a similar reason the east face runs north-east to south-west. Again, both slopes are pierced by many transverse gorges or “elues” (due to fracture and not to erosion), by which access is gained to the great central plateau of Pontarlier, though these are seen more plainly on the east face than on the west; thus the gorges at the exit from which Lons-le-Saunier, and later the Dôle, runs into Switzerland are those which join the Val de Ruz, of the Val de Travers, and of the Val d’Orbe, though on the east face there is but one city which commands all these important routes—Neuchâtel. This town is thus marked out by its geographical position, just as Besançon and Mulhausen are on the west, which has besides to defend the route from Belfort down the Doubs. These easy means of communicating with the Free County of Burgundy or Franche-Comté account for the fact that the dialect of Neuchâtel is Burgundian, and that it was held generally by Burgundian nobles, though most of the country near it was in the hands of the house of Savoy until gradually annexed by Bern. The Chasseron (5286 ft.) is the central point of the eastern face of the chain, the highest point of the range which joins Neuchâtel and Pontarlier. This ridge is in a certain sense parallel to the valley of the Loue on the west face, which flows into the Doubs a little to the south of Dôle, the only important town of the central portion of the Jura, and was held in 1562 by the Swiss, as are the helmets of the summits of the Chasseral (5272 ft.), the Mont Souchet (5220 ft.), the Aiguille de Baulmes (5128 ft.), the Dent de Vaulion (4797 ft.), the Weissenstein (4723 ft.), and the Chaumont (3845 ft.), the two last-named points being probably the best-known points in the Jura, as they are accessible by carriage road from Soleure and Neuchâtel respectively. South of the Orbe valley the east face becomes a rocky wall which is crowned by all the highest summits (the Chasseron, the Mont de Prissey, the Crêt de Neige, the Mont de Frenc, the Mont de Tendre (5512 ft.), the Dôle (5505 ft.), the Reculet (5643 ft.), the Crêt de la Neige (5553 ft.) and the Grand Crêdo (5328 ft.), the uniformity of level being as striking as on the west edge of the Jura. Thus it is through this, rather than that part of the Dôle is similar to that of the Chasseron, as along the sides of it run the great roads of the Col de St Cergues (3973 ft.) and the Col de la Faucille (4341 ft.), the latter leading through the Vallest des Dales, which was held in 1562 by the Swiss, and now, after many negotiations, the height of these roads shows that they are passages across the chain, rather than through natural depressions.

The southern face is supported by two great pillars—on the east by the Grand Crêdo and on the west by the ridge of Revermont (2529 ft.) above Bourg en Bresse; between these a huge bastion (the district of Bugey) stretches away to the south, forcing the Rhône to run east as a sort of defile. It is a vast region, composed of the plains in which Ambérieu and Culoz stand balance one another, and are the meeting points of the routes which cut through the bastion by means of deep gorges. On the eastern side this great wedge is narrow and rugged, ending in the Grand Colombier (5033 ft.) above Culoz, and it sinks on the western side to the valley of the Ain, the district of Bresse, and the plateau of Dombes. The junction of the Ain and the Suryand at Pont d’Ain on the west balances that of the Var and the Bourgogne on the eastern side.

The Jura thus dominates on the north one of the great highways of Europe, on the east and west divides the valleys of the Saône and the Aar, and stretches out to the south as near as join hands with the Mediterranean. It is the great mountain which divides the routes from France into Germany, Switzerland and Italy, and hence its enormous historical importance.

Let us now examine the topography of the interior of the range. The Jura is dominated on the north by the three great rivers of the Jura—the Doubs, the Loue and the Ain.

1. In the northern division it is the east and west line which prevails—the Lomont, the Mont Terrible, the defile of the Doubs towards the south, and the entrance to the Trouée of the Black Forest towns. It thus bars access to the central plateau from the north, and this natural wall does away with the necessity of artificial fortifications. This division falls again into two distinct portions. The central portion of the range is taken up by the Doubs, which, it turns south at St Hippolyte; it is thus quite cut off on this side, and is naturally Swiss territory. It includes the basin of the river Birse, and the great plateau between the Doubs and the Aar, on the one hand, and the Black Forest on the other, one of the most striking features of the Jura. These include Le Locle (g.v.) and La Chaux de Fonds (g.v.), and are mainly occupied with watch-making, an industry which does not require bulky materials, and produces goods that have a great demand.

(b) The part west of the “cluse” of the Doubs: of this, the district east of the river Dessoubre, isolated in the interior of the range (unlike the Le Locle plateau), is called the Haute Montagne, and is too rugged and inclement for sedentary cultivation. But little watch-making is carried on there, Besançon being the chief French centre of this industry, and being connected with Geneva by a chain of places similarly occupied, which fringe the west plateau of the Jura. The part west of the Dessoubre, the Moyenne Montagne, a huge plateau north of the Loue, is more especially devoted to agriculture, while along its north edge metal-working and manufacture of hardware are carried out, particularly at Besançon and Audincourt.
2. The central division is remarkable for being without the deep gorges which are found so frequently in other parts of the range. It consists of the basin of which Pontarlier is the centre, through notches in the rim of which routes converge from every direction; this is the great characteristic of the middle region of the Jura. Hence its immense strategical and commercial importance. On the north-east roads run to Morteau and Le Locle, on the north-west to Besançon, on the south-west to Dôle and Lons-le-Saunier and, to the west of the plateau, is nearly horizontal, the slight indentations in it being due to erosion, e.g. by the river Durance. The keys to this important plateau are to the east the Fort de Joux, with the walls of which meets the railway from Châtelard, and to the west Salins, the meeting place of the routes from the Col de la Faussiére, from Besançon, and from the French plain.

The Ain rises on the south edge of this plateau, and on a lower shelf or step, which it waters, are situated two points of great military importance: the river's source is near Aosta, and its western arm near Chambéry. It is specially important, since the road leading thence to Genève traverses one after another, not far from their head, the chief valleys which run down into the South Jura, and thus commands the southern routes as well as those by St Cergues and the Col de la Faussiére from the Geneva region, and a branch route along the Orbe river from Jougné. The fort of Les Rouses, near the foot of the Dôle, serves as an advanced post to Champagnole, just as the Fort de Joux serves to Pontarlier.

The above sketch will serve to show the character of the central Jura as the meeting place of routes from all sides, and the importance to France of its being strongly fortified, lest an enemy approaching from the east be able to try to maintain the free communication of the Jura to Belfort. It is in the western part of the central Jura that the north and south lines first appear strongly marked. There are said to be in this district no less than fifteen ridges running parallel to each other, and it is these which force the Loue to the north, and thereby determine its way eccentric course. The cultivation of wormwood wherewith to make the tonic "absinthe" has its headquarters at Pontarlier.

3. The southern division is by far the most complicated and extensive part of the Jura. The lofty ridge which bounds it to the east forces all its drainage to the west, and the result is a number of valleys of erosion (of which that of the Ain is the chief instance), quite distinct from the natural "cluses" or fissures of those of the Doubs, and of the Rhone, by far the intermediate to the latter is of roads which intersect it, despite its extreme irregularity. This is due to the great "cluses" of Nantua and Virieu, which traverse it from east to west. The north and south line is very clearly seen in this section of the division; the north-east, and south-east, is entirely wanting, but in the Villébois range south of Ambérier we have the principal example of the north-west to south-east line. The plateau west of the Ain are cut through by the valleys of the Val de Joux and the Breggeon, which take all the lowest terrains on the west slope do not possess any considerable towns. The Ain receives three tributaries from the east—

(a) The Bienne, which flows from the fort of Les Rouses by St Cergues and Cut, in the Jura, and near the manufacture of wooden toys, owing to the large quantity of boxwood in the neighbourhood. Septmoncel is busied with cutting of gems, and Morez with watch and spectacle making. Cut off to the east by the great chain, the industrial prosperity of this valley is of recent origin.

(b) The Oignin, which flows from south to north. It receives the drainage of the lake of Nantua, a town noted for combs and silk weaving, and which communicates by the cluse of the Lac de Silvan with the Val de Joux, and so with the Rhone at Chatillon, and again with the various routes which meet under the walls of the fort of Les Rouses, while by the Val Romy and the Sérans of Culoz is easily gained.

(c) The Albarine, connected with Culoz by the "cluse" of Virieu, and by the Furan flowing south with Bellevue, the capital of the district of Bugey (the old name for the South Jura). The "cluses" of Nantua and Virieu are now both traversed by improved roadways; the valley of the Ain is the chief road of the south Jura are Lyons and Geneva. But of course the strategic importance of these gorges is less than appears at first sight, because they can be turned by following the Rhone in its great bend to the south.

The range is mentioned by Caesar (Bell. Gall. i. 23, 6 (1), and 8 (1)), Strabo (iv. 3, 4, and 6, 11), Pline (iii. 31; iv. 105; xvi. 197) and Ptolemy (ii. ix. 5), its name being a word which appears under many forms (e.g. Joux, Jorat, Jorasse, Jurien), and is a synonym for a wood or forest. The German name is Leberberg, Leber being a provincial word for a hill.

Politically the Jura is French (departments of the Doubs, Jura and Ain) and Swiss (parts of the cantons of Geneva, Vaud, Neuchâtel, Bern, Soleure and Basel); but at its north extremity it takes a small bit of Alsace (Pfirt or Ferrette). The middle ages the southern, western and northern sides were parcelled out into a number of districts, all of which were gradually absorbed by the French crown. In 1586, G. V. Romey, Bresse and Bugey (exchanged in 1601 by Savoy for the southern canton of Saluzzo), Franche-Comté, or the Free County of Burgundy, an imperial fief till annexed in 1764, the county of Monthélier (Mompélag) acquired in 1793, and the county of Ferrette (French 1648–1871). The northern part of the eastern side was held till 1792 (part till 1797) by the bishop of Basel as a fief of the empire, and then belonged to France till 1814, but was given to Bern in 1815 (as a recompense for its loss of Vaud), and now forms the Bernese Jura, a French-speaking district. The centre of the eastern slope formed the principality of Neuchâtel (q.v.) and the county of Valangin, which were generally held by Burgundian nobles, came by succession to the kings of Prussia in 1707, and were formed into a Swiss canton in 1815, though they did not become free from formal Prussian claims until 1857. The southern part of the eastern slope originally belonged to the house of Savoy, but was conquered bit by bit by Bern, which was forced in 1815 to accept its subject district Vaud as a colleague and equal in the Confederation. It was Charles the Bold's defeat at Grandson and Morat which led to the annexation by the confederates of these portions of Savoy territory.

P. de la Harpe, Le Jura Vaudais. (W. A. B. C.)

JURASSIC, in geology, the middle period of the Mesozoic era, that is to say, succeeding the Triassic and preceding the Cretaceous periods. The name Jurassic (French juraissien; German Juraformation or Jura) was first employed by A. Brongniart and A. von Humboldt for the rocks of this age in the western Jura mountains of Switzerland, where they are well developed. It was in England, however, that they were first studied by William Smith, in whose hands they were made to lay the foundations of stratigraphical geology. The names adopted by him for the formations he traced across the country have passed into universal use. The rocks and strata which are thus distinguished and are known as the Jura In the following three decades Smith's work was elaborated by W. D. Conybeare and W. Phillips. The Jurassic rocks of fossils of the European continent were described by d'Orbigny, 1840–1846; by L. von Buch, 1839; by F. A. Quenstedt, 1833–1888; by A. Oppel, 1836–1858; and since then by many other authors: E. Benecke, E. Hébert, W. Waagen, and others. The study of Jurassic rocks has continued to attract the attention of geologists, partly because the bedding is so well defined and regular—the strata are little disturbed anywhere outside the Swiss Jura and the Alps—and partly because the fossils are numerous and usually well-preserved. The result has been that no other system of rocks has been so carefully examined throughout its entire thickness; many "zones" have been established by means of the fossils—principally by ammonites—and these zones are not restricted to limited districts, but many of them hold good outside areas. Oppel distinguished no fewer than thirty-three zonal horizons, and since then many more sub-zonal divisions have been noted locally.

The existence of faunal regions in Jurassic times was first pointed out by J. Marcou; later M. Neumayr greatly extended observations in this direction. According to Neumayr, three distinct geographical regions of deposit can be made out among the Jurassic rocks of Europe: (1) The Mediterranean province, embracing the Pyrenees, Alps and Carpathians, with all the tracts lying to the south. One of the biological characters of this area was the great abundance of ammonites belonging to
the groups of *Heterophyllus* (*Phylloceras*) and *Fimbriatia* (*Lytoceras*).

The central European province, comprising the tracts lying to the north of the Alpine ridge, and marked by the comparative rarity of the ammonites just mentioned, which are replaced by others of the groups *Inflati* (*Aspidoceras*) and *Oppelia*, and by abundant reefs and masses of coral. (3) The boreal or Russian province, comprising the middle and north of Russia, Spitzbergen and Greenland. The life in this area was much less varied than in the others, showing that in Jurassic times there was a perceptible diminution of temperature towards the north. The ammonites of the more southern tracts here disappear, together with the corals.

The cause of these faunal regions Neumayr attributed to climatic belts—such as exist to-day—and in part, at least, he was probably correct. It should be borne in mind, however, that although Neumayr was able to trace a broad, warm belt, some 60° in width, right round the earth, with a narrower mild belt to the north and an arctic or boreal belt beyond, and certain indications of a repetition of the climatic zones on the southern side of the tropic equator, more recent discoveries of fossils seem to show that other influences must have been at work in determining their distribution; in short, the identity of the Neumayrian climatic boundaries becomes increasingly obscured by the advance of our knowledge.

The Jurassic period was marked by a great extension of the sea, which commenced after the close of the Trias and reached its maximum during the Callovian and Oxfordian stages; consequently, the Middle Jurassic rocks are much more widely spread than the Liassic. In Europe and elsewhere Triassic beds pass gradually up into the Jurassic, so that there is difficulty sometimes in agreement as to the best line for the base of the latter; similarly at the top of the system there is a passage from the Jurassic to the Cretaceous rocks (Alps).

Towards the close of the period elevation began in certain regions; thus, in America, the Sierras, Cascade Mountains, Klamath Mountains, and Humboldt Range probably began to emerge. In England the estuarine Portlandian resulted partly from elevation, but in the Alps marine conditions steadily persisted (in the Tithonian stage). There appears to have been very little crustal disturbance or volcanic activity; tuffs are known in Argentina and California; volcanic rocks of this age occur also in Skye and Mull.

The rocks of the Jurassic system present great petrological diversity. In England the name "Oolites" was given to the middle and higher members of the system on account of the prevalence of oolitic structure in the limestones and ironstones; the same character is a common feature in the rocks of northern Europe and elsewhere, but it must not be overlooked that clays and sandstones together bulk more largely in the aggregate than the oolites. The thickness of Jurassic rocks in England is 4000 to 5000 ft., and in Germany 2000 to 3000 ft. Most of the rocks represent the deposits of shallow seas, but estuarine conditions and land deposits occur as in the Purbeck beds of Dorset and the coals of Yorkshire. Coal is a very important feature among the Jurassic rocks, particularly in the Liassic division; it is found in Hungary, where there are twenty-five workable beds; in Persia, Turkestane, Caucasus, south Siberia, China, Japan, Further India, New Zealand and in many of the Pacific Islands. Being shallow water formations, petrological changes come in rapidly as many of the beds are traced out; sandstones pass laterally into clays, and the latter into limestones, and so on, but a reliable guide to the classification and correlation is found in the fossil contents of the rocks. In the accompanying table a list is given of some of the zonal fossils which regularly occur in the order indicated; other forms are known that are equally useful. It will be noticed that while there is general agreement as to the order in which the zonal forms occur, the line of division between one formation and another is liable to vary according to factors in the personal equation of the authors.

The Jurassic formations stretch across England in a varying band from the mouth of the Tees to the coast of Dorsetshire. They consist of harder sandstones and limestones interstratified with softer clays and shales. Hence they give rise to a characteristic type of scenery—the more durable beds standing out as long ridges, sometimes even with low cliffs, while the clays underlie the level spaces between.

Jurassic rocks cover a vast area in Central Europe. They rise from under the Cretaceous formations in the north-east of France, whence they range southwards down the valley of the Saone and Rhone to the Mediterranean. They appear as a broken border round the old crystalline nucleus of Auvergne. Eastwards they range through the Jura Mountains up to the high grounds of Bohemia. They appear in the outer chains of the Alps on both sides, and on the south they rise along the centre of the Apennines, and here and there over the Spanish Peninsula. Covered by more recent formations they underlie the great plain of northern Germany, where they range eastwards and occupy large tracts in central and eastern Russia.

Lower Jurassic rocks are absent from much of northern Russia; the stages represented being the Callovian, Oxfordian and Volgian (of Professor S. Nikitin); the fauna differs considerably from that of western Europe, and the marine equivalents of the Purbeck beds are found in this region. In south Russia, the Crimea and Caucasus, Lias and Lower Jurassic rocks are present. In the Alps, the Lower Jurassic rocks are intimately associated with the underlying Triassic formations, and resemble them in consisting largely of reddish limestones and marbles; the ammonites in this region differ in certain groups, but in many from those of western and central Europe. The Oxfordian, Callovian, Corallian and Astartian stages are also present. The Upper Jurassic is mainly represented by a uniform series of limestones, with a peculiar and characteristic fauna, to which we have given the name "Dorsetian." Of these the most famous beds to the north of the horizon from Kimeridge to Cretaceous; it is developed on the southern flanks of the Alps, Carpathians, Apennines, as well as in south France and other parts of the Mediterranean basin. A charm and baptismal beds of "Mazon." Later Jurassic rocks are so-called from the fossil *Terebratula diphyra* (Pygoipo janitor) seen in the well-known escarpments ( Hochgebirge Kalk). Above the Diphya limestone comes the Stambberg limestone (Stramberg in Moravia) with "Antonya" beds and oolites. The rocks of the Mediterranean basin are on the whole more calcareous than those of corresponding age in north-west Europe; thus the Lias is represented by 1500 ft. of white crystalline limestone in Calabria and similar rocks in Sicily, Java, the Azores, and in Spain, the Liassic strata are frequently dolomitic; in the Apennines they are variegated limestones and marls. The higher Jurassic beds of Portugal show traces of the proximity of land in the abundant plant remains that are found in them. In Scania the Lias succeeds the Muschelkalk, and it is not until the Callovian that the beds are traced northward as well within the polar circle; they are known in the Lofoten, Spitzbergen, east Greenland, King Charles's Island, Cape Stewart in Scoresby Sound, Grinnell Land, Prince Puckeck Land; Bathurst and Euxhom Island. Certain facts the marine fossils denote a climate considerably milder than now obtains in these latitudes.

In the American continent Jurassic rocks are not well developed. Montana, Los Angeles and Montana Jurassic beds occur on the Pacific coast (California and Oregon), and in Wyoming, the Dakotas, Colorado, east Mexico and Texas. Above the marine beds in the interior are brackish and fresh-water deposits, the Morrison and Como beds (Atlantosaurus and Retobulodon beds of Mazon). Later Jurassic rocks are found in northern British Columbia and perhaps in Alaska, Wyoming, Utah, Montana, Colorado, the Dakota; &c. In California some of the
gold-bearing metamorphic slates are of this age. Marine Jurassic rocks have not been clearly identified on the Atlantic side of America. The Paratenux and Arundel formations (non-marine) are undoubtedly referred to this period. Lower and Middle Jurassic formations occur in Argentina and Bolivia. Jurassic rocks have been recognized in Asia, including India, Afghanistan, Persia, Kurdistan, Asia Minor, the Caspian region, Japan and Borneo. The best marine development is in Cutch, where the following groups are distinguished from above downwards: the Umia series = Portlandian and Tithonian of south Europe, passing upwards into the Neocomian; the Katrol series = Oxfordian (part) and Kimeridgian; the Chari series = Callovian and part of the Oxfordian; the Patcham

are distinguished from above downwards: the Umia series = Portlandian and Tithonian of south Europe, passing upwards into the Neocomian; the Katrol series = Oxfordian (part) and Kimeridgian; the Chari series = Callovian and part of the Oxfordian; the Patcham which include the coal-bearing "Ipswich" and "Burrum" formations of Queensland. In New Zealand there is a thick series of marine beds with terrestrial plants, the Mataura series in the upper part of Hutton's Hokonui system. Sir J. Hector included also the Putakaka series (as Middle Jurassic) and the Flag series with the Catlin's River and Bastion series below. Jurassic rocks have been recorded from New Guinea and New Caledonia.

Life in the Jurassic Period.—The expansion of the sea during this period, with the formation of broad sheets of shallow and probably warmish water, appears to have been favourable to many forms of marine life. Under these conditions several groups of organisms developed rapidly along new directions, so that the Jurassic period as a whole came to have a fauna differing clearly and distinctly from the preceding Palaeozoic or succeeding Tertiary faunas. In the seas, all the main groups were represented as they are to-day

series = Bathonian. In the western half of the Salt Range and the Himalayas, Spiti shales are the equivalents of the European Callovian and Kimeridgian. The upper part of the Gondwana series is not improbably Jurassic. On the African continent, Liassic strata are found in Algeria, and Bathonian formations occur in Abyssinia, Somaliland, Cape Colony and western Madagascar. In Australia the Perm-Carboniferous formations are succeeded in Queensland and Western Australia by what may be termed the Jura-Trias.
Corals were abundant, and in later portions of the period covered large areas in the seas, in the form of colonies built up by the activity of various polypid species. Besides reef-building forms such as Thamnastrea, Isastrea, Tereomoria, there were numerous single forms like Monticellia. Crinoids existed in great numbers in some of the shallow seas; compared with Palaeozoic types there was a marked development in the Tertiary of quantities of appendages, and the number of the animal and pinnules of P Domino, Eugenicrinus, Apicopora are all well known; Antedon was a stalkless genus. Echinoids (urchins) were gradually developing the so-called "irregular" type, Echinochrysea, Heterocyclus, Clypeaster, but the more regular types of the genus Cidaris, Hemicidaris, Acrosolenia. Sponges were important rock-builders in Upper Jurassic times (Spongeni Kalk); they include lithistids such as Cnelisulina, Hylatolycus, Peronidina; hexactinellids, Tremedesicidae and Actinidae; and horny sponges have been found in the Lower and Middle Jurassic.

Polyzoa are found abundantly in some of the beds, Stomatopora, Berenice, &c. Brachiopods were represented principally by testudinids, such as the genera Clypeaster, Plagiomerella, and by the articulate forms, Theca, Lingula and Crenita were also present. The Palaeozoic spirifids and athyrids still lingered into the Lias. The most important of the brachiopods were the pelecypods, Ostrea, Eostraea, and the articulate genera such as Agnostus, Ammonites and Turbinidae reached their maximum development; the Palaeozoic Conularia lived to see the beginning of this period (Pleuronotomaria, Nereina, Pteroceras, Cerithium, Turritella).

Gastropods were abundant in the Lias; many of the other genera were new, and their shells are found with every variation of size and shape. The earlier ammonites had relatively small tapers; later the ammonites such as Spirula, Hildoceras, and Amnicolites, were slender and long, with a pointed top. The genera Terebratulina and Turritella were represented by the usual+[x]/[y] form or the spiral form. The gastropods which grew to a large size included the genera Galatella, Scaphitidae, and in the Grunulopteridae; the genus Trichteria, Lingula and Crenita were also present. So regular do certain forms characterize definite horizons in the rocks that some thirty zones have been distinguished in Europe, and many of them can be traced even as far south as the Mediterranean basin. The history of the Mesozoic fauna has been dimly outlined in the preceding Trias, now advanced rapidly in number and variety of form, and they, like the ammonites, have proved of great value as zone-indicators. The Selachidi or cone-shaped sharks, the living species of which are a typical Jurassic form, were abundant in the Jurassic, and in the English Purbeck. Neopoterous forms predominate, but bivalves appear from the Jurassic upwards; the earliest known flies (Dioptra) and ants (Hymenoptera) appeared; orthoptera, cockroaches, scorpions and beetles, &c., are found in the Lias, Stonehenge, slate and Purbeck beds.

Fishes were approaching the modern forms during this period, herbivorous ganoids becoming scarce (the Coelacanthidae reached their maximum development), whereas the carnivorous ganoids were abundant (Gyrodus, Microdon, Lepidosteus, Lepidus, Dapedius). The Chimaeridae, sea-cats, made their appearance (Squalorajus). The ancestors of the modern sturgeons, garpikes and seacats, Dolichichthys, Acipenser, Acipenser, &c., are found in the Lias, Stonesfield, slate and Purbeck beds.

So important a place was occupied by reptiles during this period that it has been well described as the "age of reptiles." In the so-called "carnivorous reptiles," these necked and crested creatures dwelt in great numbers and reached their maximum development; the latter ranged in size from 6 to 40 ft. in length. The Pterodactylus, with bat-like wings and pugilistic and keeled breast-bone, flew over the land; Pterodactylos with a keeled breast-bone, and Rhamphorhynchus with long tail are the best known. Curiously modified crocodilians appeared late in the period (Mystriosaurus, Geosaurus, Stenoseus, Teleosaurus). But even more striking than any of the above were the birds; discovered in the Weald, feathers, claws, and egg-shells, and a nest of eggs, than a rabbit up to the gigantic Atlantosaurus, 100 ft. long, in the Jurassic of Wyoming. Both herbivorous and carnivorous forms were present: Bronotosaurus, Megalosaurus, Stenoseus, Cetiosaurus, Diplodocus, Brontosaurus, Easaurus, and Coelurosaurous (Carnivora) genera. By comparison with the Dinosaurs the mammals took a very subordinate position in Jurassic times; only a few jaws have been found, belonging to quite small creatures; they appear to have been marsupials and were probably insectivorous (Plagiolagus, Bolidon, Triadon, Phacoatherium, Stylodon). Of great interest are the remains of the earliest known bird (Archaeopteryx) from the Solenhofen slates of Bavaria. Although this was a great advance in the development of birds in avian characters, yet many reptilian features were retained.

Comparatively little change took place in the vegetation in the time that elapsed between the close of the Triassic and the middle of the Jurassic period. Cycads, Zamys, Podocarpaceae, &c., appeared, as a result of their reproduction, and the horsetail and ferns, the dominant plants of the Early Jurassic, were replaced by the conifers, particularly in the cooler sections of the world. The Carboniferous forests that had been such features of the Triassic were now giving place to the leafy forest of the Jurassic. The angiosperms, whose leaves resemble those of the Ferns and Ginkgoes, had now reached an advanced stage of development and had spread widely over the land. The coniferous forests of the Triassic were still seen in the uplands, but the primitive angiosperms had become dominant in the valleys and lowlands. The angiosperms were small and not more than a foot high, but the leaves were large and the flowers small. The angiosperms were not very abundant, and their remains have been found only in the upper Jurassic beds. The most important of these angiosperms were the Ginkgoales, which were abundant in the Lias and in the Middle Jurassic. The Ginkgoales were a group of plants that was very abundant in the Carboniferous and Permian periods, and which had disappeared from the scene of life by the end of the Triassic. They are characterized by their large leaves, which are fan-shaped and have a large central vein, and by the small flowers, which are scattered over the plant. The Ginkgoales were most abundant in the Lias and in the Middle Jurassic. They were found in the Lias, in the Purbeck, and in the Weald. They were also found in the Gault, in the Chalk, and in the Ine. They were found in the Lias, in the Purbeck, and in the Weald. They were also found in the Gault, in the Chalk, and in the Ine.

The economic products of the Jurassic system are of considerable importance. The valuable coal beds of England, which have been previously noted, are well known for their iron ores. The Cleveland district in Yorkshire and those of the Northampton sands occur respectively in the Lias and Tertiary periods. Oil shales are found in Germany and several of the Jurassic formations in England. In addition, the Jurassic sample is distinct in species. No flowering plants had yet appeared, although a primitive form of angiosperm has been reported from the Upper Jurassic of Portugal.

The great age of reptiles in the Jurassic period is indicated by the large number of species that have been found in the Lias and Tertiary periods. The Jurassic reptiles were found in a variety of forms and sizes, from the small, agile carnivores to the large, lumbering herbivores. The Jurassic reptiles were found in a variety of forms and sizes, from the small, agile carnivores to the large, lumbering herbivores. The Jurassic reptiles were found in a variety of forms and sizes, from the small, agile carnivores to the large, lumbering herbivores.

Jean Baptiste Edmond (1812-1892), French admiral, son of Admiral Juret, who served during the Revolutionary and Napoleonic wars and was a peer of France under Louis Philippe, was born on the 15th of November 1812. He entered the navy in 1828, was made a commander in 1841, and captain in 1850. During the Russian War he commanded a ship in the Black Sea. He was promoted to rear-admiral on the 1st of December 1855, and appointed to the command of a squadron in the Adriatic in 1859, when he absolutely sealed the Austrian ports with a close blockade. In October 1861 he was appointed to command the squadron in the Gulf of Mexico, and two months later the expedition against Mexico. On the 15th of January 1862 he was promoted to be vice-admiral. During the Franco-German War of 1870 he had command of the French Mediterranean fleet, and in 1871 he was appointed director of charters. As having commanded in chief the enemy the admiral was given in his favour, and he was continued on the active list. Juret died on the 4th of March 1892. He was a voluminous author of works on naval history and biography, most of which first appeared in the Revue des deux mondes. Among the most noteworthy of these are Guerres maritimes sous la republique et l'empire, which was translated by Lord Dunsmuir under the title of Sketches of the Last Naval War (1848); Souvenirs d'un amiral (1860), that is, of his father,
Admiral Jurien; La Marine d'autrefois (1865), largely autobiographical; and La Marine d'aujourd'hui (1872). In 1866 he was elected a member of the Academy.

JURIEU, PIERRE (1637–1713), French Protestant divine, was born at Mer, in Lorraine, where his father was a Protestant pastor. He studied at Saumur and Sedan under his grandfather, Pierre Dumoulin, and under Leblanc de Beaulieu. After completing his studies in Holland and England, Jurieu received Anglican ordination; returning to France he was ordained again and succeeded his father as pastor of the church at Mer. Soon after this he published his first work, Examen de livre de la réunion du christianisme (1671). In 1674 his Traité de la dévolution led to his appointment as professor of theology and Hebrew at Sedan, where he soon became also pastor. A year later he published his Apologie pour la morale des Réformés. He obtained a high position, but his work was impaired by his controversial temper, which frequently developed into an irreconcilable fanaticism, though he was always entirely sincere. He was called by his adversaries “the Goliath of the Protestants.” On the suppression of the academy of Sedan in 1681, Jurieu received an invitation to a church at Rouen, but, afraid to remain in France on account of his forthcoming work, La Politique du clergé de France, he went to Holland and was pastor of the Walloon church of Rotterdam till his death on the 11th of January 1713. He was also professor at the école illustré. Jurieu did much to help those who suffered by the revocation of the Edict of Nantes (1685). He himself turned for consolation to the Apocalypse, and succeeded in persuading himself (Accomplissement des prophéties, 1686) that the overthrow of Antichrist (i.e., the papal church) would take place in 1689. H. M. Baird says that this persuasion, however fanciful the grounds on which it was based, exercised no small influence in forwarding the success of the designs of William of Orange in the invasion of England.” Jurieu defended the doctrines of Protestantism with great ability against the attacks of Antoine Arnauld, Pierre Nicole and Bossuet, but was equally ready to enter into dispute with his fellow Protestant divines (with Louis Du Moulin and Claude Payon, for instance) when their opinions differed from his own even on minor matters. The bitternes and persistency of his attacks on his colleague Pierre Bayle led to the latter being deprived of his chair in 1693.

One of Jurieu’s chief works is Lettres pastorales adressées aux fidèles de France (3 vols., Rotterdam, 1686–1687; Eng. trans., 1689), which was well received, and the vigour of his attacks into France and produced a deep impression on the Protestant population. His last important work was the Histoire critique des dogmes et des cultes (1704; Eng. trans., 1715). He wrote a great number of controversial works. See the article in Herzog-Hauck, Realencyklopädie; also H. M. Baird, The Huguenots and the Revocation of the Edict of Nantes (1895).

JURIS, a tribe of South American Indians, formerly occupying the country between the rivers Iça (lower Putumayo) and Japura, north-western Brazil. In ancient days they were the most powerful tribe of the district, but in 1820 their numbers did not exceed 2000. Owing to inter-marrying, the Juris are believed to have been extinct for half a century. They were closely related to the Passés, and were like them a fair-skinned, finely built people with quite European features.

JURISDICTION, in general, the exercise of lawful authority, especially by a court or a judge; and so the extent or limits within which such authority is exercisable. Thus each court has its appropriate jurisdiction; in the High Court of Justice in England administration actions are brought in the chancery division, salvage actions in the admiralty, &c. The jurisdiction of a particular court is often limited by statute, as that of a county court, which is local and is also limited in amount. In international law jurisdiction has a wider meaning, namely, the rights exercisable by a state within the bounds of a given space. This is frequently referred to as the territorial theory of jurisdiction.

JURISPRUDENCE (Lat. jurisprudencia, knowledge of law, from jus, right, and prudentia, from providere, to foresee), the general term for “the formal science of positive law” (T. E. Holland); see LAW. The essential principles involved are discussed below and in Jurisprudence, Comparative; the details of particular laws or sorts of law (Contract, &c.) and of individual national systems of law (English Law, &c.) being dealt with in separate articles.

The human race may be conceived as parcelled out into a number of distinct groups or societies, differing greatly in size and circumstances, in physical and moral characteristics of all kinds. But they all resemble each other in that they reveal on examination certain rules of conduct in accordance with which the relations of the members inter se are governed. Each society has its own system of laws, and all the systems, so far as they are known, constitute the appropriate subject matter of jurisprudence. The jurist may deal with it in the following ways. He may first of all examine the leading conceptions common to all the systems, or in other words define the leading notions common to all. Such are the terms law itself, right, duty, property, crime, and so forth, which, or their equivalents, may, notwithstanding delicate differences of connotation, be regarded as common terms in all systems. That kind of inquiry is known in England as analytical jurisprudence. It regards the conceptions with which it deals as fixed or stationary, and aims at expressing them distinctly and exhibiting their logical relations with each other. What is really meant by a right and by a duty, and what is the true connexion between a right and a duty, are types of the questions proper to this inquiry. Shifting our point of view, but still regarding systems of law in the mass, we may consider them, not as stationary, but as changeable and changing, we may ask what general features are exhibited by the record of the change. This somewhat crudely put, may serve to indicate the field of historical or comparative jurisprudence. In its ideal condition it would require an accurate record of the history of all legal systems as its material. But whether the material be abundant or scanty the method is the same. It seeks the explanation of institutions and legal principles in the facts of history. Its aim is to show how a given rule came to be what it is. The legislative source—the emanation of the rule from a sovereign authority—is of no importance here; what is important is the moral source—the connexion of the rule with the ideas prevalent during contemporary periods. This method, it is evident, involves not only a comparison of successive stages in the history of the same system, but a comparison of different systems, of the Roman with the English, of the Hindu with the Christian system, &c. The method as applied to this historical method as applied to this special kind of comparison may be regarded as a special example of the method of comparison.

The comparative method is really employed in all generalizations about law; for, although the analysis of legal terms might be conducted with exclusive reference to one system, the advantage of testing the result by reference to other systems is obvious. But, besides the use of comparison for purposes of analysis and in tracing the phenomena of the growth of laws, it is evident that for the purposes of practical legislation the comparison of different systems may yield important results. Laws are contrivances for bringing about certain definite ends, the larger of which are identical in all systems. The comparison of these contrivances not only serves to bring their real object, often obscured as it is in details, into clearer view, but enables legislators to see how contrivances are efficient, and how they may be improved.

The “science of law,” as the expression is generally used, means the examination of laws in general in one or other of the ways just indicated. It means an investigation of laws which exist or have existed in some given society in fact—in other words, positive laws; and it means an examination not limited to the exposition of particular systems. Analytical jurisprudence is in England associated chiefly with the name of John Austin (q.v.), whose Province of Jurisprudence Determined systematized and completed the work begun in England by Hobbes, and continued at a later date and from a different point of view by Bentham. Austin’s first position is to distinguish between laws properly so called and laws improperly so called. In any of the older writers on law, we find the various senses in which the word is
used grouped together as variations of one common meaning. Thus, Blackstone advances in his proper subject, municipal laws, the due (1) laws of immaterial matter, (2) the laws of animal nutrition, digestion, &c., (3) the laws of nature, which are rules imposed by God on men and discoverable by reason alone, and (4) the revealed or divine law which is part of the law of nature directly expounded by God. All of these are connected by this common element that they are "rules of action dictated by some superior being." And some such generalization is this to be found at the basis of most treatises on jurisprudence which have not been composed under the influence of the analytical school. Austin disposes of it by the distinction that some of those laws are commands, while others are not commands. The so-called laws of nature are not commands; they are uniformities which resemble commands only in so far as they may be supposed to have been ordered by some intelligent being. But they are not commands in the only proper sense of that word—they are not addressed to reasonable beings, who may or may not will obedience to them. Laws of nature are not addressed to anybody, and there is no possible question of obedience or disobedience to them. Austin accordingly pronounces them laws improperly called, and, confines attention to laws properly so called, which are commands addressed by a human superior to a human inferior.

This distinction seems so simple and obvious that the energy and even bitterness with which Austin insists upon it now seem superfluous. But the indiscriminate identification of everything to which common speech gives the name of a law was, and still is, a fruitful source of confusion. Blackstone's statement that when God "put matter into motion He established certain laws of motion, to which all movable matter must conform," and that in those creatures that have neither the power to think nor to will such laws must be invariably obeyed, so long as the creature itself subsists, for its existence depends on that obedience, imputes to the law of gravitation in respect of both its origin and its execution the qualities of an act of parliament. On the other hand the qualities of the law of gravitation are imputed to certain legal principles which, under the name of the law of nature, are asserted to be binding all over the globe, so that "no human laws are of any validity if contrary to this." Austin never fails to stigmatize the use of "natural laws" in the sense of scientific facts as improper, or as metaphorical.

Having eliminated metaphorical or figurative laws, we restrict ourselves to those laws which are commands. This word is the key to the analysis of law, and accordingly a large portion of Austin's work is occupied with the determination of its meaning. A command is an order issued by a superior to an inferior. It is a signification of desire distinguished by this peculiarity that "the party to whom it is directed is liable to evil from the other, in case he comply not with the desire." "If you are able and willing to harm me in case I comply not with your wish, the expression of your wish amounts to a command." Being liable to evil in case I comply not with the wish which you signify, I am bound or obliged by it, or I lie under a duty to obey it. The evil is called a sanction, and the command or duty is said to be sanctioned by the chance of incurring the evil. The three terms command, obligation, and sanction are then inseparably connected. What Austin expresses it in the language of formal logic, "each of the three terms signifies the same notion, but each denotes a different part of that notion which comnotes the residue."

All commands, however, are not laws. That term is reserved for those commands which obligate generally to the performance of acts of a class. A command to your servant to rise at such an hour on such a morning is a particular command, but not a law or rule; a command to rise always at that hour is a law or rule. Of this distinction it is sufficient to say in the meantime that it involves, when we come to deal with positive laws, the rejection of particular enactments to which by inerterate usage the term law would certainly be applied. On the other hand it is not, according to Austin, necessary that a true law should bind persons as a class. Obligations imposed on the grantee of an office specially created by parliament would imply a law; a general order to go into mourning addressed to the whole nation for a particular occasion would not be a law. So far we have arrived at a definition of laws properly so called. Austin holds superiority and inferiority to be necessarily implied in command, and such statements as that "laws emanate from superiors" to be the merest tautology and trifling. Elsewhere he sums up the characteristics of true laws as ascertained by the analysis thus: (1) laws, being commands, emanate from a determinate source; (2) every sanction is an evil annexed to a command; and (3) every duty implies a command, and chiefly means obnoxiousness to the evils annexed to commands.

Of true laws, those only are the subject of jurisprudence which are laws strictly so called, or positive laws. Austin accordingly proceeds to distinguish positive from other true laws, which are either laws set by God to men or laws set by men to men, not, however, as political superiors nor in pursuance of a legal right. The discussion by the God of the first of these true but not positive laws leads Austin to his celebrated discussion of the utilitarian theory. The laws set by God are either revealed or unrevealed, i.e. either expressed in direct command, or made known to men in one or other of these forms: (1) by such phrases as the "light of nature," "natural law," "natural right," and sceptics and rationalists maintain that the principle of general utility, based ultimately on the assumed benevolence of God, is the true index to such of His commands as He has not chosen to reveal. Austin's exposition of the meaning of the principle is a most valuable contribution to moral science, though he rests its claims ultimately on a basis which many of its supporters would disavow. And the whole discussion is now generally condemned as lying outside the proper scope of the treatise, although the reason for so condemning it is not always correctly stated. It is found in such assumptions of fact as that there is a God, that He has issued commands to men in what Austin calls the "truths of revelation," that He designs the happiness of all His creatures, that there is a predominance of good in the order of the world—which do not now command universal assent. It is impossible to place these propositions on the same scientific footing as the assumptions of fact with reference to human society on which jurisprudence rests. If the "divine laws" were facts like acts of parliament, it is conceived that the discussion of their characteristics would not be out of place in a scheme of jurisprudence.

The second set of laws properly so called, which are not positive laws, consists of three classes: (1) those which are set by men living in a state of nature; (2) those which are set by sovereigns but not as political superiors, e.g. when one sovereign commands another to act according to a principle of international law; and (3) those set by subjects but not in pursuance of legal rights. This group, to which Austin gives the name of positive morality, helps to explain his conception of positive law. Men are living in a state of nature, or a state of anarchy, when they are not living in a state of government or as members of a political society. "Political society," thus becomes the central fact of the theory, and some of the objections that have been urged against it arise from its being applied to conditions of life in which Austin would not have admitted the existence of a political society. Again, the third set in the group is intimately connected with positive laws on the one hand and rules of positive morality which are not committed to writing on the other. Thus laws set by subjects in consequence of a legal right are clothed with legal sanctions, and are laws positive. A law set by guardian to ward, in pursuance of a right which the guardian is bound to exercise, is a positive law pure and simple; a law set by master to slave, in pursuance of a legal right, which he is not bound to exercise, is, in Austin's phraseology, to be regarded both as a positive moral rule and as a positive law. On the other hand the rules set by a club or society, and enforced upon its members by exclusion from the society, but not in pursuance of any legal right, are laws, but not positive laws. They are imperative and proceed from
a determinate source, but they have no legal or political sanction. Closely connected with this positive morality, consisting of true but not positive laws, is the positive morality whose rules are not laws properly so called at all, though they are generally denominated laws. Such are the laws of honour, the laws of fashion, and, most important of all, international law.

Nowhere does Austin’s phraseology come more bluntly into common usage than in pronouncing the law of nations (which in substance is a compact body of well-defined rules resembling nothing so much as the ordinary rules of law) to be not laws at all, even in the wider sense of the term. That the rules of a private club should be law properly so called, while the whole mass of international jurisprudence is mere opinion, shocks our sense of the proprieties of expression. Yet no man was more careful than Austin to observe these properties. He recognizes fully the futility of definitions which involve a painful struggle with the current of ordinary speech. But in the present instance the apparent paradoxism cannot be avoided if we accept the limitation of laws properly so called to commands proceeding from a determinate source. And that limitation is so generally present in our conception of law that to ignore it would be a worse anomaly than this. No one finds fault with the statement that the so-called code of honour or the dictates of fashion are not, properly speaking, laws. We repel the same statement applied to the law of nature, because it resembles in so many of its most striking features—in the certainty of a large portion of it, in its terminology, in its substantial principles—the most universal elements of actual systems of law, and because, moreover, the assumption that brought it into existence was nothing else than this, that it consisted of those abiding portions of legal systems which prevail everywhere by their own authority. But, though “positive morality” may not be the best phrase to describe such a code of rules, the distinction insisted on by Austin is unimpeachable.

The elimination of those laws properly and improperly so called which are not positive laws brings us to the definition of positive law, which is the keystone of the system. Every positive law is “set by a sovereign person, or sovereign body of persons, to a member or members of the independent political society wherein that person or body is sovereign or superior.” Though possibly sprung directly from another source, it is a positive law, by the institution of that present sovereign in the character of a political superior. The question is not as to the historical origin of the principle, but as to its present authority. “The legislator is he, not by whose authority the law was first made, but by whose authority it continues to be law.” This definition involves the analysis of the connected expressions sovereignty, subject, independent political society, and of determinate body—which last analysis Austin performs in connection with that of commands. These are all excellent examples of the logical method of which he was so great a master. The broad results alone need be noticed here. In order that a given society may form a society political and independent, the generality or bulk of its members must be in a habit of obedience to a certain and common superior; whilst that certain person or body of persons must not be habitually obedient to a certain person or body. All the italicized words point to circumstances in which it might be difficult to say whether a given society is political and independent or not. Several of these Austin has discussed—for every state of things in which a political society yields obedience which may or may not be called habitual to some external power, and the state of things in which a political society is determined to obeys not only to a superior political body, but to a body that may be determined by circumstances...and it is uncertain which shall prevail, and over how much of the society. So long as that uncertainty remains we have a state of anarchy. Further, an independent society to be political must not fall below a number which can only be called considerable. Neither then in a state of anarchy, nor in considerable communities, nor among men living in a state of nature, have we the proper phenomena of a political society. The last limitation goes some way to meet the most serious criticism to which Austin’s system has been subjected, and it ought to be stated in his own words. He supposes a society which may be styled independent, which is considerable in numbers, and which is in a savage or extremely barbarous condition. In such a society, “the bulk of its members is not in the habit of obedience to one and the same superior. For the purpose of attacking an external enemy, or for the purpose of repelling an attack, the bulk of its members who are capable of bearing arms submits to one leader or one body of leaders. But as soon as that emergency passes the transient submission ceases, and the society reverts to the state which may be deemed its ordinary state. The bulk of each of the families which compose the given society renders habitual obedience to its own peculiar chief, but those domestic societies are themselves independent societies, or are not united and compacted into one political society by habitual and general obedience to one common superior, and there is no law (simply or strictly so styled) which can be called the law of that society. The so-called laws which are common to the bulk of the community are purely and properly customary laws—that is to say, laws which are set or imposed by the general opinion of the community, but are not enforced by legal or political sanctions.” Such, he says, are the savage societies of hunters and fishers in North America, and such were the Germans as described by Tacitus. He takes no account of societies in an intermediate stage between this and the condition which constitutes political society.

We need not follow the analysis in detail. Much ingenuity is displayed in grouping the various kinds of government, in detecting the sovereign authority under the disguises which it wears in the complicated state system of the United States or under the fictions of English law, in elucidating the precise meaning of abstract political terms. Incidentally the source of many celebrated fallacies in political thought is laid bare. The question who is sovereign in a given state is a question of fact and not of law or morals or religion, that the sovereign is incapable of legal limitation, that law is such by the sovereign’s command, that no real or assumed compact can limit his action—are positions which Austin has been accused of enforcing with needleless iteration. He cleared them, however, from the air of paradox with which they had been previously enunciated, and his influence was in no direction more widely felt than in making them the commonplace of educated opinion in this generation.

Passing from these, we may now consider what has been said against the theory, which may be summed up in the following terms. Laws, no matter in what form they be expressed, are in the last resort reducible to commands set by the person or body of persons who are in fact sovereigns in any independent political society. The sovereign is the person or persons whose commands are habitually obeyed to the hurt of those who are not and by an independent society we mean that such sovereign head is not himself habitually obedient to any other determinate body of persons. The society must be sufficiently numerous to be considerable before we can speak of it as a political society. From command, with its inseparable incident of sanction, come the duties and rights in terms of which laws are for the most part expressed. Duty means that the person of whom it is predicated is liable to the sanction in case he fails to obey the command. Right means that the person of whom it is predicated may set the sanction in operation in case the command be disobeyed.

We may here interpolate a doubt whether the condition of independence on the part of the head of a community is essential to the legal analysis. It seems to us that we have all the elements of a true law present when we point to a community habitually obedient to the authority of a person or determinate body of persons, no matter what the relations of the latter may be to other major or minor persons.

Provided that in fact the commands of the lawgiver are those beyond which the community never looks, it seems immaterial to inquire whether this lawgiver in turn takes his orders from somebody else or is habitually obedient to such orders when given. One may imagine a community governed by a dependent legislative body or person, while the supreme sovereign whose representative and nominee such body or person may be never directly addresses the community at all. We do not see that in such a case anything is lost in clearness by representing the law of the community as set by the suzerain, rather than the dependent legislator. Nor is the ascertainment of the ultimate seat of power necessary to define
politic societies. That we get when we suppose a community to be in the habit of obedience to a single person or to a determinate combination of persons.

The use of the word "command" is not unlikely to lead to a misconception of Austin's meaning. What one may think of the sovereign as enunciating the rule in question for the first time. Many laws are not traceable to the sovereign at all in this sense. Some are based upon immemorial practices, some can be traced to the influence of the king, others to various habits of the commonalty. If in most countries a vast body of law owes its existence as such to the fact that it has been observed as law in some other society. The great bulk of modern laws owes its existence and its shape ultimately to the tradition of a man, or the tradition of a race, of the sovereign. The definition has nothing to do with this, the historical origin of laws. Books dealing with law in the abstract generalize the modes in which laws may be originated under the name of the "souls" of the law. The general laws of a society, the will of its grand despot, are the law of sovereign body. The connexion of laws with each other as principles is properly the subject matter of historical jurisprudence, the ideal perfection of which would be the establishment of the general laws governing the evolution of law in the technical term of the Roman definition looks, not to the authorship of the law as a principle, not to its inventor or originator, but to the person or persons who in the last resort cause it to be obeyed. If a given rule is enforced by the sovereign it is a law. It is not convenient to notice here what is usually said about the sources of law, as the expression sometimes proves a stumbling-block to the appreciation of Austin's system. In the corpus juris of any given country only a portion of the laws is traceable to the direct will of the government. The sovereignty of law is an idea, but only one, of the sources of law. Other portions of the law may be traceable to other sources, which may vary in effect in different systems. The list given in the Institutes of Justinian the sources of which may be traced, is by no means the only one, or even the principal one, of the sources of law. From the Roman law it is derived from the writings of independent teachers, such as have in other systems exercised a powerful influence on the development of law. The concept prudential, the opinions of learned men, and above all, the decisions of judges, may be mentioned as elements in the Roman law. No such influence has affected English law to any appreciable extent—a result owing to the activity of the courts of the legislature. This difference has profoundly affected the form of English law, especially as compared with that of systems which have been developed by the delay of free discussion. These are the most definite of the influences to which the beginning of laws may be traced. The law once established, no matter how, is nevertheless law in the sense of Austin's definition. It is enforced by the Sovereign, it is the law in virtue of the Sovereign's will, but when we speak of it as a command we think only of the way in which it is to-day presented to the subject. The newest order of an act of parliament is no more positively presented to the people as a law than the elementary rules of the common law for which no legislative origin can be traced. It is not even necessary to resort to the figure of speech by which alone, according to Sir Henry Maine (Early History of Institutions, p. 341), the common law can be regarded as the common law, namely, a law made by the command of the Crown. "The common law," he says, "consists of their commands because they can repeal or alter or restate it at pleasure." "They command because, being by the assumption possessed of uncontrollable power they innovate without limit at any moment. On the contrary, it may be said that they command because they do as a matter of fact enforce the rules laid down in the common law. It is not because they could innovate if they pleased in the commanders do not say or prescribe it, but because it is known that they will enforce it as they stand.

The criticism of Austin's analysis resolved itself into two different and often opposing positions. One related to the theory of sovereignty, which underlies it; the other to its alleged failure to include rules which in common parlance are laws, and which it is felt ought to be included in any satisfactory definition of law. As the latter is to some extent anticipated and admitted, as it has been brought forward, we may deal with it first.

Frederic Harrison (Fortnightly Review, vols. xxx., xxxi.) was at great pains to collect a number of laws or rules of law which do not square with the Austrian definition of law as a command creating rights and duties. Take the rule that "every will must be in writing." It is a very circuitous way of looking at things, according to Harrison, to say that such a rule creates a specific right in any determinate person of a definite description. So, again, the rule that "a legacy to the witness of a will is void." Such rules are not "enunciated" to give the one any rights, but simply to protect the public against wills made of undue influence. Again, the technical rule in Shelley's case that a gift to A for life, followed by a gift to the heirs of A, is a gift to A in fee simple, is pronounced to be inconsistent with the definition. It is an idle waste of ingenuity to force any of these rules into a form in which they might be said to create rights.

This would be a perfectly correct description of any attempt to take any of these rules separately and analyse it into a complete command creating specific rights and duties. But there is no occasion for doing anything of the kind. It is not contended that every grammatically complete sentence in a textbook or a statute is per se a command creating rights and duties. A law, like any other command, must be expressed in words, and will require the use of the usual aids to expression. The gist of it may be expressed in a sentence which, standing by itself, is not intelligible; other sentences locally separate from the principal one may contain the exceptions and the modifications and the interpretations to which that is subject. In no one of these taken by itself, but in the substance of them all taken together, is the true law, in Austin's sense, to be found. Thus the rule that every will must be in writing is a part of the system of law. It belongs to the rule which fixes the rights of devises and legates under a will. That rule in whatever form it may be expressed, is, without any straining of language, a command of the legislator. That "every person named by a testator in his last will and testament shall be entitled to the property thereby given him" is surely a command creating rights and duties. After testament add "expressed in writing"; it is still a command. Add further, "provided he be not one of the witnesses to the will," and the command, with its product of rights and duties, is still there. Each of the additions limits the operation of the command stated imperatively in the first sentence. So with the rule in Shelley's case. It is resolvable into the rule that every person to whom an estate is given by a conveyance expressed in such and such a way shall take such and such rights.

To take another example from later legislation. An English statute passed in 1881 enacts nothing more than this, that an act of a previous session shall be construed as if "that" that "meant this." It would be futile indeed to force this into conformity with Harrison's model. This definition is drawn from the language of the common law and can only be used in such a law. It belongs to the rule which fixes the rights of devises and legates under a will. That rule in whatever form it may be expressed, is, without any straining of language, a command of the legislator. That "every person named by a testator in his last will and testament shall be entitled to the property thereby given him" is surely a command creating rights and duties. After testament add "expressed in writing"; it is still a command. Add further, "provided he be not one of the witnesses to the will," and the command, with its product of rights and duties, is still there. Each of the additions limits the operation of the command stated imperatively in the first sentence. So with the rule in Shelley's case. It is resolvable into the rule that every person to whom an estate is given by a conveyance expressed in such and such a way shall take such and such rights.

To take another example from later legislation. An English statute passed in 1881 enacts nothing more than this, that an act of a previous session shall be construed as if "that" that "meant this." It would be futile indeed to force this into conformity with Harrison's model. This definition is drawn from the language of the common law and can only be used in such a law. import of existing positive law, and laws abrogating or repealing existing positive law." He thus associates them with rules of positive morality and with laws which are only metaphorically so called. This collocation is unfortunate and out of keeping with Austin's method. Declaratory and repealing laws are as completely unlike positive morality and metaphorical laws as the laws which he describes as properly so called. And if we avoid the error of treating each separate proposition enunciated by the lawyer as a law, the cases in question need give us no trouble. Read the declaratory and the repealing statutes along with the principal laws which they affect, and the result is perfectly consistent with the proposition that all law is to be resolved into a species of command. In the one case we have in the principal taken together with the interpretative statute a law, and whether it differs or not from the law as it existed before the interpretative statute was passed makes no difference to the true character of the latter. It contributes along with the former to the expression of a command which is a true law. In the same way repealing statutes are to be taken together with the laws which they repeal—the result being that there is no law, no command, at all. It is wholly unnecessary to class them as laws which are not truly imperative, or as exceptions to the rule that laws are a species of commands. The combination of the two sentences in which the lawyer has expressed himself, yields the result of silence—absence of law—which is in no way incompatible with the assertion that a law, when it exists, is a kind of command. Austin's theory does not logically require us to treat every act of parliament as being a complete law in itself, and therefore to set aside a certain number of acts of parliament as being exceptions to the great generalization which is the basis of the whole system.

Rules of procedure again have been alleged to constitute another exception. They cannot, it is said, be regarded as commands involving punishment if they be disobeyed. Nor is anything gained by considering them as commands addressed to the judge and other ministers of the law. There may be no doubt in the law of procedure a great deal that is resolvable into law in this sense, but the great bulk of it is to be regarded like the rules of interpretation as entering into the substantive commands which are laws. They are descriptions of the sanction and its mode of working. The bare prohibition of murder without any penalty to enforce it would not be a law. To prohibit it under penalty of death implies a reference to the whole machinery of criminal justice by which the penalty is enforced. Taken by themselves the rules of procedure are not, any more than canons of interpretation, complete laws in Austin's sense of the term, but they form part of the complete expression of true law. They apply of course, as they describe the sanction and the mode in which it operates.

A more formidable criticism of Austin's position is that which attacks the definition of sovereignty. There are countries, it is said, where the sovereign authority cannot by any stretch of language be said to command the laws, and yet where law manifestly exists. The ablest and the most moderate statement of this view is given by Sir Henry Maine in Early History of Institutions, p. 380:

"It is from no special love of Indian examples that I take one from India, but because it happens to be the most modern precedent in point. My instance is the Indian province called the Punjab, the country of the Five Rivers, in the state in which it was for about a quarter of a century before its annexation to the British Indian Empire. After passing through every conceivable phase of anarchy and dormant anarchy, it fell under the tolerably consolidated dominion of the Mogul, a dominion half-religious half-nomadised, which the Sikhs. The Sikhs themselves were afterwards reduced to subjection by a single chief and their command, Runjeet Singh. At first sight there could be no more perfect embodiment than Runjeet Singh of true sovereignty. But his command, whatever he was, was absolutely despotic. Except occasionally on his wild frontier he kept the most perfect order. He could have commanded anything; the smallest disobedience to his commands would have been followed by death or dismemberment and this was perfectly well known to the enormous majority of his subjects. Yet I doubt whether once in all his life he issued a command which Austin would call a law. He took as his revenue a prodigious share of the produce of the soil. He harried villages which recalcitrated at his exactions, and he executed great numbers of men. He levied great armies; he had all material of power, and he exercised it in various ways. But he never made a law. The rules which regulated the lives of his subjects were derived from their immemorial usage, and those rules were administered by domestic tribunals in families or village communities—that is, in groups no larger or little larger than those to which the application of Austin's principles cannot be effected on his own admission without absurdity."

So far as the mere size of the community is concerned, there is no difficulty in applying the Austinian theory. In postulating a considerably numerous community Austin was thinking evidently of small isolated groups which could not without provoking a sense of the ridiculous be termed nations. Two or three families, let us suppose, occupying a small island, totally disconnected with any great power, would not claim to be and would not be treated as an independent political community. But it does not follow that Austin would have regarded the village communities spoken of by Maine in the same light. Here we have a great community, consisting of a vast number of small communities, each independent of the other, and disconnected with all the others, so far as the administration of anything like law is concerned. Suppose in each case that the headman or council takes his orders from Runjeet Singh, and enforces them, each in his own sphere, relying as the last resort on the force at the disposal of the suzerain. The mere size of the separate communities would make no sort of difference to Austin's theory. He would probably regard the empire of Runjeet Singh as divided into small districts—an assumption which inverts no doubt the true historical order, the smaller group being generally more ancient than the larger. But provided that the other conditions prevail, the mere fact that the law is administered by local tribunals for minute areas would make no difference to the theory. The case described by Maine is that of the undoubted possession of supreme power by a sovereign, coupled with the total absence of any attempt on his part to originate a law. That no doubt is, as we are told by the same authority, "the type of all Oriental communities in their native state during their rare intervals of peace and order." The empire was in the main in each case a tax-gathering empire. The unalterable law of the Medes and Persians was not a law at all but an occasional command. So again Maine puts his position clearly in the following sentences: "The Athenian assembly made true laws for residents on Attic territory, but the dominion of Athens over her subject cities and islands was clearly a tax-taking as distinguished from a legislating empire. Maine, it will be observed, does not say that the sovereign assembly did not command the laws in the event of their islands and other dependencies."

In the same category may be placed without much substantial difference all the societies that have ever existed on the face of the earth previous to the point at which legislation becomes active. Maine is undoubtedly right in connecting the theories of Bentham and Austin with the overwhelming activity of legislatures in modern times. And formal legislation, as he elsewhere shows, comes late in the history of most legal systems. Law is generated in other ways, which seem irreconcilable with anything like legislation. Not only the tax-gathering emperors of the East, indifferent to the condition of their subjects, but even actively benevolent governments have up to a certain point left the law to grow by other means than formal enactments. What is ex facto more opposed to the idea of a sovereign's commands than the conception of schools of law? Does it not "sting us with a sense of the ridiculous" to hear principles which are the outcome of long debates between the Jews and Sabinians described as commands of the emperor? How is sectarianism in law possible if the sovereign's command is really all that is meant by a law? No mental attitude is more common than that which regards law as a natural product—discoverable by a diligent investigator, much in the same way as the facts of science or the principles of mathematics. The introductory portions of Justinian's Institutes are certainly written from this point of view, which may also be described without much unfairness as the point of view of German jurisprudence. And yet the English
jurist who accepts Austin's postulate as true for the English system of our own day would have no difficulty in applying it to German or Roman law generated under the influence of such ideas as these.

Again, referring to the instance of Runjeet Singh, Sir H. Maine says no doubt rightly that "he never did or could have dreamed of changing the civil rules under which his subjects lived. Probably he was as strong a believer in the independent obligatory force of such rules as the elders themselves who applied them." That too might be said with truth of states to which the application of Austin's system would be far from difficult. The sovereign body or person enforcing the rules by all the ordinary methods of justice might conceivably believe that the rules which he enforced had an obligatory authority of their own, just as most lawyers at one time, and possibly some lawyers now, believe, in the natural obligatoriness, independently of courts or parliaments, of portions of the law of England. But nevertheless, what is the idea—this is the idea of a legal rule in the sense of an authoritative •

The question may perhaps be summed up as follows. Austin's definitions are in strict accordance with the facts of government in civilized states; and, as it is put by Maine, certain assumptions or postulates having been made, the great majority of Austin's positions follow as of course or by ordinary logical process. But at the other extreme end of the scale of civilization are societies to which Austin himself refuses to apply his system, and where, it would be conceded on all sides, there is neither political community nor sovereign nor law—none of the facts which jurisprudence assumes to exist. There is an intermediate stage of society in which, while the rules of conduct might and generally would be spoken of as laws, it is difficult to trace the connexion between them and the sovereign authority whose existence is necessary to Austin's system. Are such societies to be thrown out of account in analytical jurisprudence, or is Austin's system to be regarded as only a partial explanation of the field of true law, and his definitions good only for the laws of a portion of the world?

The true answer to this question appears to be that when the rules in any given case are habitually enforced by physical penalties, administered by a determinate person or portion of the community, they should be regarded as positive laws and the appropriate subject matter of jurisprudence. Rules which are not so enforced, but are enforced in any other way, whether by what is called public opinion, or spiritual apprehensions, or natural instinct, are rightly excluded from that subject matter. In all stages of society, savage or civilized, a large body of rules of conduct, habitually obeyed, are nevertheless not enforced by any state sanction of any kind. Austin's method assimilates such rules in primitive society, where they subserve the same purpose as positive laws in an advanced society, not to the positive laws which they resemble in purpose but to the moral or other rules which they resemble in operation. If we refuse to accept this position we must abandon the attempt to frame a general definition of law and its dependent terms, or we must content ourselves with saying that law is one thing in one state of society and another thing in another. On the ground of clearness and convenience Austin's method is, we believe, substantially right, but none the less should the student of jurisprudence be on his guard against such assumptions as that legislation is a universal phenomenon, or that the relation of sovereign and subject is discernible in all states of human society. And a careful examination of Maine's criticism will show that it is not in the least directed against Austin's system, but against the correction of the misconceptions into which some of his disciples may have fallen. It is a misconception of the analysis to suppose that it involves a difference in juridical character between custom not yet recognized by any judicial decision and custom after such recognition. There is no such difference except in the case of what is properly called "judicial legislation"—wherein an absolutely new rule is added for the first time to the law. The recognition of a custom or law is not necessarily the beginning of the custom or law. Where a custom possesses the marks by which its legality is determined according to well understood principles, the courts pronounce it to have been law at the time of the happening of the facts as to which their jurisdiction is invoked. The fact that no previous instance of its recognition by a court of justice can be produced is not material. A lawyer before any such decision was given would nevertheless pronounce the custom to be law—with more or less hesitation according as the marks of a legal custom were obvious or not. The character of the custom is not changed when it is for the first time enforced by a court of justice, and hence the language used by Maine must be understood in a very limited sense. "Until customs are enforced by courts of justice"—so he puts the position of Austin—"they are merely "positive morality," rules enforced by opinion; but as soon as courts of justice enforce them they become commands of the sovereign, conveyed through the judges who are his delegates or deputies. This proposition, on
Austin's theory, would only be true of customs as to which these marks were absent. It is of course true that when a rule enforced only by opinion becomes for the first time enforceable by a court of justice—which is the same thing as the first time of its being actually enforced—its juridical character is changed. It was positive morality; it is now law. So it is when that which was before the opinion of the judge only becomes by his decision a rule enforceable by courts of justice. It was not even positive morality but the opinion of an individual; it is now law.

The most difficult of the common terms of law to define is right; and, as right rather than duty is the basis of classification, it is a point of some importance. Assuming the truth of the analysis above discussed, we may go on to say that in the notion of law is involved an obligation on the part of some one, or on the part of every one, to do or forbear from doing. That obligation is duty; what is right? Dropping the negative of forbearance, and taking duty to mean an obligation to do something, with the alternative of performing it, there appear to be two kinds. The thing to be done may have exclusive reference to a determinate person or class of persons, on whose motion or complaint the sovereign power will execute the punishment or sanction on delinquents; or it may have no such reference, the thing being commanded, and the punishment following on disobedience, without reference to the wish or complaint of individuals. The last are absolute duties, and the omission to do, or forbear from doing, the thing specified in the command is in general what is meant by a crime. The others are relative duties, each of them implying and relating to a right in some one else. A person has a right who may in this way set in operation the sanction provided by the state. In common thought and speech, however, right appears as something a good deal more positive and definite than this—as a power or faculty residing in individuals, and suggesting not so much the relative obligation as the advantage or enjoyment secured thereby to the person having the right. J. S. Mill, in a valuable criticism of Austin, suggests that the definition should be so modified as to introduce the element of “advantage to the person exercising the right.”

But it is exceedingly difficult to frame a positive definition of right which shall not introduce some term at least as ambiguous as the word to be defined. T. E. Holland defines right in general as a man’s “capacity of influencing the acts of another by means, not of his own strength, but of the opinion or the force of society.” Direct influence exercised by virtue of one’s own strength, physical or otherwise, over another’s acts, is “might” as distinguished from right. When the indirect influence is the opinion of society, we have a “moral right.” When it is the force exercised by the sovereign, we have a legal right. It would be more easy, no doubt, to pick holes in this definition than to frame a better one.1

1 In English speech another ambiguity is happily wanting which in many languages besets the phrase expressing “a right.” The Latin “jus,” the German “Recht,” the Italian “diritto,” and the French “droit” do express, not only the abstract. To indicate the distinction between “law” and “right,” the Germans are therefore obliged to resort to such phrases as “objective” and “subjective Right,” meaning by the latter the right which is enjoyed by the person, and by the former the act of enjoyment, and by Blackstone, paraphrasing the distinction drawn by Roman law between the “jus quod ad res” and the “jus quod ad personas attinet,” devotes the first two volumes of his Commentaries to the “Rights of Persons and the Right of Things.” See Holland’s Elements of Jurisprudence, 10th ed., 78 seq.

That distinction in rights which appears in the division of law into the law of persons and the law of things is thus stated by Austin. There are certain rights and duties, with certain capacities and incapacities, by which persons are determined to various classes. The rights, duties, &c., are the condition or status of the person; and one person may be invested with many states or qualities. The law of persons consists of the rights, duties, &c., constituting conditions or status; the rest of the law is the law of things. The separation is a mere matter of convenience, but of convenience so great that the distinction is universal. Thus any given right may be exercised by persons belonging to innumerable classes. The person who has the right may be under twenty-one years of age, may have been born in a foreign state, may have been convicted of crime, may be a native of a particular country, or a member of a particular profession or trade, &c.; and it might very well happen, with reference to any given right, that, while persons in general, under the circumstances of the case, would enjoy it in the same manner, a person belonging to any one of these classes would not. If belonging to any one of those classes makes a difference not to one right merely but to many, the class may conveniently be abstracted, and the variations in rights and duties dependent thereon may be separately treated under the law of persons. The personality recognized in the law of persons is such as modifies indefinitely the legal relations into which the individual clothed with the personality may enter.

T. E. Holland disapproves of the prominence given by Austin to this distinction, instead of that between public and private law. This, according to Holland, is based on the public or private character of the persons with whom the right is connected, public persons being the state or its delegates. Austin, holding that the state cannot be said to have legal rights or duties, recognizes no such distinction. The term “public law” he confines strictly to that portion of the law which is concerned with political conditions, and which ought not to be superimposed on the rest of the law, but “ought to be inserted in the law of persons as one of the limbs or members of that supplemental department.”

Lastly, following Austin, the main division of the law of things is into (1) primary rights with primary relative duties, (2) sanctioning rights with sanctioning duties (relative or absolute). The former exist, as it has been put, for their own sake, the latter for the sake of the former. Rights and duties arise from facts and events; and facts or events which are violations of rights and duties are delicts or injuries. Rights and duties which arise from delicts are remedial or sanctioning, their object being to prevent the violation of rights which do not arise from delicts.

There is much to be said for Frederic Harrison’s view (first expressed in the Fortnightly Review, vol. xxxi.,), that the arrangement of English law on the basis of a scientific classification, whether Austin’s or any other, would not result in advantages at all compensating for its difficulties. If anything like a real code were to be attempted, the scientific classification would be the best; but in the absence of that, and indeed in the absence of any habit on the part of English lawyers of studying the system as a whole, the arrangement of facts does not very much matter. It is essential, however, to the abstract study of the principles of law. Scientific arrangement might also be observed with advantage in treatises affecting to give a view of the whole law, especially those which are meant for educational rather than professional uses. As an example of the practical application of a scientific system of classification to a complete body of law, we may point to W. A. Hunter’s elaborate Exposition of Roman Law (1876).

It is impossible to present the conclusions of historical jurisprudence in anything like the same shape as those which we have been discussing. Under the heading JURISPRUDENCE, COMPARATIVE, we will find the method and results of what is practically a new science. The inquiry is in that stage which is indicated in one way by describing it as a philosophy. It resembles, and is indeed only part of, the study which is described as the philosophy of history. Its chief interest has been in the light which it has thrown upon rules of law and legal institutions which had been and are generally contemplated as positive facts.
merely, without reference to their history, or have been associated historically with principles and institutions not really connected with them.

The historical treatment of law displaces some very remarkable misconceptions. Peculiarities and anomalies abound in every legal system; and, as soon as laws become the special study of a professional class, some mode of explaining or reconciling them will be resorted to. One of the prehistorical ways of philosophizing about law was to account for what wanted explanation by some theory about the origin of technical words. This implied some previous study of words and their history, and is an instance of the deep-seated and persistent tendency of the human mind to identify names with the things they represent. The Institutes of Justinian abound in explanations, founded on a supposed derivation of some leading term. Testamentum, we are told, ex eo appellatur quod testatio mentis est. A testament was no doubt, in effect, a declaration of intention on the part of the testator when this was written. But the -mentum is a mere termination, and has nothing to do with mens at all. The history of testaments, which it may be noted incidentally, has been developed with conspicuous success, gives a totally different meaning to the institution from that which was expressed by this fanciful derivation. So the perplexing subject of possessio was supposed in some way to be explained by the derivation from pono and sedeo —quasi sedibus positio. Posthumi was supposed to be a compound of post and humanus. These examples belong to the class of rationalizing derivations with which students of philosophy are familiar. Their characteristic is that they are suggested by some prominent feature of the thing as it then appeared to observers—which feature thereupon becomes identified with the essence of the thing at all times and places.

Another prehistorical mode of explaining law may be described as metaphysical. It conceives of a rule or principle of law as existing by virtue of some more general rule or principle in the nature of things. Thus, in the English law of inheritance, until the passing of the Inheritance Act 1833, an estate belonging to a deceased intestate would pass to his uncle or aunt, to the exclusion of his father or other lineal ancestor. This anomaly from an early time excited the curiosity of lawyers, and the explanation accepted in the time of Bracton was that it was an example of the general law of nature: "Descendit itaque jus quasi ponderosum quid cadens deorsum recta linea vel transversali, et nunquam reasendit ea via qua descendit." It has been suggested that the "rule really results from the associations involved in the word descent." It seems more likely, however, that these associations explained rather than that they suggested the rule—that the omission of the lineal ancestor existed in custom before it was discovered to be in harmony with the law of nature. It would imply more influence than the reasoning of lawyers is likely to have exercised over the development of law at that time to believe that a purely artificial inference of this kind should have established so very remarkable a rule. However that may be, the explanation is typical of a way of looking at laws not enough to account for all the historical method. Minds not trained in this way were, if possible, farther removed from the conceptions implied in the reasoning of the analytical jurists than they were from the historical method itself. In this connexion it may be noticed that the great work of Blackstone marks an era in the development of legal ideas in England. It was not merely the first, as it still remains the only, adequate attempt to expound the leading principles of the whole body of law, but it was distinctly inspired by a rationalizing method. Blackstone tried not merely to express but to illustrate legal rules, and he had a keen sense of the value of historical illustrations. He worked of course with the materials at his command. His manner and his work are obnoxious alike to the modern jurist and to the modern historian. He is accused by the one of perverting history, and by the other of confusing the law. But his scheme is a great advance on anything that had been attempted before; and, if his work has been prolific in popular fallacies, at all events it enriched English literature by a prospectus of the law, in which the logical connexion of its principles inter se, and its relations to historical facts, were distinctly if erroneously recognized.

While the historical method has superseded the verbal and metaphysical explanation of legal principles, it had apparently, in some cases, come into conflict with the conclusions of the analytical school. The difference between the two systems comes out most conspicuously in relation to customs. There is an unavoidable break in the analytical method between societies in which rules are backed by regulated physical force and those in which no such force exists. At what point in its development a given society passes into the condition of "an independent political society" it may not be easy to determine, for the evidence is obscure and conflicting. To the historical jurist there is no such break. The rule which in one stage of society is a law, in another merely a rule of "positive morality," is the same thing to him throughout. By the Irish Land Act 1881 the Ulster custom of tenant-right and other analogous customs were legalized. For the purposes of analytical jurisprudence there is no need to go beyond the act of parliament. The laws known as the Ulster custom are laws solely in virtue of the sovereign government. Between the law as it now is and the custom as it existed before the act there is all the difference in the world. To the historical jurist no such separation is possible. His account of the law would not only be incomplete without embracing the precedent custom, but the act which made the custom law is only one of the facts, and by no means the most significant or important, in the history of its development. An exactly parallel case is the legalization in England of that customary tenant-right known as copyhold. It is to the historical jurist exactly the same thing as the legalization of the Ulster tenant right. In the one case a practice was made law by formal legislation, and in the other without formal legislation. And there can be very little doubt that in an earlier stage of society, when formal legislation had not become the rule, the custom would have been legalized relatively much sooner than it actually was.

Customs then are the same thing as laws to the historical jurist, and his business is to trace the influences under which they have grown up, flourished and decayed, their dependence on the intellectual and moral conditions of society at different times, and their reaction upon them. The recognized science—and such it may now be considered to be—with which historical, or more properly comparative, jurisprudence has most analogy is the science of language. Laws and customs are to the one what words are to the other, and each separate municipal system has its analogue in a language. Legal systems are related together like languages and dialects, and the investigation in both cases brings us back at last to the meagre and obscure records of savage custom and speech. A great master of the science of language (Max Müller) has indeed distinguished it from jurisprudence, as belonging to a totally different class of sciences. "It is perfectly true," he says, "that if language be the work of man in the same sense in which a statue, or a temple, or a poem, or a law are properly called the works of man, the science of language would belong to the general class of historical science. We could have a history of language as we have a history of art, of poetry and of jurisprudence; but we could not claim for it a place side by side with the various branches of natural history." Whatever be the proper position of either philology or jurisprudence in relation to the natural sciences, it would not be difficult to show that laws and customs on the whole are equally independent of the efforts of individual human wills—which appears to be what is meant by language not being the work of man. The most complete acceptance of Austin's theory that law everywhere and always is the command of the sovereign does not involve any withdrawal of laws from the domain of natural science, does not in the least interfere with the scientific study of their affinities and relationships. Max Müller elsewhere illustrates his conception of the different relations of words and laws to the individual will by the story of the emperor Tiberius, who was reproved for a grammatical mistake by Marcellus, whereupon Capito, another grammarian, observed that, if what the emperor said was not good Latin, it would soon be so.
“Capito,” said Marcellus, “is a liar; for, Caesar, thou canst give the Roman citizenship to men, but not to words.” The mere impulse of a single mind, even that of a Roman emperor, however, probably counts for little more in law than it does in language. Even in language one powerful intellect or one influential academy may, by its own decree, give a bent to modes of speech which they would not otherwise have taken. But whether law or language be conventional or natural is really an absolute question, and the difference between historical and natural sciences in the last result is one of names.

The application of the historical method to law has not resulted in anything like the discoveries which have made comparative philology a science. There is no Grimm’s law for jurisprudence; but something has been done in that direction by the discovery of the analogous processes and principles which underlie legal systems having no external resemblance to each other. But the historical method has been applied with special success to a single system—the Roman law. The Roman law presents itself to the historical student in two different aspects. It is, regarded as the law of the Roman Republic and Empire, a system whose history can be traced throughout a great part of its duration with certainty, and in parts with great detail. It is, moreover, a body of rationalized legal principles which may be considered apart from the state system in which they were developed, and which have, in fact, entered into the jurisprudence of the whole of modern Europe on the strength of their own abstract authority—so much so that the continued existence of the civil law, after the fall of the Empire, is entitled to be considered one of the first discoveries of the historical method. Alike, therefore, in its original history, as the law of the Roman state, and as the source from which the fundamental principles of modern laws have been taken, the Roman law presented the most obvious and attractive subject of historical study. An immense impulse was given to the history of Roman law by the discovery of the Institutes of Gaius in 1816. A complete view of Roman law, as it existed three centuries and a half before Justinian, was then obtained, and as the later Institutes were, in point of form, a recension of those of Gaius, the comparison of the two stages in legal history was at once easy and fruitful. Moreover, Gaius dealt with antiquities of the law which had become obsolete in the time of Justinian, and were passed over by him without notice.

Nowhere did Roman law in its modern aspect give a stronger impulse to the study of legal history than in Germany. The historical school of German jurists led the reaction of national sentiment against the proposals for a general code made by Thiibaut. They were accused by their opponents of setting up the law of past times as intrinsically entitled to critical examination, without any due respect for the development of modern law, and that they had strongly inspired by reverence for customs and traditions. Through the examination of their own customary laws, and through the elimination and separate study of the Roman element therein, they were led to form general views of the history of legal principles. In the hands of Savigny, the greatest master of the school, the historical theory was developed into a universal philosophy of law, covering the ground which we should assign separately to jurisprudence, analytical and historical, and to theories of legislation. There is not in Savigny’s system the faintest approach to the Austrian analysis. The range of it is not the analysis of law as a command, but that of a Rechtsverhaltniss or legal relation. Far from regarding law as the creation of the will of individuals, he maintains it to be the natural outcome of the consciousness of the people, like their social habits or their language. And he assimilates changes in law that are simply the germs of individual development to the life of individual men; no moment of complete stillness is experienced, but a constant organic development, such also is the case in the life of nations, and in every individual element in which this collective life consists; so we find in language a constant formation and development, and in the same way in law.” German jurisprudence is darkened by metaphysical thought, and weakened, as we believe, by defective analysis of positive law. But its conception of laws is exceedingly favourable to the growth of a historical philosophy, the results of which have a value of their own, apart altogether from the character of the first principles. Such, for instance, is Savigny’s famous examination of the law of possession.

There is only one other system of law which is worthy of being placed by the side of Roman law, and that is the law of England. No other European system can be compared with that which is the origin and substratum of them all; but England, as it happens, is isolated in jurisprudence. She has solved her legal problems for herself. Whatever element of Roman law may exist in the English system has come in, whether by conscious adaptation or otherwise, ab extra; it is not of the essence of the system, nor does it form a large portion of the system. And, while English law is thus historically independent of Roman law, it is in all respects worthy of being associated with it on its own merits. Its originality, or, if the phrase be preferred, its peculiarity, is not more remarkable than the intellectual qualities which have gone to its formation—the ingenuity, the rigid logic, the reasonableness, of the generations of lawyers and judges who have built it up. This may seem extravagant praise for a legal system, the faults of which are and always have been matter of daily complaint, but it would be endorsed by all unprejudiced students. What men complain of is the practical hardship and inconvenience of some rule or process of law. They know, for example, that the law of real property is exceedingly complicated, and that, among other things, it makes the conveyance of land expensive. But the technical law of real property, which rests to this day on ideas that have been buried for centuries, has nevertheless the qualities we have named. So too with the law of procedure as it existed under the “science” of special pleading. The greatest practical law reformer, and the severest critic of existing systems that has ever appeared in any age or country, Jeremy Bentham, has admitted this: “Confused, indeterminate, inadequate, ill-adapted, and inconsistent, as to a vast extent the provision or no provision would be found to be that has been made by it for the various cases that have happened to present themselves for decision, yet in the character of a repository of such cases it affords, for the manufactory of real law, a stock of materials which is beyond all price. Traverse the whole continent of Europe, ransack all the libraries belonging to all the jurisprudential systems of the several political states, add the contents together, you would not be able to compose a collection of cases equal in variety, in amplitude, in clearness of statement—in a word, all points taken together, in constructiveness—to that which may be seen to be afforded by the collection of English reports of adjudged cases” (Bentham’s Works, iv. 460). On the other hand, the fortunes of English jurisprudence are not without some hope of a better fate, owing to the recent arrangement of the laws of the United States of America, in India, and in the vast Colonial Empire, the common law of England constitutes most of the legal system in actual use, or is gradually being superimposed upon it. It would hardly be too much to say that English law of indigenous growth, and Roman law, between them govern the legal relations of the whole civilized world. Nor has the influence of the former on the intellectual habits and the ideas of men been much if at all inferior. Those who set any store by the analytical jurisprudence of the school of Austin will be glad to acknowledge that it is pure outcome of English law. Sir Henry Maine associated its rise with the activity of modern legislatures, which is of course a characteristic of the societies in which English laws prevail. And it would not be difficult to show that the germs of Austin’s principles are to be found in legal writers who never dreamed of analysing a law. It is certainly remarkable, at all events, that the acceptance of Austin’s system is as yet confined strictly to the domain of English law. Maine found no trace of its being even known to the jurists of the Continent, and it would appear that it has been equally without influence in Scotland, which, like the continent of Europe, is essentially Roman in the fundamental elements of its jurisprudence.

The substance of the above article is repeated from Professor E. Robertson’s (Lord Lochiel’s) article “Law," in the 9th ed. of this work.
JURISPRUDENCE, COMPARATIVE

JURISPRUDENCE, COMPARATIVE. The object of this article is to give a general survey of the study of the evolution of law. It is not concerned with analytical jurisprudence as a theory of legal thought, or an encyclopaedic introduction to legal teaching. Jurisprudence in such a philosophic or pedagogical sense has certainly to reckon with the methods and results of a comparative study of law, but its aims are distinct from those of the latter: it deals with more general problems. On the other hand, the comparative study of law may itself be treated in two different ways: it may be directed to a comparison of existing systems of legislation and law, with a view to tracing analogies and contrasts in the treatment of practical problems and taking note of expedients and of possible solutions. Or else it may aim at discovering the principles regulating the development of legal systems, with a view to explain the origin of institutions and to study the conditions of their life. In the first sense, comparative jurisprudence resolves itself into a study of home and foreign law (cf. Hofmann in the Zeitschrift für das private und öffentliche Recht der Gegenwart, 1878). In the second sense, comparative jurisprudence is one of the so-called sociology, being the study of social evolution in the special domain of law. From this point of view it is, in substance, immaterial whether the legal phenomena subjected to investigation are ancient or modern, are drawn from civilized or from primitive communities. The fact that they are being observed and explained as features of social evolution characterizes the inquiry and forms the distinctive attribute separating these studies from kindred subjects. It is only natural, however, that early periods and primitive conditions have attracted investigators in this field more than recent developments. The interest of students seems to have stood in inverse ratio to the chronological vicinity of the facts under consideration—the farther from the observer, the more suggestive and worthy of attention the facts were found to be. This peculiarity is easily explained if we take into account the tendency of all evolutionary investigations to obtain a view of origins in order to follow up the threads of development from their initial starting-point. Besides, it has been urged over and over again that the simpler phenomena of ancient and primitive society are more conveniently material for legal evolution than the extremely complex legal institutions of civilized nations. But there is no determined line of division between ancient and modern comparative jurisprudence in so far as both are aiming at the study of legal development. The law of Islam, or, for that matter, the German civil code, may be taken up as a subject of study quite as much as the code of Hammurabi or the marriage customs of Australian tribes.

The fact that the comparative study of legal evolution is chiefly represented by investigations of early institutions is therefore a characteristic, but not a necessary feature in the treatment of the subject. But it is essential to this treatment that it should be historical and comparative. Historical, because it is only as history, i.e. a sequence of stages and events, that development can be thought of. Comparative, because it is not the casual notices about one or the other chain of historical facts that can supply the basis for any scientific induction. Comparisons of kindred processes have to be made in order to verify the vail of general meaning and scientific regularity. As linguistic science differs from philosophy in so far as it treats of the general evolution of language and not of particular languages, even so comparative jurisprudence differs from the history of law as a study of general legal evolution distinct from the development of one or the other national branch of legal enactment. Needless to say that there are intermediate shades between these groups, but it is not these shades we have to attend to, but to the main distinctions and divisions.

1. The idea that the legal enactments and customs of different countries should be compared for the purpose of deducing general principles from them is as old as political science itself. It was realized with especial vividness in epochs when a considerable material of observations was gathered from different sources and in various forms. The wealth of varieties and the recurrence of certain leading views in them led to comparison and to generalizations based on comparison. Aristotle, who lived at the close of a period marked by the growth of free Greek cities, summarized, as it were, their political experience in his Constitutions and Politics; students of these know that the Greek philosopher had to deal with not only public law and political institutions, but also to some extent private, criminal law, equity, the relations between law and morals, &c.

Another great attempt at comparative observation was made at the close of the pre-revolutionary period of modern Europe. Montesquieu took stock of the analogies and contrasts of law in the commonwealths of his time and tried to show to what extent particular enactments and rules were dependent on certain general currents in the life of societies—on forms of government, on moral conditions corresponding to these, and ultimately on the geographical facts with which various nationalities and states have to reckon in their development.

These were, however, only slight beginnings, general forecasts of a new line of thought, and Montesquieu’s remarks on laws and legal customs read now almost as if they were meant to serve as materials for social utopias, although they were by no means conceived in this sense. At this distance of time we cannot help perceiving how fragmentary, incomplete and uncritical his notions of the facts of legal history were, and how strongly his thought was biased by didactic considerations, by the wish to teach his contemporaries what politics and law should be.

It was reserved for the 19th century to come forward with connected and far-reaching investigations in this field as in many others. We are not deceived by proximity and self-consciousness when we affirm that comparative jurisprudence, as understood in these introductory remarks, dates from the 19th century and especially from its second half.

There were many reasons for such a new departure: two of these reasons have been especially manifest and decisive. The 19th century was an eminently historical and an eminently scientific age. In the domain of history it may be said that it was the period of thought, and Montesquieu’s remarks on laws and legal customs read now almost as if they were meant to serve as materials for social utopias, although they were by no means conceived in this sense. At this distance of time we cannot help perceiving how fragmentary, incomplete and uncritical his notions of the facts of legal history were, and how strongly his thought was biased by didactic considerations, by the wish to teach his contemporaries what politics and law should be.

Apart from the personal efforts of eminent writers, a great and general movement has to be taken into account in order to explain this remarkable stage of human thought. The historic bent of mind of 19th-century thinkers was to a great extent the result of heightened political and cultural self-consciousness. It was the reflection in the world of letters of the tremendous upheaval in the states of Europe and America which took place from the close of the 18th century onwards. As one of the greatest leaders of the movement, Niebuhr, pointed out, the fact of being a witness of such struggles and catastrophes as the American and French Revolutions and the Napoleonic Empire and the national reaction against it, taught every one to think historically, to appreciate the importance of historical factors, to measure the force not only of logical argument and moral impulse, but also of instinctive habits and traditional customs. It is not a matter of chance that the historical school of jurisprudence, Savigny’s doctrine of the organic growth of law, was formed and matured while Europe collected its forces after the most violent revolutionary crisis it had ever experienced, and in most intimate connexion with the romantic movement, a movement animated by
enthusiastic belief in the historical, traditional life of social groups as opposed to the intellectual conceptions of individualistic rationalism.

On the other hand, the 19th century was a scientific age and especially an age of biological science. Former periods—the 16th and 17th centuries especially—had bequeathed to it high standards of scientific investigation, an ever-increasing weight of authority in the direction of an exact study of natural phenomena and a conception of the world as ruled by laws and not by capricious interference. But these scientific views had been chiefly applied in the domain of mathematics, astronomy and physics; although great discoveries had already been made in physiology and other branches of biology, yet the achievements of 19th-century students in this respect far surpassed those of the preceding period. And the doctrine of transformation which came to occupy the central place in scientific thought was eminently fitted to co-ordinate and suggest investigations of social facts. As F. York Powell put it, Darwin is the greatest historian of modern times, and certainly an historian not in the sense of a reader of annals, but in that of a guide in the understanding of organic evolution. Though much is expressed in the one name of Darwin, it is perhaps even more momentous as a symbol of the tendency of a great age than as a mark of personal work. To this tendency we are indebted for the rise of anthropology and of sociology, of the scientific study of man and of the scientific study of society. Of course it ought not to be disregarded that the application of scientific principles and methods to human and social facts was made possible by the growth of knowledge in regard to savage and half-civilized nations called forth by the increased activity of European and American business men, administrators and explorers. Ethnography and ethnology have brought some order into the wealth of materials accumulated by generations of workers in this direction, and it is with their help that the far-reaching generalizations of modern inquirers as to man and society have been achieved.

2. It is not difficult to see that the comparative study of legal evolution finds its definite place in a scientific scheme elaborated from such points of view. Let us see how, as a matter of fact, the study in question arose and what its progress has been. The immediate incitement for the formation of comparative jurisprudence was given by the great discoveries of comparative philology. When the labours of Franz Bopp, August Schleicher, Max Müller, W. D. Whitney and others revealed the profound connexion between the different branches of the Indo-European race in regard to their languages, and showed that the development of these languages proceeded on lines which might be studied in a strictly scientific manner, on the basis of comparative observation and with the object of tracing the uniformities of the process, it was natural that students of religion, of folk-lore and of legal institutions took up the same method and tried to win similar results (Sir H. Maine, Rede lecture in Village Communities, 3rd ed.).

It is interesting to note that one of the leading scholars of the Germanic revival in the beginning of the 19th century, Jacob Grimm, a cooperator of Savigny in his own line, took up with fervent zeal and remarkable results not only the scientific study of the German language, but also that of Germanic mythology and popular law. His Rechtsalterthümer are still unrivalled as a collection of data as to the legal lore of Teutonic tribes. Their basis is undoubtedly a narrow one: they treat of the varieties of legal custom among the continental Germans, the Scandinavians and the Germanic tribes of Great Britain, but the method of treatment is already a comparative one. Grimm takes up the different subjects—property, contract, procedure, succession, and crime in the light of modern historical provincial and local customs; sometimes obtaining expressly affinities with Roman and Greek law (e.g. the subject of imprisonment for debt, Rechtsalterthümer, 4th ed., vol. ii., p. 165).

A broader basis was taken up by a linguist who tried to trace the primitive institutions and customs of the early Aryans before their separation into divers branches. Adolphe Picquet (Les Origines indo-européennes, i. 1859; ii. 1863) had to touch constantly on questions of family law, marriage, property, public authority, in his attempt to reconstruct the common civilization of the Aryan race, and he did so on the strength of a comparative study of terms used in the different Indo-European languages. He showed, for instance, how the idea of protection was the predominant element in the position of the father in the Aryan household. The names pitar, pater, arhop, father, which recur in most branches of the Aryan race, go back to a root pā-, pointing to guardianship or protection. Thus we are led to consider the patria poliestas, so stringently formulated in Roman law, as an expression of a common Aryan notion, which was already in existence before the Aryan tribes parted company and went their different ways. Descriptions of Aryan early culture have been given several times since in connexion with linguistic observations. An example is W. E. Hearn's Aryan Household (1879). Fustel de Coulanges' famous volume on the ancient city and Rudolf von Jhering's studies of primitive Indo-European institutions (Vorgeschichte der Indoeuropäer) start from similar observations, although the first of these scholars is chiefly interested in tracing the influence of religion on the material arrangements of life, while the latter draws largely on principles of public and private law, studied more especially in Roman antiquity.

3. The chief work in that direction has been achieved in one sense by a German scholar, B. W. Leist. His Graeco-Roman legal history, his Justum Genitum of Primitive Aryans, and his Just Civile of Primitive Aryans, form the most complete and learned attempt not only to reconstitute the fundamental rules of common Aryan law before the separation of tongues and nations, but also to trace the influence of this original stock of juridical ideas in the later development of different branches of the Aryan race. These three books present three stages of comparison, marked by a successive widening of the horizon. He began his legal history by putting together the data as to Roman and Greek legal origins; in the All-arisches Justum Genitum the material of Hindu law is not only drawn into the range of observation, but becomes its very centre; in the All-arisches Just Civile the legal customs of the Zend branch, of Celts, Germans and Slavs, are taken into account, although the most important part of the inquiry is still directed to the combination of Hindu, Greek and Roman law. In this way Leist builds up his theories by the comparative method, but he restricts its use consciously and consistently to a definite range. He does not want to plunge into haphazard analogies, but seeks common ground before all things in order to be able to watch for the appearance of ramifications and to explain them. According to his view comparison is of use only between "coherent" lines of facts. Common origin, not similarity of features, appears to him as the fundamental basis for fruitful comparison. It may be said that Leist's work is characterized by the attempt to draw up a continuous history of a supposed archaic common law of the Aryan race rather than to put different solutions of kindred legal problems by the side of each other. For him Aryan tribal organization with its double-sided relationship—cognatic and agnostic—through men and through women—is one, and although he does not draw its picture as Fustel de Coulanges does by the help of traits taken indiscriminately from Hindu, Roman and Greek material, although he notices divisions, degrees and variations, at bottom he writes the history of one set of principles exemplified and modulated, as it were, in the six or seven main varieties of the race. Even so the nine rules of conduct prescribed by Hindu sacral law are, according to his view, the directing rules of Roman, Greek, Germanic, Celtic, Slavonic legal custom—the duties in regard to gods, parents and fatherland, guests, personal purity, the profits of the husband and wife, the divisions of inheritance and the same religious, moral and legal system, and their original unity is reflected and proved by the unity of legal terminology itself.

The same leading idea is embodied in the books of Otto Schrader—Urgeschichte und Sprachvergleichung (1st ed., 1883; 2nd ed., 1890) and Realllexikon der indogermanischen Altertumskunde (1901). In this case we have to do not with a jurist
but with a linguist and a student of cultural history. His training made him especially fit to trace the national affinities in the data of language, and to see the intimate connexion between the growth of institutions on one side, of words and linguistic forms on the other, underlies all his investigations. But Schrader testifies also to another powerful influence—to that of Victor Hahn, the author of a remarkable book on early civilization, *Kulturphänomen und Hausthier im ihrem Übergang aus Asien in Europa* (1st ed., 1870; 7th ed., 1902), dealing with the migrations of tribes and their modes of acquiring material civilization. Although the linguistic and archaeological sides naturally predominate in Schrader's works, he has constantly to consider legal subjects, and he strives conscientiously to obtain a clear and common-sense view of the early legal notions of the Aryans. Speaking of the "ordeals," the "waging of God's law," for example, he traces the customs of purification by fire, water, iron, &c., to the practice of oaths (Sansk. om; Gr. ὁμορρ. O. Ital. omr = first group; O. Ger. αἷς, I. ὕθος = second group; O. Norse rola, Arm. երամն = I swear = third group). The central idea of the ordeal is thus shown to be the imposition—"Let him be cursed who pollutes the saintly"—a notion which is false.

The comparative study of the Aryan group assumed another aspect in the works of Sir Henry Maine. He did not rely on linguistic affinities, but made great use of another element of investigation which plays hardly any part in the books of the writers mentioned hitherto. His best personal preparation for the task was that he had not only taught law in England, but had come into contact with living legal customs in India. For him the comparison between the legal lore of Rome and that of India did not depend on linguistic roots or on the philological study of the laws of Manu, but was the result of recognizing again and again, in actual modern custom, the views, rules and institutions of which he had read in Gaius or in the fragments of the Twelve Tables. The sense of historical analogy and evolution which had shown itself already in the lectures on Ancient Law, which, after all, were mainly a presentation of Roman legal history mapped out by a man of the world, averse from pedantic disquisitions. But what appears as the expression of Maine's personal aptitude and intelligent reading in Ancient Law gets to be the interpretation of popular legal principles by modern as well as by ancient instances of their application in Village Communities, The Early History of Institutions, Early Law and Custom. The evolution of property in land out of archaic collectivism, ancient forms of contract and compulsion, rudimentary forms of feudality and the like, were treated in a new light in consequence of systematic comparisons with the conditions not only of India but of southern Slavonic nations, medieval cells and Teutons. This breadth of view seemed startling when the lectures appeared, and the original treatment of the subject was hailed on all sides as a most welcome new departure in the study of legal customs and institutions. And yet Maine set very definite boundaries to his comparative surveys. He renounced the chronological limitation confining such inquiries to the domain of antiquaries, but he upheld the ethnographical limits and his method of adaptation to laws of the same race. In his case it was the Aryan race, and in his Law and Custom he opposed in a determined manner the attempts of more daring students to extend to the Aryans generalizations drawn from the life of savage tribes unconnected with the Aryans by blood.

Thus, notwithstanding all diversities in the treatment of particular problems, one leading methodical principle runs through the works of all the above-mentioned exponents of comparative study. It was to proceed on the basis of common origin and on the assumption of a certain common stock of language, religion, material culture, and law to start with. What Pictet, Leist, Schrader, and Maine were doing for the Aryans, F. Hommel, Robertson Smith and others did in a lesser degree for the Semitic race.

4. The literary group which started from the discoveries of comparative philology and history was met on the way by what may be called the ethnological school of inquirers. The original impetus was given, in this case, by jurists and historians who took up the study in the field of ancient history, but treated it from the beginning in such a way as to break up the subdivisions of historic races and to direct the inquiry to a state of culture best illustrated by savage customs. The first impulse may be said to have come from J. J. Bachofen (Mutterrecht, 1861; *Antiquarische Briefe, 1880; Die Sage von Tanagru*). All the representatives of Aryan antiquities are at one in laying stress on the patriarchal and agnostic system of the kindreds in the different Aryan nations; even Leist, although dwelling on the importance of cognatic ties, looks to agnostic relationships for the explanation of military organization and political authority. And undoubtedly, if we argue from the predominant facts and from the linguistic evidence of parallel terms, we are led to assume that already before their separation the Aryans lived in a patriarchal state of society. Now, Bachofen discovered in the very tradition of classical antiquity traces of a fundamentally different state of things, the central conception of which was not patriarchal power, but matrilineality, relationship being traced through mothers, the wife presenting the constant and directing element of the household, while the husband (and perhaps several husbands) joined her from time to time in more or less inconstant unions. Such a state of society is definitely described by Herodotus in the case of the Lycians, it is clearly noticeable even in later historical times in Sparta; the passage from this matriarchal conception to the recognition of the claims of the father is reflected in poetical fiction in the famous Orestes myth, based on the struggle between the moral incitement which prompted the son to avenge his father and the absolute reverence for the mother required by ancient law. Although chiefly drawing his materials from classical literature, Bachofen included in his *Antiquarian Letters* an interesting study of the marriage custom and systems of relationship of the Malabar Coast in India; they attracted his attention by the contrasts between different layers of legal tradition—the Brahmins living in patriarchal order, while the class next to them, the Nayirs (Nairs), follow rules of matriarchy.

Similar ideas were put forward in a more comprehensive form by J. M. McLennan. His early volume (Studies in Ancient History, 1876) contains several essays published some time before that date. He starts from the wide occurrence of marriage by capture in primitive societies, and groups the tribes of which we have definite knowledge into endogamous and exogamous societies according as they take their wives from among the kindred or outside it. Marriage by capture and by purchase are signs of exogamy, connected with the custom in many tribes of killing female offspring. The development of marriage by capture and purchase is a powerful agent in bringing about patriarchal rule, agnostic relationship, and the formation of clans or gentes, but the more primitive forms of relationship appear as variations of systems based on mother-right. These views are supported by ethnological observations and used as a clue to the history of relationship and family law in ancient Greece. In further contributions published after McLennan's death these researches are supplemented and developed in many ways. The different systems of relationship, for instance, are traced back to the even more primitive practice of Totemism, the grouping of men according to their conceptions of animal worship and to their symbols. McLennan's line of inquiry was taken up in a very effective manner not only by anthropologists like E. B. Tylor or A. Lang, but also in a more special manner by students of primitive family law. One of the most brilliant monographs in this direction is Robertson Smith's study of *Kinship and Marriage in Arabia*.

But perhaps the most decisive influence was exercised on the development of the ethnological study of law by the discoveries of an American, Lewis H. Morgan. In his epoch-making work on Systems of Consanguinity (1860) and on Ancient Society (1877) he drew attention to the remarkable fact that in the case of a number of tribes—the Red Indians of America, the Australian black tribes, some of the polar races, and several Asiatic tribes, mostly of Turanian race—degrees of relationship are reckoned and distinguished by names, not as ties between
individuals, but as ties between entire groups, classes or gen-
erations. Instead of a mother and a father a man speaks of fathers
and mothers; all the individuals of a certain group are deemed
husbands or wives of corresponding individuals of another group;
sisters and brothers have to be sought in entire generations, and
not among the descendants of a definite and common parent, and
so forth. There are variations and types in these forms of
organization, and intermediate links may be traced between
unions of consanguine people—brothers and sisters of the same
blood—on the one hand, and the monogamic marriage prevailing
nowadays, on the other; but the central and most striking fact
seems to be that in early civilizations, in conditions which we
should attribute to savage and barbarian life, marriage appears
as a tie, not between single pairs, but between classes, all the
men of a class being regarded as potential or actual husbands
of the women of a corresponding class. Facts of this kind
produce very peculiar and elaborate systems of relationships,
which have been copiously illustrated by Mommsen. In his
Ancient Society he attempted to reduce all the known
forms and facts of marriage and kinship arrangements to
a comprehensive view of evolution leading up to the Aryan,
Semitic and Uralian family, as exhibiting the most modern
type of relationship.

These observations, in conjunction with Bachofen's and
McLennan's teaching on mother-right, brought about a complete
change of perspective in the comparative study of man and
society. The rights of ethnologists to have their say in regard
to legal, political and social development was forcibly illustrated
from both ends, as it were. On the one hand, classical antiquity
itself proved to be a rather thin layer of human civilization
hardly sufficient to conceal the long periods of barbarism and
primitive evolution which had gone to its making. On the other
hand, unexpected combinations in regard to family, property,
social order, were discovered in every corner of the inh-
habited world, and our trite notions as to the character of
laws and institutions were reduced to the rank of variations on
themes which recur over and over again, but may be and have
been treated in very different ways.

There is no need to speak of the use made of ethnological
material in the wider range of anthropological and sociological
studies—the works of Tylor, Lubbock, Lippert, Spencer are in
everybody's hands—but attention must be called to the further
influence of the ethnological point of view in comparative
jurisprudence. An interesting example of the passage from one
line of investigation to another, from the historical to the anthro-
pological line, if the expression may be used for the sake of
brevity, is presented in the works of one of the founders of the
Zeitschrift für vgl. Rechtswissenschaft—Franz Bernhöft. He
appears in his earlier books as an exponent of the comparative
study of Greek and Roman antiquities, more or less in the style
of Leist. Like the latter he was gradually incited to draw India
into the range of his observations, but unlike Leist, he ended by
fully recognizing the importance of ethnological evidence, and
although he did not do much original research in that direction
himself, the influence of Bachofen and of the ethnologists made
itself felt in Bernhöft's treatment of classical antiquity itself:
in his State and Law in Rome at the Time of the Kings he starts
from the view that patricians and plebeians represent two
ethnological layers of society—a patriarchal Aryan and a
matriarchal pre-Aryan one.

But, of course, the utmost use was made of ethnological
evidence by writers who cut themselves entirely free from the
special study of classical or European antiquities. The enth-
usiasm of the explorers of new territory led them naturally to
disregard the peculiar claims of Europe, and to seek to
the history of higher civilization. They wanted material for a study
of the genus homo in all its varieties, and they had no time to
look after the minute questions of philological and antiquarian
research which had so long constituted the daily bread of
inquirers into the history of laws. The most characteristic
representative of the new methods of extensive comparison was
undoubtedly A. H. Post (1839-1895)—the author of many works,
in which he ranges over the whole domain of mankind—Hovas,
Zulus, Maoris, Tunguses, alternating in a kaleidoscopic fashion
with Hindus, Teutons, Jews, Egyptians. The order of his com-
positions is systematic, not chronologico or even ethnographico
in the sense of grouping kindred races together. He takes up
the different subdivisions of law and traces them through all
the various tribes which present any data in regard to them.
His method is not only not bound by history, it is opposed to it.
He writes:

"The method of comparative ethnology is different from the
historical method, inasmuch as it collects the given material from
all the facts of the world. Historical investigation tries to
get at the causes of the facts of rational life by observing the develop-
ment of these facts from such as preceded them within the range
of separate kindreds, tribes and peoples. The investigation of com-
parative ethnology is different, inasmuch as it seeks the causes of facts in national
life by collecting identical or similar ethnological data wherever they
may be found in the world, and by drawing inferences from these
materials to identical or similar causes. This method is therefore
greatly unscientific. It serves things that have been hitherto regarded
as closely joined and arranges these shreds into new combinations
(Grundrisse, i. 14).

This is not a mere paradox, but the necessary outcome of the
situation in respect of the material used. What is being sought
is not common origin or a common stock of ideas, but recourse
to similar expedients in similar situations, and it is one of the
most striking results of ethnology that it can show how peoples
entirely cut off from each other and even placed in very different
planes of development can resort to analogous solutions in
analogous emergencies. Is not the custom of the so-called
Coward— the pretended confinement of the husband when a child
is born to his wife—a most quaint and seemingly reconcile
ceremony? Yet we find it practiced in the same way by Basques,
California Indians, and some Siberian tribes. They have surely
not borrowed from each other, nor have they kept the ceremony
as a remnant of the time when they formed one race; in each
case, evidently the passage from a matriarchal state to a patri-
archal has suggested it, and a very appropriate method it seems to
establish the fact of fatherhood in a solemn and graphic though
artificial manner. Again, an inscription from the Cretan town
of Gortyn, published in the American Journal of Archaeology
(2nd series, vol. i., 1897) by Halbherr, tells us that the weapons
of a warrior, the wool of a woman, the plough of a peasant, could
not be taken from them as pledges. We find a similar idea in
the prohibition to take from a knight his weapons, from a villein
his plough, in payment of fines, which obtained in medieval
England and was actually inserted in Magna Carta. Here also
the similarity extends to details, and is certainly not derived
from direct borrowing or common origin but from analogies of
situations translating themselves into analogies of legal thought.
It may be said in a sense that for the ethnological school the less
relationship there is between the compared groups the more
instructive the comparison turns out to be.

The collection of ethnological parallels for the use of sociology
and comparative jurisprudence has proceeded in a most fruitful
manner. By the side of special monographs about single tribes
or geographical groups of tribes, such as Komalaroi and Kurnai,
by L. Fison & A. W. Howitt (1880), and The Native Tribes of
Australia, by Baldwin Spencer & F. G. Gillen (1890), the whole
range of ethnological jurisprudence was gone through by Wilken
in regard to the inhabitants of the Dutch possessions in Asia, by
M. M. Kovalevsky in regard to Caucasians, &c. As a rule the
special monographs turned out to be more successful than the
general surveys, but the interest of the special monographs
themselves depended partly on the fact that people's eyes had
been opened to the recurrence of certain widespread phenomena
and to the development of new historical investigation trends.
Ethnologists of Post's school have not had it entirely
their own way, however. Not only did their natural opponents,
the philologists, historians and jurists, reproach them with lack
of critical discrimination, with a tendency to disregard funda-
mental distinctions, to wipe out characteristic features, to throw
the most disparate elements into the same pot. In their own
ranks a number of conscientious and scientifically trained
investigators protested against the haphazard manner in which the most intricate problems were treated, and sought to evolve more definite methodical rules. P. and F. Sarrasin in their description of the Ceylon Veddahs showed a most primitive race scattered in small clusters, monogamous and patriarchial in their marriage customs and systems of relationship. E. A. Westernmarck challenged the sweeping generalizations indulged in by many ethnologists about primitive promiscuity in sexual relations and the necessary passage of all human tribes through the stages of matriarchy and group marriage.

A very interesting departure was attempted by Dargun in his studies on the origin and development of property and his treatise on mother-right and marriage by capture. His lead was followed by R. Hildebrand in the monograph on law and custom. The principal idea of these inquirers may be stated as follows. We must utilize ethnological as well as historical materials from the whole world, but it is not use doing this indiscriminately. Fruitful comparisons may be instituted mainly in the case of tribes on the same level in their general culture and especially their economic pursuits. Hunting tribes must be primarily compared with other hunters, fishers with fishers, pastoral nations with pastoral nations, agriculturists with agriculturists; nations in transitional stages from one type of culture to the other have to be grouped and examined by themselves. The result would be to establish certain parallel lines in the development of institutions and customs. From this point of view both Dargun and Hildebrand attacked the prevailing theory of primitive communism and insisted on the atomic individualism of the rudimentary civilization of hunting tribes. Collectivism in the treatment of ownership, common field husbandry, practices of joint holdings, co-oration, common stores, &c., make their appearance according to Dargun in consequence of the drawing together of scattered groups and smaller independent settlements. An evolution of the same kind leading from loose unions around mothers through marriage by capture to patriarchal kindreds with the idea of the history of relationship. Grosse (Die Formen der Familie und der Wirtschaft, 1896) followed in a similar strain. Another line of criticism was opened up from the side of exact sociological study. Its best exponent is Steinmetz, who represents with Wilken the Dutch group of investigators of social phenomena. He takes up a standpoint which severs him entirely from the linguistic and historic school. In a discourse on the Meaning of Sociology (p. 10) he expresses himself in the following words: "One who judges of the social state of the Hindus by the book of Manu takes the ideal notions of one portion of the people for the actual conditions of all its parts." In regard to jurisprudence he distinguishes carefully between art and science. "Jurisprudence in the wider sense is an art, the art of framing rules for social intercourse in so far as these rules can be put into execution by the state and its organs, as well as the art of interpreting and applying these rules. In another sense it is pure science, the investigation of all consciously formulated and actually practiced conditions belonging to the history of life and thought, with the history of life of existing and bygone nations, without a knowledge and understanding of which a knowledge and understanding of law as its outcome is, of course, impossible." In this sense jurisprudence is a part of ethnology and of the comparative history of culture. But in order to grapple with such a tremendous task comparative jurisprudence has not only to call to help the study of scattered ethnological facts. This is not sufficient to widen the frame of observation and to realize the relative character of the principles with which practical lawyers operate, without ever putting in question their general acceptance or logical derivations. Ethnological studies themselves have to look for guidance to psychology, especially to the psychology of emotional life and of character. Although these branches of psychological science have been much less investigated than the study of intellectual processes, they still afford material help to the ethnologist and the comparative jurist; and Steinmetz himself made a remarkable attempt to utilize a psychological analysis of the feelings of revenge in his Origins of Punishment.

6. The necessity of employing more stringent standards of criticism and more exact methods is now recognized, and it is characteristic that the foremost contemporary representative of comparative jurisprudence, Joseph Kohler of Berlin, principal editor of the Zeitschrift für vgl. Rechtswissenschaft, often gives expression to this view. Beginning with studies of procedure and private law in the provinces of Germany where the French law of the Code Napoleon was still applied, he has thrown his whole energy into monographic surveys and investigations in all the departments of historical and ethnological jurisprudence. The code of Khamburabi and the Babylonian contracts, the ancient Hindu codes and juridical commentaries on them, the legal customs of the different tribes and provinces of India, the collection and sifting of the legal customs of aborigines in the German colonies in Africa, the materials supplied by investigators of Australian and American tribes, the history of legal customs of the Mahommedans, and numberless other points of ethnological research, have been treated by him in articles in his Zeitschrift and in other publications. Comprehensive attempts have also been made by him in a synthetic treatment of certain sides of the law—like the law of debt in his Shakespeare vor dem Forum der Jurisprudenz (1883) or his Primitive History of Marriage. Undoubtedly we have not to deal in this case with mere accumulation of material or with remarks on casual analogies. And yet the importance of these works consists mainly in their extensive range of observation. The critical side is still on the second plane, although not conspicuously absent as in the case of Post and some of his followers. We may sympathize cordially with Kohler's exhortation to work for a universal history of law without yet perceiving clearly what the stages of this universal history are going to be. We may acknowledge the enormous importance of Morgan's and Bachofen's discoveries without feeling bound to recognize that all tribes and nations of the earth have gone substantially through the same forms of development in respect of marriage custom, and without admitting that the evidence for a universal spread of group-marriage has been produced. Altogether the approach seems not entirely unfounded that investigations of this kind are carried on too much under the sway of a preconceived notion that some highly peculiar arrangement entirely different from what we are practising nowadays—say sexual promiscuity or communism in the treatment of property—must be made out as a universal clue to earlier stages of development. Kohler's occasional remarks on matters of method (e.g. Zeitschrift für vgl. Rechtswissenschaft, xii. 193 seq.) seem hardly adequate to dispel this impression. But in his own work and in that of some of his forerunners and followers, J. E. Hitzig, Hellwig, Max Huber, R. Daresto, more exact forms and means of inquiry are gradually put into practice, and the results testify to a distinct heightening of the scientific standard in this group of studies on comparative jurisprudence. Especially conspicuous in this respect are three tendencies: (a) the growing disinclination to accept authorities of any name belonging to widely different spheres of culture as necessarily produced by the same ideas themselves (e.g. Darinsky's review of Kovalevsky's assumptions as to group marriage among the Caucasian tribes, *Z. für vgl. Rv.,* xiv. 151 seq.); (b) the selection of definite historical or ethnological territories for monographic inquiries, in the course of which arrangements observed elsewhere are treated as suggestive material for supplying gaps and starting possible explanations: Kohler's own contributions have been mainly of this kind; and the treatment of selected subjects by an intensive legal analysis, bringing out the principles underlying one or the other rule, its possible differentiation, the means of its application in practice, &c.; Hellwig's monograph on the right of sanctuary in savage communities (Das Asylrecht der Naturvölker) may be named in illustration of this analytical tendency. Altogether, there can be no doubt that the stage has been reached by comparative jurisprudence when, after a hasty, one might almost say a voracious consumption of materials, investigators begin to strive towards careful sifting of evidence and a conscious examination of methods and critical rules which have to be followed in order
to make the investigations undertaken in this line worthy of their scientific aims. Until the latter has been done many students, whose true spirit would seem to lead them naturally into this domain, may be repelled by the unfailing distinctness with which mere analogies are treated as licences proofs by some of the representatives of the comparative school. F. W. Mail-land, for instance, was always kept back by such considerations.

7. It is desirable, in conclusion, to review the entire domain of comparative jurisprudence, and to formulate the chief principles of method which have to be taken into consideration in the course of this study. It is evident, to begin with, that a scientific comparison of facts must be directed towards two aims -towards establishing and explaining similarities, and towards enumerating and explaining differences. As a matter of fact the same material may be studied from both points of view, though logically these are two distinct processes.

(a) Now at this initial stage we have already to meet a difficulty and to guard against a misconception: we have namely to reckon with the plurality of causes, and are therefore debarred from assuming that wherever similar phenomena are forthcoming they are always produced by identical causes. Death may be produced by various agents -by sickness, by poison, by a blow. The habit of wearing mourning upon the death of a relation is a widespread habit, and yet it is not always to be ascribed to real or supposed grief and the wish to express it in one's outward get-up. Savage people are known to go into mourning in order to conceal themselves from the terrific spirit of the dead which would recognize them in their everyday costume (Jhering, Der Zweck im Recht, 2nd ed., 1884-1886). This is certainly a momentous difficulty at the start, but it can be greatly reduced and guarded against in actual investigation. In the example taken we are led to suppose different origin because we are informed as to the motives of the external ceremony, and thus we are taught to look not only to bare facts, but to the psychological environment in which they appear. And it is evident that the greater the complexity of observed phenomena, the more they are made up of different elements welded into one sum, the less probability there is that we have to do with consequences derived from different causes. The recurrence of group-marriage in Australia and among the Red Indians of North America can in no way be explained by the working of entirely different agencies. And it may be added that in most cases of an analysis of social institutions the limits of human probability and reasonable assumption do not coincide with mathematical possibility in any sense. When we register our facts and causes in algebraic forms, marking the first with a, b, c, and the latter with x, y, z, we are apt to demand a degree of precision which is hardly ever to be met with in dealing with social facts and causes. Let us rest content with reasonable inferences and probable explanations.

(b) The easiest way of explaining a given similarity is by attributing it to a direct loan. The process of reception, of the borrowing of one people from the other, plays a most notable part in the history of institutions and ideas. The Japanese have in our days engraved many European institutions on their perfectly distinct civilization; the Germans have used for centuries what was termed euphemistically the Roman law of the present time (heutiges römisches Recht); the Romans absorbed an enormous amount of Greek and Oriental law in their famous jurisprudence. A check upon explanation by direct loan will, of course, lie in the fact that two societies are entirely disconnected, so that it comes to be very improbable that one drew its laws from the other. Although migrations of words, legends, beliefs, charms, have been shown by Theodor Benfey and his school to be a reality, we cannot, such wide areas, think of such a source as being possible in this case. Now, if we do not look to India in order to explain the burning of widows among the negroes of Africa; the suttee may be the example of this custom which happens to be most familiar to us, but it is certainly not the only root of it on the surface of the earth.

It is much more difficult to make out the share of direct borrowing in the case of peoples who might conceivably have influenced one another. A hard and fast rule cannot be laid down in such cases, and everything depends on the weighing of evidence and sometimes on almost instinctive estimates. The use of a wager for the benefit of the tribunal in the early procedure of the Romans and Greeks, the sacramentum and the ποταμεία, with a similar growth of the sum laid down by the parties in proportion to the interests at stake, has been explained by a direct borrowing by the Romans from the Greeks at the time of the Twelve Tables legislation (Hofmann, Beiträge zur Geschichte des griechischen und römischen Rechts). No direct proof is available for this hypothesis, and the question in dispute might have lain for ever between this explanation and that based on the analogous development in the two closely related branches of law. The further study of the legal antiquities of other branches of the Aryan race leads one to suppose, however, that there are actually to be found in the latter and not with the former eventuality. Why should the popular custom of the Vaddhin in Bohemia (Kaprio, “Das Pfandrecht in altböhmischem Land-recht,” Z. für vgl. R.-wissenschaft, xvii. 424 seq.), regulating the wager of litigation in the case of two parties submitting their dispute to the decision of a public tribunal, turn out to be so similar to the Greek and the Roman process? And the Teutonic Wedde would further countenance the view that we have to do in this case with analogous expediency or, possibly, common origin, not loans. But while dwelling on considerations which may disprove the assumption of direct loans, we must not omit to mention circumstances that may render such an assumption the best available explanation for certain points of similarity. We mean especially the recurrence of special secondary traits not deducible from the nature of the relations compared. Terminological parallels are especially convincing in such cases. An example of most careful linguistic investigations attended by important results is presented by W. Thomsen’s treatment of the affinities between the languages and cultures of the peoples of northern and eastern Europe. Taking the indications in regard to the influence of Germanic tribes on Finns and Lapps, we find, for instance, that the Finnish race has stood for some 1500 or 2000 years under “the influence of several Germanic languages—partly of a more ancient form of Gothic than that represented by Ulslas, partly of a northern (Scandinavian) tongue and even possibly of a common Gothic-northern one.” The importance of these linguistic investigations for our subject becomes apparent when we find that a series of most important legal and political terms has been imported from Teutonic into Finnish. For example, the Finnish kunings, “king,” comes from a Germanic root illustrated by O. Norse konung, O. H. Ger. chung, A.-S. cyning, Goth. htidun. The Finnish salo, “power,” “authority,” is of Germanic origin, as shown by O. N. sal, Goth. sadan. The Finnish kindla, a compact secured by solemn promise, is akin with O. N. gisal, A.-S. gisel, O. H. Ger. gisal, “hostage.” The explanation for Finnish vuokra, “interest,” “usury,” is to be found in Gothic vikb, O. N. okr, Ger. Wucher, &c. (W. Thomsen, Über den Einfluss der germanischen Sprachen auf die Finnisch-lappischen, trans. E. Sievers, 1870, p. 166 seq.; cf. W. Thomsen, The Relations between Ancient Russia and Scandinavia and the Origin of the Russian State, p. 127 seq.; Miklosich, “Die Fremdwörter in den slavischen Sprachen,” Denkschriften der Wiener Akademie, Ph. hist. Klasse, XV.).

(c) The next group of analogies is formed by cases which may be reduced to common origin. In addition to what has already been said on the subject in connexion with the literature of the historical school, we must point out that in the case of laws that are to be regarded as having been produced primarily by analogy has, to a great extent, to be regarded, whatever our view may be about the most primitive
stages of development in this respect. The fact that the common stock of Aryan languages and of Aryan legal customs points to a patriarchal organization of the family may be regarded as established, and it is certainly an important fact drawn from a very ancient stage of human history, although there are indications that still more primitive formations may be discovered. Inferences in the direction of common origin become more doubtful when we argue, not that certain facts proceed from a common stock of notions embodied in the early culture of a race before it was broken up into several branches, but that they have to be accounted for as instances of a similar treatment of legal problems by different peoples of the same ethnic family. The only thing that can be said in such a case is that, methodically, the customs of kindred nations have the first claim to comparison. It is evident that in dealing with common forms, composition for homicide, and the like, among the Germans or Slavs, the evidence of other Aryan tribes has to be primarily studied. But it is by no means useless for the investigator of these problems to inform himself about the aspect of such customs in the life of nations of other descent, and especially of savage tribes. The motives underlying legal rules in this respect are to a large extent suggested by feelings and considerations which are not in any way peculiarly Aryan, and may be fully illustrated from other sources, as has been done e.g. in Steinmetz's Origins of Punishment.

(d) This leads to the consideration of what may be called disconnected analogies. They are instructive in so far as they go back, not to any continuous development, but to the fundamental, psychological and logical unity of human nature. In similar circumstances human beings are likely to solve the same problems in the same way. Take a rather late and special case. In the Anglo-Saxon laws of Ine, a king who lived in the 7th century, it is enacted that no landowner should be allowed to claim personal labour service from his tenants unless he provides them not merely with land, but with their households. Now an exactly similar rule is found in the statement of rural by-laws to be enforced on great domains in Africa, which had been taken over by the imperial fiscus—the Lex Manciana (cf. Schulten, Lex manciana). There is absolutely no reason for assuming a direct transference of the rule from one place to the other: it reflects considerations of natural equity which in both cases were directed against similar encroachments of powerful landowners on a dependent peasant population. In both instances government is interfered with in a certain limitation of the right of rent and the performance of labour, and fastened on the same feature to fix the limit, namely, on the difference between peasants living in their own homes and those who had been settled by the landowner on his farms. Of such analogies, the study of savage life presents a great number, e.g. the widely spread practices of purification by ordeal (H. C. Lea, Superstition and Force).

(e) Organizing thought always seeks to substitute order for chaotic variety. Observations as to disconnected analogies lead to attempts to systematize them from some comprehensive point of view. These attempts may take the shape of a theory of consecutive stages of development. Similar facts appear over and over again in ethnological and antiquarian evidence, because all peoples and tribes, no matter what their race and geographical position, go through the same series of social arrangements. This is the fundamental idea which directed the researches of Maine, McLennan, Morgan, Post, Kohler, although each of these scholars formulated his sequence of stages in a peculiar way. McLennan, for instance, puts the idea referred to in the following words:

"In short, it is suggested to us, that the history of human society, is that of a development following very slowly one general law, and that the variety of forms of life—of domestic and civil institution—is ascribable mainly to the unequal development of the different sections of mankind. . . . The first thing to be done is to inform ourselves of the facts relating to the least developed races. To begin with them is to begin with history at the farthest-back point of time to which, except by argument and inference, we can reach."

Their condition, as it may to-day be observed, is truly the most ancient condition of man" (Studies in Ancient History, 2nd series, 9, 15).

On this basis we might draw up tables of consecutive stages, of which the simplest may be taken from Post:—

"Four types of organization: the tribal, the territorial, the seignorial, and the social. The first has as its basis marriage and relationship by blood; the second, neighbouring occupation of a district; the third, patronage relations between lord and dependants; the fourth, social intercourse and contractual relations between individual personalities" (Post, Grundriss, i. 14).

This may be supplemented from Friedrichs in regard to initial stages of family organization. He reckons four stages of this kind: promiscuity, loose relations, matriarchal family, patriarchal family, modern, bilateral family (Z. f. vgl. R. wissenschaft). This mode of grouping similar phenomena as a sequence of stages leads to a conception of universal history of a peculiar kind. And as such it has been realized and advocated by Kohler (see e.g. his article in Helmont's World's History, Eng. trans. i.). Prompted by this conception several representatives of comparative jurisprudence have found no difficulty to insert such a peculiar institution as group-marriage into the general and obligatory course of legal evolution. It is to be noticed, however, that Kohler himself has entered a distinct protest against McLennan's and Post's view that the more rudimentary a people's culture is, the more archaic it is, and the earlier it has to be placed in the natural sequence of evolution: this would create difficulties in the case of tribes of exceedingly low culture, like the Ceylon Veddas, who live in monogamous and patriarchal groups. According to Kohler's view, neither the mere fact of a low standard of culture, nor the fact that a tribe precedes another in some cases in point of time, settles the natural sequence of development. The process of development must be studied in cases when it is sufficiently clear, gaps in other cases have to be supplied accordingly, and the working together of distinct institutions, especially in cases when there is no ethnic connexion, has to be especially noticed. These are counsels of perfection, but Kohler's own example shows sufficiently that it is not easy to follow them to the letter. One thing is, however, clearly indicated by these and similar criticisms; it is, at the least, premature to sketch anything like a course of universal development for legal history. We have grave doubts whether the time will ever come for laying down any single course of that kind. The attempts made hitherto have generally led to over-stating the value of certain parts of the evidence and to squeezing some traits into a less complicated course of evolution.

(f) Another group of thinkers is therefore content to systematize and explain the material from the point of view, not of universal history, but of correspondence to economic stages and types. This is, as we have seen, the leading idea in Dargun's or Hildebrand's investigations. It is needless to go into the question of the right or wrong of particular suggestions made by these writers. The place assigned to individualism and collectivism may be adequate or not; how far can be settled only by special inquiries. But the general trend of study initiated in this direction is certainly a promising one, if only one consideration of method is well kept in view. Investigators ought to be very chary of laying down certain combinations as the necessary outcome of certain economic situations. Such combinations or consequences certainly exist; pastoral husbandry, the life of scattered hunting groups, the conditions of agriculturists under feudal rule, certainly contain elements which will recur in divers ethnical surroundings. But we must not forget a feature which is constantly before our eyes in real life: namely, that different minds and characters will draw different and perhaps opposite conclusions in exactly similar outward conditions. This may happen in identical or similar geographical environment; let us only think of ancient Greeks and Turks on the Balkan peninsula, or of ancient Greeks and modern Greeks for that matter. But even the same historical medium leaves, as a rule, scope for treatment of legal problems on divers lines. Take systems of succession. They exercise the most potent influence on the
structure and life of society. Undivided succession, whether in the form of primogeniture or in that of junior right, sacrifices equity and natural affection to the economic efficiency of estates. Equal-partition rules, like gavelkind or parage, lead in an exactly opposite direction. And yet both sets of rules co-existed among the agriculturists of feudal England; communities placed in nearly identical historical positions followed one or the other of these rules. The same may be said of types of wolfgangs and forms of settlement. In other words, it is not enough to start from an economic condition as if it were bound to regulate with fatalistic precision all the incidents of legal custom and social intercourse. We have to start from actual facts as complex results of many causes, and to try to reduce as much as we can of this material to the action of economic forces in a particular stage or type of development.

(g) The psychological diversities of mankind in dealing with the same or similar problems of food and property, of procreation and marriage, of common defence and relationship, of intercourse and contrast, &c., open another possibility for the grouping of facts and the explanation of their evolution. It may be difficult or impossible to trace the reasons and causes of synthetic combinations in the history of society. That is, we can hardly go beyond noting that certain disconnected features of social life appear together and react on each other. But it is easier and more promising to approach the mass of our materials from the other side, taking for granted certain principles, or rules or institutions, and treating them as the final consequences either through a direct systematization of recorded facts or, when these fail, through logical inferences. Some of the most brilliant and useful work in the struggle of history has been limited on these lines. Mommsen's theory of Roman magistracy, Jhering's theory of the struggle for right, Kohler's view of the evolution of contract, &c., have each been made by a process of legal analysis; and, even when such generalizations have been curtailed or complicated later on, they serve their turn as a powerful means of organizing evidence and suggesting reasonable explanations. The attribute of "reasonableness" has to be reckoned with largely in such cases. Analytical explanations are attractive to students because they substitute logical clearness for irrational accumulation of traits and facts. They do so to a large extent through appeals to the logic and to the reason common to us and to the people we are studying. This deductive element has to be closely watched and tested from the side of a concrete study of the evidence, for it may easily form part of the comparative history of law, because legal analysis and construction have at all times striven to embody logic and equity in the domain of actual interests and forces. And, as we have seen in our survey of the literature of the subject, recent comparative studies tend to make the share of juridical analysis in given relative surroundings larger and larger. What is so difficult an attainment to single workers—a harmonious appreciation of the combined influences of common origin, reception of foreign custom, recurring psychological combinations, the driving forces of economic culture and of the dialectical process of legal thought, will be achieved, it may be hoped, by the enthusiastic and brotherly exertions of all the workers in the field.

JURJANI—JURY

JURJANI, the name of two Arabic scholars.

1. ABU BAKR ABDU-L-Qahir ibn ABDUR-RAHMÄN UJURJANI (d. 778), Arabian grammarian, belonged to the Persian school and wrote a famous grammar, the Kitâb ul-Avdâmil ul-Mi'a or Kitâb Mi'a 'Amîl, which was edited by Erpenius (Leiden, 1617), by Baillie (Calcutta, 1803), and by Lockett (Calculta, 1814). Ten Arabic commentaries on this work exist in MS., also two Turkish. It has been versified times and translated into Persian. Another of his grammatical works on several commentaries have been written is the Kitâb Jumal fi-n-Nawh.

For other works see C. Brockelmann's Gesch. der Arabischen Literatur (1898), i. 298.

2. ALE IBN MAHMED UJURJANI (1330-1414), Arabic encyclopedic writer, was born near Astarahmad and became professor in Shiraz. When this city was plundered by Timur (1387) he removed to Sambark, but returned to Shiraz in 1405, and remained there until his death in his thirty-one extant works. Being commentaries on other works, one of the best known is the Tarif'd (Definitions), which was edited by G. Flügel (Leipzig, 1845), published also in Constantinople (1837), Cairo (1866, &c.), and St Petersburg (1897).

JURY, in English law, a body of laymen summoned and sworn (jurati) to ascertain, under the guidance of a judge, the truth as to questions of fact raised in legal proceedings whether civil or criminal. The development of the system of trial by jury has been regarded as one of the greatest achievements of English jurisprudence; it has even been said that the ultimate aim of the English constitution is "to get twelve good men into a box." In modern times the English system of trial by jury...
has been adopted in many countries in which jury trial was not native or had been strangled or imperfectly developed under local conditions.

The origin of the system in England has been much investigated by lawyers and historians. The result of these investigations is a fairly general agreement that the germ of jury trial is to be found in the Frankish inquest (recognitio or inquisitio) transplanted into England by the Norman kings. The essence of this inquest was the summoning of a body of neighbours by a public officer to give answer upon oath (rejociscere veritatem) on some question of fact or law (jus), or of mixed fact and law. At the outset the object of the inquiry was usually to obtain information for the king, e.g. to ascertain facts needed for assessing taxation. Indeed Domesday Book appears to be made up by recording the answers of inquests.

The origin of juries is very fully discussed in W. Forsyth's History of Trial by Jury (1852), and the various theories advanced are more concisely stated in W. Stubbs's Constitutional History (vol. i.) and in E. A. Freeman's Norman Conquest (vol. v.). Until the modern examination of historical documents proved the contrary, the jury system, like all other institutions, was popularly regarded as the work of a single legislator, and in England it has been usually assigned to Alfred the Great. This supposition is without historical foundation, nor is it correct to regard the jury as "copied from this or that kindred institution to be found in this or that German of Scandinavian land," or brought over ready made by Hengist or by William.1 "Many writers of authority," says Stubbs, "have maintained that the entire jury system is indigenous in England, some deriving it from Celtic tradition based on the principles of Roman law, and adopted by the Anglo-Saxons and Normans from the people they had conquered. Others have regarded it as a product of that legal genius of the Anglo-Saxons of which Alfred is the mythical impersonation, or as derived by that nation from the customs of primitive Germany or from their intercourse with the Danes. Nor even when it is admitted that the system of 'recognition' was introduced from Normandy have legal writers agreed as to the source from which the Normans themselves derived it. One scholar maintains that it was brought by the Norsemen from Scandinavia; another that it was derived from the processes of the canon law; another that it was developed on Gallic soil from Roman principles; another that it came from Asia through the crusades, or was borrowed by the Angles and Saxons from their Slavonic neighbours in northern Europe. The true answer is that forms of trial resembling the jury system in various particulars are to be found in the primitive institutions of all nations. That which comes nearest in time and character to trial by jury is the system of recognition by sworn inquest, introduced into England by the Normans. "That inquest," says Stubbs, "is directly derived from the Frank capitularies, into which it may have been adopted from the fiscal regulations of the Theodosian code, and thus own some distant relationship with the Roman jurisprudence." However that may be, the system of "recognition" consisted in questions of fact, relating to fiscal or judicial business, being submitted by the officers of the crown to sworn witnesses in the local courts. Freeman points out that the Norman rulers of England were obliged, more than native rulers would have been, to rely on this system for accurate information. They needed to have a clear and truthful account of disputed points set before them, and such an account was sought for in the oaths of the recognitores.2 The Norman conquest, therefore, fostered the growth of those native germ common to England with the other countries of Rome than the institution of juries grew. Recognition, as introduced by the Normans, is only, in this point of view, another form of the same principle which shows itself in the compurgators, in the frith-borh (frank-pledge), in every detail of the action of the popular courts before the conquest. Admitting

with Stubbs that the Norman recognition was the instrument which the lawyers in England ultimately shaped into trial by jury, Freeman maintains none the less that the latter is distinctively English. Forsyth comes to substantially the same conclusion. Noting the jury germ of the Anglo-Saxon period, he shows how out of those elements, which continued in full force under the Anglo-Normans, was produced at last the institution of the jury. "As yet it was only implied in the requirement that disputed questions should be determined by the voice of sworn witnesses taken from the neighbourhood, and deposing to the truth of what they had seen or heard." The conclusions of Sir F. Pollock and F.W. Maitland, expressed in their History of English Law, and based on a closer study, are to the same effect.

This inquest then was a royal institution and not a survival from Anglo-Saxon law or popular custom, under which compurgation and the ordeal were the accepted modes of trying issues of fact.

The inquest by recognition, formerly an inquest of office, i.e. to ascertain facts in the interests of the crown or the exchequer, was gradually allowed between subjects as a mode of settling disputes of fact. This extension began with the assize of novel disseisin, whereby the king protected by royal writ and inquest of neighbours every seisin of a freehold. This was followed by the grand assize, applicable to questions affecting freehold or status. A defendant in such an action was enabled by an enactment of Henry II. to decline trial by combat and choose trial by assize, which was conducted as follows. The sheriff summoned four knights of the neighbourhood, who being sworn chose the twelve lawful knights most cognisant of the facts, to determine on their oaths which had the better right to the land. If they all knew the facts and were agreed as to their verdict, well and good; if some or all were ignorant, the fact was certified in court, and new knights were named, until twelve were found to be agreed. The same course was followed when the twelve were not unanimous. New knights were added until the twelve were agreed. This was called afforcing the assize. At this time the knowledge on which the jurors acted was their own personal knowledge, acquired independently of the trial. "So entirely," says Forsyth, "did they proceed upon their own previously formed view of the facts in dispute that they seem to have considered themselves at liberty to pay no attention to evidence offered in court, however clearly it might disprove the case which they were prepared to support." The use of recognition is prescribed by the constitutions of Clarendon (1166) for cases of dispute as to lay or clerical tenure. See Forsyth, p. 131; Stubbs, i. 617.

This procedure by the assize was confined to real actions, and while it preceded, it is not identical with the modern jury trial in civil cases, which was gradually introduced by consent of the parties and on pressure from the judges. Jury trial proper differs from the grand and petty assizes in that the assizes were summoned at the same time as the defendant to answer a question formulated in the writ; whereas in the ordinary jury trial no order for a jury could be made till the parties by their pleadings had come to an issue of fact and had put themselves on the country, posuerunt se super patriam (Pollock and Maitland, i. 119-128; ii. 601, 615, 621).

The Grand Jury.—In Anglo-Saxon times there was an institution analogous to the grand jury in criminal cases, viz. the twelve senior thegns, who, according to an ordinance of Æthelred II., were sworn in the county court that they would accuse no innocent man and acquit no guilty one. The twelve thegns were either of presentment or accusation, like the grand jury of later times, and the absolute guilt or innocence of those accused by them had to be determined by subsequent proceedings—by compurgation or ordeal. Whether this is the actual origin of the grand jury or not, the assizes of Clarendon (1166) and Northampton (1176) establish the criminal jury on a definite basis.

In the laws of Edward the Confessor and the earlier Anglo-Saxon kings are found many traces of a public duty to bring
offenders to justice, by hue and cry, or by action of the frieth-bork, township, tithing or hundred. By the assize of Clarendon it was directed that inquiry be made in each county and in each hundred by twelve lawful (legaliores) men of the hundred, and by four lawful men from each of the four vills nearest to the scene of the alleged crime, on oath to tell the truth if in the hundred or vill there is any man accused (rettatus aut publicitus) as a robber or murderer or thief, or receiver of such. The assize of Northampton added forgery of coin or charters (falsanoria) and arson. The inquiry is to be held by the justices in eyre, and by the sheriffs in their county courts. On a finding on the oath aforesaid, the accused was to be taken and to go to the ordeal. By the articles of visitation of 1164, four knights are to be chosen from the county who by their oath shall choose two lawful knights of each hundred or wapentake, or, if knights be wanting, free and legal men, so that the twelve may answer for all matters within the hundred, including, says Stubbs, "all the pleas of the crown, the trial of malefactors and their receivers, as well as a vast amount of civil business." The process thus described is now regarded as an employment of the Frankish inquest for the collection of jama publica. It was alternative to the rights of a private accuser by appeal, and the inquest were not exactly either accusers or witnesses, but gave voice to public repute as to the criminality of the persons whom they presented. From this form of inquest has developed the grand jury of presentment or accusation, and the coroner's inquest, which works partly as a grand jury as to homicide cases, and partly as an inquest of office as to treasure trove, &c.

The number of the grand jury is fixed by usage at not less than twelve nor more than twenty-three jurors. Unanimity is not required, but twelve must concur in the presentment or indictment. This jury retains so much of its ancient character that it may present of its own knowledge or information, and is not tied down by rules of evidence. After a general charge by the judge, which sets forth the bills of indictment on the file of the court, the grand jury considers the bills in private and hears upon oath in the grand jury chamber some or all the witnesses called in support of an indictment whose names are endorsed upon the bill. It does not as a rule hear counsel or solicitors for the prosecution, nor does it see or hear the accused or his witnesses, and it is not concerned with the nature of the defence, its functions being to ascertain whether there is a prima facie case against the accused justifying his trial. If it thinks that there is such a case, the indictment is returned into court as a true bill; if it thinks that there is not, the bill is ignored and returned into court torn up or marked "no bill," or "ignoramus." Inasmuch as no man can be put on trial for treason or felony, and few are tried for misdemeanour, without the intervention of the grand jury, the latter has a kind of veto with respect to criminal prosecutions. The grand jurors are described in the indictment as "the jurors for our lord the king." As such prosecutions in respect of indictable offences are now in almost all cases begun by a full preliminary inquiry before justices, and inasmuch as cases rarely come before a grand jury until after committal of the accused for trial, the present utility of the grand jury depends very much on the character of the justices' courts. As a review of the discretion of stipendiary magistrates in committing cases for trial, the intervention of the grand jury is in most cases superfluous; and even when the committing justices are not lawyers, it is now a common opinion that their views as to the existence of a case to be submitted to a jury for trial should not be over-ridden by a lay tribunal sitting in private, and in this opinion many grand jurors concur. But the abolition of the grand jury would involve great changes in criminal procedure for which parliament seems to have no appetite. Forsyth thinks that the grand jury will often baffle the attempts of malevolence by ignoring a malicious and unfounded prosecution; but it may also defeat the ends of justice by shielding a criminal with whom it has strong political or social sympathies. The qualification of the grand jurymen is that they should be freeholders of the county—to what amount appears to be uncertain—and they are summoned by the sheriff, or failing him by the coroner. The coroner's jury must by statute (1857) consist of not more than twenty-three nor less than twelve jurors. It is summoned by the coroner to hold an inquest super visum corporis in cases of sudden or violent death, and of death in prisons or lunatic asylums, and to deal with treasure trove. The qualification of the coroner's jurors does not depend on the Juries Acts 1825 and 1870, and in practice they are drawn from householders in the immediate vicinity of the place where the inquest is held. Unanimity is not required of a coroner's jury; but twelve must concur in the verdict. If it charges anyone with murder or manslaughter, it is duly recorded and transmitted to a court of assize, and has the same effect as an indictment by a grand jury, i.e. it is accusatory only and is not conclusive, and is traversable, and the issue of guilt or innocence is tried by a petit jury.

The Petty Jury.—The ordeal by water or fire was used as the final test of guilt or innocence until its abolition by decree of the Lateran council (1219). On its abolition it became necessary to devise a new mode of determining guilt as distinguished from ill fame as charged by the grand jury. So early as 1221 accused persons had begun to put themselves on the country, or to pay to have a verdict for "good or ill"; and the trial seems to have been by calling for the opinions of the twelve men and the four townships, which may have been regarded as a second body of witnesses who could traverse the opinion of the hundred jury. (See Pollock and Maitland, i, 56.) The reference to judicium parium in Magna Carta is usually taken to refer to the jury, but it is clear that what is now known as the petty jury was not then developed in its present form. The history of that institution is still in manuscript," says Maitland. "It was a curious system, remote from the common law and practice of the court of law. The trial by the country (in pais; in patria) was before another and different jury. The earliest instances look as if the twelve men and the four vills were the patria and had to agree. But by the time of Edward I. the accused seems to have been allowed to call in a second jury. A person accused by the inquest of the hundred was allowed to have the truth of the charge tried by another and different jury. There is," says Forsyth, "no possibility of assigning a date to this alteration." "In the time of Bracton (middle of the 13th century) the usual mode of determining innocence or guilt was by combat or appeal. But in most cases the appellant had the option of either fighting with his adversary or putting himself on his country for trial"—the exceptions being murder by secret poisoning, and certain circumstances presumed by the law to be conclusive of guilt. But the separation must have been complete by 1352, in which year it was enacted "that no indictor shall be put in inquests upon deliverance of the indentures of any of felonies or trespass if he be challenged for that same cause by the indictor."

The jurors, whatever their origin, differed from the Saxon doomsmen and the jurors of the Channel Islands in that they adjudged nothing; and from compurgators or oath-helpers in

1 Blackstone puts the principle as being that no man shall be convicted except by the unanimous voice of twenty-four of his equals or neighbours—twelve on the grand, and twelve on the petty jury.

2 The distinction between the functions of the grand jury, which presents the cases charged in the petty plea or the original trial by jury, and the petit jury, which has suggested the theory that the system of compurgation is the origin of the jury system—the first jury representing the compurgators of the accused, the second the compurgators of the accused, and the third the accused himself—has often baffled the attempts of malevolence by ignoring a malicious and unfounded prosecution; but it may also defeat the ends of justice by shielding a criminal with whom it has
that they were not witnesses called by a litigant to support his case (Pollock and Maitland, i. 18). Once established, the jury of trial whether of actions or indictments developed on the same lines. But at the outset this jury differed in one material respect from the modern trial jury. The ancient trial jury certify to the truth from their knowledge of the facts, however acquired. In other words, they resemble witnesses or collectors of local evidence or gossip rather than jurors. The complete withdrawal of the witness character from the jury is connected by Forsyth with the ancient rules of law as to proof of written instruments, and a peculiar mode of trial per sectam. When a deed is attested by witnesses, you have a difference between the testimony of the witness, who deposes to the execution of the deed, and the verdict of the jury as to the fact of execution. It has been contended with much plausibility that in such cases the attesting witnesses formed part of the jury. Forsyth doubts that jury, although he assumes that, if the jurors themselves were originally mere witnesses, there was no distinction in principle between them and the attesting witnesses, and that the attesting witnesses might be associated with the jury in the discharge of the function of giving a verdict. However that may be, in the reign of Edward III., although the witnesses are spoken of "as joined to the assize," they are distinguished from the jurors. The trial per sectam was used as an alternative to the assize or jury, and resembled in principle the system of compurgation. The claimant proved his case by vouching a certain number of witnesses (secta), who had seen the transaction in question, and the defendant rebutted the presumption thus created by vouching a larger number of witnesses on his own side. In cases in which this was allowed, the jury did not interpose at all, but in course of time the practice arose of the witnesses of the secta telling their story to the jury. In these two instances we have the jury as judges of the facts, simply contrasted with the witnesses who testify to the facts; and, with the increasing use of juries and the development of rules of evidence, this was gradually established as the true principle of the system. In the reign of Henry IV. we find the judges declaring that the jury after they have been sworn should not see or take with them any other evidence than that which has been offered in open court. But the personal knowledge of the jurors was not as yet regarded as outside the evidence on which they might found a verdict, and the stress laid upon the selection of jurymen from the neighbourhood of the cause of the action shows that this element was counted on, and, in fact, deemed essential to a just consideration of the case. Other examples of the same theory of the duties of the jury may be found in the language used by legal writers. Thus it has been said that the jury may return a verdict although no evidence at all be offered, and again, that the evidence given in court is not binding on the jury, because they are not bound to take it from their local knowledge to be sufficiently informed of the facts to give a verdict without or in opposition to the oral evidence. A recorder of London, temp. Edward VI., says that, "if the witnesses at a trial do not agree with the jurors, the verdict of the twelve shall be taken and the witnesses shall be rejected." Forsyth suggests as a reason for the continuance of this theory that it allowed the jury an escape from the attainit, by which penalties might be imposed on them for delivering a false verdict in a civil case. They could suggest that the verdict was according to the fact, though not according to the evidence.

In England the trial jury (also called petty jury or traverse jury) consists of twelve jurors, except in the county court, where the number is eight. In civil but not in criminal cases the trial may be consent by be fewer than twelve jurors, and the verdict may by consent be that of the majority. The rule requiring a unanimous verdict has been variously explained. Forsyth regards the rule as intimately connected with the original character of the jury as a body of witnesses, and with the conception common in primitive society that safety is to be found in the number of witnesses, rather than the character of their testimony. The old notion seems to have been that to justify an accusation, or to find a fact, twelve sworn men must be agreed. The affording of the jury, already described, marks an intermediate stage in the development. Where the juries were not unanimous new jurors were added until twelve were found to be of the same opinion. From the unanimous twelve selected out of a large number to the unanimous twelve constituting the whole jury was a natural step, which, however, was not taken without hesitation. In some old cases the verdict of eleven jurors out of twelve was accepted, but it was decided in the reign of Edward III. that the verdict must be the unanimous opinion of the whole jury. Diversity of opinion was taken to imply perversity of judgment, and the law sanctioned the application of the harshest methods to produce unanimity. The jurors while considering their verdict were not allowed a fire nor any refreshment, and it is said in some of the old books that, if they failed to agree, they could be put in a cart and drawn after the justices to the border of the county, and then allowed home. The rule of unanimity has been softened in later practice, but in criminal cases the rule of unanimity is still absolutely fixed.

In civil cases and in trials for misdemeanour, the jurors are allowed to separate during adjournments and to return to their homes; in trials for treason, treason-felony and murder, the jurors, once sworn, must not separate until discharged. But by an act of 1897 jurors on trials for other felonies may be allowed by the court to separate in the same way as on trials for misdemeanour.

These rules do not apply to a jury which has retired to consider its verdict. During the period of retirement it is under the keeping of an officer of the court.

At common law aliens were entitled to be tried by a jury de mediatate linguae—half Englishmen, half foreigners, not necessarily compatriots of the accused. This privilege was abolished by the Naturalization Act 1870; but by the Juries Act 1870 aliens who have been domiciled in England or Wales for ten years or upwards, or in other respects duly qualified, are liable to jury service as if they were natural-born subjects (s. 8).

A jury of matrons is occasionally summoned, viz. on a writ de ventre inspiciendo, or where a female condemned to death pleads pregnancy in stay of execution.

The jurors are selected from the inhabitants of the county, borough or other area for which the court to which they are summoned is commissioned to act. In criminal cases, owing to the rules as to venue and that crime is to be tried in the neighbourhood where it is committed, the mode of selection involves a certain amount of independent local knowledge on the part of the jurors. Where local prejudice has been aroused for or against the accused, which is likely to affect the chance of a fair trial, the proceedings may be removed to another jurisdiction, and there are a good many offences in which by legislation the accused may be tried. There are many cases where the accused is in the place where he is alleged to have broken the law. As regards civil cases, a distinction was at an early date drawn between local actions which must be tried in the district in which they originated, and transitory actions which could be tried in any county. These distinctions are now of no importance, as the place of trial of a civil action is decided as a matter of procedure and convenience, and regard is not necessarily paid to the place at which a wrong was done or a contract broken.

The qualifications for, and exemptions from, service as a petty juror are in the main contained in the Juries Acts 1825 and 1870, though a number of further exemptions are added by scattered enactments. The exemptions include members of the legislature and judges, ministers of various denominations, and practising barristers and solicitors, registered medical practitioners and dentists, and officers and soldiers of the regular army. Persons over sixty are exempt but not disqualified. Lists of the jurors are prepared by the overseers in each county, and are submitted to justices for revision. When jurors are required for a civil or criminal trial they are summoned by the sheriff or, if he cannot act, by the coroner.

*Special and Common Juries.*—For the purpose of civil trials in the superior courts there are two lists of jurors, special and
common. The practice of selecting special jurors to try important civil cases appears to have sprung up, without legislative enactment, in the procedure of the courts. Forssyth says that the first statutory recognition of it is so late as 3 Geo. II. c. 25, and that in the oldest book of practice in existence (Powell's *Attorney's Academy*, 1629) there is no allusion to two classes of jurymen. The acts, however, which regulate the practice allude to it as well established. The *Juries Act 1870* (33 & 34 Vict. c. 77) defines the class of persons entitled and liable to serve on special juries thus: Every man whose name shall be on the jurors' book for any county, &c., and who shall be legally entitled to be called an esquire, or shall be a person of higher degree, or a banker or merchant, or who shall occupy a house of a certain rateable value (e.g. £500 in a town of 20,000 inhabitants, £30 elsewhere), or of a farm of £300 or other premises at £100. A special jurymen receives a fee of a guinea for each cause. Either party may obtain an order for a special jury, but must pay the additional expenses created thereby unless the judge certifies that it was a proper case to be so tried. For the common jury any man is qualified and liable to serve who has £10 by the year in land or tenements of freehold, copyhold or customary tenure; or £20 on lands or tenement held by lease for twenty-one years or longer, or who being a householder is rated at £30 in the counties of London and Middlesex, or £20 in any other county. A special jury cannot be ordered in cases of treason or felony, and may be ordered in cases of misdemeanor only when the trial is in the king's bench division of the High Court, or the civil side at assizes.

**Challenge.**—It has always been permissible for the parties to challenge the jurors summoned to consider indictments or to try cases. Both in civil and criminal cases a challenge "for cause" is allowed; in criminal cases a peremptory challenge is also allowed. Challenge "for cause" may be either to the *array*, i.e. to the whole number of jurors returned, or to the *polls*, i.e. to the jurors individually. A challenge to the array is either a *principal* challenge (on the ground that the sheriff is a party to the cause, or related to one of the parties), or a challenge for *favour* (on the ground of circumstances implying "at least a probability of bias or favour in the sheriff"). A challenge to the polls is an exception to one or more jurymen on either of the following grounds: (1) *propter honoris respectum*, when a lord of parliament is summoned; (2) *propter defectum*, for want of qualification; (3) *propter affectum*, on suspicion of bias or partiality; and (4) *propter delictum*, when the juror has been convicted of an infamous offence. The challenge *propter defectum* is made on the challenge of the *array*, either principal challenge or "to the favours." In England, a juror may be interrogated to show want of qualification; but in other cases the person making the challenge must prove it without questioning the juror, and the courts do not allow the protracted examination on the *voir dire* which precedes every cause célèbre in the United States. On indictments for treason the accused has a right peremptorily to challenge thirty-five of the jurors on the panel; in cases of felony the number is limited to twenty, and in cases of misdemeanor there is no right of peremptory challenge. The Crown has not now the right of peremptory challenge and may challenge only for cause certain (Juries Act 1825, s. 20). In the case of felony, on the first call of the list jurors objected to by the Crown are asked to stand by, and the cause of challenge need not be assigned by the Crown until the whole list has been perused or gone through, or unless there remain no longer twelve jurors left to try the case, exclusive of those challenged. This arrangement practically amounts to giving the Crown the benefit of a peremptory challenge.

**Function of Jury.**—The jurors were originally the mouthpiece of local opinion on the questions submitted to them, or witnesses to fact as to such questions. They have now become the judges of fact upon the evidence laid before them. Their province is strictly limited to questions of fact, and within that province they are still further restricted to matters proved by evidence in the course of the trial and in theory must not act upon their own personal knowledge and observation except so far as it proceeds from what is called a "view" of the subject matter of the litigation. Indeed it is now well established that if a juror is acquainted with facts material to the case, he should inform the court so that he may be dismissed from the jury and called as a witness; and Lord Ellenborough ruled that a judge would misdirect the jury if he told them that they might reject the evidence and go by their own knowledge. The old *decontatum* assigns to judge and jury their own independent functions: *Ad quaestionem legis respondent judices: ad quaestionem facti juratores* (Plowden, 114). But the independence of the jurors as to matters of fact was from an early time not absolute. In certain civil cases a litigant dissatisfied by the verdict could adopt the procedure by attainder, and if the attendant jury of twenty-four found that the first jury had given a false verdict, they were fined and suffered the infamous judgment. Attaints fell into disuse on the introduction about 1665 of the practice of granting new trials when the jury found against the weight of the evidence, or upon a wrong direction as to the law of the case.

In criminal cases the courts attempted to control the verdicts by fining the jurors for returning a verdict *contra plenam et manifestam evidentiam*. But this practice was declared illegal in Bushell's case (1670); and so far as criminal cases are concerned the independence of the jury as sole judges of fact is almost absolute. If they acquit, their action cannot be reviewed nor punished, except on proof of wilful and corrupt consent to "embracery" (Juries Act 1825, s. 61). If they convict no new trial can be ordered except in the rare instances of misdemeanours tried as civil cases in the High Court. In trials for various forms of libel during the 18th century, the judges restricted the powers of juries by ruling that their function was limited to finding whether the libel had in fact been published, and that it was for the court to decide whether the words published constituted an offence. By Fox's Libel Act 1792 the jurors in such cases were expressly empowered to bring in a general verdict of libel or no libel, i.e. to deal with the whole question of the meaning and extent of the incriminated publication. In other words, they were given the same independence in cases of libel as in other criminal cases. This independence has in times of public excitement operated as a kind of local option against the existing law and as an aid to procuring its amendment. Juries in Ireland in agrarian cases often acquit in the teeth of the evidence. In England the independence of the jury in criminal trials is to some extent menaced by the provisions of the Criminal Appeal Act 1907.

While the jury is in legal theory absolute as to matters of fact, it has never been regarded as largely controlled by the judges. Not only does the judge at the trial decide as to the relevancy of the evidence tendered to the issues to be proved, and as to the admissibility of questions put to a witness, but he also advises the jury as to the logical bearing of the evidence admitted upon the matters to be found by the jury. The rules as to admissibility of evidence, largely based on scholastic logic, sometimes difficult to apply, and almost unknown in continental jurisprudence, coupled with the right of an English judge to sum up the evidence (denied to French judges) and to express his own opinion as to its value (denied to American judges), fetter to some extent the independence or limit the chances of error of the jury.

The whole theory of the jurisdiction of the courts to interfere with the verdict of the constitutional tribunal is that the court is satisfied that the jury have not acted reasonably upon the evidence but have been misled by prejudice or passion (*Wat v. Wall* (1905), App. Cas. 118, per Lord Halsbury). In civil cases the verdict may be challenged on the ground that it is against the evidence or against the weight of the evidence, or unsupported by any evidence. It is said to be against the evidence when the jury have completely misapprehended the facts proved and have drawn an inference so wrong as to be in substance perverse. The dissatisfaction of the trial judge with the verdict is a potent but not conclusive element in determining as to the perversity of a verdict, because of his special opportunity of appreciating the
evidence and the demeanour of the witnesses. But his opinion is less regarded now that new trials are granted by the court of appeal than under the old system when the new trial was sought in the court of which he was a member.

The appellate court will not upset a verdict when there is substantial and conflicting evidence before the jury. In such cases it is for the jury to say which side is to be believed, and the court will not interfere with the verdict. To upset a verdict on the ground that there is no evidence to go to the jury implies that the judge at the trial ought to have withdrawn the case from the jury. Under modern procedure, in order to avoid the risk of a new trial, it is not uncommon to take the verdict of a jury on the hypothesis that there was evidence for their consideration, and to leave the unsuccessful party to apply for judgment notwithstanding the verdict. The question whether there was any evidence proper to be submitted to the jury arises oftenest in cases involving an imputation of negligence—e.g., in an action of damages against a railway company for injuries sustained in a collision. Juries are somewhat ready to infer negligence, and the court has to say whether, on the facts proved, there was any evidence of negligence or of its absence. This is by no means the same thing as saying whether, in the opinion of the court, there was negligence. The court may be of opinion that on the facts there was none, yet the facts themselves may be of such a nature as to be evidence of negligence to go before a jury. When the facts proved are such that a reasonable man might have come to the conclusion that there was negligence, then, although the court would not have come to the same conclusion, it must admit that there is evidence to go before the jury. This statement indicates existing practice but scarcely determines what relation between the facts proved and the conclusion to be established is necessary to make the facts evidence from which a jury may infer the conclusion. The true explanation is to be found in the principle of relevancy. Any fact which is relevant to the issue constitutes evidence to go before the jury, and any fact, roughly speaking, is relevant between which and the fact to be proved there may be a connection as cause and effect (see Evidence). As regards damages the court has always had wide powers, as damages are often a question of law. But when the amount of the damages awarded by a jury is challenged as excessive or inadequate, the appellate court, if it considers the amount unreasonably large or unreasonably small, must order a new trial unless both parties consent to a reduction or increase of the damages to a figure fixed by the court; see Watt v. Watt (1905), App. Cas. 115.

**Value of Jury System.**—The value of the jury in past history as a bulwark against aggression by the Crown or executive cannot be over-rated, but the working of the institution has not escaped criticism. Its use protracts civil trials. The juries are usually unwilling and are insufficiently remunerated; and jury trials in civil cases often drag out much longer and at greater expense than trials by a judge alone, and the proceedings are occasionally rendered ineffective by the failure of the jurors to agree.

There is much force in the arguments of Bentham and others against the need of unanimity—the application of pressure to force a verdict on the minds of jurors, the indifference to veracity which the concurrence of unconvincing minds must produce in the public mind, the probability that juries will disagree and trials be rendered abortive, and the absence of any reasonable security in the unanimous verdict that would not exist in the verdict of a majority. All this is undeniable true, but disagreements are happily not frequent, and whatever may happen in the jury room no compulsion is now used by the court to induce agreement.

But, apart from any incidental defects, it may be doubted whether, as an instrument for the investigation of truth, the jury system deserves all the encomiums which have been passed upon it. In criminal cases, especially of the graver kind, it is perhaps the best tribunal that could be devised. There the element of moral doubt enters largely into the consideration of the case, and that can best be measured by a popular tribunal. Opinion in England has hitherto been against subjecting a man to serious punishment as a result of conviction before a jury sitting without a jury, and the judges themselves would be the first to depurate so great a responsibility, and the Criminal Appeal Act 1907, which constituted the court of criminal appeal, recognized the responsibility by requiring a quorum of three judges in order to constitute a court. The same act, by permitting an appeal to persons convicted on indictment both on questions of fact and of law, removed to a great extent any possibility of error by a jury. But in civil causes, where the issue must be determined one way or the other on the balance of probabilities, a single judge would probably be a better tribunal than the present combination of judge and jury. Even if it be assumed that he would on the whole come to the same conclusion as a jury deliberating under his directions, he would come to it more quickly. Time would be saved in taking evidence, summing up would be unnecessary, and the addresses of counsel would inevitably be shortened and concentrated on the real points at issue. Modern legislation and practice in England have very much reduced the use of the jury both in criminal and civil cases.
The civil jury consists as in England of twelve jurors chosen by ballot from the names on the list of those summoned. There is a right of peremptory challenge limited to four, and also a right to challenge for cause. Unanimity was at first but is not now required. The juror, if not unanimous on the close of the case, if they are not unanimous they are enclosed and may at any time not less than three hours after being enclosed return a verdict by a bare majority. If after six hours they do not agree the jury may be discharged.

It was stated by Commissioner Adam, under whom the Scots civil jury was originated, that in twenty years he knew of only one case in which the jury disagreed. Jury trial in civil cases is not compulsory; and O'Hagan's Acts 1871 and 1872, and the Judicature Acts 1873 and 1874, were passed to regularize and put an end to the practice. But in criminal cases much freer use is made than in England of the rights of the accused to challenge, and of the Crown to order jurors to stand by, and what is called "jury-packing" seems to be the object of both sides when some political or sectarian prejudice is involved in the trial.

In the passing of the Irish Local Government Act 1898, the grand jury, besides its functions as a jury of accusation, had large duties with respect to local government which are now transferred to the county council.

**British Empire.**—In most parts of the British Empire the jury system is in force as part of the original law of the colonists or under the colonial charters of justice or by local legislation. The grand jury is in most cases the body which exercises the functions of the jury as such, and in some cases they are not held. Among them are the Cape Colony; and in Australia has been for most purposes superseded by the public prosecutor. The ordinary trial jury for criminal cases is twelve, but in India may be nine, seven, five or three, according to certain provisions of the Indian Code. In the countries where the British Crown has foreign jurisdiction the jury for criminal trials has in some cases been fixed at a less number than twelve and the right of the Crown to fix the number is established; see Cooley, *Constitutional Limitations* (6th ed.), 379. These provisions may be stated as the number of the jury in the United States, the English jury system was part of the law of the American colonies before the separation, and until the American Revolution, and grand jury, coroner's jury and petty jury continue in full use in the United States. Under the Federal Constitution (Article III.) there is a right to trial by jury in all criminal cases (except on impeachment), and the jury is constituted by the court, the number of which may not be less than six. In Belgium, Spain, Italy and Germany, certain classes of crime are tried with the aid of a jury.

**European Countries.**—In France there is no civil jury. In criminal cases the place of the grand jury is taken by the chambre des pair; and in criminal and civil cases the accused and the Jewels of crime are tried before a jury of fifteen which finds its verdict by a majority, the number of which may not be disclosed. In Belgium, Spain, Italy and Germany, certain classes of crime are tried by the aid of a jury.

In the United States, the English jury system was part of the law of the American colonies before the separation, and until the American Revolution, and grand jury, coroner's jury and petty jury continue in full use in the United States. Under the Federal Constitution (Article III.) there is a right to trial by jury in all criminal cases (except on impeachment), and the jury is constituted by the court, the number of which may not be less than six. In Belgium, Spain, Italy and Germany, certain classes of crime are tried by the aid of a jury.

The civil jury is in force in the states of the union depends on the constitution and legislature of each state. In some the use of juries in civil and in criminal cases is reduced or made dependent on the majority of the accused. In others unanimous verdicts are not required, while in others there is no such requirement in the cases of the common law code.

**Jus Prima Noctis, or Droit du Seigneur, a custom alleged to have existed in medieval Europe, giving the lord a right to the virginity of his vassal's daughter on their wedding-night. For the existence of the custom in a legalized form there is no trustworthy evidence. That some such abuse of power may have been occasionally exercised by brutal nobles in the lawless days of the early middle ages is only too likely, but the jns, it seems, is a myth, invented no earlier than the 16th or 17th century. There appears to have been an entirely religious custom established by the council of Carthage in 398, whereby the Church required from the faithful continence on the wedding-night, and this may have been, and there is evidence that it was, known as Drog du Seigneur, or God's right. Later the clerical admonition was extended to the first three days of marriage. This religious abstention, added to the undeniable fact that the feudal lord exacted fines on the marriages of his vassals and their children, doubtless gave rise to the belief that the jns was once an established custom.

The whole subject has been exhaustively treated by Louis Veuillot in *Le Droit du seigneur au moyen âge* (1854).

**Jus Relictae,** in Scots law, the widow's right in the movable property of her deceased husband. The deceased must have been domiciled in Scotland, but the right accrues from movable property, wherever situated. The widow's provision amounts to one-third where there are children surviving, and to one-half where there are no surviving children. The widow's right vests by survival, and is independent of the husband's testamentary provisions; it may however be renounced by contract, or be charged by satisfaction. It is subject to alienation of the husband's movables estate during his lifetime or by its conversion into heritage. See also WILL.

**Jusserdand, Jean Adrien Antoine Jules** (1855--), French diplomat and politician, was born at Lyons on the 18th of February 1855, and entered the diplomatic service in 1876, he became in 1878 consul in London. After an interval spent in Tunis he returned to London in 1887, as a member of the French Embassy.

In 1890 he became French minister at Copenhagen, and in 1892 was transferred to Washington. A close student of English literature, he produced some very lucid and vivid monographs on comparatively little-known subjects: Le Théâtre en Angleterre depuis la conquête jusqu'à aux prédécesseurs immédiats de Shakespeare (1878); Le Roman au temps de Shakespeare (1887); Eng. trans. by Miss E. Lee, 1890; Les Anglais au moyen âge: la vie nomade et les routes d'Anglerete au XIVe siècle (1884; Eng. trans., English Wayfaring Life in the Middle Ages, by L. T. Smith, 1889); and L'Époque de Langland (1893; Eng. trans., Pier Plowman, by M. C., 1894).

His Histoire littéraire du peuple anglais, the first volume of which was published in 1895, was completed in three volumes in 1909. In English he wrote A French Ambassador at the Court of Charles II. (1892), from the unpublished papers of the count of Cominges.

**Jussieu, de,** the name of a French family which came into prominence towards the close of the 16th century, and for a century and a half was distinguished for the botanists it produced. The following are its more prominent members:

1. Antoine de Jussieu (1686-1758), born at Lyons on the 6th of July 1686, was the son of Christophe de Jussieu (or Dejussieu), an apothecary of some repute, published a *Neuveau traité de la théorie* (1708). Antoine studied at the university of Montpellier, and travelled with his brother Bernard through Spain, Portugal and southern France. He went to Paris in 1708, J. P. de Tournefort, whom he succeeded at the Jardin des Plantes, dying in that year. His own original publications are not of marked importance, but he edited an edition of Tournefort's *Institutiones reris herbariae* (3 vols., 1710), and also a posthumous work of Jacques Barrelier, *Plantae per Galiuinum, Hispaniun, et Italianu obserravant*, &c. (1714).

He practised medicine, chiefly devoting himself to the very poor. He died at Paris on the 22nd of April 1758.

2. Bernard de Jussieu (1699-1777), a younger brother of the above, was born at Lyons on the 17th of August 1699. He took a medical degree at Montpellier and began practice in 1710, but finding the work unremunerative he gladly accepted his brother's invitation to Paris in 1722, when he and his brother Jean Vaillant as sub-demonstrator of plants in the Jardin des Plantes. In 1725 he brought out a new edition of Tournefort's *Histoire des plantes qui naissent aux environs de Paris*, 2 vols., which was afterwards translated into English by John Martyn, the original work being incomplete. In the same year he was admitted into the académie des sciences, and communicated several papers to that body. Long before Abraham Trembley (1700-1784) published his Histoire des polypes d'eau douce, Jussieu maintained the doctrine that these organisms were animals, and not the flowers of marine plants, then the current notion; and to confirm his views he made
three journeys to the coast of Normandy. Singularity modest and retiring, he published very little, but in 1750 he arranged the plants in the royal garden of the Trianon at Versailles, according to his own scheme of classification. This arrangement is printed in his nephew's Genera, pp. xiii.–lxx., and formed the basis of that work. He cared little for the credit of enunciating new discoveries, so long as the facts were made public. On the death of his brother Antoine, he could not be induced to succeed him in his office, but prevailed upon L. G. Lemontier to assume the higher position. He died at Paris on the 6th of November 1777.

3. Joseph de Jussieu (1704–1779), brother of Antoine and Bernard, was born at Lyons on the 3rd of September 1704. Educated like the rest of the family for the medical profession, he accompanied C. M. de la Condamine to Peru, in the expedition for measuring an arc of meridian, and remained in South America for thirty-six years, returning to France in 1771. Amongst the seeds he sent to his brother Bernard were those of Helecostium peruvianum, Linn., then first introduced into Europe. He died at Paris on the 11th of April 1779.

4. Antoine Laurent de Jussieu (1748–1836), nephew of the three preceding, was born at Lyons on the 12th of April 1748. Called to Paris by his uncle Bernard, and carefully trained by him for the pursuits of medicine and botany, he largely profited by the opportunities afforded him. Gifted with a tenacious memory, and the power of quickly grasping the salient points of subjects under observation, he steadily worked at the improvement of that system of plant arrangement which had been sketched out by his uncle. In 1789 he issued his Genera plantarum secundum ordines naturales disposita, justa methodum in horto regio Parisiensi exaratum, anno MDCCCLXXX. This volume formed the basis of modern classification; more than this, it is certain that Cuvier derived much help in his zoological classification from its perusal. Hardly had the last sheet passed through the press, when the French Revolution broke out, and the author was installed in charge of the hospitals of Paris. The museum d'histoire naturelle was organized on its present footing mainly by him in 1793, and he selected for its library everything relating to natural history from the vast materials obtained from the convents then broken up. He continued as professor of botany there from 1770 to 1826, when his son Adrien succeeded him. Besides the Genera, he produced nearly sixty memoirs on botanical topics. He died at Paris on the 17th of September 1836.

5. Adrien laurent Henri de Jussieu (1797–1853), son of Antoine Laurent, was born at Paris on the 23rd of December 1797. He displayed the qualities of his family in his thesis for the degree of M.D., De Euphorbiacearum generibus medicisque carundem tendentia, Paris, 1824. He was also the author of valuable contributions to botanical literature on the Rutaceae, Meliaceae and Malpighiaceae respectively, of "Taxonomie" in the Dictionnaire universelle d'histoire naturelle, and of an introductory work styled simply Botanique, which reached nine editions, and was translated into the principal languages of Europe. He also edited his father's Introductio in historiam plantarum, issued at Paris, without imprint or date, it being a fragment of the intended second edition of the Genera, which Antoine Laurent did not live to complete. He died at Paris on the 29th of June 1853, leaving two daughters, but no son, so that with him closed the brilliant botanical dynasty.

6. Laurent Pierre de Jussieu (1792–1866), miscellaneous writer, nephew of Antoine Laurent, was born at Villeurbanne on the 7th of February 1792. His Simon de Nantua, ou le mar- chand forain (1818), reached fifteen editions, and was translated into seven languages. He also wrote Simples notions de physique et d'histoire naturelle (1857), and a few geological works. He died at Passy on the 23rd of February 1866.

Justice (Lat. justitia), a term used both in the abstract, for the quality of being or doing what is just, i.e. right in law and equity, and in the concrete for an officer deputed by the sovereign to administer justice, and do right by way of judgment. It has long been the official title of the judges of two of the English superior courts of common law, and it is now extended to all the judges in the supreme court of judicature—a judge in the High Court of Justice being styled Mr Justice, and in the court of appeal Lord Justice. The president of the King's bench division of the High Court is styled Lord Chief Justice (q.v.). The word is also applied, and perhaps more usually, to certain subordinate magistrates who administer justice in minor matters, and who are usually called justices of the peace (q.v.).

Justice of the Peace, an inferior magistrate appointed in England by special commission under the great seal to keep the peace within the jurisdiction for which he is appointed. The title is commonly abbreviated to J.P. and is used after the name. "The whole Christian world," said Coke, "hat not the like office as justice of the peace if duly executed." Lord Cowper, on the other hand, described them as "men sometimes illiterate and frequently bigoted and prejudiced." The truth is that the justice of the peace is appointed to consider and report whether any and what steps should be taken to facilitate the selection of the most suitable persons to be justices of the peace irrespective of creed and political opinion. In great centres of population, when the judicial business of justices is heavy, it has been found necessary to appoint paid justices or stipendiary magistrates to do the work, and an extension of the system to the country districts has been often advocated.

The commission of the peace assigns to justices the duty of keeping and causing to be kept all ordinances and statutes for the good of the peace and for preservation of the same, and for the quiet rule and government of the people, and further assigns to you and every two or more of you (of whom any one of the aforesaid A, B, C, D, &c., we, will, shall be one) to inquire the truth more fully by the oath of good and lawful men of the county of all such malicious and corrupt practices, in matters of witchcrafts, sorceries, arts, magic, trespasses, forestallings, regrettings, extortions, and extortions whatever." This part of the commission is the authority for the jurisdiction of the justices in sessions. Justices named specially in the parenthetical clause are said to be on the quorum. Justices for counties are appointed by the Crown on the advice of the lord chancellor, and usually with the recommendation of the lord lieutenant of the county. Justices for boroughs having municipal corporations and separate commissions of the peace are appointed by the crown, the lord chancellor either adopting the recommendation of the town council or acting independently. Justices cannot act as such until they have taken the oath of allegiance and the judicial oath. A justice for a borough while acting as such must reside in or within seven miles of the borough or occasionally a house, warehouse or other property in the borough, but he need not be a burgess. The mayor of a borough is ex officio a justice during his year of office and the succeeding year. He takes precedence over all borough justices, but not over justices acting in and for the county in which the borough or any part thereof is situated, unless when acting in relation to the business of the borough.

1 Where a borough council desire the appointment of a stipendiary magistrate they may present a petition for the same to the secretary of state and it is thereupon lawful for the king to appoint to that office a barrister of seven years standing. He is by virtue of his office a justice of the peace, and receives a yearly salary payable in four equal quarterly instalments. On a vacancy, application must again be made as for a first appointment. There may be more than one stipendiary magistrate for a borough.
JUSTICIAE—JUSTIFICATION

The chairman of a county council is ex officio a justice of the peace for the county, and the chairman of an urban or rural district council for the county in which the district is situated. Justices cannot act beyond the limits of the jurisdiction for which they are appointed, and the warrant of a justice cannot be executed out of his jurisdiction unless it be backed, that is, endorsed by a justice of the jurisdiction in which it is to be carried into execution. A justice improperly refusing to act on his office, or acting partially and corruptly, may be proceeded against by a criminal information, and a justice refusing to act may be compelled to do so by the High Court of Justice. An action will lie against a justice for any act done by him in excess of his jurisdiction, and for any act within his jurisdiction which has been done wrongfully and with malice, and without reasonable or probable cause. But no action can be brought against a justice for a wrongful conviction until it has been quashed. By the Justices' Qualification Act 1744, every justice for a county was required to have an estate of freehold, copyhold, or customary tenure in fee, for life or a given term, of the yearly value of £100. By an act of 1875 the occupation of a house rated at £100 was made a qualification. No such qualifications were ever required for a borough justice, and it was not until 1906 that county justices were put on the same footing in this respect. The Justices of the Peace Act 1906 did away with all qualification by estate. It also removed the necessity for residence within the county, permitting the same residential qualification as for borough justices, "within seven miles thereof." The same act removed the disqualification of solicitors to be county justices and assimilated to the existing power to remove other justices from the commission of the peace the power to exclude ex officio justices.

The justices for every petty sessional division of a county or for a borough having a separate commission of the peace must appoint a fit person to be their salaried clerk. He must be either a barrister or a bencher of the Inner Temple or Lincoln's Inn, or the equivalent for the local body. It is optional for the supreme court, or have served for not less than seven years as a clerk to a police or stipendiary magistrate or to a metropolitan police court. An alderman or councillor of a borough must not be appointed as clerk, nor can a clerk of the peace for the borough or for the county in which the borough is situated be appointed. A borough clerk is not allowed to prosecute. The salary of a justice's clerk comes, in London, out of the police fund; in counties out of the county fund; in county boroughs out of the borough fund, and in other boroughs out of the county fund.

The vast and multifarious duties of the justices cover some portion of every important head of the criminal law, and extend to a considerable number of matters relating to the civil law.

In the United States these officers are sometimes appointed by the executive, sometimes elected. In some states, justices of the peace have jurisdiction in civil cases given to them by local regulation.

JUSTICIAR (med. Lat. justiciarius or justitiarius, a judge), in English history, the title of the chief minister of the Norman and earlier Angevin kings. The history of the title in this connotation is somewhat obscure. Justiciarius meant simply "judge," and was originally applied, as Stubbs points out (Const. Hist. i. 39, note), to any officer of the king's court, to the chief justice, or in a very general way to all and sundry who possessed courts of their own or were qualified to act as justiciici in the shire-courts, even the style capitallis justiciarius being used of judges of the royal court other than the chief. It was not till the reign of Henry II. that the title summis or capitallis justiciarius, or justiciarius totius Angliae was exclusively applied to the king's chief minister. The office, however, existed before the style of its holder was fixed; and, whatever their contemporary title (e.g. Custos Angliae), later writers refer to them as justiciarii, with or without the prefix summis or capitallis (ibid. p. 346). Thus Ranulf Flambard, the minister of William II., who was probably the first to exercise the powers of a justiciar, is called justiciarii by Ordericus Vitalis.

The origin of the justiciarship is thus given by Stubbs (ibid. p. 276). The sheriff was the king's representative in all matters judicial, military and financial in the shire. From him, or from the courts of which he was the presiding officer, appeal lay to the king alone; but the king was often absent from England and did not understand the language of his subjects. In his absence the administration was entrusted to a justiciar, a regent or lieutenant of the kingdom; and the convenience being once ascertained of having a minister who could in the whole kingdom represent the king, as the sheriff did in the shire, the justiciar became a permanent functionary.

The fact that the kings were often absent from England, and that the justiciarship was held by great nobles or churchmen, made this office of an importance which at times threatened to overshadow that of the Crown. It was this latter circumstance which ultimately led to its abolition. Hubert de Burgh (q.v.) was the last of the great justiciaries; after his fall (1231) the justiciarship was not again committed to a great baron, and the chancellor soon took the position formerly occupied by the justiciar as second to the king in dignity, as well as in power and influence. Finally, under Edward I. and his successor, in place of the justiciar—who had presided over all causes vice regis—separate heads were established in the three branches into which the curia regis as a judicial body had been divided: justices of common pleas, justices of the king's bench and barons of the exchequer.

Outside England the title justiciar was given under Henry II. to the seneschal of Normandy. In Scotland the title of justiciar was borne, under the earlier kings, by two high officials, one having his jurisdiction to the north, the other to the south of the Forth. They were the king's lieutenants for judicial and administrative purposes and were established in the 12th century, either by Alexander I. or by his successor David I. In the 12th century a magister justitiarius also appears in the Norman kingdom of Sicily, title and office being probably borrowed from the Justiciaries of England. The Justitiarius of Sicily was, with his assistants, empowered to decide, inter alia, all cases reserved to the Crown (see Du Cange, s.v. Magister Justitiarius).

See W. Stubbs, Const. Hist. of England; Du Cange, Glossarium (Niotr, 1885) s.v. "Justitiarius."

JUSTICIARY, HIGH COURT OF, in Scotland, the supreme criminal court, consisting of five of the lords of session together with the lord justice-general and the lord justice-clerk as president and vice-president respectively. The constitution of the court is settled by the Act 1672 c. 16. The lords of justiciary hold circuits regularly twice a year according to the ancient practice, which, however, had been allowed to fall into disuse until revived in 1748. For circuit purposes Scotland is divided into northern, southern and western districts (see CIRCUIT). Two judges generally go on a circuit, and in Glasgow they are by special statute authorized to sit in separate courts. By the Criminal Procedure (Scotland) Act 1878 all the senators of the court of justice are lords commissioners of justiciary. The high court, sitting in Edinburgh, has, in addition to its general jurisdiction, an exclusive jurisdiction for districts not within the jurisdiction of the circuits—the three Lothians, and Orkney and Shetland. The high court also takes up points of difficulty arising before the special courts, like the court for crown cases reserved in England. The court of justiciary has authority to try all crimes, unless when its jurisdiction has been excluded by special enactment of the legislature. It is also stated to have an inherent jurisdiction to punish all criminal acts, even if they have never before been treated as crimes. Its judgments are believed to be not subject to any appeal or review, but it may be doubted whether an appeal on a point of law would not lie to the house of lords. The following crimes must be prosecuted in the court of justiciary: treason, murder, robbery, rape, fire-raising, enforcement of prisoners, breach of duty by magistrates, and all offences for which a statutory punishment higher than imprisonment is imposed.

JUSTIFICATION, in law, the showing by a defendant in a suit of sufficient reason why he did what he was called upon to answer,
For example, in an action for assault and battery, the defendant may prove in justification that the prosecutor assaulted or beat him himself, and that he acted merely in self-defense. The word is employed particularly in actions for defamation, and has in this connexion a somewhat special meaning. When a libel consists of a specific charge a plea of justification is a plea that the words are true in substance and in fact (see Libel and Slander).

JUSTIN I. (450–527), East Roman emperor (518–527), was born in 450 as a peasant in Asia, but enlisting under Leo I. he rose to be commander of the imperial guards of Anastasius. On the latter's death in 518 Justin used for his own election to the throne money that he had received for the support of another candidate. Being ignorant even of the rudiments of letters, Justin entrusted the administration of state to his wise and faithful quaestor Proclus and to his nephew Justinian, though his own experience dictated several improvements in military affairs. An orthodox churchman himself, he effected in 519 a reconciliation of the Eastern and Western Churches, after a schism of thirty-five years (see Hormisdas). In 522 he entered upon a desultory war with Persia, in which he co-operated with the Arabs. In 523 also Justin ceded to Théodoric, the Gothic king of Italy, the right of naming the consuls. On the 1st of April 527 Justin, enfeebled by an incurable wound, yielded to the request of the senate and assumed Justinian at his colleague; on the 1st of August he died. Justin bestowed much care on the repairing of public buildings throughout his empire, and contributed large sums to repair the damage caused by a destructive earthquake at Antioch.

JUSTIN II. (d. 578), East Roman emperor (565–578), was the nephew and successor of Justinian I. He availed himself of his influence as master of the palace, and as husband of Sophia, the niece of the late empress Theodora, to secure a peaceful election. The first few days of his reign—when he paid his uncle's debts, administered justice in person, and proclaimed universal religious toleration—gave bright promise, but in the face of the lawless aristocracy and defiant governors of provinces he effected few subsequent reforms. The most important event of his reign was the invasion of Italy by the Lombards (q.v.), who, entering in 568, under Alboin, in a few years made themselves masters of nearly the entire country. Justin's attention was distracted from Italy to the N. and E. frontiers. After refusing to pay the Avars tribute, he fought several unsuccessful campaigns against them. In 572 his hordes to the Turks led to a war with Persia. After two disastrous campaigns, in which his enemies overran Syria, Justin bought a precarious peace by payment of a yearly tribute. The temporary fits of insanity into which he fell warned him to name a colleague. Passing over his own relatives, he raised, on the advice of Sophia, the general Tiberius (q.v.) to be Caesar in December 574 and withdrew for his remaining years into retirement.

JUSTIN (JUNIANUS JUSTINUS), Roman historian, probably lived during the age of the Antonines. Of his personal history nothing is known. He is the author of Historiarum Philippicarum libri XLI., a work described by himself in his preface as a collection of the most important and interesting passages from the voluminous Historiae Philippicae et totius mundi origines et terrae situs, written in the time of Augustus by Pompeius Trogus (q.v.). The work of Trogus is lost; but the prologi or arguments of the text are preserved by Pliny and other writers. Although the main theme of Trogus was the rise and history of the Macedonian monarchy, Justin yet permitted himself considerable freedom of digression, and thus produced a capacious anthology instead of a regular epitome of the work. As it stands, however, the history contains much valuable information. The style, though far from perfect, is clear and occasionally elegant. The book was much used in the middle ages, when the author was sometimes confounded with Justin Martyr.

JUSTINIAN I. (483–565). Flavius Aëtius Justinianus, named the Great, the most famous of all the emperors of the Eastern Roman Empire, was by birth a barbarian, native of a place called Tauresium in the district of Dardania, a region of Illyricum, and was born, most probably, on the 11th of May 483. He had been variously conjectured, on the strength of the proper names which its members are stated to have borne, to have been Teutonic or Slavonic. The latter seems the more probable view. His own name was originally Upuradu. Justinianus was a Roman name which he took from his uncle Justin I., who adopted him, and to whom his advancement in life was due. Of his early life we know nothing except that he went to Constantinople while still a young man, and received there an excellent education. Doubtless he knew Latin before Greek; it is alleged that he always spoke Greek with a barbarian accent. When Justin ascended the throne in 518, Justinian became at once a person of the first consequence, guiding, especially in church matters, the policy of his aged, childless and ignorant uncle, receiving high rank and office at his hands, and soon coming to be regarded as his destined successor. On Justin's death in 527, having been a few months earlier associated with him as co-emperor, Justinian succeeded without opposition to the throne. About 523 he had married the famous Theodora (q.v.), who, as empress regnant, was closely associated in all his actions till her death in 547.

Justinian's reign was filled with great events, both at home and abroad, both in peace and in war. They may be classed under four heads: (1) his legal reforms; (2) his administration of the empire; (3) his ecclesiastical policy; and (4) his wars and foreign policy generally.

1. It is as a legislator and codifier of the law that Justinian's name is most familiar to the modern world; and it is therefore this department of his action that requires to be most fully dealt with here. He found the law of the Roman empire in a state of great confusion. It consisted of two masses, which were usually distinguished as old law (jus vetus) and new law (jus novum). The first of these comprised: (i.) all such of the statutes (leges) passed under the republic and early empire as had not become obsolete; (ii.) the decrees of the senate (senatus consulta) passed at the end of the republic and during the first two centuries of the empire; (iii.) the writings of the jurists of the later republic and of the empire, and more particularly of those jurists to whom the right of declaring the law with authority (jus respondendum) had been committed by the emperors. As these jurists had in their commentaries upon the leges, senatus consulta and edicts of the magistrates practically incorporated all that was of importance in those documents, the books of the jurists may substantially be taken as including (i.) and (ii.). These writings were of course very numerous, and formed a vast mass of literature. Many of them had become exceedingly scarce—many had been altogether lost. Some were of doubtful authenticity. They were so costly that no person of moderate means could hope to possess any large number; even the public libraries had nothing approaching to a complete collection. Moreover, as they proceeded from a large number of independent authors, who wrote expressing their own opinions, they contained many discrepancies and contradictions, the dicta of one writer being controverted by another, while yet both writers might enjoy the same formal authority. A remedy had been attempted to be applied to this evil by a law of the

1 It is commonly identified with the modern Küstendil, but Uskub (the ancient Skupi) has also been suggested. See Toser, Highlands of European Turkey, ii. 370.

2 The name Upuradu is said to be derived from the word praeda, which in Old Slavic means jas, justitia, the prefix being simply a breathing frequently attached to Slavonic names.
emperors Theodosius II. and Valentinian III., which gave special weight to the writings of five eminent jurists (Papinian, Paulus, Ulpian, Modestinus, Gaius); but it was very far from removing it. As regards the *jus verum*, therefore, the judges and practitioners of Justinian's time had two terrible difficulties to contend with—first, the bulk of the law, which made it impossible for any one to be sure that he possessed anything like the whole of the authorities bearing on the point in question, so that he was always liable to find his opponent quoting against him some authority for which he could not be prepared; and, secondly, the uncertainty of the law, there being a great many important points on which differing opinions of equal legal validity might be cited, so that the practising counsel could not advise, nor the judge decide, with any confidence that he was right, or that a superior court would uphold his view.

The new law (*jus novum*), which consisted of the ordinances of the emperors promulgated during the middle and later empires (edita, rescripta, mandata, decreta, usually called by the general name of constitutiones), was in a condition not much better. These ordinances or constitutions were extremely numerous. No complete collection of them existed, for although two collections (*Codex gregorianus* and *Codex hermogenianus*) had been made by two jurists in the 4th century, and a large supplementary collection published by the emperor Theodosius II. in 438 (*Codex theodosianus*), these collections did not include all the constitutions; there were others which it was necessary to obtain separately, but many whereof it must have been impossible for a private person to procure. In this branch too of the law there existed some, though a less formidable, uncertainty; for there were constitutions which practically, if not formally, repealed or superseded others without expressly mentioning them, so that a man who relied on one constitution might find that it had been varied or abrogated by another he had never heard of or on whose sense he had not put such a construction. It was therefore necessary to regard both the older and the newer law to take some steps to collect into one or more bodies or masses so much of the law as was to be regarded as binding, reducing it within a reasonable compass, and purging away the contradictions or inconsistencies which it contained. The evil had been long felt, and reforms apparently often proposed, but nothing (except by the compilation of the *Codex theodosianus*) had been done till Justinian's time. Immediately after his accession, in 528, he appointed a commission to deal with the imperial constitutions (*jus novum*), this being the easier part of the problem. The commissioners, ten in number, were directed to go through all the constitutions of which copies existed, to select such as were of practical value, to cut these down by retrenching all unnecessary matter, and gather them, arranged in order of date, into one volume, getting rid of any contradictions by omitting one or other of the conflicting passages.1 These statute law commissioners, as one may call them, set to work forthwith, and completed their task in fourteen months, distributing the constitutions which they placed in the new collection into ten books, in general conformity with the order of the Perpetual Edict as settled by Salvius Julianus and enacted by Hadrian. By this means the bulk of the statute law was immensely reduced, its obscurities and internal discrepancies in great measure removed, its provisions adapted, by the abrogation of what was obsolete, to the circumstances of Justinian's own time. This *Codex constitutionum* was formally promulgated and enacted as one great consolidating statute in 529, all imperial ordinances not included in it being repealed at once. The success of this first experiment encouraged the emperor to attempt the more difficult enterprise of simplifying and digesting the older law contained in the treaties of the jurists. Before entering on this, however, he wisely took the preliminary step of settling the more important of the legal questions as to which the older jurists had been divided in opinion, and which had therefore remained sources of difficulty, a difficulty aggra-

1 See, for an account of the instructions given to the commission, the compilation *Haece quae*, prefixed to the revised *Codex* in the Corpus juris civilis.

too far, and indeed stated what was impossible, when he forbade all commentaries upon the Digest. He was obliged to allow a Greek translation to be made of it, but directed this translation to be exactly literal.

These two great enterprises had substantially despatched Justinian’s work; however, he, or rather Tribonian, who seems to have acted both as his adviser and as his chief executive officer in all legal affairs, conceived that a third book was needed, viz. an elementary manual for beginners which should present an outline of the law in a clear and simple form. The little work of Gaio, most of which we now possess under the title of Commentarii institutionum, had served this purpose for nearly four centuries; but much of it had, owing to changes in the law, become inapplicable, so that a new manual seemed to be required.

Justinian accordingly directed Tribonian, with two coadjutors, Theophilus, professor of law in the university of Constantinople, and Dorotheus, professor in the great law school at Byceutum, to prepare an elementary textbook on the lines of Gaio. This they did while the Digest was in progress, and produced the useful little treatise which has ever since been the book with which students commonly begin their studies of Roman law, the Institutes of Justinian. It was published as a statute with full legal validity shortly before the Digest. Such merits as it possesses—simplicity of arrangement, clearness and conciseness of expression—belong less to Tribonian than to Gaio, who was closely followed wherever the alterations in the law had not made him obsolete. However, the spirit of that great legal classic seems to have in a measure dwelt with and inspired the inferior men who were recasting his work; the Institutes is better both in Latin and in substance than we should have expected from the condition of Latin letters at that epoch, better than the other laws which emanate from Justinian.

In the year 534 a bill which elapsed between the publication of the Codex and that of the Digest, many important changes had been made in the law, notably by the publication of the Fifty Decisions, which settled many questions that had exercised the legal mind and given occasion to intricate statutory provisions. It was therefore natural that the idea should present itself of revising the Codex, so as to introduce these changes into it, for by so doing, not only would it be simplified, but the one volume would again be made to contain the whole statute law, whereas now it was necessary to read along with it the ordinances issued since its publication. Accordingly another commission was appointed, consisting of Tribonian with four other coadjutors, full power being given them not only to incorporate the new constitutions with the Codex and make it in all its requisite changes, but also to revise the Codex generally, cutting down or filling in wherever it thought it necessary to do so. This work was completed in a few months; and in November 534 the revised Codex (Codex repetitum peregrinatum) was promulgated with the force of law, prefixed by a constitution (Cordis nobis) which sets forth its history, and declares it to be alone authoritative, the former Codex being abrogated.

It is this revised Codex which has come down to the modern world, all copies of the earlier edition having disappeared.

The constitutions contained in it number 4652, the earliest dating from Hadrian, the latest being of course Justinian’s own. A few thus belong to the period to which the greater part of the Digest itself was compiled (i.e. the time of Diocletian), down to the time of Alexander Severus (244); but the great majority are later, and belong to one or other of the four great eras of imperial legislation, the eras of Diocletian, of Constantine, of Theodosius II., and of Justinian himself. Although this Codex is said to have the same general order as that of the Digest, viz. the order of the Perpetual Edict, there are considerable differences of arrangement between the two. It is divided into twelve books. Its contents, and the number of its pieces, are in some respects most practical importance. Those of that time, and of much value still, historically as well as legal, are far less interesting and scientifically admirable than the extracts preserved in the Digest. The difference is even greater than that between the Digest and the Novels, which are made up of copies of the texts of old ordinances, which have been, so to speak, gathered together, like the Holt and the English acts of parliament for the same two centuries.

The emperor’s scheme was now complete. All the Roman law had been gathered into two volumes of not excessive size, and a satisfactory manual for beginners added. But Justinian and Tribonian had grown so fond of legislating that they found it hard to leave off. Moreover, the very simplifications that had been so far effected brought into view more clearly such anomalies or pieces of injustice as still continued to deform the law. Thus no sooner had the work been rounded off than fresh excrescences began to be created by the collection of new laws. Between 534 and 652 Justinian issued a great number of ordinances, dealing with all sorts of subjects and seriously altering the law on many points—the majority appearing before the death of Tribonian, which happened in 545. These ordinances were issued in the form of summary instructions, the Novellae constitutiones post codicem (repetitum peregrinatum), Novels. Although the emperor had stated in publishing the Codex that all further statutes (if any) would be officially collected, this promise does not appear to have been fulfilled. The terms of the Novels which we possess are apparently private collections, nor do we even know how many such constitutions were promulgated. One of the three contains 168 (together with 13 Edicts), but some of these are identical with the Novels of Tribonian. Another, the so-called Epitome of Julius, contains 125 Novels in Latin, and the third, the Liber authenticarum or vulgata versio, has 134, also in Latin. This last was the collection first known and chiefly used in the West during the middle ages; and of its 134 only 97 have been written on by the glossators or medieval commentators; these therefore alone have been received as binding in those countries which recognize and obey the Roman law,—according to the maxim Justinus non agonit glossa, nec agonit curia. And, whereas Justinian’s constitutions contained in the Codex were all issued in Latin, the rest of the book being in that tongue, these Novels were nearly all published in Greek. Latin translations being of course made, but from Greek, and the expression is therefore very broad, and with the exception of a few, particularly the 116th and 118th, which introduce the most sweeping and laudable reforms into the law of intestate succession, are much more interesting, as supplying materials for the history of the time, social, economical and ecclesiastical, than in respect of pure juristic value. They may be found printed in any edition of the Corpus iuris civilis.

This Corpus juri$, which bears and immortalizes Justinian’s name, contains the basis of the modern code of law. The authorized collection of imperial ordinances (Codex constitutionum); (2) the authorized collection of extracts from the great jurists (Digesta or Pandecta); (3) the elementary handbook (Institutiones); (4) the unauthorized collection of constitutions subsequent to the Codex (Novellae).

From what has already been stated, the reader will perceive that Justinian did not, according to the strict use of terms, codify the Roman law. By codification we understand the taking in of the whole pre-existing body of law to a new form, the re-stating it in a series of propositions, scientifically ordered, which may or may not contain some new substance, but are at any rate new in form. If he had, so to speak, thrown into one furnace all the law contained in the treatises of the jurists and in the imperial ordinances, fused them down, the gold of the one and the silver of the other, and run them out into new moulds, this would have been codification. What he did do was something quite different. It was not codification but consolidation, not remoulding but abridging. He made extracts from the existing law, preserving the old words, and merely cutting out repetitions, removing contradictions, retrenching superfluities, so as immensely to reduce the bulk of the whole. And he made not one set of such extracts but two: one for the jurist law, the other for the statute law. He gave to posterity not one code but two digests or collections of extracts, which are new only to this extent that they are arranged in a new order, having been previously altogether unconnected with one another, and that here and there their words have been modified in order to bring one extract into harmony with some other. Except for this, the matter is old in expression as well as in substance.

Thus regarded, even without remarking that the Novels, never having been officially collected, much less incorporated with the Codex, mar the symmetry of the structure, Justinian’s work may appear to entitle him and Tribonian to much less credit than they have usually received for it. But let it be observed, first, that to reduce the huge and confused mass of pre-existing law into the compass of these two collections was an immense practical benefit to the empire; secondly, that whereas the work which he undertook to accomplish in seven years, the infinitely more difficult task of codification might probably have been left unfinished at Tribonian’s death, or even at Justinian’s own, and been abandoned by his successor; thirdly, that in the extracts preserved in the Digest we have the opinions of the greatest legal luminaries given in their own admirably lucid, philosophical and concis
language, while in the extracts of which the *Codex* is composed we find valuable historical evidence bearing on the administration and social condition of the later Pagan and earlier Christian empire; fourthly, that Justinian's age, that is to say, the intellect of the men whose services he commanded, was quite unequal to so vast an undertaking as the fusing upon scientific principles into one new organic whole of the entire law of the empire. With sufficient time and labour the work might no doubt have been done; but what we possess of Justinian's own legislation, and still more what we know of the general condition of literary and legal capacity in his time, makes it certain that it would not have been well done, and that the result would have been not more valuable to the Romans of that age, and much less valuable to the modern world, than are the results, preserved in the Digest and the Institutes and Justinian's own writings.

To the merits of the work as actually performed some reference has already been made. The chief defect of the *Digest* is in point of scientific arrangement, a matter about which the Roman lawyers, perhaps one may say the ancients generally, cared very little. There are some repetitions and some inconsistencies, but not more than may fairly be allowed for in a compilation of such magnitude executed so rapidly. Tribonian has been blamed for the insertions the compilers made in the sentences of the old jurists (the so-called *Emblemata Tribonianis*); but it was a part of Justinian's plan that such insertions should be made, so as to adapt those sentences to the law as settled in the emperor's time. On Justinian's own laws, contained in the *Codex* and in his *Novels*, a somewhat less favourable judgment must be pronounced. They, and especially the latter, are diffuse and often lax in expression, needlessly prolix, and pompously rhetorical. The policy of many, particularly of those which deal with ecclesiastical matters, may also be condemned; yet some gratitude is due to the legislator who put the law of intestate succession on that plain and rational footing whereon it has ever since continued to stand. It is somewhat remarkable that, although Justinian is so much more familiar to us by his legislation than by anything else, this sphere of his imperial labour is hardly referred to by any of the contemporary historians, and then only with censure. Procopius complains that he and Tribonian were always repealing old laws and enacting new ones, and accuses them of venal motives for doing so.

The *Corpus Juris* of Justinian continued to be, with naturally a few changes, the standard work of succeeding emperors, the chief official or auxiliary law-book of the Roman world till the time of the Macedonian dynasty when, towards the end of the 9th century, a new system was prepared and issued by those sovereigns, which we know as the *Basilica*. It is of course written in Greek, and consists of parts of the *Codex* and the *Digest*, thrown together and often altered in expression, together with some matter from the *Novels* and imperial ordinances posterior to Justinian. In the western provinces, which had been wholly severed from the empire before the publication of the *Basilica*, the law as settled by Justinian held its ground; but copies of the *Corpus Juris* were extremely rare, nor did the study of it revive until the end of the 11th century.

The best edition of the *Digest* is that of Mommsen (Berlin 1866-1870), and of the *Codex* that of Kruger (Berlin 1875-1877).

2. In his financial administration of the empire, Justinian is represented to us as being at once rapacious and extravagant. His unwearying activity and inordinate vanity led him to undertake a great many costly public works, many of them, such as the erection of palaces and churches, unremunerative. The money needed for these, for his wars, and for buying off the barbarians who threatened the frontiers, had to be obtained by increasing the burdens of the people. They suffered, not only from the regular taxes, which were seldom remitted even after bad seasons, but also from monopolies; and Procopius goes so far as to allege that the emperor made a practice of further recruiting his treasury by confiscating on slight or fictitious pretenses the property of persons who had displease. Theodora or himself. Fiscal severities were no doubt one cause of the insurrections which now and then broke out, and in the gravest of which, (532) thirty thousand persons are said to have perished in the capital. It is not always easy to discover, putting together the trustworthy evidence of Justinian's own laws and the angry complaints of Procopius, what was the nature and justification of the changes made in the civil administration. But the general conclusion seems to be that these changes were always in the direction of further centralization, increasing the power of the chief ministers and their offices, bringing all more directly under the control of the Crown, and in some cases limiting the powers and appropriating the funds of local municipalities. Financial necessities compelled retrenchment, so that a certain number of offices were suppressed altogether, much to the disgust of the office-holding class, which was numerous and wealthy, and had almost come to look on the civil service as its hereditary possession. The most remarkable instance of this policy was the discontinuance of the consulship. This great office had remained a dignity centuries after it had ceased to be a power; but it was a very costly dignity, the holder being expected to spend large sums in public displays. As these sums were provided by the state, Justinian saved something considerable by stopping the payment. He named no consul after Basilius, who was the name-giving consul of 541.

In a bureaucratic despotism the greatest merit of a sovereign is to choose capable and honest ministers. Justinian's selections were usually capable, but not so often honest; probably it was hard to find thoroughly upright officials; possibly they would not have been most serviceable in carrying out the imperial will, and especially in replenishing the imperial treasury. Even the great Tribonian labours under the reproach of corruption, while the fact that Justinian maintained John of Cappadocia in power long after it was clear that he was not worth his salary, himself, whose private life had excited the anger of the whole empire, reflects little credit on his own principles of government and sense of duty to his subjects. The department of administration in which he seems to have felt most personal interest was that of public works. He spent immense sums on buildings of all sorts, on quays and harbours, on fortifications, repairing the walls of cities and erecting castles in Thrace to check the inroads of the barbarians, on aqueducts, on monasteries, above all, upon churches. Of these works only two remain perfect, St Sophia in Constantinople, now a mosque, and one of the architectural wonders of the world, and the church of SS Sergius and Bacchus, now commonly called Little St Sophia, which stands about half a mile from the great church, and is in its way a very delicate and beautiful piece of work. The church of S. Vitale at Ravenna, though built in Justinian's reign, and containing mosaic pictures of him and Theodora, does not appear to have owed anything to his mind or purse.

3. Justinian's ecclesiastical policy was so complex and varying that it is impossible within the limits of this article to do more than indicate its bare outlines. For many years before the accession of his uncle Justin, the Eastern world had been vexed by the struggles of the Monophysite party, who recognized only one nature in Christ, against the view which then and ever since has maintained itself as orthodox, that the divine and human natures coexisted in Him. The latter doctrine had triumphed at the council of Chalcedon, and was held by the whole Western Church, but Egypt, great part of Syria and Asia Minor, was a considerable minority even in Constantinople clinging to Monophysism. The emperors Zeno and Anastasius had been strongly suspected of it, and the Roman bishops had refused to communicate with the patriarchs of Constantinople since 484, when they had condemned Acacius for accepting the formula of conciliation issued by Zeno. One of Justinian's first public acts was to put an end to this schism by inducing Justin to make the then patriarch renounce this formula and declare his full adhesion to the creed of Chalcedon. When he himself came to the throne he endeavoured to persuade the Monophysites to come in by summoning some of their leaders to a conference. This failing, he ejected suspected prelates, and occasionally persecuted them, though with far less rigor than in the case of the Arians. He did not go so far as to impose a deeper dye, such as Monophysites or even Arians. Not long afterwards, his attention having been called to the spread of Origenistic opinions in Syria, he issued an edict condemning fourteen propositions drawn from the writings of the great Alexandrian, [I. 599]
JUSTINIAN

and caused a synod to be held under the presidency of Mennas (whom he had named patriarch of Constantinople), which renewed the condemnation of the impugned doctrines and anathematized Origen himself. Still later, he was induced by the machinations of some of the prelates who haunted his court, and by the influence of Theodora, herself much interested in theological questions, and more than suspected of Monophysitism, to raise a needless, mischievous, and protracted controversy. The Monophysites sometimes alleged that they could not accept the decrees of the council of Chalcedon because that council had not condemned, but (as they argued) virtually approved, three writers tainted with Nestorian principles, Theodore of Mopsuestia, Theodoret, and Ibas, bishop of Edessa. It was represented to the emperor, who was still pursued by the desire to bring back the schisms, that a great step would have been taken towards reconciliation if a condemnation of these teachers, or rather of such of their books as were complained of, could be brought about, since then the Chalcedonian party would be purged from any appearance of sympathy with the errors of Nestorius. Not stopping to reflect that in the angry and suspicious state of men's minds he was sure to lose as much in one direction as he would gain in the other, Justinian entered into the idea, and put forth an edict exposing and denouncing the errors contained in the writings of Theodore generally, in the treatise of Theodoret against Cyril of Alexandria, and in a letter of Bishop Ibas (a letter whose authenticity was doubted, but which passed under his name) to the Persian bishop Maris. This edict was circulated through the Christian world to be subscribed by the bishops. The four Eastern patriarchs, and the great majority of the Eastern prelates generally, subscribed, though reluctantly, for it was felt that a dangerous precedent was being set when dead authors were anathematized, and that this new movement could hardly fail to weaken the authority of the council of Chalcedon. Among the Western bishops, who were less disposed both to Monophysitism and to subservience, and especially by those of Africa, the edict was earnestly resisted. When it was found that Pope Vigilius did not forthwith comply, he was summoned to Constantinople. Even there he resisted, not so much, it would seem, from any scruples of his own, for he was not a high-minded man, as because he knew that he dared not return to Italy if he gave way. Long disputes and negotiations followed, the end of which was that Justinian summoned a general council of the church, that which we reckon the Fifth, which condemned the impugned writings, and anathematized several other heretical authors. Its decrees were received in the East but long contested in the Western Church, where a schism arose that lasted for seventy years. This is the controversy known as that of the Three Chapters (Tris capitolia, τρεῖς καπιτόλια), again composed from the three propositions or condemnations contained in Justinian's original edict, one relating to Theodore's writings and person, the second to the incriminated treatise of Theodoret (whose person was not attacked), the third to the letter (if genuine) of Ibas (see Hefele, Conciliengeschichte, ii. 777).

At the very end of his long career of theological discussion, Justinian himself lapsed into heresy, by accepting the doctrine that the earthly body of Christ was incorruptible, insensible to the weaknesses of the flesh, a doctrine which had been advanced by Julian, bishop of Halicarnassus, and went by the name of Aphthartodocetism. According to his usual practice, he issued an edict enforcing this view, and requiring all patriarchs, metropolitans, and bishops to subscribe to it. Some, who not unnaturally held that it was rank Monophysitism, refused at once, and were deprived of their sees, among them Eutychius the exarch of Constantinople, and Ibas, bishop of Edessa, and many others. The rest temporized; but before there had been time enough for the matter to be carried through, the emperor died, having tarnished if not utterly forfeited by this last error the reputation won by a life devoted to the service of Orthodoxy.

As no preceding sovereign had been so much interested in church affairs, so none seems to have shown so much activity as a persecutor both of pagans and of heretics. He renewed with additional stringency the laws against both these classes. The former embraced a large part of the rural population in certain secluded districts, such as parts of Asia Minor and Peloponnesus; and we are told that the efforts directed against them resulted in the forcible baptism of 70,000 persons in Asia Minor alone. Paganism, however, survived; we find it in Laconia in the end of the 6th century, and in northern Syria it has lasted till our own times. There were also a good many crypto-pagans among the educated population of the capital. Procopius, for instance, if he was not actually a Pagan, was certainly very little of a Christian. Inquiries made in the third year of Justinian's reign drove nearly all of these persons into an outward conformity, and their offspring seem to have become ordinary Christians. At Athens, the philosophers who taught in the schools hallowed by memories of Plato still openly professed what passed for Paganism, though it was really a body of moral doctrine, strongly tinged with mysticism, in which there was far more of Christianity and of the speculative metaphysics of the East than of the old Olympian religion. Justinian, partly from religious motives, partly because he discomfited all rivals to the imperial university of Constantinople, closed these Athenian schools (539). The professors sought refuge at the court of Chosroes, king of Persia, but were soon so much disgraced by the ideas and practices of the fire-worshippers that they returned to the empire, Chosroes having magnanimously obtained from Justinian a promise that they should be suffered to pass the rest of their days unmolested. Heresy proved more obdurate. The severities directed against the Montanists of Phrygia led to a furious war, in which most of the sectaries perished, while the doctrine was not extinguished. Harsh laws provoked the Samaritans to a revolt, from whose effects Palestine had not recovered when conquered by the Arabs in the following century. The Nestorians and the Eutychian Monophysites were not threatened with such severe civil penalties, although their worship was interdicted, and their bishops were sometimes banished; but this vexatious treatment was quite enough to keep them affected, and the rapidity of the Mahommedan conquests may be partly traced to that alienation of the bulk of the Egyptian and a large part of the Syrian population which dates from Justinian's persecutions.

4. Justinian was engaged in three great foreign wars, two of whom his own seeking, the third a legacy which nearly every emperor had come into for three centuries, the secular strife of Rome and Persia. The Sassanid kings of Persia ruled a dominion which extended from the confines of Syria to those of India, and from the straits of Oman to the Caucasus. The martial character of their population made them formidable enemies to the Romans, whose troops were at this epoch mainly barbarians, the settled and civilized subjects of the empire being as a rule quite heterogeneous. When Justinian came to the throne his troops were maintaining an unequal struggle on the Euphrates against the armies of Kavadh I. (q.v.). After some campaigns, in which the skill of Belisarius obtained considerable successes, a peace was concluded in 553 with Chosroes I. (q.v.). This lasted till 539, when Chosroes declared war, alleging that Justinian had been secretly intriguing against him with the Hephthalite Huns, and doubtless moved by alarm and envy at the victories which the Romans had been gaining in Italy. The emperor was too much occupied in the West to be able adequately to defend his eastern frontier. Chosroes advanced into Syria with little resistance, and in 540 captured Antioch, then the greatest city in Asia, carrying off its inhabitants into captivity. The war continued with varying fortunes for four years more in this quarter; while in the meantime an even fiercer struggle had begun on the Euphrates. The Persians under their king Kavadh crossed the Euphrates at the eastern corner of the Black Sea (see COLCHIS). When after two-and-twenty years of fighting no substantial advantage had been gained by either party, Chosroes agreed in 562 to a peace which left Lazica to the Romans, but under the dishonourable condition of their paying 30,000 pieces of gold annually to the Persian king. Thus no result of permanent importance flowed from these Persian wars, except that they greatly weakened the Roman Empire, increased Justinian's financial embarrassments, and prevented him from prosecuting with sufficient vigour his
enterprises in the West. (See further Persia: Ancient History, "The Sassanid Dynasty.")

These enterprises had begun in 533 with an attack on the Vandals, who were then reigning in Africa. Belisarius, despatched from Constantinople with a large fleet and army, landed without opposition, and destroyed the barbarian power in two engagements. North Africa from beyond the straits of Gibraltar to the Syrtes became again a Roman province, although the Moorish tribes of the interior maintained a species of independence; and part of southern Spain was also recovered for the empire. The case with which so important a conquest had been effected encouraged Justinian to attack the Ostrogoths of Italy, whose kingdom, though vast in extent, for it included part of south-eastern Gaul, Raetia, Dalmatia and part of Pannonia, as well as Italy, Sicily, Sardinia and Corsica, had been grievously weakened by the death first of the great Theodoric, and some years later of his grandson Athalaric, so that the Gothic nation was practically without a head. Justinian began the war in 535, taking as his pretext the murder of Queen Amalsuntha, daughter of Theodoric, who had placed herself under his protection, and alleging that the Ostrogothic kingdom had always owned a species of allegiance to the emperor at Constantinople. The Gothic nation was then in a state of decay, and Alboin, who conducted the operations, did not have it in his power to make a strong resistance. The Gothic king of the East, although it could not have been made effective against Theodoric, who was more powerful than his supposed suzerain. Belisarius, who had been made commander of the Italian expedition, overran Sicily, reduced southern Italy, and in 536 occupied Rome. Here he was attacked in the following year by Vitiges, who had been chosen king by the Goths, with a greatly superior force. After a siege of over a year, the energy, skill, and courage of Belisarius, and the sickness which was preying on the Gothic troops, obliged Vitiges to retire. Belisarius pursued his diminished army northwards, shut him up in Ravenna, and ultimately received the surrender of that impregnable city. Vitiges was sent prisoner to Constantinople, where Justinian treated him, as he had previously treated the captive Vandal king, with clemency. The imperial administration was established through Italy, but its rapacity soon began to excite discontent, and the kernel of the Gothic nation had not submitted. After two short and unfortunate reigns, the crown had been bestowed on Totila or Badula, a warrior of distinguished abilities, who by degrees drove the imperial generals and governors out of Italy. Justinian found it too small for the gravity of the situation. He moved from place to place during several years, but saw city after city captured by or open its gates to Totila, till only Ravenna, Otranto and Ancona remained. Justinian was occupied by the ecclesiastical controversy of the Three Chapters, and had not the money to fit out a proper army and fleet; indeed, it may be doubted whether he would ever have roused himself to the necessary exertions but for the presence at Constantinople of a knot of Roman exiles, who kept urging him to reconquer Italy, representing that with their help and the sympathy of the people it would not be a difficult enterprise. The emperor at last complied, and in 552 a powerful army was despatched under Narses, an Armenian eunuch now advanced in life, but reputed the most skilful general of the age, as Belisarius was the hottest soldier. He marched along the coast of the Gulf of Venice, and encountered the army of Totila at Taginae not far from Cesena. Totila was slain, and the Gothic cause irretrievably lost. The valiant remains of the nation made another stand under Teias on the Lactarian Hill in Campania; after that they disappeared from history. Italy was reconquered for ever, and transformed into a large, well-governed and depopulated, whose possession carried little strength with it. Justinian's policy both in the Vandalic and in the Gothic War stands condemned by the result. The resources of the state, which might better have been spent in defending the northern frontier against Slavs and Huns and the eastern frontier against Persians, were consumed in the conquest of two countries which had suffered too much to be of any substantial value, and which, separated by language as well as by intervening seas, could not be permanently retained. However, Justinian must have been almost preternaturally wise to have foreseen this: his conduct was in the circumstances only what might have been expected from an ambitious prince who perceived an opportunity of recovering territories that had formerly belonged to the empire, and over which its rights were conceived to be only suspended.

Besides these three great foreign wars, Justinian's reign was troubled by a constant succession of border inroads, especially on the northern frontier, where the various Slavonic and Hunnish tribes who were established along the lower Danube and on the north coast of the Black Sea made frequent marauding expeditions into Thrace and Macedonia, sometimes penetrating as far as the walls of Constantinople in one direction and the Isthmus of Corinth in another. Immense damage was inflicted by these marauders on the subjects of the empire, who seem to have been mostly too peaceable to defend themselves, and whom the emperor could not spare troops enough to protect. Fields were laid waste, villages burnt, large numbers of people carried into captivity; and on one occasion the capital was itself in danger.

5. It only remains to say something regarding Justinian's personal character and capacities, with regard to which a great diversity of opinion has existed among historians. The civilians, looking on him as a patriarch of their science, have as a rule accorded him a high rank; the ecclesiastics, after his death, have invested him with many fancied virtues. It is certain that he was a man of considerable abilities, wonderful activity of mind, and admirable industry. He was interested in many things, and threw himself with ardour into whatever course he took up; he was open to new ideas, quick to grasp the suggestions of others, and usually made them succeed when no long time was needed, for, if a project was delayed, there was a risk of its tiring of and dropping it. Although vain and full of self-confidence, he was easily led by those who knew how to get at him, and particularly by his wife. She exercised over him that influence which a stronger character always exercises over a weaker, whatever their respective positions; and unfortunately it was seldom a good influence, for Theodora (q.v.) seems to have been a woman who, with all her brilliant gifts of intelligence and manner, had no principles and no pity. Justinian was rather quick than strong or profound; his policy does not strike one as the result of deliberate and well-considered views, but dictated by the hopes and fancies of the moment. His activity was in so far a misfortune as it led him to attempt too many things at once, and engage in undertakings so costly that oppression became necessary to provide the funds for them. Even his devotion to work, which excites our admiration, in the centre of a luxurious court, was to a great extent unprofitable, for it was mainly given to theological controversies which neither he nor any one else could make out. Still, if we weight with all deductions, it is plain that the man who accomplished so much in the liberal arts that he kept the whole world so occupied, as Justinian did during the thirty-eight years of his reign, must have possessed no common abilities. He was affable and easy of approach to all his subjects, with a pleasant address; nor does he seem to have been, like his wife, either cruel or revengeful. We hear several times of his sparing those who had conspired against him. But he was not scrupulous in the means he employed, and he was willing to maintain in power destitute ministers if only they served him efficiently and filled his coffers. His chief passion, after that for his own fame and
JUSTINIAN II.—JUSTIN MARTYR

According to his own account, were Pagans (Dialog. c. Tryph. 28). He describes the course of his religious development in the introduction to the dialogue with the Jew Trypho, in which he relates how chance intercourse with an aged stranger brought him to know the truth. Though this narrative is a mixture of truth and fiction, it may be said with certainty that a thorough study of the philosophy of Peripatetics and Pythagoreans, Stoics and Platonists, brought home to Justin the conviction that true knowledge was not to be found in them. On the other hand, he came to look upon the Old Testament prophets as approved by their antiquity, sanctity, mystery and prophecies to be interpreters of the truth. To this, as he tells us in another place (Apol. ii. 12), must be added the deep impression produced upon him by the life and death of Christ. His conversion apparently took place at Ephesus; there, at any rate, he places his decisive interview with the old man, and there he had those discussions with Jews and converts to Judaism, the results of which he in later years set down in his Dialogue. After his conversion he retained his philosopher’s cloak (Euseb., Hist. Eccl. iv. 11. 8), the distinctive badge of the wandering professional teacher of philosophy, and went about from place to place discussing the truths of Christianity in the hope of bringing educated Pagans, as he himself had been brought, through philosophy to Christ. In Rome he made a fairly long stay, giving lectures in a class-room of his own, though not without opposition from his fellow-teachers. Among his opponents was the Cynic Crescentius (Apol. ii. 13). Eusebius (Hist. Eccl. iv. 16. 7–8) concludes somewhat hastily, from the statement of Justin and his disciple Tatian (Orat. ad Graec. 19), that the accusation of Justin before the authorities, which led to his death, was due to Crescentius. But we know, from the undoubtedly genuine Acta SS Justin et sociorum, that Justin suffered the death of a martyr under the prefect Rusticus between 163 and 167.

To form an opinion of Justin as a Christian and theologian, we must turn to his Apology and to the Dialogue with the Jew Trypho, for the authenticity of all other extant works attributed to him is disputed with good reason. The Apology—it is more correct to speak of one Apology than of two, for the second is only a continuation of the first, and dependent upon it—was written in Rome about 150. In the first part Justin defends his fellow-believers against the charge of atheism and hostility to the state. He then draws a positive demonstration of the truth of his religion from the effects of the new faith, and especially from the excellence of its moral teaching, and concludes with a comparison of Christian and Pagan doctrines, in which the latter are set down with naive confidence as the work of demons. As the main support of his proof of the truth of Christianity appears his detailed demonstration that the prophecies of the old dispensation, which are older than the Pagan poets and philosophers, have found their fulfilment in Christianity. A third part shows, from the practices of their religious worship, that the Christians had in truth dedicated themselves to God. The whole closes with an appeal to the princes, with a reference to the edict issued by Hadrian in favour of the Christians. In the so-called Second Apology, Justin takes occasion from the trial of a Christian recently held in Rome to argue that the innocence of the Christians was proved by the very persecutions.

Even as a Christian Justin always remained a philosopher. By his conscious recognition of the Greek philosophy as a preparation for the truths of the Christian religion, he appears as the first and most distinguished in the long list of those who have endeavoured to reconcile Christian with non-Christian philosophy. For him in the doctrines, guaranteed by the manifestation of the Logos in the person of Christ of God, righteousness and immortality, truths which have been to a certain extent foreshadowed in the monotheistic religious philosophies. In this process the conviction of the reconciliation of the sinner with God, of the salvation of the world and the individual through Christ, fell into the background before the vindication of supernatural truths intellectually conceived. Thus Justin may give the impression of having
rationalized Christianity, and of not having given it its full value as a religion of salvation. It must not, however, be forgotten that Justin is here speaking as the apologist of Christi-
anity to an educated pagan public, on whose philosophical view of life he had to base his arguments, and from whom he could not expect an intimate comprehension of the religious position of Christians. That he himself had a thorough comprehension of it he showed in the Dialogue with the Jew Trypho. Here, where he had to deal with the Judaism that believed in a Messiah, he was far better able to do justice to Christianity as a revelation; and so we find that the arguments of this work are much more completely in harmony with primitive Christian theology than those of the Apology. He also displays in this work a considerable knowledge of the Rabbinical writings and a skillful polemical method which was surpassed by none of the later anti-Jewish writers.

Justin is a most valuable authority for the life of the Christian Church in the middle of the 2nd century. While we have elsewhere no connected account of this, Justin's Apology contains a few paragraphs (61 seq.), which give a vivid description of the public worship of the Church and its method of celebrating the sacraments (Baptism and the Eucharist). And from this it is clear that though, as a theologian, Justin wished to go his own way, as a believing Christian he was ready to make his standpoint that of the Church and its baptismal confession of faith. His works are also of great value for the history of the New Testament writings. He knows of no canons of the New Testament, i.e. no fixed and inclusive collection of the apostolic writings. His sources for the teachings of Jesus are the "Memoirs of the Apostles," by which are probably to be under-
stood the Synoptic Gospels (without the Gospel according to St John), which, according to his account, were read along with the prophetic writings at the public services. From his writings we derive the impression of an amiable personality, who is honestly at pains to arrive at an understanding with his opponents. As a theologian, he is of wide sympathies; as a writer, he is often diffuse and somewhat dull. There are not many traces of any particular literary influence of his writings upon the Christian Church, and this need not surprise us. The Church as a whole took but little interest in apolo-
getics and polemics, nay, had at times even an instinctive feeling that in these controversies which she held holy might easily suffer loss. Thus Justin's writings were not much read, and at the present time both the Apology and the Dialogue are preserved in but a single MS. (cod. Paris, 450, A.D. 1364).

The fibre is obtained from two species of Corchorus (nat. ord. Tiliaceae), C. capsularis and C. olitorius, the products of both being so essentially alike that neither in commerce nor agriculture is any distinction made between them. These and various other species of Corchorus are natives of Bengal, where they have been cultivated from very remote times for economic purposes, although there is reason to believe that the cultivation did not originate in the northern parts of India. The two species cultivated for jute fibre are in all respects very similar to each other, except in their fructification and the relatively greater size attained by C. capsularis. They are annual plants from 5 to 10 ft. high, with a cylindrical stalk as thick as a man's finger, and hardly branching except near the top. The light-green leaves are from 4 to 5 in. long by 1½ in. broad above the base, and taper upward into a fine point; the edges are serrated; the two lower teeth are drawn out into bristle-like points. The small whitish-yellow flowers are produced in clusters of two or three opposite the leaves.

The capsules or seed-pods in the case of C. capsularis are globular, rough and wrinkled, while in C. olitorius they are slender, quill-like cylinders (about 2 in. long), a very marked distinction, as may be noted from fig. 1, in which a and b show the capsules of C. capsularis and C. olitorius respectively. Fig. 2 represents a flowering top of C. olitorius.

Both species are cultivated in India, not only on account
of their fibre, but also for the sake of their leaves, which are there extensively used as a pot-herb. The use of C. olitorius for the latter purpose dates from very ancient times, if it may be identified, as some suppose, with the mallows (Mollis) mentioned in Job xxx. 4; hence the name Jew's mallow. It is certain that the Greeks used this plant as a pot-herb; and by many nations around the shores of the Mediterranean this use of it was, and is still, common. Throughout Bengal the name by which the plants when used as edible vegetables are recognized is sallit; when on the other hand they are spoken of as fibre-producers it is generally under the name pât. The cultivation of C. capsularis is most prevalent in central and eastern Bengal, while in the neighbourhood of Calcutta, where, however, the area under cultivation is limited, C. olitorius is principally grown. The fibre known as China jute or Tien-tsin jute is the product of another plant, Abutilon Avenacea, a member of the Mallow family.

Cultivation and Cropping.—Attempts have been made to grow the jute plant in America, Egypt, Africa and other places, but up to the present the fibre has proved much inferior to that obtained from plants grown in Asia. Hence, to the cultivation of the plant extends from the Hugli through eastern and northern Bengal. The successful cultivation of the plant demands a hot, moist climate, with a fair amount of rain. Too much rain at the beginning of the season is detrimental to the growth, while a very dry season is disastrous. The climate of eastern and northern Bengal appears to be ideal for the growth of the plant.

The quality of the fibre and the produce per acre depend in a measure on the preparation of the soil. The ground should be ploughed about four times and all weeds removed. The seed is then sown broadcast as in the case of flax. It is only within quite recent years that any attention has been paid to the selection of the seed. The following extract from Capital (Jan. 17, 1907) indicates the new interest taken in it."

"Jute seed experiments are being continued and the report for 1906 has been issued. The object of these experiments is, of course, to obtain a better class of jute seed by growing plants, especially for no other purpose than to obtain their seeds. The agricultural department has about 300 maunds (25,000 lb) of selected seed for distribution this year. The selling price is to be Rs. 10 per maund. The agricultural department of the government of Bengal are now fully alive to the importance of fostering the jute industry by showing conclusively that attention to scientific agriculture will make two maunds of jute grow where only one maund grew before. Let them go on (as they will) till all the ryots are thoroughly indoctrinated into the new system."

The time of sowing extends from the middle of March to the middle of June, while the reaping, which depends upon the time of sowing and upon the weather, is performed from the end of June to the middle of October. The crop is said to be ready for gathering when the flowers appear; if gathered before, the fibre is weak, while if left until the seed is ripe, the fibre is stronger, but is coarser and lacks the characteristic lustre.

The fibre is separated from the stalks by a process of retting similar to that for flax and hemp. In certain districts of Bengal it is the practice to stack the crop for a few days previous to retting in order to allow the leaves to dry and to drop off the stalks. It is stated that the colour of the fibre is darkened if the leaves are allowed to remain on during the process of retting. It is also thought that the drying of the plants before retting facilitates the separation of the fibre. Any simple operation which improves the colour of the fibre or shortens the operation of retting is worthy of consideration. The benefits to be derived from the above process, however, cannot be great, for the bundles are usually taken direct to the pools and streams. The period necessary for the completion of the retting process varies according to the temperature and to the properties of the water, and may occupy from two days to a month. After the first few days of immersion the stalks are examined daily to test the progress of the retting. When the fibres are easily separated from the stalk, the operation is complete and the bundles should be withdrawn. The following description of the retting of jute is taken from Royle's Fibrous Plants of India—

"The proper point being attained, the native operator, standing up to his middle in water, takes as many of the sticks in his hands as he can grasp, and removing a small portion of the bark from the ends next the roots, and grasping them together, he strips off the whole with a little management from end to end, without breaking either stem or fibre. Having prepared a certain quantity into this half state, he next proceeds to wash off: this is done by taking a large handful; swinging it round his head he dashes it repeatedly against the surface of the water, drawing it through towards him, so as to wash off the impurities; then, with a dexterous throw he fans it out on the surface of the water and carefully picks off all remaining black spots. It is now wrung out so as to remove as much water as possible, and then hung up on lines prepared on the spot, to dry in the sun."

The separated fibre is then made up into bundles ready for sending to one of the jute presses. The jute is carefully sorted into different qualities, and then each lot is subjected to an enormous hydraulic pressure from which it emerges in the shape of the well-known bales, each weighing 400 lb.

The crop naturally depends upon the quality of the soil, and upon the attention which the fibre has received in its various stages; the yield per acre varies in different districts. Three bales per acre, or 1200 lb is termed a 100 % crop, but the usual quantity obtained is about 2-6 bales per acre. Sometimes the crop is stated in lakhs of 100,000 bales each. The crop in 1906 reached nearly 9,000,000 bales, and in 1907 nearly 10,000,000 was reached. The following particulars were issued on the 19th of September 1906 by Messrs. W. F. Souter & Co., Dundee:

A number of experiments in jute cultivation were made during 1906, and the report showed that very encouraging results were obtained from land manured with cow-dung. If more scientific attention be given to the cultivation it is quite possible that what is now considered as 100% yield may be exceeded. 

Characteristics.—The characters by which qualities of jute are judged are colour, lustre, softness, strength, length, firmness, uniformity and absence of roots. The best qualities are of a clear whitish-yellow colour, with a fine silky lustre, soft and smooth to the touch, and fine, long and uniform in fibre. When the fibre is intended for goods in the natural colour it is essential that it should be of light shade and uniform, but if intended for yarns which are to be dyed a dark shade, the colour is not so important. The cultivated plant yields a fibre with a length of from 6 to 10 ft., but in exceptional cases it has been known to reach 14 or 15 ft. in length. The fibre is decidedly inferior to flax and hemp in strength and tenacity; and, owing to a peculiarity in its microscopic structure, by which the walls of the separate cells composing the fibre vary much in thickness at different points, the single strands of fibre are of unequal strength. Recently prepared fibre is always stronger, more lustrous, softer and whiter than such as has been stored for some time—age and exposure rendering it brown in colour and harsh and brittle in quality. Jute, indeed, is much more woody in texture than either flax or hemp, a circumstance which may be easily demonstrated by its behaviour under appropriate agents; and to that fact is due the change in colour and character it undergoes on exposure to the air. The fibre bleaches with facility, up to a certain point, sufficient to enable it to take brilliant and delicate shades of dye colour, but it is with great difficulty brought to a pure white by bleaching. A very striking and remarkable fact, which has much practical interest, is its highly hygroscopic nature. While in a dry position and atmosphere it may not possess more than 6% of moisture, under damp conditions it will absorb as much as 23%.

Sir G. Watt, in his Dictionary of the Economic Products of India, mentions the following eleven varieties of jute fibre: Serajganji, Narangunj, Desi, Desha, Uttanya, Deswad, Bakrabadi, Bhatial, Karimganj, Mirganji and Jungpuri. There are several other varieties of minor importance. The first four form the four classes into which the commercial fibre is divided, and they are commonly known as Serajgunj, Narangunj, Daisee and Dowrah. Serajgunj is a soft fibre, but it is superior in colour, which ranges from white to grey. Narangunj is a strong fibre, possesses good spinning qualities, and is very suitable for good warp yarns. Its colour, which is not so high as Serajgunj, begins with a cream shade and approaches red at the roots. All the better class yarns are spun from these two kinds. Daisee is similar to Serajgunj in softness, is of good quality and of great length; its drawback is the low colour, and hence it is not so suitable for using in natural colour. It is, however, a valuable fibre for carpet yarns, especially for dark yarns. Dowrah is a strong, harsh and low quality fibre, and is used principally for heavy weaves. Each class is subdivided according to the quality and colour of the material, and each class receives a distinctive mark called a bale’s mark. Thus, the finest fibres may be divided as follows:

Superfine first marks.

The qualities are, naturally, divided into fewer varieties. Each variety has its own marks, the fibres of which are guaranteed equal in quality to some standard mark. It would be impossible to give a list of the different marks, for there are hundreds, and new marks are constantly being added. A list of all the principal marks is issued in book form by the Calcutta Jute Bakers' association.

The relative prices of the different classes depend upon the crop, upon the demand and upon the quality of the fibre; in 1905 the price of Daisee jute and First Marks were practically the same, although the former is always considered inferior to the latter. It does not follow that a large crop of jute will result in low prices, for the year 1906-1907 was not only a record one for crops, but also for prices. R. F. C. grade has been as high as £40 per ton, while its lowest recorded price is £12. Similarly the price for First Marks reached £29, £55, in 1906 as compared with £9, £5, per ton in 1897. The following table shows a few well-known grades with the average prices during December for the years 1903, 1904, 1905 and 1906.

Jute Manufacture.—Long before jute came to occupy a prominent place amongst the textile fibres of Europe, it formed...
the raw material of a large and important industry throughout the regions of Eastern Bengal. The Hindu population made the material up into cordage, paper and cloth, the chief use of the latter being in the manufacture of gunny bags. Indeed, up to 1830–1840 there was little or no competition with hand labour for this class of material. The process of weaving gunny for bags and other coarse articles by these hand-loom weavers has been described as follows:

"Seven sticks or chattee weaving-posts, called tanā pārdā or warp, are fixed upon the ground, occupying the length equal to the measure of three or four bales of the cloth woven, and a saucet number of nine or ten is wound on them as warp called tanā. The warp is taken up and removed to the weaving machine. Two pieces of wood are placed at two ends, which are tied to the khari or other roller; they are made to thread the warp. The warp is then closely fastened to a stick, called chupari or regulator. There is no sley used in this, nor a shuttle necessary. In the room of the latter a stick covered with thread called sangā is thrown into the warp as woof, which is beaten in by a piece of plank called behno, and as the cloth is woven it is wound up to the roller. Next to this is a piece of wood called khetone, which is used for smoothing and regulating the woof; a stick is fastened to the warp to keep the woof straight."

Gunny cloth is woven of numerous qualities, according to the purpose to which it is devoted. Some kinds are made close and dense in texture, for carrying such seed as poppy or rape and sugar; others less close are used for rice, pulses, and seeds of like size, and coarser and opener kinds again are woven for the outer cover of packages and for the sails of country boats. There is a thin close-woven cloth made and used as garments among the females of the aboriginal tribes near the foot of the Himalayen, and in various localities a cloth of pure jute or of jute mixed with cotton is used as a sheet to sleep on, as well as for wearing purposes. To indicate the variety of uses to which jute is applied, the following quotation may be cited from the official report of Hemy Chunder Kerr as applying to Midnapur.

"These are principally (1) gunny bags; (2) string, rope and cord; (3) kumpa, a net-like bag for carrying wood or hay on bullocks; (4) chat, a strip of stuff for tying bales of cotton or cloth; (5) dula, a swing on which infants are rocked to sleep, a kind of hanging shelf for little earthen pots, &c.; (7) dhlia, a floor-cloth; (8) small stands for wooden plates used particularly in poojahs; (9) a painter's brush and brush for white-washing; (10) gunshi, a waist-band worn next to the skin; (11) ghokh-dari, a hair-band worn by women; (12) mukh-bag, a bag used for carrying; (13) parshda, false hair worn by players; (14) rakhi-bandhan, a slender arm-band worn at the Rakhi-poornima festival; and (15) dhup, small incense sticks burned at poojahs."

The fibre began to receive attention in Great Britain towards the close of the 18th century, and early in the 19th century it was spun into yarn and woven into cloth in the town of Abingdon. It is claimed that this was the first British town to manufacture the material. For years small quantities of jute were imported into Great Britain and other European countries and into America, but it was not until the year 1832 that the fibre may be said to have made any great impression in Great Britain. The first really practical experiments with the fibre were made in this year in Chapelshade Works, Dundee, and these experiments proved to be the foundation of an enormous industry. It is interesting to note that the site of Chapelshade Works was in 1907 cleared for the erection of a large new technical college.

In common with practically all new industries progress was slow for a time, but once the value of the fibre and the cloth produced from it had become known the development was more rapid. The pioneers of the work were confronted with many difficulties; most people condemned the fibre and the cloth, many warps were discarded as unfit for weaving, and any attempt to mix the fibre with flax, tow or hemp was considered a form of deception. The real cause of most of these objections was the fact that suitable machinery and methods of treatment had not been developed for preparing yarns from this useful fibre.

Warden in his Linen Trade says:

"For years after its introduction the principal spinners refused to have anything to do with jute, and cloth made of it long retained a tainted reputation. Indeed, it was not until Mr. Rowan got the Dutch government, about 1838, to substitute jute yarns for those made from flax in the manufacture of the coffee bagging for their East Indian possessions, that the jute trade in Dundee got a proper start. That fortunate circumstance gave an impulse to the spinning of the fibre which it never lost, and since that period its progress has been truly astonishing."

The demand for this class of bagging, which is made from fine hessian yarns, is still great. These fine Rio hessian yarns form an important branch of the Dundee trade, and in some weeks during 1906 as many as 1000 bales were despatched to Brazil, besides numerous quantities to other parts of the world.

For many years Great Britain was the only European country engaged in the manufacture of jute, the great seat being Dundee. Gradually, however, the trade began to extend, and now almost every European country is partly engaged in the trade.

The success of the method of spinning and weaving of jute in Dundee and district led to the introduction of textile machinery into and around Calcutta. The first mill to be run there by power was started in 1854, while by 1872 three others had been established. In the next ten years no fewer than sixteen new mills were erected and equipped with modern machinery from Great Britain, while in 1907 there were thirty-nine mills engaged in the industry. The expansion of the Indian power trade may be gathered from the following particulars of the number of looms and spindles from 1802 to 1906.

The Calcutta looms are engaged for the most part with a few varieties of the commoner classes of jute fabrics, but the success in this direction has been really remarkable. Dundee, on the other hand, turns out not only the commoner classes of fabrics, but a very large variety of other fabrics. Amongst these may be mentioned the following: Hessian, bagging, tarpaulin, sackings, scrim, Brussels carpets, imitation Brussels, and several other types of carpets, rugs and matting, in addition to a large variety of fabrics of which jute forms a part. Calcutta has certainly taken a large part of the trade which Dundee held in its former days, but the continually increasing demands for jute fabrics for new purposes have enabled Dundee to enter new markets and to take part in the prosperity of the trade.

The development of the trade with countries outside India from 1828 to 1906 may be seen by the following figures of exports:

1 End of calendar year, the remainder being taken to the 31st of March, the end of financial year.
2 Approximate number of spindles.
The subjoined table shows the extent of the trade from an agricultural, as well as from a manufacturing, point of view. The difference between the production and the exports represents the native consumption, for very little jute is sent overland. The figures are taken to the 31st of March, the end of the Indian financial year.

Manufacture.—In their general features the spinning and weaving of jute fabrics do not differ essentially as to machinery and processes from those employed in the manufacture of hemp and heavy flax goods. Owing, however, to the woody and brittle nature of the fibre, it has to undergo a preliminary treatment peculiar to itself. The pioneers of the jute industry, who did not understand this necessity, or rather who did not know how the woody and brittle character of the fibre could be remedied, were greatly perplexed by the difficulties they had to encounter, the fibre spinning badly into a hard, rough and hairy yarn owing to the splitting and breaking of the fibre. This peculiarity of jute, coupled also with the fact that the machinery on which it was first spun, although quite suitable for the stronger and more elastic fibres for which it was designed, required certain modifications to suit it to the weaker jute, was the cause of many annoyances and failures in the early days of the trade.

The first process in the manufacture of jute is termed beating. Batch setting is the first part of this operation; it consists of selecting the different kinds or qualities of jute for any predetermined kind of yarn. The number of bales for a batch seldom exceeds twelve, indeed it is generally about six, and of these there may be three, four or even more varieties or marks. The "streaks" or "heads" of jute as they come from the bale are in a hard condition in consequence of having been subjected to a high hydraulic pressure during baling; it is therefore necessary to soften them before any further process is entered. The stresses are sometimes partly softened or crushed by means of a steam hammer during the process of opening the bale, then taken to the "strikers-up" where the different varieties are selected and hung on pins, and then taken to the jute softening machine. The more general practice, however, is to employ what is termed a "bale opener" or "jute crusher." The essential parts of one type of bale opener are three specially shaped rollers, the peripheries of which contain a number of small knobs. Two of these rollers supported in the same horizontal plane of the framework, while the third or top roller is kept in close contact by means of weights and springs acting on each end of the arbor. Another type of machine termed the three pair roller jute opener is illustrated in fig. 3. The layers from the different bales are laid upon the feed cloth which carries them up to the rollers, between which they are crushed and partly separated. The proximity of the weighted roller or rollers to the fixed ones depends upon the thickness of material passing through the machine. The fibre is delivered by what is called the delivery cloth, and the batcher usually selects small streaks of about 1/2 lb to 2 lb weight each and passes them on to the attendant or feeder of the softening machine. These small streaks are now laid as regularly as possible upon the feed-cloth of the softening machine, a general view of which is shown in fig. 4. The fibre passes between a series of fluted rollers, each pair of which is kept in contact by spiral springs as shown in the figure. The standard number of pairs is sixty-three, but different lengths obtain. There is also a difference in the structure of the

1 Also in the forms "streck," "stick" or "strike," as in Chaucer, *Can. Tales*, Prologue 676, where the Pardoner's hair is compared with a "strike of flax." The term is also used of a handful of hemp or other fibre, and is one of the many technical applications of "strike" or "streak," which etymologically are cognate words.
large cylinder. This cylinder, which has a high surface speed, carries part of the fibre towards the workers and strippers; the surface speed of the workers being much slower than that of the cylinder. The pins in the two rollers oppose each other, those of the workers being back-set, and this arrangement, combined with the relative angle of the pins, make thedrawing both in the first and second speeds of the two rollers, results in part of the fibre being broken and carried round by the worker towards the stripper. This, as its

name implies, strips the fibre off the worker, and carries it round to the cylinder. The pins of the stripper and cylinder point in one same direction, but since the surface speed of the cylinder is much greater than the surface speed of the stripper, it follows that the fibre is combed between the two, and that part is carried forward by the cylinder to be reworked. The strippers and workers are in pairs, of which there may be two or more. After passing the last pair of workers and strippers the fibre is carried forward towards the drawing roller, the pins of which are back-set, and the fibre is removed from the cylinder by the doffer, from which it passes between the drawing and pressing rollers into the conductor, and finally between the delivery and pressing rollers into the silver can. It may be mentioned that more or less breaking takes place between each pair of rollers, the pins of which are opposed, and that combing and drawing out obtains between those rollers with pins pointing in the same direction. The ratio of the surface speeds of the drawing roller and the feed roller is termed the draft:—

surface speed of drawing roller

surface speed of feed roller

In this machine the draft is used without thirteen.

The sliver from the can of the breaker card may be wound into bales, or it may be taken direct to the finisher card. In the latter method from eight to fifteen cans are placed behind the feed rollers, and all the slivers from these cans are united before they emerge from the machine. The main difference between a breaker card and a finisher card is that the latter is fitted with finer pins, that it contains two doffing rollers, and that it usually possesses a greater number of pairs of workers and strippers—a full circular finisher card having four sets.

After the fibre has been thoroughly carded by the above machines, the cans containing the sliver from the finisher card is used in the first drawing frame. A very common method is to let four slivers run into one sliver at the first drawing or two slivers from the first drawing are run into one sliver at the second drawing frame. There are several types of drawing frames, e.g., push-bar or slide, rotary, spiral, ring, open-link or chain, the spiral being generally used for the second drawing. All, however, perform the same function, viz., combing out the fibres and thus laying them parallel, and in addition drawing out the sliver. The designation of the machine indicates the particular method in which the gill pins are moved. These pins are much finer than those of the breaker and finisher cards, consequently the fibres are more thoroughly separated. The draft in the first drawing varies from three to five, while that in the second drawing is usually five to seven. It is easy to see that a certain amount of draft, or drawing out of the sliver, is necessary, otherwise the various doublings would cause the sliver to emerge thicker and thicker from each machine. The doublings play a very important part in the appearance of the ultimate rove and yarn, for the chief reason for doubling threads or slivers is to minimize irregularities of thickness and of colour in the material. In an ordinary case, the total doublings in jute from the breaker card to the end of the second drawing is ninety-six: $12 \times 4 \times 2 = 96$; and if the slivers were made thinner and more of them used the ultimate result would naturally be improved.

The final preparing process is that of roving. In this operation there is no doubling of the slivers, but each sliver passes separately through the machine, from the can to the spindle, is drawn out to about eight times its length, and receives a small amount of twist to strengthen it, in order that it may be successfully wound upon the bobbin. Each layer of the bobbin has its own particular number, which is constant for the full traverse, but each change of direction of the builder is accompanied by a quick change of speed to the bobbin. Each layer of the bobbin has its own particular number, which is constant for the full traverse, but each change of direction of the builder is accompanied by a quick change of speed to the bobbin. It is essential that the bobbin should have such a motion, because the number of the sliver and the number of the flyer are both a constant for a given size of rove, whereas the layers of rove on the bobbin increase in length as the bobbin fills. In the jute roving frame the bobbin is termed the "follower," because its revolutions per minute are fewer than those of the flyer. Each layer of rove increases the diameter of the mate roving, and consequently the bobbin itself. The widening of each layer, the speed of the bobbin must be increased, and kept at this increased speed for the whole traverse from top to bottom or vice versa.

Let $R = \frac{\text{rotations per second of the flyer}}{\text{revolutions per second of the bobbin}}$; $r = \frac{\text{revolutions per second of the bobbin}}{\text{revolutions per second of the bobbin}}$; $d = \frac{\text{diameter of bobbin shaft plus the material}}{\text{diameter of bobbin shaft plus the material}}$; $L = \text{length of sliver delivered per second}$; then

$$ R = \left(1 + \frac{d}{L}ight) - r.$$

In the above expression $R$, $r$, and $L$ are constant, therefore as $d$ increases the term $(R - r)$ must decrease; this can happen only when $r$ is increased, that is, when the bobbin revolves quicker. It is easy to see from the above expression that if the bobbin were the "leader," its speed would have to decrease as its size increases.

The builder, which receives its motion from the disk and scroll, from the cones, or from the expanding pulley, has also an intermittingly variable speed. It begins at a maximum speed when the bobbin is empty, is constant for each layer, but decreases as the bobbin fills.

The rove yarn is now ready for the spinning frame, where a further draft of about eight is given. The principles of jute spinning are similar to those of dry spinning for flax. For very heavy jute yars the bottom and top bars are used—these are the desired amount of twist given at the roving frame.

The count of jute yarn is based upon the weight in pounds of 14,400 yds., such length receiving the name of spundy. The finest yars weigh 2 lb to 3 lb per spundy, but the commonest kinds are 7 lb, 8 lb, 9 lb, and 10 lb per spundy. The sizes rise in pounds up to about 20 lb, then by 2 lb up to about 50 lb per spundy, with much larger jumps above this weight. It is not uncommon to find 200 lb and 300 lb rove yars, while the weight occasionally reaches 400 lb per spundy. The difference in size is so large that a jute yarn of 400 lb per spundy is used in a large variety of fabrics, sometimes alone, sometimes in conjunction with other fibres, e.g., with worsted in the various kinds of carpets, with cotton in tapistries and household cloths, with line and tow yars for household articles, for slittings, and various other uses for horse and human clothing. The yarns are capable of being dyed brilliant colours, but, unfortunately, the colours are not very fast to light. The fibre can also be prepared to imitate human hair with remarkable close- ness, and advantage of this is largely taken in making stage wigs.

For detailed information regarding jute, the cloths made from it and the machinery used, see the following works: W. Watts's Dictionary of the Economic Products of India; Royke's Fibrous Plants of India; Sharp's Flax, Tussar and Jute Spinning; Leggett's Jute Spinning; Woodhouse and Milne's Jute and Linen Weaving; and Woodhouse and Milne's Textile Design: Pure and Applied.

(J. T.)

JUTERBOG, or Jüterbog, a town of Germany in the prussian province of Brandenburg, on the Nuthe, 39 m. S.W. of Berlin, at the junction of the main lines of railway from Berlin to Dresden and Leipzig. Pop. (1900), 7,497. The town is surrounded by a medieval wall, with three gateways, and contains two Protestant churches, of which that of St Nicholas (14th century) is remarkable for its three fine aisles. There are also a Roman Catholic church, an old town-hall and a modern school. Jüterbog carries on weaving and spinning both of flax and wool, and trades in the produce of those manufactures and in cattle. Vines are cultivated in the neighbourhood. Jüterbog belonged in the later middle ages to the archbishopric of Magdeburg, passing to electoral Saxony in 1648, and to Prussia in 1815. It was here that a treaty over the succession to the duchy of Jülich was made in March 1611 between Saxony and Brandenburg, and here in November 1644 the Swedes defeated the Imperialists. Two miles S.W. of the town is the battlefield of Dennenwitz where the Prussians defeated the French on the 8th of September 1813.
JUTES--JUTURNA

JUTES, the third of the Teutonic nations which invaded Britain in the 5th century, called by Bede Iutae or Iutii (see BRITAIN, ANGLO-SAXON). They settled in Kent and the Isle of Wight together with the adjacent parts of Hampshire. In the latter case the national name is said to have survived until Bede’s own time, in the New Forest indeed apparently very much later. In Kent, however, it seems to have soon passed out of use, though there is good reason for believing that the inhabitants of that kingdom were of a different nationality from their neighbours (see KENT, KINGDOM OF). With regard to the origin of the Jutes, Bede only says that Angulus (Angel) lay between the territories of the Saxons and the Iutae—a statement which points to their identity with the Iuti or Jyder of later times, i.e. the inhabitants of Jutland. Some recent writers have preferred to identify the Jutes with a tribe called Eucii mentioned in a letter from Theodbert to Justinian (Mon. Germ. Hist., Epist. iii., p. 132 seq.) and settled apparently in the neighbourhood of the Franks. But these people may themselves have come from Jutland.

See Bede, Hist. Eclec. i. 15, iv. 16. (H. M. C.)

JUTIGALPA, or JUTICAPA, the capital of the department of Jutigalpa in eastern Honduras, on the main roads from the Bay of Fonseca to the Atlantic coast, and on a small left-hand tributary of the river Patuca. Pop. (1905), about 18,000. Jutigalpa is the second city of Honduras, being surpassed only by Tegucigalpa. It is the administrative centre of a mountainous region rich in minerals, though mining is rendered difficult by the lack of communications and the unsettled condition of the country. The majority of the inhabitants are Indians or half-castes, engaged in the cultivation of coffee, bananas, tobacco, sugar or cotton.

JUTLAND (Danish Jylland), though embracing several islands as well as a peninsula, may be said to belong to the continental portion of the kingdom of Denmark. The peninsula (Chersonese or Cimbriic peninsula of ancient geography) extends northward, from a line between Lillebæck and the mouth of the Elbe, for 270 m. to the promontory of the Skaw (Skagen), thus preventing a natural communication directly east and west between the Baltic and North Seas. The northern portion only is Danish, and bears the name Jutland. The southern is German, belonging to Schleswig-Holstein. The peninsula is almost at its narrowest (36 m.) at the frontier, but Jutland has an extreme breadth of 110 m. and the extent from the south-western point (near Ribe) to the Skaw is 180 m. Jutland embraces nine amter (counties), namely, Hjørring, Thisted, Aalborg, Ringkøbing, Viborg, Randers, Aarhus, Vejle and Ribe. The main water-shed of the peninsula lies towards the east coast; therefore such elevated ground as exists is found on the east, while the western slope is gentle and consists of a low sandy plain of slight undulation. The North Sea coast (western) and Skagerrack coast (north-western) consist mainly of a sweeping line of dunes with wide lagoons behind them. In the south the northernmost of the North Frisian Islands (Fanø) is Danish. Towards the north a narrow mouth gives entry to the Limfjord, or Limfjordfjord, which, wide and ramifying among islands to the west, narrows to the east and pierces through to the Cattegat, thus isolating the counties of Hjørring and Thisted (known together as Vendsyssel). It is, however, bridged at Aalborg, and its depth rarely exceeds 12 ft. The seaward banks of the lagoons are frequently broken in storms, and the narrow channels through them are constantly shifting. The east coast is slightly bolder than the west, and indented with true estuaries and bays. From the south-east the chain of islands forming insular Denmark extends towards Sweden, the strait between Jutland and Fünen having the name of the Little Belt. The low and dangerous coasts, off which the seas are generally very shallow, are efficiently served by a series of lifeboat stations. The western coast region is well compared with the Landes of Gascony. The interior is low. The Varde, Omme, Skjern, Sör and Karup, sluggish and torrentious streams draining into the western lagoons, rise in and flow through marshes, while the eastern Limfjord is flanked by the swamps known as Vildmose. The only considerable river is the Gudenaab, flowing from S.W. into the Randersfjord (Cattégat), and rising among the picturesque lakes of the county of Aarhus, where the principal elevated ground in the peninsula is found in the Himmelbjerg and adjacent hills (exceeding 500 ft.). The German portion of the peninsula is generally similar to that of western Jutland, the main difference lying in the occurrence of islands (the North Frisian) off the west coast in place of sand-bars and lagoons. Erratic blocks are of frequent occurrence in south Jutland. (For geology, and the general consideration of Jutland in connexion with the whole kingdom, see DENMARK.)

Although in ancient times well wooded, the greater portion of the interior of Jutland consisted for centuries of barren drift-sand, which grew nothing but heather; but since 1866, chiefly through the instrumentality of the patriarchal Heath association, assisted by annual contributions from the state, a very large proportion of this region has been more or less reclaimed for cultivation. The means adopted are: (i.) the plantation of trees; (ii.) the making of irrigation canals and irrigating meadows; (iii.) exploring for, extracting and transporting loam, a process aided by the construction of short light railways; and (iv.), since 1889, the experimental cultivation of fenney districts. The activity of the association takes the form partly of giving gratuitous advice, partly of experimental attempts, and partly of model works for imitation. The state also makes annual grants directly to owners who are willing to place their plantations under state supervision, for the sale of plants at half price to the poorer peasantry, for making protective or sheltering plantations, and for free transport of man or loam. The species of timber almost exclusively planted are the red fir (Pinus excelsa) and the mountain pine (Pinus montana). This admirable work quickly caused the population to increase at a more rapid rate in the districts where it was practised than in any other part of the Danish kingdom. The counties of Viborg, Ringkøbing and Ribe cover the principal hith district.

Jutland is well served by railways. Two lines cross the frontier from Germany on the east and west respectively and run northward near the coasts. The eastern touches the ports of Kolding, Fredericia, Vejle, Horsens, Aarhus, Randers, Aalborg on Limfjord, Frederikshavn and Skagen. On the west the only port of first importance is Esbjerg. The line runs past Skjern, Ringkøbing, Vemb and Holstebro to Thisted. Both throw off many branches and are connected by lines east and west between Kolding and Esbjerg, Skanderborg and Skjern, Lægaa and Struer on Limfjord via Viborg. Of purely inland towns only Viborg stands in the midland and Hjørring in the extreme north are of importance.

JUTURNA (older form Diuturna, the lasting), an old Latin divinity, a personification of the never-falling sponges. Her original home was on the river Numicus near Laviniun, where there was a spring called after her, supposed to possess healing qualities (whence the old Roman derivation from juware, to help). Her worship was early transferred to Rome, localized by the Lacus Juturnae near the temple of Vesta, at which Castor and Pollux, after announcing the victory of lake Regillus, were said to have washed the sweat from their horses. At the end of the First Punic War Lutatius Catulus erected a temple in her honour on the Campus Martius, subsequently restored by Augustus. Juturna was associated with two festivals: the Juturnalia on the 11th of January, probably a dedication festival of a temple built by Augustus, and celebrated by the college of the fontani, workmen employed in the construction and maintenance of aqueducts and fountains; and the Volcanalia on the 23rd of August, at which sacrifice was offered to Volcanus, the Nymphs and Juturna, as protectors against outbreaks of fire. In Virgil, Juturna appears as the sister of Turnus (probably owing to the partial similarity of the names), on whom Jupiter, to console her for the loss of her chastity, bestowed immortality and the control of all the lakes and rivers of Latium. For the statement that she was the wife of Janus and mother of Fontus (or Fons), the god of fountains, Arnobius (Adv. gentes iii. 29) is alone responsible.
See Virgil, Aeneid, xii. 139 and Servius ad loc.; Ovid, Fasti, ii. 583-616; Valerius Maximus, i. 8. 15. Le Dubeur, "Juturna und die Ausgrabungen auf dem römischen Forum," in "Neue Jahrb. f. das klassische Altertum" (1902), p. 370.

JUVENAL (Decimus Junius Juvenalis) (c. 60-140), Roman poet and satirist, was born at Aquinum. Brief accounts of his life, varying considerably in details, are prefixed to different MSS. of the works. But their common original cannot be traced to any competent authority, and some of their statements are intrinsically improbable. According to the version which appears to be the earliest:—

"Juvenal was the son or ward of a wealthy freedman; he practised declamation till middle age, not as a professional teacher, but as an amateur, and was sent by his master to study the law in Paris, the actor and favourite of Domitian, now found in the seventh satire (lines 90 seq.). Encouraged by their success, he devoted himself diligently to this kind of composition, but refrained for a long time from either publicly reciting or publishing his verses. When at last he did come before the public, his recitations were attended by great crowds and received with the utmost approbation. But the lines originally written on Paris, having been inserted in one of his new satires, excited the jealous anger of an actor of the time, who was a supporter of the emperor, and procured the poet's banishment under the form of a military appointment to the extremity of Egypt. Being then eighty years of age, he died shortly afterwards of grief and vexation."

Some of these statements are so much in consonance with the indirect evidence afforded by the satires that they may be a series of conjectures based upon them. The rare passages in which the poet speaks of his own position, as in satires xi. and xiii., indicate that he was in comfortable but moderate circumstances. We should infer also that he was not dependent on any professional occupation, and that he was separated in social station, and probably too by tastes and manners, from the higher class to which Tacitus and Pliny belonged, as he was by character from the new men who rose to wealth by servility under the empire. Juvenal is no organ of the pride and dignity, still less of the urbanity, of the cultivated representatives of the great families of the republic. He is the champion of the more sober virtues and ideas, and perhaps the organ of the rancours and detraction, of an educated but depressed and embittered middle class. He lets us know that he has no leanings to philosophy (xii. 112) and pours contempt on the serious epic writing of the day (i. 162). The statement that he was a trained and practised declamer is confirmed both by his own words (i. 16) and by the rhetorical mould in which his thoughts and illustrations are cast. The allusions which fix the dates when his satires first appeared, and the large experience of life which they imply, agree with the statement that he did not come before the world as a talented but inexperienced satirist till after middle age.

The statement that he continued to write satires long before he gave them to the world accords well with the nature of their contents and the elaborate character of their composition, and might almost be inferred from the emphatic but yet guarded statement of Quintilian in his short summary of Roman literature. After speaking of the merits of Lucilius, Horace and Persius as satirists, he adds, "There are, too, in our own day, distinguished writers of satire whose names will be heard of hereafter" (Inst. Or. x. 1, 94). There is no Roman writer of satire who could be mentioned along with those others by so judicious a critic, except Juvenal. The motive which a writer of satire must have had for secrecy under Domitian is sufficiently obvious; and the necessity of concealment and self-suppression thus imposed upon the writer may have permanently affected his whole manner of composition.

So far the original of these lives follows a not improbable tradition. But when we come to the story of the poet's exile the case is otherwise. The undoubted reference to Juvenal in Sidonius Apollinaris as the victim of the rage of an actor only proves that the original story from which all the varying versions of the lives are derived was generally believed before the middle of the 5th century of our era. If Juvenal was banished at the age of eighty, the author of his banishment could not have been the "engaged actor" in reference to whom the original lines were written, as Paris was put to death in 83, and Juvenal was certainly writing satires long after 100. The satire in which the lines now appear was probably first published soon after the accession of Hadrian, when Juvenal was not an octogenarian but in the maturity of his powers. The cause of the poet's banishment at that advanced age could not therefore have been either the original composition or the first publication of the lines.

An expression in xv. 145 is quoted as a proof that Juvenal had visited Egypt. He may have done so as an exile or in a military command; but it seems hardly consistent with the importance which the emperors attached to the security of Egypt, or with the concern which they took in the interests of the army, that these conditions were combined at an age so unfruitful for military employment. If any conjecture is warrantable on so obscure a subject, it is more likely that this temporary disgrace should have been inflicted on the poet by Domitian. Among the many victims of Juvenal's satire it is only against him and against one of the vilest instruments of his court, the Egyptian Crispinus, that the poet seems to have been animated by personal hatred. A sense of wrong suffered at their hands may perhaps have mingled with the detestation which he felt towards them on public grounds. But if he was banished under Domitian, it must have been either before or after 93, at which time, as we learn from an epigram of Martial, Juvenal was in Rome.

More ancient evidence is supplied by an inscription found at Aquinum, recording, so far as it has been deciphered, the dedication of an altar to Ceres by a Junius Juvenalis, tribune of the first cohort of Dalmatians, duumvir quiquisennalis, and flamens Divi Vespasiani, a provincial magistrate whose functions corresponded to those of the censor at Rome. This Juvenalis may have been the poet, but he may equally well have been a relation. The evidence of the satires does not point to a prolonged absence from the metropolis. They are the product of immediate and intimate familiarity with the life of the great city. An epigram of Martial, written at the time when Juvenal was most vigorously employed in their composition, speaks of him as settled in Rome. He himself hints (iii. 31) that he maintained his connexion with Aquinum, and that he had some special interest in the worship of the "Helvian Ceres." Nor is the tribute to the national religion implied by the dedication of the altar to Ceres inconsistent with the beliefs and feelings expressed in the satires. While the fables of mythology are often treated contemptuously or humorously by him, other passages in the satires clearly imply a conformity to, and even a respect for, the observances of the national religion. The evidence as to the military post filled by Juvenal is curious, when taken in connexion with the confused tradition of his exile in a position of military importance. But it cannot be said that the satires bear traces of military experience; the life described in them is rather such as would present itself to the eyes of a civilian.

The only other contemporary evidence which affords a glimpse of Juvenal's actual life is contained in three epigrams of Martial. Two of these (vii. 24 and 91) were written in the time of Domitian, the third (xii. 18) early in the reign of Trajan, after Martial had retired to his native Bilbilis. The first attests the strong regard which Martial felt for him; but the subject of the epigram seems to hint that Juvenal was not an easy person to get on with. In the second, addressed to Juvenal himself, the epithet facundus is applied to him, equally applicable to his eloquence as satirist or rhetorician. In the last Martial imagines his friend wandering about discontentedly through the crowded streets of Rome, and undergoing all the discomforts incident to attendance at banquets. The second of the three epigrams is harsh and polemical, and suggests that the satirist, who inveighed with just severity against the worst corruptions of Roman morals, was not too rigid a censor of the morals of his friends. Indeed, his intimacy with Martial is a ground for not attributing to him exceptional strictness of life.

The additional information as to the poet's life and circumstances derivable from the satires themselves is not important. He had enjoyed the training which all educated men received in his day (i. 15); he speaks of his farm in the territory of Tibur.
JUVENAL

trifler rather than as a monster of lust and cruelty, is the reproduction of a real or imaginary scene from the reign of Domitian, and is animated by the profoundest scorn and loathing both of the tyrant himself and of the worst instruments of his tyranny. The fifth is a social picture of the degradation to which poor guests were exposed at the banquets of the rich, but many of the epigrams of Martial and the more sober evidence of one of Pliny's letters show that the picture painted by Juvenal, though perhaps exaggerated in colouring, was drawn from a state of society prevalent during and immediately subsequent to the times of Domitian. Book II. consists of the most elaborate of the satires, by many critics regarded as the poet's masterpiece, the famous sixth satire, directed against the whole female sex, which shares with Domitian and his creatures the most cherished place in the poet's antipathies. It shows certainly no diminution of vigour either in its representation or its invective. The time at which this satire was composed cannot be fixed with certainty, but some allowances render it highly probable that it was given to the world in the later years of Trajan, and before the accession of Hadrian. The date of the publication of Book III., consisting of the seventh, eighth and ninth satires, seems to be fixed by its opening line to the first years after the accession of Hadrian. In the eighth satire another reference is made (120) to the misgovernment of Marius in Africa; a recent event, there may be an allusion to the Eastern wars which occupied the last years of Trajan's reign. The ninth has no allusion to determine its date, but it is written with the same outspoken freedom as the second and the sixth, and belongs to the period when the poet's power was most vigorous, and his exposure of vice most uncompromising. In Book IV., comprising the famous tenth, the eleventh and the twelfth satires, the author appears more as a moralist than as a pure satirist. In the tenth, the theme of the "vanity of human wishes" is illustrated by great historic instances, rather than by pictures of the men and manners of the age; and, though the declamatory vigour and power of expression in it are occasionally as great as in the earlier satires, and although touches of Juvenal's saturnine humour, and especially of his misogyny, appear in all the satires of this book, yet their general tone shows that the white heat of his indignation is abated; and the lines of the eleventh, already referred to (201 seq.), leave no doubt that he was well advanced in years when they were written.

Two important dates are found in Book V., comprising satires xiii.-xvi. At xiii. 16 Juvenal speaks of his friend Calvisius as now past sixty years of age, having been born in the consulship of Fonteius. Now L. Fonteius Capito was consul in 67. Again at xv. 27 an event is said to have happened in Egypt "nuper consule Iunco." There was a L. Aemilius Iuncus consul suffectus in 127. The fifth book must therefore have been published some time after this date. More than the fourth, this book bears the marks of age, both in the milder tone of the sentiments expressed, and in the feeble power of composition exhibited. The last satire is now imperfect, and the authenticity both of this and of the fifteenth has been questioned, though on insufficient grounds.

Thus the satires were published at different intervals, and for the most part composed between 100 and 130, but the most powerful in feeling and vivid in conception among them dealt with the experience and impressions of the reign of Domitian, occasionally recall the memories or traditions of the times of Nero and Claudius, and reproduce at least one startling page from the annals of Tiberius. The same overmastering feeling which constrained Tacitus (Agric. 2, 3), when the time of long endurance and silence was over, to recall the "memory of the

---

1 This is especially noticeable in the seventh satire, but it applies also to the mention of Crispinus, Latinus, the class of delatores, &c., in the first, to the notice of Veiento in the third, of Rubellius Blandus in the eighth, of Gallicus in the thirteenth, &c.

2 Cf. Tacitus, Annals, xiii. 25.

3 Pliny's remarks on the vulgarity as well as the ostentation of his host imply that he regarded such behaviour as exceptional, at least in the circle in which he himself lived (Ep. ii. 6).
former oppression," acted upon Juvenal. There is no evidence that these two great writers, who lived and wrote at the same time, who were animated by the same hatred of the tyrant under whom the best years of their manhood were spent, and who both felt most deeply the degradation of their times, were even known to one another. Tacitus belonged to the highest official and senatorial class; Juvenal apparently to the middle class and to that of the struggling men of letters; and this difference in position had much influence in determining the different bent of their genius, and in forming one to be a great national historian, the other to be a great social satirist. If the view of the satirist is owing to this circumstance more limited in some directions, and his taste and temper less conformable to the best ancient standards of propriety, he is also saved by it from prejudices to which the traditions of his class exposed the historian. But both writers are thoroughly national in sentiment, thoroughly masculine in tone. No ancient authors express so strong a hatred of evil. The peculiar greatness and value of both Juvenal and Tacitus is that they did not shut their eyes to the evil through which they had lived, but deeply resented it—the one with a vehement and burning passion, like the "saeva indignatio" of Swift, the other with perhaps even deeper but more restrained emotions of mingled scorn and sorrow, like the scorn and sorrow of Milton when "fallen on evil days and evil tongues." In one respect there is a difference. For Tacitus the prospect is not wholly cheerless, the detested tyranny was at an end, and its effects might disappear with a more beneficent rule. But the gloom of Juvenal's pessimism is enlightened by hope.

A. C. Swinburne has suggested that the secret of Juvenal's concentrated power consisted in this, that he knew what he hated, and that he did hate was despotism and democracy. But it would be hardly true to say that the animating motive of his satire was political. It is true that he finds the most typical examples of lust, cruelty, levity and weakness in the emperors and their immediate agents; but he draws his portraits of Nero, Claudius and Messalla. It is true also that he shares in the traditional idolatry of Brutus, that he strikes at Augustus in his mention of the "three disciples of Sulla," and that he has no word of recognition for what even Tacitus acknowledges as the beneficent rule of Trajan. So too his scorn for the Roman populace of his time, who cared only for their dole of bread and the public games, is unqualified. But it is only in connexion with its indirect effects that he seems to think of despotism; and he has no thought of democracy at all. It is not for the loss of liberty and of the senatorial rule that he chafes, but for the loss of the old national manliness and self-respect. This feeling explains his detestation of foreign manners and superstitions, his loathing not only of inhuman crimes and cruelties but even of the lesser deprivations from self-respect, his scorn of luxury and of art as ministering to luxury, his mockery of the poetry and of the stale and dilletante culture of his time, and perhaps, too, his indifference to the schools of philosophy, and his readiness to identify all the pretensions of stoicism with the reserved and close-cropped puritans, who concealed the worst vices under an outward appearance of austerity. The great fault of his character, as it appears in his writings, is that he too exclusively indulged this mood. It is much more difficult to find what he loved and admired than what he hated. But it is characteristic of his strong nature that, where he does betray any sign of human sympathy or tenderness, it is for those who by their weakness and position are dependent on others for their protection—as for "the peasant boy with the little dog, his playfellow," or for "the home-sick lad from the Sabine highlands, who sighs for his mother whom he has not seen for a long time, and for the little but and the familiar kids."

If Juvenal is to be ranked as a great moralist, it is not for his greatness and consistency as a thinker on moral questions. In the rhetorical exaggeration of the famous tenth satire, for instance, the highest energies of patriotism—the gallant and desperate defence of great causes, by sword or speech—are quoted as mere examples of disappointed ambition; and, in the indiscriminate condemnation of the arts by which men sought to gain a livelihood, he leaves no room for the legitimate pursuits of industry. His services to morals do not consist in any positive contributions to the notions of active duty, but in the strength with which he has realized and expressed the restraining influence of the old Roman and Italian ideal of character, and also of that religious conscience which was becoming a new power in the world. Though he disclaims any debt to philosophy (xiii. 221), yet he really owes more to the "Stoica dogmata," then prevalent, than he is aware of. But his highest and rarest literary quality is his power of painting characters, scenes, incidents and actions, whether from past history or from contemporary life. In this power, which is also the great power of Tacitus, he has few equals and perhaps no superior among ancient writers. The difference between Tacitus and Juvenal in power of representation is that the prose historian is more of an imaginative poet, the satirist more of a realist and a grotesque humorist. Juvenal can paint great historical pictures in all their detail—as in the famous representation of the fall of Sejanus; he can describe a character elaborately or hit it off with a single stroke. The picture drawn may be a caricature, or a misrepresentation of the fact—as that of the father of Demosthenes, "blear-eyed with the shot of the glowing mass," &c.—but it is, with rare exceptions, realistically conceived, and it is brought before us with the vivid touches of a Defoe or a Swift, or of the great pictorial satirist of the 18th century, Hogarth. Yet even in this, his most characteristic talent, his proneness to exaggeration, the attraction which coarse and repulsive images have for his mind, and the tendency to sacrifice general effect to minuteness of detail not infrequently mar his best effects.

The difficulty is often felt of distinguishing between a powerful rhetorician and a genuine poet, and it is felt particularly in the case of Juvenal. He himself knew and has well described the difference. He was "beneficent, benevolent, a boy," his "real characteristic," as Shakespeare expresses it, "is blase." But he felt that his own age was incapable of producing one. He has little sense of beauty either in human life or nature. Whenever such sense is evoked it is only as a momentary relief to his prevailing sense of the hideousness of contemporary life, or in protest against what he regarded as the enervating influences of art. Even his references to the great poets of the past indicate rather a blase sense of indifference and weariness than a fresh enjoyment of them. Yet his power of touching the springs of tragic awe and horror is a genuine poetical gift, of the same kind as that which is displayed by some of the early English dramatists. But he is, on the whole, more essentially a great rhetorician than a great poet. His training, the practical bent of his understanding, his strong but morose character, the circumstances of his time, and the materials available for his art, all fitted him to rebuke his own age and all after-times in the tones of a powerful preacher, rather than charm them with the art of an accom-plished poet. The composition of his various satires is shown by his neglect, but rather excess of elaboration; but it produces the impression of mechanical contrivance rather than of organic growth. His movement is sustained and powerful, but there is no rise and fall in it. The verse is most carefully constructed, and is also most effective, but it is so with the rhetorical effectiveness of Lucan, not with the musical charm of Virgil. The diction is full, even to excess, of meaning, point and emphasis. Few writers have added so much to the currency of quotation. But his style altogether wants the charm of ease and simplicity. It wearies by the constant strain after effect, its mock-heroics and allusive periphrasis, and excites distrust by its want of moderation.

On the whole no one of the ten or twelve really great writers of ancient Rome leaves on the mind so mixed an impression, both as a writer and as a man, as Juvenal. He has little, if anything at all, of the high imaginative mood—the love of reverence and noble admiration—which made Ennius, Lucretius and Virgil the truest poetical representatives of the genius of Rome. He has nothing of the wide humanity of Cicero, of the urbanity of Horace, of the ease and grace of Catullus. Yet he
represents another mood of ancient Rome, the mood natural to her before she was humanized by the lessons of Greek art and thought. If we could imagine the elder Cato living under the Domitian, cut off from all share in public life, and finding no outlet for his combative energy except in literature, we should perhaps understand the motives of Juvenal's satire and the place which is his due as a representative of the genius of his country. As a man he shows many of the strong qualities of the old Roman plebeian—the aggressive boldness, the intolerance of superiority and privilege, which animated the tribunes in their opposition to the senatorial rule. Even where we least like him we find something small or mean to alienate our respect from him. Though he loses no opportunity of being coarse, he is not licentious; though he is often truculent, he cannot be called malignant. It is, indeed, impossible to say what motives of personal chagrin, of love of detracion, of the mere literary passion for effective writing, may have contributed to the indignation which inspired his verse. But the prevailing impression we carry away after reading him is that in all his early satires he was animated by a sincere and manly detestation of the tyranny which adorned the delegate of power, and the crimes and frauds, which we know from other sources were then rife in Rome, and that a mere serene wisdom and a happier frame of mind were attained by him when old age had somewhat alleviated the fierce rage which vexed his manhood.

AUTHORITIES.—The remarkable statements in a "life" found in a late Italian MS. (Barberini, viii. 18), "Juvaneus Aquinis Junio Juvenal pater mero Septumulea ex Aquinian municipio Claudio Nerone et L. Antistio consulis (55 natus est, sororem habuit Septumuleam cuius Fuscio (Süf. xiv. 1 nupst), though not necessarily false, cannot be accepted without confirmation.

The earliest evidence for the banishment of Juvenal is that of Sidonius Apollinaris (c. 480), Car. i. 269, "Non qui tempore Caesaris secundii Aquelin coluit Tomus reatu; Nec qui consolaliis debito habuit..." and the "Satire viii. exul," which by the exact parallel drawn between Ovid's fate and Juvenal's imply the belief that Juvenal died in exile. The banishment is also mentioned by J. Malalas, a Greek historian whose authority is often questioned, who gives the opinion that Juvenal was banished by the Byzantine MS. (Canon. Lat. 41), which contains a portion of Satire vi, the existence of which was unknown until E. O. Winsted published it in the Classical Review (1889), pp. 201 sqq. Another fragment in the Bibliotheca Græca Rescripta, ed. G. C. Morey (1893), pt. i. (1899) and Quarterly (Jan. 1909). Numerous scholia and glossaries attest the interest taken in Juvenal in post-classical times and the middle ages. There are two classes of scholars—the older or "Pithoena," first published by P. Pithoene, and the Cornutus schola of less value, specimens of which have been published by various scholars. The earliest edition which need now be mentioned is that of P. Pithoene, 1858, in which P. was first used for the text. Amongst later ones we may mention the editions of C. F. Heinrich (1839, with the old scholia), O. Jahn (1851, critical with the old scholia), A. Weidner (1889), L. Friedländer (1895, with a full verbal index). The most useful English commentaries are those of J. F. Sensen (2 vols., first published as "Commenaries... Satires," ii. vi. and i. vi. being omitted), J. D. Lewis (1882, with a prose translation) and J. D. Duff (1898, expurgated, and ii. and ix. being omitted). There are recent critical texts: conservative and chary based on P. by F. Bischelcher (1891, with selections from the scholia) and S. G. Owen (in the Oxford Series of Texts); on the other side, by A. E. Housman (1905) and by the same, but with fewer innovations, in the new Corpus poetarum latinarum, fasc. vi. The two last-named editors alone give the results of the whole course of the scholia. The modern translations of Juvenal into English verse, Dryden translated i., iii., vi., x. and xvi., the others being committed to inferior hands. Versions are Gifford's (1802), some merit, and C. Badham's (1814). Johnson's imitations of Satires are, and are. In the edition of 1875 is the criticism and elucidation of the Satires, reference should be made to Teuffel's Geschichte der römischen Literatur (Eng. trans. by Warre, 

JUVENAL, GAUS VETTII AQUILINUS, Christian poet, flourished during the reign of Constantine the Great. Nothing is known of him except that he was a Spanish presbyter of distinguished family. About 330 he published his Libri evangeliorum IV., each book containing about 800 hexameters. The division into books is possibly a reminiscence of the number of the Gospels. The work itself, written with the object of ostending the absurdities of pagan mythology and replacing them by the truths of Christianity, may be called the first Christian epic. In the Proefatio the author expresses the hope that the sacredness of his subject may procure him safety at the final condemnation of the world and admission into heaven. The whole is, in the main, a poetical version of the Gospel of Matthew, the other evangelists only being used for supplementary details. It is founded upon a pre-vulgate Latin translation, although there is evidence that Juvenal also consulted the Greek. In spite of metrical irregularities, the language and style are simple and show good taste, being free from the artificiality of other Christian poets and prose writers, and the author has made excellent use of Virgil (his chief model) and other classical writers. Juvenal set the fashion of verse translations of the Bible, and the large number of MSS. of his poems mentioned in lists and still extant are sufficient evidence of its great popularity. According to Jerome, he was also the author of some poems on the sacraments, but no trace of these has survived. The Latin Heptateuch, a hexameter version of the first seven books of the Old Testament, has been attributed to Juvenal amongst others; but it is now generally supposed to be the work of a certain Cyprianus, a Gaul who lived in the 6th century, possibly a bishop of Toulon, author of the Life of Caesarius, bishop of Arelate (Arles).

JUVENILE OFFENDERS. In modern social science the question of the proper penal treatment of juvenile (i.e. non-adult) offenders has been increasingly discussed; and the reformatory principle, first applied in the case of children, has even been extended to reclaimable adult offenders (juveniles in crime, if not in age) in a way which brings them sufficiently within the same category to be noticed in this article. In the old days the main idea in England was to use the same penal methods for all criminals, young and old; when the child broke the law he was sent to prison like his elders. It was only in comparatively recent times that it was realized that child criminals were too often the victims to circumstances beyond their own control. They were caught with inherited taint; they were brought up among evil surroundings; they suffered from the culpable neglect of vicious parents, and still more from bad example and pernicious promptings. They were rather potential than actual criminals, calling for rescue and regeneration rather than vindictive reprimands. Under the old system a painstaking English gaol chaplain calculated that 58% of all criminals had made their first lapse at fifteen. Boys and girls laughed at imprisonment. Strappings of thirteen and fourteen had been committed ten, twelve, sixteen or seventeen times. Religion and moral improvement were little regarded in prisons, industrial and technical training were impossible. The chief lesson learnt was an intimate and contemplative acquaintance with the demoralizing interior of a gaol. There were at one time in London two "flash houses" frequented by 6000 boys trained and proficient in thieving and depredation. The substantial moral conviction of a modern date from the protest of Charles Dickens, who roused public opinion on such a scale that the first Reformatory School Act was passed in 1854. Sporadic efforts to meet the evil had indeed been made earlier. In 1756 the Marine Society established a school for the reception and reform of younger criminals; in 1878 the City of London formed a similar institution, which grew much later into
the farm school at Redhill. In 1838 an act of parliament created an establishment at Parkhurst for the detention and correction of juvenile offenders, to whom pardon was given conditional on their entrance into some charitable institution. Parkhurst was technically a prison, and the system combined industrial training with religious and educational instruction. These earlier efforts had, however, been quite insufficient to meet the evils, for in the years immediately preceding 1854 crime was being so constantly reinforced in its beginnings, under the existing penal system, that it threatened to swamp the country. Unofficial, but more or less accurate, figures showed that between 11,000 and 12,000 juveniles passed annually through the prisons of England and Wales, a third of the whole number being contributed by London alone. In 1834 the total reached 14,000. The ages of offenders ranged from less than twelve to seventeen; 60% of the whole were between fourteen and seventeen; 46% had been committed more than once; 18% four times and more.

The Reformatory School Act 1854, which was thrashed out at conferences held in Birmingham in 1851 and 1853, substituted the school for the gaol, and all judicial benches were empowered to send delinquents to schools when they had been guilty of acts punishable by short imprisonment, the limit of which was at first four days but became afterwards ten days. A serious flaw in this act long survived; this was the provision that a short period of imprisonment in gaol must precede reception into the reformatory; it was upheld by well-meaning but mistaken people as essential for deterrence. But more enlightened opinion condemned the rule as inflicting an indelible prison taint and breeding contamination, even with ample and effective safeguards. Wiser legislation has followed, and an act of 1890 abolished preliminary imprisonment.

Existing reformatories, or "senior home office schools" as they are officially styled, in England numbered 44 in 1907. They receive all juvenile offenders, up to the age of sixteen, who have been convicted of an offence punishable with penal servitude or imprisonment. The number of these during the years between 1894 and 1906 constantly varied, but the figure of the earliest date, 6604, was never exceeded, and in some years it was considerably less, while in 1906 it was no more than 5586; though the general population had increased by several millions in the period. These figures, in comparison with those of 1854, must be deemed highly satisfactory, even when we take into account that the latter went up to the age of seventeen. Older offenders are sent to six-year and twenty-one-year schools, and are counted in the category of juvenile adults and are dealt with differently (see Borstal Scheme below).

Other schools must be classed with the reformatory, although they have no connexion with prisons and deal with youths who are only potential criminals. The first in importance are the industrial schools. When the newly devised reformatories were doing excellent service it was realized that many of the rising generation might some day lapse into evil ways but were still on the right side and might with proper precautions be kept there. They wanted preventive, not punitive treatment, and for them industrial schools were instituted. The germ of these establishments existed in the Ragged Schools, "intended to educate destitute children and save them from vagrancy and crime." They had been invented by John Pounds (1766-1839), a Portsmouth shoemaker, who, early in the 19th century, was moved with sympathy for these little outcasts and devoted himself to this good work. The ragged school movement found powerful support in active philanthropists when public attention was aroused to the prevalence of juvenile delinquency. That the first Industrial School Act was passed in 1856 and applied only to Scotland. Next year its provisions were extended to England, and their growth was rapid. There were 45 schools in the beginning; in 1878 the number had more than been doubled; in 1907 there were 102 in England and Wales and 31 in Scotland.

The provisions of the Education Acts 1871 and 1876 led to a large increase in the number of children committed for breaches of the law and to the establishment of two kinds of subsidiary industrial schools, short detention of truant schools and day industrial schools in which children do not reside but receive their meals, their elementary education and a certain amount of industrial training. The total admissions to truant schools in 1907 were 13,689 boys, and the numbers actually in the schools on the last day of that year were 11,125 with 2568 on licence. The average length of detention was fourteen weeks and three days on first admission, seventeen weeks and five days on first re-admission, and twenty-three weeks six days on second re-admission. The total number of admissions into truant schools from 1878 to the end of 1907 was 44,315, of whom just half had been licensed and not returned, 11,230 had been licensed and once re-admitted, 8000 had been re-admitted twice or oftener.

The day industrial schools owed their origin to another reason than the enforcement of the Education Acts. It was found that some special treatment was required for large masses of youths in large cities, who were in such a neglected or degraded condition that there was little hope of their growing into healthy men and women or becoming good citizens. They were left uncared for, were ill-fed and insufficiently clothed, and were not usefully taught. The total number who attended these day schools in 1907 was 1957 boys and 1754 girls.

England and Wales, like many other countries, is subject to the influence of the French system of education. This system of education is planned upon the establishment or institution system, as opposed to that of the "family" or "boarding out" systems adopted in some countries, and some controversy has been aroused as to the comparative value of the methods. The British practice has always favoured the well-governed school, with the proviso that it is kept small so that the head may know all of his charges. But a compromise has been effected in large establishments by dividing the boys into "houses," each containing a small manageable total as a family under an official father or head. Under this system the idea of the home is maintained, while uniformity of treatment and discipline is secured by grouping several houses together under one general authority. The plan of "boarding out" is not generally approved of in England; the value of the domestic training is questionable and of uncertain quality, depending entirely upon the character and fitness of the foster-parents secured. Education must be less systematic in the private home, industrial training is less easily carried out, and there can be none of that esprit de corps that stimulates effort in physical training as applied to athletics and the playing fields. No very definite decision has been arrived at as to the comparative merits of institutional life and the home. Among the Latin races—France, Italy, Portugal and Spain—the former is as a rule preferred; also in Belgium; in Germany, Holland and the United States placing out in private families is very much the rule; in Austria-Hungary and Russia both methods are in use.

The total admissions to English reformatory schools from their creation to the 31st of December 1907 amounted to 76,455, or 64,031 boys and 12,424 girls. The total discharges for the same period were 70,890, or 59,081 boys and 11,809 girls. The results are tested by the figures for those discharged in 1904, 1905 and 1906:

Boys—3573 were placed out, of whom 66 had died, leaving 3507; of these it was found that 2735 (or about 78%) were in regular employment; 185 (or about 4%) were in casual employment; 430 (or about 13%) had been convicted; and 175 (or about 5%) were unknown.

Girls—480, of whom 11 had died, leaving 469; of these it was found that 384 (or about 82%) were in regular employment; 28 (or about 6%) were in casual employment; 17 (or about 4%) had been convicted, and 40 (or about 8%) were unknown.

For industrial schools, including truant and day schools, the total discharges, up to the 31st of December 1907, were 153,863, or 127,993 boys and 25,870 girls. The large proportion of the discharges (excluding transfers) were 136,961, or 108,398 boys and 28,563 girls. The results as tested by those discharged in 1904, 1905 and 1906 were as follows:

Boys—9009 were placed out, of whom 118 had since died, leaving 8791 to be reported on; of these it was found that 754 (or about 86%) were in regular employment; 415 (or about 4 7/10%) were in casual employment; 419 (or about 4 7/10%) had been convicted or re-committed; and 410 (or about 4 6/10%) were unknown.

Girls—2505 placed out, of whom 50 had died, leaving 2455; of
these 2,180 (or about 89%) were in regular employment; 112 (or about 4%) were in casual employment; 21 (or about 1%) convicted or re-committed; and 142 (or about 6%) unknown.

These results are of course wholly independent of those achieved by the juvenile reformatories at Borstal substituted in October 1902. The record of the first year's work of this excellent system showed that 50% of cases placed out had done well, thanks to the system and philanthropic labours of the Borstal Association.

Another point in regard to the reclamation of these criminally inclined juveniles is the nature of the employment to which they have been recommended, and in which, as shown, they have done so well. In 1904, 1905 and 1906, the total number of boys discharged and placed was 12,482. By far the largest number of these, nearly a sixth, joined the army, 679 of them entering the bands; 252 joined the navy; 961 the mercantile marine; 1,567 went to farm service; 448 worked in factories or mills as skilled hands; but others joined, a good many of them to learn some trade, the total number was 12,482.

Other jobs found included miners (629), carters (353), iron or steel workers (214), mechanics (201), shoemakers (181), tailors (161), shop assistants (228), carpenters (170), bakers (131), messengers and porters, including 112 errand boys (315). The balance found employment in smaller numbers at other trades. The fate of 885 was unknown, 858 had been re-convicted, and the balance were in unrecorded or casual employment.

The outlets found by the girls from these various schools naturally follow lines appropriate to their sex and the instruction received. Out of a total of 2,985 discharged in the three years mentioned, 1,253 became general servants, 268 housemaids, 253 laundry-maids, 523 laundresses, 345 dressmakers, 635 domestic servants, general or choice, 100 women who joined the armed forces, 414 cooks, 213 domestics, 50 in agriculture, 160 in the navy; 252 received a proper education, and 103 were apprenticed to learn some trade. The balance, 858, were workers in factories and mills, and the balance was made up by marriage, death or casual employment.

In Ireland the reformatory and industrial school system conforms to that of Great Britain. There were in 1905 six reformatory and 70 industrial schools in Ireland, mostly under Roman Catholic management.

A short account of the reformatory methods of dealing with juvenile offenders in certain other countries will fitly find a place here.

**Austria-Hungary.**—The law leaves children of less than ten years of age to domestic discipline, as also children above that age if not exactly criminal, although the latter may be sent to correctional schools. There they are detained for varying periods, but never after twenty years of age, and they may be sent out on licence to situations or employment found for them. These schools also receive children between ten and fourteen guilty of crimes which are, however, by law deemed "convenienz" only; also the destitute between the same ages and the destitute females.

In Hungary the penal code prescribes that children of less than twelve cannot be charged with offences; those between twelve and sixteen may be deemed to have acted without discretion, and thus escape sentence, but are sent to a correctional school where they may be detained till they are twenty years of age. An excellent system prevails in Hungary by which the supervision of those liberated is entrusted to a "protector," a philanthropic person in the district who visits and reports upon the conduct of the boys, much like the "probation officer" in the United States.

**Belgium.**—The law of November 1891 places the whole mass of juveniles—those who are likely to give trouble and those who have already done so—at the disposal of the state. The system is very elastic, realizing the infinite variety of children in the purely paternal régime would be wasted upon the really vicious; a severe discipline would press too heavily on the well-disposed. Accordingly, all juveniles, male and female, are divided into six principal classes with a corresponding treatment, it being strictly ruled that there is no intermingling of the classes; the very youngest, rescued early, are never to be associated with the older, who may be already vicious and degraded and who could not fail to exercise a pernicious influence. One of the great merits of the Belgian system is that the regulations may be relaxed, and children of whose amendment good hopes are entertained may be released provisionally, either to the care of parents and guardians or to employers, artisans or agriculturists who will teach them a trade.

**Denmark.**—There were 61 establishments of all classes for juveniles in Denmark in 1906, holding some 2,000 inmates. In 1874, by the will of Countess Danner, a large female refuge was founded at Castle Jagerspris, which holds some 360 girls. Another of the same class is the Royal Vodrofske Bonnehjem at Copenhagen, founded in the same year by Mile Schneider. The régime preferred in Denmark is that of the family or the very small school. The Jagerspris system is to divide the whole number of 360 into small parties of 20 each under a nurse or official mother. Employment in Danish schools is mainly agricultural, field labour and gardening, with a certain amount of industrial training; and on discharge the inmates go to farms or to apprenticeship, while a few emigrate.

**France.**—There are five methods of disposing of juvenile offenders in France—:

1. The preliminary or preventative prison (maisons d'arrêt and de justice) for those arrested and accused.

2. The ordinary prison for all sentenced to less than six months, whose time of detention is too short to admit of their transfer to a provincial colony. It also receives children whom parents have found unmanageable.

3. The public or private penitentiary colony for the irresponsible children, acquitted as "without discretion," as well as for the guilty sentenced to more than six months" and less than two years' detention.

4. The correctional colony, where the system is more severe, receiving all sentenced for more than two years and all who have misconducted themselves in the milder establishments.

5. Various penitentiary houses for young females, whatever their particular sentence.

Foremost among French penal reformers stands the name of F. A. Demetz (1796-1873), the founder of the famous colony of M. Demetz at Mettray. By M. Demetz was a philanthropist who, realizing at the evil inflicted upon children whom he was compelled by law to imprison, left the bench and undertook to find some other outlet for them. At that time the French law, while it acquitted minors shown to have acted without discretion, still consigned them for safe keeping and inevitable contamination to the common gaols. M. Demetz conceived the idea of an agricultural colony, and in 1840 organized a small "société paterne," as it was called, of which he became vice-president. Another philanthropist, the Vicomte de Bretignières de Courtelle, a landed proprietor in Touraine, associated himself in the enterprise and endowed the institution with land at Mettray near Tours. The earliest labours at Mettray were in the development of the institution, but as this approached completion they were applied to turnwork, agricultural employment being the chief feature of the place. The motto and device of Mettray was "the moralization of youth by the cultivation of the soil"; a healthy life in the open air was to replace the enervating and demoralizing influences of the confined prisons; and this was effected in the usual farming operations, to which were added gardening, vine-dressing, the raising of stock and the breeding of silkworms. The labour was not light; on the contrary, the directors of the colony sought by constant employment to send their charges to bed tired, ready to sleep soundly and not roam and chatter in their dormitories. The excellence of its aims, and the manifestly good results that were growing out of the system, soon made Mettray a model for imitation in France and beyond it. Many establishments were planned upon it, started by the state or private enterprise; penitentiary colonies were founded at Vincennes, Soufflot, and in Reims, in connection with some of the great central prisons. The colony of Val de Yèvre has a good record. It was started by a private philanthropist, Charles J. M. Lucas, (1803-1889) but after five-and-twenty years was handed over to the state. Other cognate establishments are those of Petit Quevilly near Rouen, Petit Bourg near Paris, St Hilaire and Eysses. There are several female colonies, especially that of Darnetall at Rouen.

It is for the magistrate or juge d'instruction to select the class of establishment to which the juvenile delinquents brought before him shall be committed. The very young, those of twelve years of age and under, are placed out in the country with families, unless they can be again entrusted to their parents or committed to maisons paternes, containing very limited numbers, twenty or thirty, in charge of a large staff. After twelve, and from that age to fourteen or fifteen, the "ungrateful age" as
the French call it, boys are sent to a reformatory or "preservative school," where they will be under stronger discipline. For the third class, from fifteen to sixteen or eighteen, stricter measures are necessary, so as to dispose of them in specially selected penal colonies, as has already been done at Eysses, where the discipline is severe, while embodying technical and industrial instruction.

Germany.—In most parts of the German Empire juvenile delinquents and neglected youths are treated in the same establishments. No child of less than twelve years of age can be proceeded against in a court of law, although in some German states destitute or abandoned children have been taken at the ages of six, five and even three years. Youths between twelve and eighteen may be convicted, but their offences are passed over if they are proved to have acted without discretion. There are many kinds of correctional institutions and a number of schools not of a correctional character. These last are generally very small, the largest taking barely a hundred, but are very numerous. Many private persons have devised and devoted themselves to the work. Count A. von der Recke-Volmerstein (1791-1878) about 1821 founded a refuge for neglected children in Düsseldorf, between Düsseldorf and Elberstadt. Pastor T. F. Fliedner (1800-1864) built up a fine establishment at Kaiserswerth from 1833, in which was an infant school, a penitentiary and an orphan asylum. Another famous name is that of W. von Türk (1774-1846), who studied under Pestalozzi in Switzerland.

A school which has largely influenced public opinion in Great Britain, as in Germany, is the Rauhe Haus, near Hamburg, founded by Dr. Wickern in 1833. This began with a single cottage but had grown in twenty years to a hamlet of twenty houses, with from twelve to sixteen inmates in each. The establishment is a Lutheran one; both boys and girls are admitted, in separate houses, and a marked feature of the place is the number of "brothers," young men of good character qualifying for rescue work as superintendents and housekeepers. They take part in the work and are in constant touch with the boys whom they closely supervise, being bound to "keep them in sight day and night, eat with them, sleep in their dormitories, direct their labour, accompany them to chapel, join in their recreations and sports." These "brothers" are honourably known throughout the world and have performed a large work in distant lands as missionaries, prison officers and schoolmasters. The Rauhe Haus receives three classes of juveniles: first, the boys, mostly street arabs; second, girls of the same category; third, children taken as boarders from private families, who confess their inability to manage them. The instruction given is in trades, in farming operations, gardening and fruit-raisning. The pupils are largely assisted on release, through the good offices of the citizens of Hamburg.

Holland.—In the Low Countries, refugees, called "Godshuis," were founded as early as the 14th century, intended for the care and shelter of neglected youths, and almost all age. In the 17th century people came from all parts of Europe to learn from the Dutch how orphans and unfortunate children could best be cared for. The Godshuis of Amsterdam was a vast establishment, into which as many as 4,000 juveniles were sometimes crowded, with such disastrous effects that its name was changed to that of "pesthuis," and the government in the beginning of the present century ordered it to be emptied and closed. Other reformatory institutions in Holland are the Netherlands Mettray, the reformatory of Zetten, near the Arnhem railway station, for Protestant girls; and that of Alkmaar for boys; the reformatory school of St. Vincent de Paul at Amsterdam for both sexes; the Amsterdam reformatory for young vagabonds, male and female; the reform school of Smallpod at Amsterdam.

The Netherlands Mettray, which is about five hours' journey from Amsterdam on a farm called Rissjelt, near Zutphen, is planned on the model of the French Mettray and was opened about 1853 by M. Suringar, a veteran Dutch philanthropist, long vice-president of the directors of prisons in Amsterdam.

Italy.—In Italy there is no distinction between the treatment of the offending and the neglected or deserted in youth. There are seventeen or more correctional establishments, eight of which are state institutions and the rest founded by private benevolence or by charitable associations or local communities. None of these is exclusively agricultural; ten are industrial, seven industrial and agricultural combined. In Italy the age of responsibility is nine, below which no child can be charged with an offence. The Italian schools are mostly planned on a large scale. That of Marchiondi Spaglardi accommodates 550, divided among three houses under one supreme head. The Turazza institution at Trevio holds 380, and there are eight others with from 200 to 300 inmates. The régime is very various; the larger number of schools are on the congregate system, with daily labour in association and isolation by night. This family method is also practised with small groups, divisions or companies, into which the children are formed according to age or conduct.

Sweden.—All children below the age of sixteen may be sent to a correctional establishment or boarded out in respectable families:

1. If they have committed acts punishable by law which indicate moral perversity and it is deemed advisable to reform them.
2. If they are neglected, ill-used, or if their moral deterioration is feared from the vicious life and character of parents or friends.
3. If their conduct at school or at home is such that a more severe correctional treatment is necessary for their rescue.

Under this law the state is also to provide special schools to take all above ten who have shown peculiar depravity; all who have reached eighteen and who are not yet thought fit for freedom; all who have relapsed after provisional release.

Sweden is rich in institutions devoted to the care of destitute and deserted children, all due to the efforts of the charitable. The largest correctional establishment is that founded at Hall, near the town of Sodertelge on the shores of the Baltic. This admirable agricultural colony, modelled on that of Mettray, owes its existence to "Oscar-Josephine society," founded by Queen Josephine, widow of Oscar I.

United States.—In the words of a report made in 1878 by F. B. Sanborn, secretary of the American Social Science Society, "America can justly plume herself upon the work accomplished by her juvenile reformatories since their inauguration down to the present time." The first in point of date and still the most considerable of the reformatories in the United States is that founded in 1825, thanks to the unwearied efforts of the great American publicist and philanthropist Edward Livingston, which now has its home on Randall's Island in New York City. In the following year a reformatory of the same class was founded in Boston, and another in the year after in Philadelphia. All were intended to receive criminal youth. There are state reformatories now in almost all the states of the Union, and those for juvenile adults in New York and Massachusetts have attracted world-wide attention, aiming so high and with such an elaborate means that they deserve particular description.

The great state reformatory establishment of Elmira, New York, called into existence in 1889 with the avowed aim of compassing the reformation of the criminal by new processes, partakes of the system involved in the treatment of juvenile offenders. It was based upon the principle that crime ought to be attacked in its beginnings by other than ordinary punitive and prison methods. Under this view, the right of society to defend itself by punishment was denied, and it was held that a youthful offender was more sinned against than sinning. It was urged that his crime, due largely to inherent defects, mental or physical and vicious surroundings, was not his own fault, and he had a paramount claim to be treated differently by the state when in custody. The state was not justified in using powers of repression to imprison him in the usual mechanical hard and fast manner, but that where he was found himself to be possibly worse, than before; it was bound to regenerate him, to change his nature, improve his physique, and give him a new mental equipment, so that when again at large he might be fitted to take his place amongst honest citizens, to earn his living by reputable means and escape all temptation to drift back into crime. This
is the plausible explanation given for the state reformatory movement, which led to the creation on such costly and extensive lines of Elmira, and of Concord in Massachusetts, a cognate establishment. There is very little penal about the treatment, which is that of a boarding school; the education, thorough and carried far, includes languages, music, science and industrial art; diet is plentiful, even luxurious; amusements and varied recreation are permitted; well stocked libraries are provided with entertaining books; a prison newspaper is issued (edited by an inmate). Physical development is sedulously cultivated both by gymnastics and military exercises, and the whole course is well adapted to change entirely the character of the individual subjected to it. The trouble taken in the hope of transforming erring youth into useful members of society goes still further. The original sentence has been indefinite, and release on parole will be granted to inmates who pass through the various courses with credit and are supposed to have satisfied the authorities of their desire to amend. The limit of detention need not exceed twelve months, after which parole is possible, although the average period passed before it is granted is twenty-two months. The hope of permanent advancement is largely dependent upon the fact that a situation, generally with good wages and congenial work, provided by the authorities, awaits every inmate at the time of his discharge. The inmates, selected from a very large class, are first offenders, but guilty generally of criminal offences, which include manslaughter, burglary, forgery, fraud, robbery and receiving. The exact measure of reformation achieved can never be exactly known, from the absence of authentic statistics and the difficulty of following up the surveillance of individuals when released on parole. Reports issued by the manager of Elmira claim that 81% of those paroled have done well, but these results are not definitely authenticated. They are based upon the ascertained good conduct during the term of surveillance, six or twelve months only, during which time these subjects have not yet spent the gratuities earned and have probably still kept the situations found for them on discharge. No doubt the material treated at Elmira and Concord is of a kind to encourage hope of reformation, as they are first offenders and presumably not of the criminal classes. Although the processes are open to criticism, the discipline enforced in these state reformatories does not err in excessive leniency. They are not "hotels," as has been sometimes said in ridicule, where prisoners go to enjoy themselves, have a good time, study Plato and conic sections, and pass out to an assured future. There is plenty of hard work, mental and physical, and the "inmates" rather envy their fellows in state prisons. A point to which great attention is paid is that physical degeneracy lies at the bottom of the criminal character, and great attention is paid to the development of nervous energy and strengthening by every means the normal and healthful functions of the body. A leading feature in the treatment is the frequency and perfection with which bathing is carried out. A series of Turkish baths forms a part of the course of instruction; the baths being fitted elaborately with all the adjuncts of shower bath, cold douche, electric current, etc. with gymnastic exercises.

A remarkable and unique institution is the state reformatory for women at Sherborn, Massachusetts, for women with sentences of more than a year, who in the opinion of the court are fit subjects for reformatory treatment. The majority of the inmates were convicted of drunkenness, an offence which the law of Massachusetts visits with severity—a sentence of two years being very common. This at once differentiates the class of women from that in ordinary penal establishments. At the same time we find that other women guilty of serious crime are sent by the courts to this prison with a view to their reform. Thus of 352 inmates, while no fewer than 200 were convicted of drunkenness, there were also 63 cases of offences against chastity and 30 of larceny. The average age was thirty-one and the average duration of sentence just over a year. In appearance and in character it more resembles a hospital or home for inebriates than a state convict prison. A system of grades or divisions is relied upon as a stimulus to reform. The difference in grades is denoted by small and scarcely perceptible variations of the little details of everyday life, such as are supposed in a peculiar degree to affect the appreciation of women, e.g. in the lowest division the women have their meals off old and chipped china; in the next the china is less chipped; in the highest there is no chipped china; in the next prettily set out with tumblers, crust-stands and a pepper pot to each prisoner. The superintendent relies greatly also on the moralizing influence of animals and birds. Well-behaved convicts are allowed to tend sheep, calves, pigs, chickens, canaries and parrots. This privilege is highly esteemed and productive, it is said, of the most softening influences.

The "George Junior Republic" (q.v.) is a remarkable institution established in 1865 at Freeville, near the centre of New York State, by Mr. William Reuben George. The original features of the institution are that the motto "Nothing without labour" is rigidly enforced, and that self-government is carried to a point that, with mere children, would appear whimsical were it not a proved success. The place is, as the name implies, a miniature "republic" with laws, legislature, courts and system of self-government of its own, all of which is carried on by the "citizens" themselves. The tone and spirit of the place appeared to be excellent and there is much evidence that in many cases strong and independent character is developed in children whose antecedents have been almost hopeless.

Borstal Scheme in England.—The American system of state reformatories as above described has been sharply criticized, but the principle that underlies it is recognized as, in a measure, sound, and it has been adopted by the English authorities. Some time back the experiment of establishing a penal reformatory for offenders above the age hitherto committed to reformatory schools was resolved upon. This led to the foundation of the Borstal scheme, which was first formally started in October 1902. The arguments which led to it may be briefly stated here. It had been conclusively shown that quite half the whole number of professional criminals had been first convicted when under twenty-one years of age, when still at a malleable period of development, when in short the criminal habit had not yet been definitely formed. Moreover these adolescents escaped special reformatory treatment, for sixteen is in Great Britain the age of criminal majority, after which no youthful offenders can be committed to the state reformatory schools. But there was always a formidable contingent of juvenile adults between sixteen and twenty-one, sent to penal servitude, and their numbers although diminishing rose to an average total of 15,000. It was accordingly decided to create a penal establishment under state control, which should be a half-way house between the prison and the reformatory school. A selection was made of juvenile adults, sentenced to not less than six months and sent to Borstal in 1902 to be treated under rules approved by the home secretary. They were to be divided on arrival into three separate classes, penal, ordinary and special, with promotion by industry and good conduct from the lowest to the highest, in which they enjoyed distinctive privileges. The general system, educational and disciplinary, was intelligent and governed by common sense. Instruction, both manual and educational, was well suited to the recipients; the first embraced field work, market gardening, and a knowledge of useful handicrafts; the second was elementary but sound, aided by well-chosen libraries and brightened by the privilege of evening association to play harmless but interesting games. Physical development was also guaranteed by gymnastics and regular exercises. The results were distinctly encouraging. They arrived at Borstal "rough, untrained cubs," but rapidly improved in demeanour and inward character, gaining self-reliance and self-respect, and left the prison on the high road to regeneration. It was wisely remembered that to secure lasting amendment it is not enough to chasten the erring subject, to train his hands, to strengthen his moral sense while still in durance; it is essential to assist him on discharge by helping him to find work, and encourage him by timely advice to keep him in the straight path. Too much praise cannot be accorded to the agencies and associations
which labour strenuously and unceasingly to this excellent end. Special good work has been done by the Borstal association, founded under the patronage of the best known and most distinguished persons in English public life—archbishops, judges, cabinet ministers and privy councillors—which receives the juvenile adults on their release and helps them to employment. Their labours, backed by generous voluntary contributions, have produced very gratifying results. Although the offenders originally selected to undergo the Borstal treatment were those committed for a period of six months, it was recognized that this limit was experimental, and that thoroughly satisfactory results could only be obtained with sentences of at least a year's duration, so as to give the reforming agencies ample time to operate. In the second year's working of the system it was formally applied to young convicts sentenced to penal servitude between the ages of sixteen and twenty-one.

In the next year it was adopted for all offenders between the ages of sixteen and twenty-one committed to prison, as far as the length of sentence would permit. The commissioners of prisons, in their Report for the year 1908 (Cd. 4300) thus expressed themselves on the working of the experiment:—

"Experience soon began to point to the probable success of this general application of the principle, in spite of the fact that the prevailing shortness of sentences operated against full benefit being derived from reformatory effort. The success was most marked in those localities where magistrates, or other benevolent persons, personally co-operated in making the scheme a success. Local Borstal committees were established at all prisons, and it was arranged that those members of the local committees should become ex officio honorary members of the Central Borstal Association, which it was intended should become what it now is, the parent society directing the general aid on discharge of this category of young prisoners."

In spite of the general adoption of the Borstal system, there was a large class of young criminals who were outside its effects, those who were sentenced to terms of ten days and under for trifling offences. These juvenile adults, once having had the fear of prison taken away by actual experience, were found to come back again and again. To remedy this state of affairs, a bill was introduced in 1907 to give effect to the principle of a long period of detention for all those showing a tendency to embark on a criminal career. The bill was, however, dropped, but a somewhat similar bill was introduced the next year and became law under the title of The Prevention of Crime Act 1908. This measure introduces a new departure in the treatment of professional crime by initiating a system of detention for habitual criminals (see Recidivism). The act attempts the reformation of young offenders by giving the court power to pass sentence of detention in a Borstal institution for a term of not less than one year nor more than three on those between the ages of sixteen and twenty-one who by reason of criminal habits or tendencies or association with persons of bad character require such instruction and discipline as appear most conducive to their reformation. The power of detention applies also to reformatory school offences, while such persons as are already undergoing penal servitude or imprisonment may be transferred to a Borstal institution if detention would conduce to their advantage. The establishment of other Borstal institutions is authorized by the act, while a very useful provision is the power to release on licence if there is a reasonable probability that the offender will abstain from crime and lead a useful and industrious life. The licence is issued on condition that he is placed under the supervision or authority of some society or person willing to take charge of him. Supervision is introduced after the expiration of the term of sentence, and power is given to transfer to prison incorrigibles or those exercising a bad influence on the other inmates of a Borstal institution. The act marks a noteworthy advance in the endeavour to arrest the growing habit of crime.

JUVENAS (Latin for "youth": later Juventas), in Roman mythology, the tutelar goddess of young men. She was worshipped at Rome from very early times. In the front court of the temple of Minerva on the Capitol there was a chapel of Juventas, in which a coin had to be deposited by each youth on his assumption of the toga virilis, and sacrifices were offered on behalf of the rising manhood of the state. In connexion with this chapel it is related that, when the temple was in course of erection, Terminus, the god of boundaries, and Juventas refused to quit the sites they had already appropriated as sacred to themselves, which accordingly became part of the new sanctuary. This was interpreted as a sign of the immovable boundaries and eternal youth of the Roman state. It should be observed that in the oldest accounts there is no mention of Juventas, whose name (with that of Mars) was added in support of the augural prediction. After the Second Pun War Greek elements were introduced into her cult. In 218 b.c., by order of the Sibyline books, a lectisternium was prepared for Juventas and a public thanksgiving to Hercules, an association which shows the influence of the Greek Hebe, the wife of Heracles. In 207 Marcus Livius Salinator, after the defeat of Hasdrubal at the battle of Sena, erected another temple to Juventas in the Circus Maximus, which was consecrated in 191 by C. (or M.) Licinius Lucullus; it was destroyed by fire in 16 B.C. and rebuilt by Augustus. In imperial times, Juventas was personified, not the youth of the Roman state, but of the future emperor.

See Dion. Halic., iii. 69, iv. 15; Livy v. 54, xii. 62, xxxvi. 36.

JUXON, WILLIAM (1582—1663), English prelate, was the son of Robert Juxon and was born probably at Chichester, being educated at Merchant Taylors' School, London, and at St John's College, Oxford, where he was elected to a scholarship in 1598. He studied law at Oxford, but afterwards he took holy orders, and in 1609 became vicar of St Giles, Oxford, a living which he retained until he became rector of Somerton, Oxfordshire, in 1615. In December 1621 he succeeded his friend, William Laud, as president of St John's College, and in 1626 and 1627 he was vice-chancellor of the university. Juxon soon obtained other important positions, including that of chaplain-in-ordinary to Charles I. In 1627 he was made dean of Worcester and in 1632 he was nominated to the bishopric of Hereford, and presented which led him to resign the presidency of St John's in January 1633. However, he never took up his episcopal duties at Hereford, as in October 1633 he was consecrated bishop of London in succession to Laud. He appears to have been an excellent bishop, and in March 1636 Charles I entrusted him with important secular duties by making him lord high treasurer of England; thus for the next five years he was dealing with the many financial and other difficulties which beset the king and his advisers. He resigned the treasurership in May 1641. During the Civil War the bishop, against whom no charges were brought in parliament, lived undisturbed at Fulham Palace, and his advice was often sought by the king, who had a very high opinion of him, and who at his execution selected him to be with him on the scaffold and to administer to him the last consolations of religion. Juxon was deprived of his bishopric in 1649 and retired to Little Compton in Gloucestershire, where he had bought an estate, and here he became famous as the owner of a pack of hounds. At the restoration of Charles II. he became archbishop of Canterbury and in his official capacity he took part in the coronation of this king, but his health soon began to fail and he died at Lambeth on the 4th of June 1663. By his will the archbishop was a benefactor to St John's College, where he was buried; he also aided the work of restoring St Paul's Cathedral and rebuilt the great hall at Lambeth Palace.

See W. H. Marah, Memoirs of Archbishop Juxon and his Times (1869); the best authority for the archbishop's life is the article by W. H. Hutton in the Dict. Nat. Biog. (1892).

KABBABISH

KABBABISH

KABBABISH

KABBABISH

The eleventh letter in the Phoenician alphabet and in its descendant Greek, the tenth in Latin owing to the omission of Teth (see I), and once more the eleventh in the alphabets of Western Europe owing to the insertion of J. In its long history the shape of K has changed very little. It is on the inscription of the Moabite Stone (early 9th cent. B.C.) in the form (written from right to left) of י and ℳ. Similar forms are also found in early Aramaic, but another form ₵ or ℳ, which is found in the Phoenician of Cyprus in the 9th or 10th century B.C. has had more effect upon the later development of the Semitic forms. The length of the two back strokes and the manner in which they join the upright are the only variations in Greek. In various places the back strokes, treated as an angle <, become more rounded (κ, so that the letter appears as ṫ, a form which in Latin probably affected the development of C (q.v.). In Crète it is elaborated into K and P. In Latin K, which is found in the earliest inscriptions, was soon replaced by C, and survived only in the abbreviations for Kаленdae and the proper name Kaeso. The original name Kaph became in Greek Καββα. The sound of K throughout has been that of the unvoiced guttural, varying to some extent in its pronunciation according to the nature of the vowel sound which followed it. In Anglo-Saxon C replaced K through Latin influence, writing being almost entirely in the hands of ecclesiastics. As the sound-changes have been discussed under C it is necessary here only to refer to the palatalization of K followed earlier by a final e, as in watch (Middle English wacce, Anglo-Saxon wæce) by the side of wake (ME. wakon, A.-S. wæccan); batch, bake, etc. Sometimes an older form of the substantive survives, as in the Elizabethan and Northern mokte = mole alongside watch.

K, or Mt Godwin-Austen, the second highest mountain in the world, ranking after Mt. Everest. It is a peak of the Karakoram extension of the Muztagh range dividing Kashmir from Chinese Turkestan. The height of K is as at present determined by triangulation is 8,250 ft., but it is possible that an ultimate revision of the values of refraction at high altitudes may have the effect of lowering the height of K, while it would elevate those of Everest and Kinchungjunga. The latter mountain would then rank second, and K third, in the scale of altitudes, Everest always maintaining its ascendancy. K was ascended for the first time by the duke of the Abruzzi in June 1909, being the highest elevation on the earth's surface ever reached by man.

KABA, KABA, or Kaabe, the sacred shrine of Mahomedanism, containing the "black stone," in the middle of the great mosque at Mecca (q.v.).

KABARDIA, a territory of S. Russia, now part of the province of Terek. It is divided into Great and Little Kabardia by the upper river Terek, and covers 3,780 sq. m. on the northern slopes of the Caucasus range (from Mount Elbruz to Pasis-mta, or Edena), including the Black Mountains (Kara-dagh) and the high plains on their northern slope. Before the Russian conquest it extended as far as the Sea of Azov. Its population is now about 70,000. One-fourth of the territory is owned by the aristocracy and the remainder is divided among the auls or villages. A great portion is under permanent pasture, part under forests, and some under perpetual snow. Excellent breeds of horses are reared, and the peasants own many cattle. The land is well cultivated in the lower parts, the chief crops being millet, maize, wheat and oats. Bee-keeping is extensively practised, and Kabardian honey is in repute. Wood-cutting and the manufacture of wooden wares, the making of báhras (felt and fur cloaks), and saddlery are very general. Nalchik is the chief town.

The Kabardians are a branch of the Adygê (Circassians). The policy of Russia was always to be friendly with the Kabardian aristocracy, who were possessed of feudal rights over the Ossetes, the Ingushes, the Abkhasians and the mountain Tatars, and had command of the roads leading into Transcaucasia. Ivan the Terrible took Kabardia under his protection in the 16th century. Later, Russian influence was counterbalanced by that of the Crimean khans, but the Kabardian nobles nevertheless supported Peter the Great during his Caucasian campaign in 1722-23. In 1739 Kabardia was recognized as being under the double protectorate of Russia and Turkey, but thirty-five years later it was definitively annexed to Russia, and risings of the population in 1804 and 1822 were crushingly suppressed. Kabardia is considered as a school of good manners in Caucas; the Kabardian dress sets the fashion to all the mountaineers. Kabardians constitute the best detachment of the personal Imperial Guards at St Petersburg.

A short grammar of the Kabardian language and a Russian-Kabardian dictionary, by Lopatin, were published in Stroevsk Materialy dlia Opisania Kabbashes (vol. xii., Tiflis, 1891). Fragments of the poem Soeyruku, some Persian tales, and the tenets of the Musulman religion were printed in Kabardian in 1864, by Kari Atozhiukin and Shardonov. The common law of the Kabardians has been studied by Maxim Kovalovsky and Vsevolod Miller.

KABBA, a province of the British protectorate of Northern Nigeria, situated chiefly on the right bank of the Niger, between 7° 5' and 8° 45' N. and 5° 30' and 7° E. It has an area of 7,800 sq. m. and an estimated population of about 70,000. The province consists of relatively healthy uplands interspersed with fertile valleys. It formed part at one time of the Nupe emirate, and under Fula rule the armies of Bida regularly raided for slaves and laid waste the country. Amongst the native inhabitants the Igibira are very industrious, and crops of tobacco, indigo, all the African grains, and a good quantity of cotton are already grown. The sylvan products are valuable and include palm oil, kolas, shea and rubber. Lokoja, a town which up to 1902 was the principal British station in the protectorate, is situated in this province. The site of Lokoja, with a surrounding tract of country at the junction of the Benue and the Niger, was ceded to the British government in 1841 by the attah of Idah, whose dominions at that time extended to the right bank of the river. The British settlement was a failure. In 1854 MacGregor Laird, who had taken an active part in promoting the exploration of the river, sent thither Dr W. B. Baikie, who was successful in dealing with the natives and in 1857 became the first British consul in the interior. The town of Lokoja was founded by him in 1860. In 1868 the consulate was abolished and the settlement was left wholly to commercial interests. In 1879 Sir George Goldie formed the Royal Niger Company, which bought out its foreign rivals and acquired a charter from the British government. In 1886 the company made Lokoja its military centre, and on the transfer of the company's territories to the Crown it remained for a time the capital of Northern Nigeria. In 1902 the political capital of the protectorate was shifted to Zungeru in the province of Zaria, but Lokoja remains the commercial centre. The distance of Lokoja from the sea at the Niger mouth is about 250 m.

In the absence of any central native authority the province is entirely dependent for administration upon British initiative. It has been divided into four administrative divisions. British and native courts of justice have been established. A British station has been established at Kabba town, which is an admirable site some 50 m. W. by N. of Lokoja, about 1500 ft. above the sea, and a good road has been made from Kabba to Lokoja. Roads have been opened through the province. (See Nigeria.)

KABBABISH ("goatherds"). James Bruce derives the name from Heb. sheph, a tribe of African nomads of Semitic origin. It is perhaps the largest "Arab" tribe in the Anglo-Egyptian Sudan, and its many clans are scattered over the country extending S.W. from the province of Dongola to the confines of Darfur. The Kabbabish speak Arabic, but their pronunciation differs much from that of the true Arabs. The Kabbabish have a tradition that they came from Tunisia and are of Mogrebian or western descent; but while the chiefs look like Arabs, the tribesmen resemble the Beja family. They themselves declare that
KABBALAH

one of their clans, Kawaheh, is not of Kabbabish blood, but was affiliated to them long ago. Kawaheh is a name of Arab formation, and J. L. Burckhardt spoke of the clan as a distinct one living about Abu Haraz and on the Atbara. The Kabbabish probably received Arab rulers, as did the Ababda. They are chiefly employed in cattle, camel and sheep breeding, and before the Sudan wars of 1883–90 they had a monopoly of all transport from the Nile, north of Abu Gussi, to Kordofan. They also cultivate the lowlands which border the Nile, where they have permanent villages. They are of fine physique, dark black wiry hair, carefully arranged in tightly rolled curls which cling to the head, with regular features and rather thick aquiline noses. Some of the tribes wear large hats like those of the Kabyles of Algeria and Tunisia.

See James Bruce, Travels to Discover the Source of the Nile (1790); A. H. Keane, Ethnology of Egyptian Sudan (1884); Angle-Egyptian Sudan (edited by Count Gleichen, 1905).

KABBALAH (late Hebrew kabbalah, qabbalah), the technical name for the system of Jewish theosophy which played an important part in the Christian Church in the middle ages. The term primarily denotes "reception" and then "doctrines received by tradition." In the older Jewish literature the name is applied to the whole body of received religious doctrine with the exception of the Pentateuch, thus including the Prophets and Hagiographa as well as the oral traditions ultimately embodied in the Mishnah.

1. It is only since the 11th or 12th century that Kabbalah has become the exclusive appellation for the renowned system of theosophy which claims to have been transmitted uninterruptedly by the mouths of the patriarchs and prophets ever since the creation of the first man.

The cardinal doctrines of the Kabbalah embrace the nature of the Deity, the Divine emanations, or Sephiroth, the cosmogony, Doctrine of the Sephiroth, the import of the revealed law. According to this esoteric doctrine, God, who is boundless and above everything, even above being and thinking, is called En Sop (אֵל שֹׁפַח); He is the space of the universe containing to נוּכֹ , but the universe is not his space. In this boundlessness He could not be comprehended by the intellect or described in words, and as such the En Sop was in a certain sense Ayin, non-existent (Zohar, iii. 283). To make his existence known and comprehensible, the En Sop had to become active and creative. As creation involves intention, desire, thought and work, and as these are properties which imply limit and belong to a finite being, and moreover as the imperfect and circumscribed nature of this creation precludes the idea of its being the direct work of the infinite and perfect, the En Sop had to become active and creative, through the agency of ten Sephiroth or intelligences which emanated from him like rays proceeding from a luminary.

Now the wish to become manifest and known, and hence the idea of creation, is co-eternal with the inscrutable Deity, and the first manifestation of this primordial will is called the first Sephiroth or emanation. This first Sephiroth, this spiritual substance which existed in the En Sop from eternity, contained nine other intelligences or Sephiroth. These again emanated from one another, the second from the first, the third from the second, and so on up to ten.

The ten Sephiroth, which form among themselves and with the En Sop a strict unity, and which simply represent different aspects of one and the same being, are respectively denominated (1) the Crown, (2) Wisdom, (3) Intelligence, (4) Love, (5) Justice, (6) Beauty, (7) Firmness, (8) Splendour, (9) Foundation, and (10) Kingdom. Their evolution was as follows: When the Holy Aged, the concealer, concealed, assumed a form, he produced everything in the form of male and female, as things could not continue in any other form. Hence Wisdom, the second Sephiroth, and the beginning of development, which proceeded from it. Hence the Holy Aged, and the denial of the Holy Aged, and the male and female, and Wisdom, the father and Intelligence, the mother, from whose union the other 1.

pairs of Sephiroth successively emanated (Zohar, iii. 290). These two opposite potencies, viz. the masculine Wisdom or Sephiroth No. 2 and the feminine Intelligence or Sephiroth No. 3 are joined together by the first potency, the Crown or Sephiroth No. 1; they form the first triad of the Sephiroth decade, and constitute the divine head of the archetypal man.

From the junction of Sephiroth Nos. 2 and 3 emanated the masculine potency Love or Mercy (4) and the feminine potency Justice (5), which constitute the divine arms, thus yielding the first of the Sephiroth decade. From this second conjunction emanated again the masculine potency Firmness (6) and the feminine potency Splendour (8), which constitute the divine legs of the archetypal man; and these sent forth Foundation (9), which is the gateway of spiritual and material life, and the third triad in the Sephiroth decade. Kingdom (10), which emanated from the ninth Sephiroth, encircles all the other nine, inasmuch as it is the Shechinah, the divine halo, which encompasses the whole by its all-glorious presence.

In their totality and unity the ten Sephiroth are not only denominated the World of Sephiroth, or the World of Emanations, but, owing to the above representation, are called the primordial or archetypal man (πουργων) and the heavenly man. It is this form which, as we are assured, the prophet Ezekiel saw in the mysterious chariot (Ezek. i. 28) and of which the earthly man is a faint copy.

As the three triads respectively represent intellectual, moral and physical qualities, the first is called the Intellectual, the second the Moral or Sensuous, and the third the Material World. According to this theory of the archetypal man the three Sephiroth on the right-hand side are masculine and represent the principle of rigour, the three on the left are feminine and represent the principle of mercy, and the four central or uniting Sephiroth represent the principle of mildness. Hence the right side is called "the Pillar of Judgment," the left "the Pillar of Mercy," and the centre "the Middle Pillar."" The middle Sephiroth are synchronologically used to represent the worlds or triads of which they are the uniting potencies. Hence the Crown, the first Sephiroth, which unites Wisdom and Intelligence to constitute the first triad, is by itself denominated the Intellectual World. So Beauty is by itself described as the Sensuous World, and in this capacity is called the Sacred King or simply the King, whilst Kingdom, the tenth Sephiroth, which unites all the nine Sephiroth, is used to denote the Material World, and as such is denominated the Queen or the Matron. Thus a triunity of units, viz. the Crown, Beauty and Kingdom, is obtained within the triunity of triads. But further, each Sephiroth as it were a triunity in itself. It (1) has its own absolute character, (2) receives from above (3) which constitute the Sacred Age, and is represented by the number three, so are all the other lights (Sephiroth) of a threefold nature (Zohar, iii. 288).

In this all-important doctrine of the Sephiroth, the Kabbalah insists upon the fact that these potencies are not creations of the En Sop, which would be a diminution of strength; that they form among themselves and with the En Sop a strict unity, and simply represent different aspects of the same being, just as the different rays which proceed from the light, and which appear different things to the eye, are only different manifestations of one and the same light; that for this reason they all alike partake of the perfections of the En Sop; and that as emanations from the Infinite, the Sephiroth are infinite and perfect like the En Sop, and yet constitute the first finite things. They are infinite and perfect when the En Sop imparts his fullness to them, and finite and perfect when that fullness is withdrawn from them.

The conjunction of the Sephiroth, or, according to the language of the Kabbalah, the union of the crowned King and Queen, produced the universe in their own image. Worlds came into existence before the En Sop manifested himself in the human form of emanations, but they could not continue, and necessarily perished because the conditions of development which obtained with the sexual opposites of the Sephiroth did not exist. These worlds which perished are compared to sparks which fly out from a red-hot iron beaten by a hammer, and which are extinguished according to the distance.
they are removed from the burning mass. Creation is not ex nihilo; it is simply a further expansion or evolution of the Sephiroth. The world reveals and makes visible the Boundless and the concealed of the concealed. And, though it exhibits the Deity in less splendour than its Sephiric parents exhibit the En Sôph, because it is farther removed from the primordial source of light than the Sephiroth, still, as it is God manifested, all the multifarious forms in the world point out the unity which they represent. Hence nothing in the whole universe can be annihilated. Everything, spirit as well as body, must return to the source whence it emanated (Zohar, ii. 218). The universe consists of four different worlds, each of which forms a separate Sephiric system of a decade of emanations.

They were evolved in the following order. (1) The World of Emanations, also called the Image and the Heavenly or Archetypal Man, i.e., as we have seen, subject emanations from the En Sôph. Hence it is most intimately allied to the Deity, and is perfect and immutable. From the conjunction of the King and Queen (i.e. these ten Sephiroth) is produced (2) the World of Creation, or the Briatic world, also called the Throne. Its ten Sephiroth, being farther removed from the En Sôph, are of a more limited and circumscribed potency, though the substances they comprise are of the purest nature and without any admixture of matter. The angel Metatron is the commander of this world of Creation; in fact, he is the Garb (i.e. the visible manifestation of the Deity. His name is numerically equivalent to that of the Lord (Zohar, iii. 231). He governs the sovereign world, preserves the harmony of its evolution, appoints as the captain of all the myriads of angelic beings. This Briatic world again gave rise to (3) the World of Formation, or Yetziratic World. Its ten Sephiroth, being still farther removed from the Primordial Sephiroth, are subject to a certain modification of the matter they are formed of. It is the abode of the angels, who are wrapped in luminous garments, and who assume a sensuous form when they appear to men. The myriads of the angelic hosts who people this world are divided into ten ranks. They are the members of the purest spheres, and in the third Sephirah are made up of the greater elements of the former three worlds; they consist of material substance limited by space and perceptible to the senses in a multiplicity of forms. This world is subject to constant changes and corruption, and is the dwelling of the evil spirits. These, the grossest and most deficient of all forms, are also divided into ten degrees, each lower than the other. The first two are nothing more than the absence of all visible form and organization. The third degree is the mode of darkness; whilst the remaining seven are "the seven infernal hells," occupied by the demons, who are the incarnation of all human vices. These seven hells are subdivided into innumerable compartments corresponding to every species of sin, and all the human beings who have suffered themselves to be led astray whilst on earth. The prince of this region of darkness is Sâmâk, the evil spirit which is called the Beast, and which is regarded as the Harlot or the Woman of Whoredom. The two are treated as one person, and are called the Beast (Zohar, ii. 255–259, with i. 35).

The whole universe, however, was incomplete, and did not receive its finishing stroke till man was formed, who is the acme of the creation and the microcosm. The heavens, the earthly Adam (i.e. the ten Sephiroth) who emanated from the highest primordial obscurity (i.e. the En Sôph) created the earthly Adam (Zohar, ii. 70). Man is both the import and the highest degree of creation, for which reason he was formed on the sixth day. As soon as man was created everything was completed, including the upper and nether worlds, for everything is comprised in man. He unites in himself all forms (Zohar, iii. 48). Each member of his body corresponds to a part of the universe. Just as we see in the firmament above, covering all things, so these parts of the stars and the planets, and which contain secret things and profound mysteries studied by those who are wise and expert in these things; so there are in the skin, which is the cover of the body of the son of man, and which is like the sky that covers all things above, signs and features which are the stars and planets of the skin, indicating secret things and profound mysteries whereby the wise are attracted who understand the reading of

1 The view of a mediate creation, in the place of immediate creation out of nothing, and that the mediate beings were emanations, was much influenced by Solomon ibn Gabirol (1021–1070).

2 The mysteries in the human face (Zohar, ii. 76). The human form is shaped after the four letters which constitute the Jewish Tetragrammaton (q.v. see also Jevohav). The head is in the shape of , the arms and the shoulders are like , the breast like , and the legs with the back again resemble (Zohar, ii. 72). The souls of the whole human race pre-exist in the World of Emanations, and are all destined to inhabit human bodies. Like the Sephiroth from which it emanates, every soul has ten potencies, consisting of a triunity of triads. (1) The Spirit (nēshāmah), which is the highest degree of being, corresponds to and is operated upon by the Crown, which is the highest triad in the Sephiroth, and is called the Intellectual World; (2) the Soul (rûdh), which is the seat of the moral qualities, corresponds to and is operated upon by Beauty, which is the second triad in the Sephiroth, and is called the Moral World; and (3) the Cruder Soul (nēphesh), which is immediately connected with the body, and is the reproductive, instincst and the animal life, corresponds to and is operated upon by Foundation, the third triad in the Sephiroth, called the Material World. Each soul prior to its entering into this world consists of male and female united into one being. When it descends on this earth the two parts are separated and animate two different bodies. “At the time of marriage the Holy One, blessed be he, who knows all souls and spirits, unites them again as they were before; and they again constitute one body and one soul, forming as it were the right and the left of the individual. . . . This union, however, is influenced by the deeds of the man and by the ways in which he walks. If the man is pure and his conduct is pleasing in the sight of God, he is united with that female part of the soul which was his component part previous to his birth (Zohar, i. 97). The soul’s destiny upon earth is to develop those perfections the germs of which are eternally implanted in it, and it ultimately must return to the infinite source from which it emanated. Hence, if, after assuming a body and sojourning upon earth, it becomes polluted by sin and fails to acquire the experience for which it descends from heaven, it must three times reinhabit a body, till it is able to ascend in a purified state through repeated trials. If, after its third residence in a human body, it is still too weak to withstand the contamination of sin, it is united with another soul, in order that by their combined efforts it may resist the pollution which by itself it was unable to conquer. When the whole pleroma of pre-existent souls in the world of the Sephiroth shall have descended and occupied human bodies and have passed their period of probation and have returned purified to the bosom of the infinite self, the souls which shall have descended from the celestial souls; then the great Jubilee will come, and each shall be no more sin, no more temptation, no more suffering. Universal restoration will take place. Satan himself, “the venomous Beast,” will be restored to his angelic nature. Life will be an everlasting feast, a Sabbath without end. All souls will be united with the Highest Soul, and will supplement each other in the Holy of Holies of the Seven Halls (Zohar, i. 45, 168; ii. 97).

According to the Kabbalah all these esoteric doctrines are contained in the Hebrew Scriptures. Theinitiated cannot perceive them; but they are plainly revealed to the spiritually minded, who discern the profound import of this theosophy beneath the surface of the letters and words of Holy Writ. “If the law simply consists of ordinary expressions and narratives, such as the words of Esau, Hagar, Laban, the ass of Balaam or Balaam himself, why should it be called the law of truth, the perfect law, the true witness of God? Each word contains a sublime source, each narrative points not only to the single instance in question, but also to generals (Zohar, iii. 149, cf. 152).

To obtain these heavenly mysteries, which alone make the Torah superior to profane codes, definite hermeneutical rules are employed, of which the following are the most important. (1) The words of several verses in the Hebrew Scriptures which are regarded as containing a recondite sense are placed over each other, and the letters are formed into new words by reversing each verse. (2) The words of the text are ranged in squares in such a manner as to be read either vertically or boustrophedon. (3) The words are
KABBALAH

joined together and divided. (4) The initials and final letters of several words are formed into separate words. (5) Every letter of a word is reduced to its numerical value, and the word is explained by another of the same quantity. (6) Every letter of a word is taken to be the initial or abbreviation of a word. (7) The two letters of the alphabet, becomes Lamad, the twelfth letter; Beth becomes the first, and so forth. This principle is called the "Gematria" by the kabbalists. The names of the Cabalists, for example, are called from the first interchangeable pairs. (8) The commutation of the twenty-two letters is effected by the last letter of the alphabet taking the place of the first, the last but one the place of the second, and so forth. This principle is called the "Nusaph". These hermeneutical canons are much older than the Kabbalah. They obtained in the synagogue from time immemorial, and were used by the Christian fathers in the interpretation of Scripture. Thus Canon V, according to which a word is reduced to its numerical value and interpreted by another word of the same value, is recognized in the New Testament (cf. Rev. xii. 18). Canon VI. is adopted by Irenaeus, who tells us that, according to the learned among the Hebrews, the name "Jehovah" consists of two letters and a half, and signifies that Lord who contains heaven and earth: "It is a halve, one, and two" (Against Heres. ii. xxiv., i. 205, ed. Clark). The cipher "Abath" (Canon VIII.) is used in Jeremiah xxv. 26, li. 41, where Sheshach is written for Babel. In Jer. li. 1, "<w>27 Leb-Kamas</w> ("the heart of them that rise up against me"), is written for <w>27</w>, Chaldean, by the same rule.

Exegesis of this sort is not the characteristic of any single circle, people or century; unscientific methods of biblical interpretation are borrowed from Philo's treatment of the Pentateuch to modern apologetic interpretations of Genesis, ch. 2. The Kabbalah itself is but an extreme and remarkable development of certain forms of thought which had never been absent from Judaism; it is bound up with earlier tendencies to mysticism, with man's inherent striving to enter into communion with the Deity. To seek its sources would be futile. The Pythagorean theory of numbers, Neoplatonic ideas of emanation, the Logos, the personified Wisdom, Gnosticism—these and many other features combine to show the antiquity of tendencies which, clad in other shapes, are already found in the old pre-Christian Oriental religions. Its more mature form the Kabbalah belongs to the period when medieval Christian mysticism was beginning to manifest itself (viz. in Eckhart, towards end of 13th century); it is an age which also produced the rationalism of Maimonides (q.v.) Although some of its foremost exponents were famous Talmudists, it was a protest against excessive intellectualism and Aristotelian scholasticism. It laid stress, not on external authority, as did the Jewish law, but on individual experience and inward meditation. The mystics acceded the first place to prayer, and by contortions of the mystical progress "find God, becoming a state of ecstasy." As one of the finest specimens of Jewish devotional literature and some of the best types of Jewish individual character have been Kabbalists. On the other hand, the Kabbalah has been condemned, and nowhere more strongly than among the Jews themselves. Jewish orthodoxy found itself attacked by the more revolutionary aspects of mysticism and its tendencies to alter established customs. While the medieval scholasticism denied the possibility of knowing anything unattainable by reason, the spirit of the Kabbalah held that the Deity could be realized, and it sought to bridge the gulf. Thus it encouraged an unstrained emotionalism, rank superstition, an unhealthy asceticism, and the employment of artificial means to induce the ecstatic state. That this brought moral laxity was a stronger reason for condemning the Kabbalah, and the evil effects of nervous degeneration find a more recent illustration in the mysticism of the Chasidim ("saints"), a Jewish sect in eastern Europe which started from a movement in the 18th century against the exaggerated casuistry of contemporaneous rabbinics, and combined much that was spiritual and beautiful with extreme emotionalism and degradation. The appearance of the Kabbalah and of other forms of mysticism in Judaism may seem contrary to ordinary and narrow conceptions of orthodox Jewish legalism. Its interest lies, not in its doctrines, which have often been absurdly over-estimated (particularly among Christians), but in its contribution to the study of human thought. It supplied a want which has always been felt by certain types, and it became a movement which had mischievous effects upon ill-balanced minds. As usual, the excessive self-introspection was not checked by a rational criticism; the individual was guided by his own reason, the limitations of which he did not realize; and in becoming a law unto himself he ignored the accumulated experiences of civilization.

A feature of greater interest is the extraordinary part which this theosophy played in the Christian Church, especially at the time of the Renaissance. We have already seen that the Sepheric decade or the archetypal man, like Christ, is considered to be of double nature, both infinite and finite, perfect and imperfect. More correctly, however, the man is taken as the Great Mystery. In Deut. vi. 43, where Yahweh occurs first, then Eloheinu, and again Yahweh, we are told "The voice though one, consists of three elements, fire (i.e. warmth), air (i.e. breath), and water (i.e. humidity), yet all three are one in the mystery of the voice and can only be one. Thus also Yahweh, Eloheinu, Yahweh, constitute one—three forms which are one" (Zohar, ii. 43; compare iii. 65). Discussing the thrice holy in Isaiah vi. 3, one codex of the Zohar had the following remark: "The first holy denotes the Holy Father, the second the Holy Son, and the third the Holy Ghost" (cf. Galatians, De arcantis cathol. lib. ii. c. 3, p. 31; Wolf, Bibliotheca hebraica, i. 1136). Still more distinct is the doctrine of the atonement. "The Messiah invokes all the sufferings, pain, and afflictions of Israel to come upon Him. Now if He did not remove them thus and take them upon Himself, no man could endure the sufferings of Israel, due as their punishment for transgressing the law; as it is written (Isa. iii. 4), Surely He hath borne our griefs and carried our sorrows" (Zohar, ii. 12). These and similar statements favouring the doctrines of the New Testament made many Kabbalists of the highest position in the synagogue embrace the Christian faith and the Kabalist Abraham Abuyafra (1319-1378), the author of the Introduction to the Kabbalah of the Trinity, to answer to "the Messiah of the Holy Ghost". As early as 1220 a company of Jewish craftsmen in Spain, at the head of which were Paul de Heredia, Vidal de Saragossa de Aragon, and Davila, published compilations of Kabalistic treatises to prove from them the doctrines of Christianity. They were followed by Paul Rici, professor at Pavia, and physician to the emperor Maximilian I. Among the best-known non-Jewish exponents of the Kabbalah were the Italian count Pico di Mirandola (1463-1494), the renowned Johann Reuchlin (1455-1522), Heinrich Cornelius Agrippa of Nettesheim (1487-1535), Theophrastus Paracelsus (1493-1541), and, later, the Englishman Robert Fludd (1574-1657). Prominent among the "nine hundred theses" which Mirandola had placarded in Rome, and which he undertook to defend in the presence of all European scholars, whom he invited to the Eternal City, promising to defray their travelling expenses, was the following: "No science yields greater proof of the divinity of Christ than magic and the Kabbalah." Mirandola so convinced Pope Sixtus of the paramount importance of the Kabbalah as an auxiliary to Christianity that his holiness exercised himself to have Kabalistic writings translated into Latin for the use of divinity students. With equal zeal did Reuchlin act as the

KABINDA—KABIR

There are various meanings of the name Kabi, ascribed to the prophet whose story is told. Sources for the tale exist in European literature, but a later version, a combination of medieval natural philosophy and mysticism, is also known.

KABINDA, a Portuguese possession on the west coast of Africa north of the mouth of the Congo. Westwards it borders the Atlantic, N. and E. French Congo, S. and S.E. Belgian Congo. It has a coastline of 93 m., extends inland, at its greatest breadth, 70 m., and has an area of about 3000 sq. m. In its physical features, flora, fauna and inhabitants, it resembles the coast region of French Congo (q.v.). The only considerable river is the Chiloango, which in part forms the boundary between Portuguese and Belgian territory, and in its lower course divides Kabinda into two fairly even portions. The mouth of the river is in 3° 12' S., 12° 5' E. The chief town, named Kabinda, is a seaport on the right bank of the small river Bele, in 3° 33' S., 12° 5' E., pop. about 3000. From the beauty of its situation, it is sometimes called the paradise of the coast. The harbour is sheltered and commodious, with anchorage in four fathoms. Kabinda was formerly a noted slave mart. Further north are the ports of Landana and Massabi. Between Kabinda and Landana is Moloemo at the head of a small bay of the same name. There is a considerable trade in palm oil, ground nuts and other jungle produce, largely in the hands of British and German firms.

The possession of the enclave of Kabinda by Portugal is a result of the efforts made by that nation during the last quarter of the 19th century to obtain sovereignty over both banks of the lower Congo. Whilst Portugal succeeded in obtaining the southern bank of the river to the limit of navigability from the sea, the northern bank became part of the Congo Free State (see Africa, § 5). Portuguese claims to the north of the river were, however, to some extent met by the recognition of her right to Kabinda. The southernmost part of Kabinda is 25 m. (following the coast-line) north of the mouth of the Congo. This district as far north as the Chiloango river (including the adjacent territory of Belgian Congo) is sometimes spoken of as Kacongo. The name Loango (q.v.) was also applied to this region as well as to the coast-lands immediately to the north. Administratively Kabinda forms a division of the Congo district of the province of Angola (q.v.). The inhabitants are Bantu negroes who are called Kabindas. They are an intelligent, energetic and enterprising people, daring sailors and active traders.

KABIR, the most notable of the Vaishnava reformers of religion in northern India, who flourished during the first half of the 15th century. He is counted as one of the twelve disciples of Rāmānādand, the great preacher in the north (about A.D. 1400) of the doctrine of bhakti addressed to Rāma, which originated with Rāmānādu (12th century) in southern India. He himself also mentions among his spiritual forerunners Jāideo and Nāmdeo (or Nāma) the earliest Marathi poet (both about 1250). Legend relates that Kabir was the son of a Brāhman widow, by whom he was exposed, and was found on a lotus in Lahar Talāo, a pond near Benares, by a Musalmān weaver named 'Ali (or

KABUL

Nūr), who with his wife Nimā adopted him and brought him up in their craft as a Musalmān. He lived most of his life at Bānāres, and afterwards removed to Maghar (or Magahar), in the present district of Bātī, where he is said to have died in 1449. There appears to be no reason to doubt that he was originally a Musalmān and a weaver; his own name and that of his son Kamāl are Mahommedan, not Hindu. His adhesion to the doctrine of Rāmānand is not a solitary instance of the religious syncretism which prevailed at this time in northern India. The religion of the earlier Sūkh Gurus, which was largely based upon his teaching, also aimed at the fusion of Hinduism and Islam; and the example of Malik Muhammad, the author of the Padmāvat, who lived a century later than Kabīr, shows that the relations between the two creeds were in some cases extremely intimate. It is related that at Kabīr’s death the Hindus and Musalmāns each claimed him as an adherent of their faith, and that when his funeral issued forth from his house at Maghar the contention was only assuaged by the appearance of Kabīr himself, who bade them look under the cloth which covered the corpse, and immediately vanished. On raising the cloth they found nothing but a heap of flowers. This was divided between the rival factions, half being buried by the Musalmāns and the other half burned by the Hindus.

Kabīr’s fame as a preacher of bhākti, or enthusiastic devotion to a personal God, whom he preferred to call by the Hindu names of Rāma and Hari, is greater than that of any other of the Vaishnava spiritual leaders. His fervent conviction of the truth and power of his doctrine, and the homely and searching expression given to it in his utterances, in the tongue of the people and not in a learned language remote from their understanding, won for him multitudes of adherents; and his sect, the Kabīrpanth, is still one of the most numerous in northern India, its numbers exceeding a million. Its headquarters are the Kabīr Chaurā at Bānāres, where are preserved the works attributed to Kabīr (called the Granth), the greater part of which, however, were written by his immediate disciples and their followers in his name.

Those works which seem to have the best claim to be considered his own compositions are the Sahīhs, or stanzas, some 5000 in number, which have a very wide currency even among those who do not formally belong to the sect, and the Shabads, consisting of a thousand “words” (shabd), or short doctrinal expositions. Perhaps some of the Ṛekhās, or odes (100 in number), and of the Ramānais—brief mystical poems in very obscure language—may also be from his hand. Of these different forms specimens will be found translated in Professor H. Wilson’s Sketch of the Religious Sects of the Hindus (Wesley, 1868, pp. 103 seq.). Dr. E. Trumpp’s edition of the Adi Granth (Introduction, pp. xcvi. seq.) may also be consulted. Recent publications dealing with the subject are the Rev. G. H. Wilson’s Sketch of the Religious Sets of the Hindus (Wesley, 1868, pp. 103 seq.); the Sahīhs, numbering two and a half millions in the Panjāb, are also his spiritual descendents, and their Granth or Scripture is largely stocked with texts drawn from his works.

Kabīr taught the life of bhākti (faith, or personal love and devotion), the object of which is a personal God, and not a philosophical abstraction or an impersonal quality-less, all-pervading spiritual substance (as in the Vēdānta of Sāṅkaraśāya). His utterances do not, like those of Tulsi Dās, dwell upon the incidents of the human life of Rāma, whom he takes as his type of the Supreme; nevertheless, it is the essence of his creed that God became incarnate to bring salvation to His children, mankind, and that the human mind of this incarnation still subsists in the Divine Person. He proclaims the unity of the Godhead, the nameless, formless, and formless Lord, who is true, all-powerful, far beyond the power of speech, and also the divine origin of the human soul, divīnae partículae aureae. All evil in the world is ascribed to Māya, illusion or falsehood, and truth in thought, word and deed is enjoined as the chief duty of man: “No act of devotion can equal truth; no crime is so heinous as falsehood; in the heart where truth abides there is My abode.” The distinctions of creeds are declared to be of no importance in the presence of God: “The city of Hari is to the east, that of Ali is to the west; but explore your own heart, for there are both Rāma and Karim;” “Behold but One in all things: it is the second that leads you astray. Every man and woman that has ever been born is of the same nature as yourself. He, whose is the world, and whose are the children of Ali and Rāma, He is my Guru, He is my Pīr.” He proclaims the universal brotherhood of man, and the duty of kindness to all living creatures. Life is the gift of God, and must not be violated; the shedding of blood, whether of man or animals, is a heinous crime. The followers of Kabīr do not observe celibacy, and live quiet unostentatious lives; Wilson (p. 97) compares them to Quakers for their hatred of violence and unobtrusive piety.

The resemblance of many of Kabīr’s utterances to those of Christ, and especially to the ideas set forth in St John’s gospel, is very striking; still more so is the existence in the ritual of the sect of a sacramental meal, involving the eating of a consecrated wafer and the drinking of water administered by the Mahānt or spiritual superior, which bears a remarkable likeness to the Eucharist. Yet, though the deities of Hinduism and the prophet of Islam are frequently mentioned in his sayings, the name of Jesus has nowhere been found in them. It is conjectured that the doctrine of Rāmānand, which came from southern India, has been influenced by the Christian settlements in that region, which go back to very early times. It is also possible that Sūfism, the pietistic (as distinguished from the theosophic) form of which seems to owe much to eastern Christianity, has contributed some echo of the Gospel to Kabīr’s teaching. A third (but scarcely probable) hypothesis is that the sect has borrowed both maxims and ritual, long after Kabīr’s own time, from the teaching of the Roman Catholic missionaries, who were established at Agra from the reign of Akbar (1556-1605) onwards.

No critical edition of the writings current under the name of Kabīr has yet been published, though collections of his sayings (chiefly the Sābhi’s) are constantly appearing from Indian presses. The reader is referred, for a summary account of his life and doctrine, to H. H. Wilson’s Sketch of the Religious Sects of the Hindus (Wesley, 1868, pp. 103 seq.).

KABUL, the capital of Afghanistan, standing at an elevation of 6000 ft. above the sea in 34° 32’ N. and 69° 14’ E. Estimated pop. (1901), 140,000. Lying at the foot of the bare and rocky mountains forming the western boundary of the Kabul valley, just below the gorge made by the Kabul River, the city extends a mile and a half east to west and one mile north to south. Hemmed in by the mountains, there is no way of extending it, except in a northerly direction Towards the Sherpur cantonment. As the key of northern India, Kabul has been a city of vast importance for countless ages. It commands all the passes which here debouch from the north through the Hindu Kush, and from the west through Kandahar; and through it passed successive invasions of India by Alexander the Great, Mahmud of Ghazni, Jenghiz Khan, Baber, Nadir Shah and Ahmad Shah. Indeed from the time of Baber to that of Nadir Shah (1526-1738) Kabul was part of the empire of Delhi. It is now some 160 m. from the British frontier post of Jamrud near Peshawar.

Kabul was formerly walled; the old wall had seven gates, of which two alone remain, the Lahori and the Sirdar. The city is now a medley of narrow and dirty streets, with the Bala Hisar or fort forming the south-east angle, and rising about 150 ft. above the plain. The Amir’s palace is situated outside the town about midway between it and the Sherpur cantonment which lies about a mile to the north-east. Formerly the greatest...
ornament of the city was the arcaded and roofed bazaar called Chitkār Chāl, ascribed to Ali Mardan Khan, a noble of the 17th century, who has left behind him many monuments of his munificent public spirit both in Kabul and in Hindustan. Its four arms had an aggregate length of about 600 ft., with a breadth of 30. The display of goods was remarkable, and in the evening it was illuminated. This edifice was destroyed by Sir G. Pollock on evacuating Kabul in 1842 as a record of the treachery of the city.

The tomb of the Sultan Babar stands on a slope about a mile to the west of the city in a charming spot. The grave is marked by two erect slabs of white marble. Near him lie several of his wives and children; the garden was formerly enclosed by a marble wall; a clear stream waters the flower-beds. From the hill that rises behind the tomb there is a noble prospect of his beloved city, and of the all-fruitful plain stretching to the north of it.

After the accession of Abdur Rahman in 1880 the city underwent great changes. The Bala Hisar was destroyed and has never since been entirely rebuilt, and a fortified cantonment at Sherpur (one side of which was represented by the historic Bemarau ridge) had taken the place of the old earthworks of the British occupation of 1842 which were constructed on nearly the same site. The city streets were as narrow and evil-smelling, the surrounding gardens as picturesque and attractive, and the wealth of fruit was as great, as they had been fifty years previously. The amir, however, effected many improvements. Kabul is now connected with well-planned and metalled roads with Afghan Turkistan on the west, with the Oxus and Bokhara on the north, and with India on the east. The road to India was first made by British and is now maintained by Afghan engineers. The road southwards to Ghazni and Kandahar was always naturally excellent and has probably needed little engineering, but the general principle of road-making in support of a military advance has always been consistently maintained, and the expeditions of Kabul troops to Kāfārān have been supported by a very well graded and substantially constructed road up the Kunar valley from Jalalabad to Asmar, and onwards to the Bashgol valley of Kāfārān. The city ways have been improved until it has become possible for wheeled vehicles to pass, and the various roads connecting the suburbs and the city are efficiently maintained. A purely local railway has also been introduced, to assist in transporting building material. The buildings erected by Abdur Rahman were pretentious, but unmarked by any originality in design and hardly worthy representation of the beauty and dignity of Mahomedan architecture. They included a new palace and a durbar hall, a bridge across the river and embankment, a pavilion and garden laid out around the site of Baber's tomb overlooking the Chardeh valley; and many other buildings of public utility connected with stud arrangements, the manufacture of small arms and ammunition, and the requirements of what may be termed a wholesale shop under European direction, besides hospitals, dispensaries, bazaars, &c. The new palace is within an entrenchment just outside the city. It is enclosed in a fine garden, well planted with trees, where the harem serai (or ladies' apartments) occupies a considerable space. The public portion of the buildings comprise an ornamental and lofty pavilion with entrances on each side, and a high-domed octagonal room in the centre, beautifully fitted and appointed, where public receptions take place. The durbar hall, which is a separate building, is 60 yards long by 20 broad, with a painted roof supported by two rows of pillars. But the arrangement of terraced gardens and the lightly constructed pavilion which graces the western slopes of the hills overlooking Chardeh are the most attractive of these innovations. Here, on a summer's day, with the scent of roses pervading the heated air, the cool refreshment of the passing breezes and of splashing fountains may be enjoyed by the officials of the Kabul court, whilst they look across the beauty of the thickly planted plains of Chardeh to the rugged outlines of Paghman and the snowy hills of the Hindu Kush. The artistic taste of the landscape gardening is excellent, and the mountain scenery is not unworthy of Kashmir. It is pleasant to record that the graveyard of those officers who fell in the Kabul campaign of 1879-1880, which lies at the northern end of the Bemarau ridge, is not uncared for.

Kabul is believed to be the Ortospanium or Ortospa of the geographies of Alexander's march, a name conjectured to be a corruption of Urdukashānā, "high place." This is the meaning of the name Bala Hisar. But the actual name is perhaps also found as that of a people in this position (Ptolemy's Kabīdeai), if not in the Indian army of Alexander. The name probably corresponds to a favourite Arabic love of jingle) Kabul and Zābul constantly associated. Zābul appears to have been the country about Ghazni. Kabul first became a capital when Baber made himself master of it in 1504, and there he reigned for fifteen years before his invasion of Hindustan. In modern times it became a capital again, under Timur Shah (see Afghanistan), and so has continued both to the end of the Durani dynasty, and under the Barakzais, who now reign. It was occupied by Sir John Keane in 1839, General Pollock in 1842, and again by Sir Frederick, afterwards Lord Roberts, in 1879.

Kabul is also the name of the province including the city so called. It may be considered to embrace the whole of the plains called Koh Daman and Beghram, &c., to the Hindu Kush northward, with the Kohistan or hill country adjoining. Eastward it extends to the border of Jalalabad at Jagdalak; southward it includes the Logar district, and extends to the border of Ghazni; north-westward it reaches the Punjab, and the valley of the Panjgur or Kabul river, and so to the Koh-i-Baba. Roughly it embraces a territory of about 100 square miles, chiefly mountainous. Wheat and barley are the staple products of the arable tracts. Artificial grasses are also grown, and, in the north-east, extensive gardens are maintained. A considerable part of the population spends the summer in tents. The villages are not enclosed by fortifications, but contain small private castles or fortifications.

See v. Yate, Northern Afghanistan (1888); J. A. Gray, At the Court of the Amir (1895); Sir T. H. H. Holdich, The Indian Borderland (1901).

KABUL RIVER, a river of Afghanistan, 300 m. in length. The Kabul (ancient Kophes), which is the most important (although not the largest) river in Afghanistan, rises at the foot of the Unai pass leading over the Sanglange range, an offshoot of the Hindu Kush towards Bamian and Afghan Turkistan. Its basin forms the province of Kabul, which includes all northern Afghanistan between the Hindu Kush and the Safed Koh ranges. From its source to the city of Kabul the course of the river is only 45 m., and this part of it is often exhausted in summer for purposes of irrigation. Half a mile east of Kabul it is joined by the Logar, a much larger river, which rises beyond Ghazni among the slopes of the Gul Koh (14,200 ft.), and drains the rich and picturesque valleys of Logar and Wardak. Below the confluence the Kabul becomes a rapid stream with a great volume of water and gradually deepening bed, and the whole river, from 12 to 20 m. below Kabul the Panjshir river joins it; 15 m. farther the Taghaz; 20 m. from the Tagaza junction the united streams of Alihang and Alihang (rivers of Kāfārān); and 20 m. below that, at Balabagh, the Surkhāb from the Safed Koh. Two or three miles below Jalalabad it joins the Kunar, the river of Chitrāl. Thenceforward it passes by deep gorges through the Mohmand hills, curving northward until it emerges into the Peshawar plain at Michi. Soon afterwards it receives the Swat river from the north and the Bara river from the south, with a further course of 40 m. falls into the Indus at Attock. From Jalalabad downwards the river is navigable by boats or rafts of inflated skins, and is considerably used for purposes of commerce.

KABYLES, or Kabail, a confederation of tribes in Algeria, Tunisia, and a few oases of the Sahara, who form a branch of the great Berber race. Their name is the Arabic gabiṭ [gabīṭ], and they are divided into two great divisions, the Kabyles of Algeria to all Berber peoples. The part of Algeria which they inhabit is usually regarded as consisting of two divisions—Great Kabylie and Lesser Kabylie, the former being also known as the Kabylia of the Jurjura (also called Adrar Budfel, "Mountain of Snow"). Physically many Kabyles do not present much contrast to the Arabs of Algeria. Both Kabyle and Arab are white at birth, but rapidly grow brown through exposure to air and sunshine. Both have in general brown eyes and wavy hair
of coarse quality, varying from dark brown to jet black. In 
status there is perhaps a little difference in favour of the Kabyle, 
and it appears also to be heavier and more complex. 
Both are clearly superior. Some, however, of the pure 
type of Kabyles in Kabylie proper have fair skins, ruddy comple-
xions and blue or grey eyes. In fact there are two distinct 
types of Kabyles: those which by much admixture have 
approximated to Arab and negroid types, and those which pre-
scribe Libyan features. Active, energetic and enterprising, the 
Kabyle is to be found far from home—as a soldier in the French 
army, as a workman in the towns, as a field labourer, or as a 
pedlar or trader earning the means of purchasing his bit of ground 
in his native village. The Kabyles are Mahomedans of the 
Sunnite 

Kachins and the Kachins were the Indo-Chinese race who, 
before the beginning of history, but after the Môn-Anam wave 
of the Chinese, took their home in western China 

and to pour over the region where Tibet, Assam, Burma and China 

converge, and that the Chingpaw are the residue left round the 
headquarters of the Irrawaddy and the Chidawdik after those 
branches, destined to become the Tibetans, the Nagas, the 
Burmans and the Kuki Chins, had gone westwards and southwards. 
In the middle of the 19th century the southern limit of the 
Kachins was 200 m. farther north than it is now. Since then 
the race has been drifting steadily southward and eastward, 
a vast aggregate of small independent clans united by no common 
government, but all obeying a common impulse to move 
outwards from their original seats along the line of least 
resistance. Now the Kachins are on both sides of the border 
of Upper Burma, and are a force to be reckoned with by frontier 
administrators. According to the Kachin Hill Tribes Regulation 
of 1895, administrative responsibility is accepted by the 
British government on the left bank of the Irrawaddy for 
the country south of the Nmaikha, and on the right bank for 
the country south of a line drawn from the confluen of the Malikha 
and Kachin rivers through the northern limit of the Labam 
district and including the jade mines. The tribes north of this line 
were told that if they abstained from raiding to the south of it 
they would not be interfered with. South of that line peace was to 
be enforced and a small tribute exacted, with a minimum of inter-
ference in their private affairs. On the British side of the border 
the chief objects have been the disarmament of the tribes 
and the construction of frontier and internal roads. A light 
tribute is exacted.

The Kachins have been the object of many police operations 
and two regular expeditions: (1) Expedition of 1892–93. Bhamo 
was occupied by the British on the 28th of December 1885, and 
almost immediately trouble began. Certain punitive measures were 
carried on in 1886, but in December 1886 a police column 
proceeding to establish a post at Sama was heavily attacked, 
and simultaneously the town of Myitkyina was raided by Kachins. 
A force of 1200 troops was sent to put down the rising. The 
enemy received their final blow at Palap, but not before three officers 
were killed, three wounded, and 102 sepoys and followers killed 
and wounded. (2) Expedition of 1895–96. The continued misconduct 
of the Sana Kachins from beyond the administrative border 
rendered punitive measures necessary. They had remained unpunished 
since the attack on Myitkyina in December 1892. Two columns were 
sent up, one of 250 rifles from Myitkyina, the other of 200 rifles 
from Mogant, marching in December 1895. The resistance was 
soon broken and a large body of Kachins and Kachingbaw was 
completely destroyed. A strong force of military police is stationed at Myitkyina, with several 
outposts in the Kachin hills, and the country is never wholly free 
from crimes of violence committed by the Kachins.

KADUR, a district of Mysore state, in southern India, with an 
area of 2813 sq. m. Pop. (1901), 167,752, showing an increase 
of 9% in the decade. The larger portion of the district consists 
of the Malnad or hill country, which contains some of the wildest 
mountain scenery in southern India. The western frontier is 
formed by the chain of the Ghatas, of which the highest peaks are 
the Kudremukha (6251 ft.) and the Merudi Gutta (5451 ft.). 
The centre is occupied by the horse-shoe range of the Baba 
Budans, containing the loftiest mountain in Mysore, Mulanigiri 
(6317 ft.). The Maidaon or plain country lying beneath the 
ampitheatre formed by the Baba Budan hills is a most fertile 
region, well watered, and with the famous “black cotton soil.” 
The principal rivers are the Tunga and Bhadra, which rise near 
the Mount Abu in Rajputana and run through the central 
region, receiving tributary from the Kistna. The eastern region is watered by the 
Bhadra. At the point where this river leaves the Baba Budan 
the water is embanked to form two extensive tanks which irrigate 
the lower valley. From all the rivers water is drawn off into 
irrigation channels by means of anicuts or weirs. The chief 
natural wealth of Kadur is in its forests, which contain inex-
haustible supplies of the finest timber, especially teak, and also 
acquiped shelter for the coffee plantations. Iron is found and 
smelted at the foot of the hills, and corundum exists in certain 
localities. Wild beasts and game are numerous, and fish are 
abundant.

1 From the enlistment of Kabyles speaking the Zouave dialect 
the Zouave regiments of the French army came to be so called.
KAEMPFER—KAFFIRS

The largest town is Tarkere (pop. 10,164); the headquarters are at Chikmagalur (1915); the staple crop is rice, chiefly grown on the hill slopes, where the natural rainfall is sufficient, or in the river valley, where the fields can be irrigated. Coffee cultivation is said to have been introduced by a Mahomedan saint, Baba Budan, more than two centuries ago; but it first attracted European capital in 1840. The district is served by the Southern Mahratta railway.

KAEMPFER, ENGELBRECHT (1653–1716), German traveller and physician, was born on the 16th of November 1651 at Lemgo in Lippe-Detmold, Westphalia, where his father was a pastor. He studied at Hameln, Lüneburg, Hamburg, Lübeck and Danzig, and after graduating Ph.D. at Cracow, spent four years at Königsberg in Prussia, studying medicine and natural science. In 1681 he visited Upsala in Sweden, where he was offered inducements to settle; but his desire for foreign travel led him to become secretary to the embassy which Charles XI. sent through Russia to Persia in 1683. He reached Persia by way of Moscow, Kazan and Astrakhan, landing at Nizabad in Daghestan after a voyage in the Caspian; from Shemakha in Shirvan he made an expedition to the Baku peninsula, being perhaps the first modern scientist to visit these fields of "eternal fire." In 1684 he arrived in Isfahan, then the Persian capital. When after a stay of more than a year the Swedish embassy prepared to return, Kaempfer joined the fleet of the Dutch East India Company in the Persian Gulf as chief surgeon, and in spite of fever caught at Bandar Abbasi he found opportunity to see something of Arabia and of many of the western coast-lands of India. In September 1689 he reached Batavia; spent the following winter in studying Javanese natural history; and in May 1690 set out for Japan as physician to the embassy sent yearly to that country by the Dutch. The ship in which he sailed touched at Slam, whose capital he visited; and in September 1690 he arrived at Nagasaki on the seas of Japan, then open to foreigners.

Kaempfer stayed two years in Japan, during which he twice visited Tokyo. His adroitness, insinuating manners and medical skill overcame the habitual jealousy and reticence of the natives, and enabled him to elicit much valuable information. In November 1692 he left Japan for Java and Europe, and in October 1693 he landed at Amsterdam. Receiving the degree of M.D. at Leiden, he settled down in his native city, becoming also physician to the court of Lippe. He died at Lemgo on the 2nd of November 1716.

The only work Kaempfer lived to publish was Aenomaetum exotarum politico-physico-medicarum fasciculi V. (Lemgo, 1712), a selection from his papers giving results of his invaluable observations in Persia, India and Japan. At his death the unpublished manuscripts were purchased by Sir Hans Sloane, and conveyed to England. Among them was a History of Japan, translated from the manuscript into English by J. G. Scheuchzer and published in London, in 2 vols., in 1727. The original German has never been published, the extant German version being taken from the English. Besides Japanese history, this book contains a description of the political, social and physical state of the country in the 17th century. For upwards of a hundred years it remained the chief source of information for the general reader, and is still not wholly obsolete. A life of the author is prefixed to the History.

KAFFA, a country of N.E. Africa, part of the Abyssinian empire. Kaffa proper (formerly known also as Gomara) has an area of little more than 5000 sq. m., but the name is used in a general sense to include the neighbouring territories of Gimirra, Jimma, Ennarea, &c. In this larger acceptance Kaffa extends roughly from 6° to 9° N. and from 35° to 37° E. It forms the S.W. part of the great Abyssinian plateau and consists of broken table-land deeply scored by mountain torrents and densely wooded. The general elevation is about 8000 ft., while several peaks are over 10,000 ft. From the western slopes of the plateau descend headstreams of the Sobat. The principal river is the Omo, the chief feeder of Lake Tugdell. Kaffa proper is believed to be the native home of the coffee plant (whence the name), which grows in profusion on the mountain sides. The principal town was Bonga, 7° N., 36° 12' E., a great trading centre, but the Abyssinian headquarters are at Anderacha, about 12 m. S.S.W. of Bonga. Jiren, the capital of Jimma, 60 m. N.E. of Bonga, is a still more important town, its weekly market being attended by some 20,000 persons.

A great variety of races inhabit these countries of southern Ethiopia. The Kaficho (people of Kaffa proper) are said to be of the same stock as the northern Abyssinians and to have been separated from the rest of the country by the Mahomedan invasion of the 16th century. Thus Jimma, immediately north of Kaffa proper, is peopled by Mahomedan Gallas. The Kaficho, though much mixed with Galla blood, retained their Christianity and a knowledge of Geez, the ecclesiastical tongue of Abyssinia. The ordinary language of the Kaficho has no outward resemblance to modern Abyssianin. Their speech was, however, stated by Dr C. T. Beke (c. 1850) to be cognate with the Gonga tongue, spoken in a portion of Damot, on the northern side of the Abai. Kaffa, after having been ruled by independent sovereigns, who were also suzerains of the neighbouring states, was about 1865 conquered by the Abyssinians. The first European explorer of Kaffa was Antoine de Abbadie, who visited it in 1845. Not until the early years of the 19th century was the country accurately mapped.

KAFFIR BREAD, in botany, the popular name for a species of Euphcalartos (E. caffra), one of the cacti, a native of South Africa, so called from the farinaceous food-stuff which is found at the apex of the stem (Gr. κω, in, καθαλ, head, and ἄρτος, bread). It is a tree reaching nearly 20 ft. in height, with very stiff, spreading pinnae leaves 3 to 4 ft. long and recurving at the tips. The species of Euphcalartos, which are natives of tropical and South Africa, form handsome greenhouse and conservatory plants; some species are effectively used in subtropical gardening in the summer months.

KAFFIRS (Arabic Kafir, an unbeliever), a name given by the Arabs to the native races of the east coast of Africa. The term was current along the east coast at the arrival of the Portuguese, and passed from the Portuguese and English to the native races themselves under the form of Kaffirs. There are no general or collective national names for these peoples, and the various tribal divisions are mostly designated by historical or legendary chiefs, founders of dynasties or hereditary chief taincies. The term has no real ethological value, for the Kaffirs have no national unity. To-day it is used to describe that large family of Bantu negroes inhabiting the greater part of the Cape, the whole of Natal and Zululand, and the Portuguese dominions on the east coast south of the Zambesi. The name is also loosely applied to any negro inhabitant of South Africa. For example, the Bechuana of the Transvaal and Orange Free State are usually called Kaffirs.

The Kaffirs are divisible into two great branches: the Amazulu with the Ama-Swazi and Ama-Tonga and the Kaffirs proper, represented by the Ama-Xosa, the Tembu (q.v.) and the Pondo (q.v.). Hence the compound term Zulu-Kaffir applied in a collective sense to all the Kaffir peoples. Intermediate between these two branches were several broken tribes now collectively known as Ama-Fengu (i.e. "wanderers" or "needy" people, from fenguza, to seek service) (see FINGO).

The ramifications of the Kaffirs proper cannot be understood without reference to the national genealogies, most of the tribal names, as already stated, being those of real or reputed founders of the respective tribes. "Amazulu means people of Xosa," a somewhat mythical chief supposed to have flourished about the year 1530. Ninth in descent from his son Topu was Paulo, who died about 1780, leaving two sons, Guleka and Kirabi (pronounced Khu-Kha-Le), the former came the Ama-Guleka, Ama-Dhlambo (Tsantsambies and the Am Zuquika, Guleka or Sandili's people). The Pondo do not descend from Xosa, but probably from an elder brother, while the Tembu, though apparently representing a younger branch, are regarded by all the Kaffir tribes as the royal race. Hence the Guleka chief, who is the head of all

1 The Ama-Fengu are regarded both by the Zulu and Ama-Xosa as slaves or out-castes, without any right to the privileges of true-born Kaffirs. Any tribes which have broken and mixed would probably be regarded as Ama-Fengu by the other Kaffirs. Hence the multiplicity of clans, such as the Ama-Bele, Aba-Sembotwendl Ama-Ziizl, Ama-Kuze, Aba-Sekume, Ama-Nkuzae, Ama-Teriyeni, Ama-Swawa, &c., all of whom are collectively grouped as Ama-Fengu.
the Ama-Xosa tribes, always takes his first or "great wife" from the Tembu royal family, and her issue alone have any claim to the succession. The subjoined genealogical tree will place Kaffir relations in a clearer light:

It will be seen that, as representing the elder branch, the Gcaleka stand apart from the rest of Xosa's descendants, whom they group collectively as Ama-Rarabe (Ama-Khakhabe), and whose genealogies, especially in the case of the Gaikas and Ts'labies, are very confused. The Ama-Xosa country lies mainly between the Kei and Umtata rivers. The Zulu call themselves Abantu ba-Kwa-Zulu, i.e., "people of Zulu's land," or briefly Bakwa-Zulu, from a legendary chief Zulu, founder of the royal dynasty. They were originally an obscure tribe occupying the basin of the Umfolosi river, but rose suddenly to power under Chaka, who had been brought up among the neighboring and powerful Umtetwas, and who succeeded the chiefs of that tribe and of his own in the beginning of the 19th century. But the true mother tribe seems to have been the extinct Ama-Ntombela, whom the Ama-Tefulu, the U'mdawane, U'mkelas, U'mtettes and many others, all absorbed or claiming to be true Zulus. But they permitted marriage by polygamy, and the gradual adoption of the Zulu dress, usages and speech. Hence in most cases the term Zulu implies political rather than blood relationship. This remark applies also to the followers of the Mzilikazi (properly U'mzikazi), who, after a fierce struggle with the Bechuana, founded about 1820 a second Zulu state about the head waters of the Orange river. In 1837 most of them were driven northwards by the Boers and are now known as Matabele.

The origin of the Zulu-Kaffir race has given rise to so much controversy. It is obvious that they are not the aborigines of their present domain, whence in comparatively recent times—since the beginning of the 16th century—they have displaced the Hottentots and Bushmen of fundamentally distinct stock. They themselves are conscious of their foreign origin. Yet they are closely allied in speech (see Bantu Languages) and physique to the surrounding Basuto, Bechuana and other members of the great South African Negroid family. Hence their appearance in the south-east corner of the continent is sufficiently explained by the gradual onward movement of the populations pressing southward on the Hottentot and Bushman domain. The specific difference in speech and appearance by which they are distinguished from the other branches of the family must in the same way be explained by the altered conditions of their new habitat. Hence it is that the farther they have penetrated southwards the farther they have become differentiated from the Tswana type. Thus the light and clear brown complexion prevail amongst the southern Tembu becomes gradually darker as we proceed northwards, passing at last to the blue-black and sepia of the Ama-Swazi and Tekeza. Even many of the mixed Tongo tribes are of a polished ebony colour, like that of the Joloos and other Senegambian negroes. The Kaffir hair is uniformly of a woolly texture. The head is dolichocephalic, but it is also high or long vertically, and it is in this feature of hysiptenosephaly (height and length combined) that the Kaffir presents the most striking contrast with the pure Negro. But the nose being generally rather broad and the lips thick, the Kaffir face, though somewhat oval, is never regular in the European sense, the deviations being normally in the direction of the Negro, with which race the peculiar odour of the skin again connects the Kaffirs. In stature they rank next to the Zulus and Bechuana, between 5 ft. 7 in. to 5 ft. 11 in., and even 6 ft. They are slim, well-proportioned and muscular. Owing to the hard life they lead, the women are generally inferior in appearance to the men, except amongst the Zulu, and especially the Tembu. Hence in the matrimonial market, while the Ama-Xosa girl realizes no more than ten or twelve head of cattle, the Tembu belle fetches as many as forty, and if especially fine even eighty.

The more warlike tribes were usually arrayed in leopard or ox skins, of late years generally replaced by European blankets, with feather head-dresses, coral and metal ornaments, bead armlets and necklaces. The Makuas and a few others practise tattooing, and the Ama-Xosa are fond of painting or smearing their hair with red ochre. Their arms consist chiefly of ox-hide shields 4 to 6 ft. long, the kerrie or club, and the assegai, of which there are two kinds, one long, with 9-in. narrow blade, for throwing, the other short, with broad blade, for stabbing. The dwellings are group or conical huts grouped in kraals or villages. Although cattle form their chief wealth, and hunting and stock-breeding their main pursuits, many have turned to husbandry. The Zulu raise regular crops of "neelies" (maize), and the Pondo cultivate a species of millet, tobacco, water melons, yams and other vegetables. Milk (never taken fresh), millet and maize form the staples of food, and meat is seldom eaten except in time of war.

When Kaffirs are socially, not at puberty, but upon his marriage. Polygyny is the rule and each wife is regarded as adding dignity to the household. Marriage is by purchase, the price being paid in cattle. Upon the husband's death family life is continued under the headship of the eldest son of the house, the widows by virtue of levarite becoming the property of the uncle or nearest males, not sons. A son inherits and honourably liquidates, if he can, his father's debts.

The Zulu are emphatically a nation superior to the Negro. In their social and political relations they display great tact and intelligence; they are remarkably brave, warlike and hospitable, and were honest and truthful until through contact with the whites they became corrupt. Their political organization, besides acting as a bond of union, is a splendid example of something approaching true nationhood. Religion, as ordinarily understood, they have very little, and have certainly never developed any mythologies or dogmatic systems. It is more than doubtful whether they have ever formed any notion of a Supreme Being. Some conception, however, of a future state is implied by a strongly developed worship of ancestry, and by a belief in spirits and ghosts to whom sacrifices are made. There are no idols or priests, but belief in witchcraft formerly "witch-doctor" or medicine-man overwhelming power. Circumcision and polygyny are universal; the former is sometimes attributed to Mahomedan influences, but has really prevailed almost everywhere in East Africa from the remotest time.

Hunting and war serve as avocations rather than as occupations, and many ceremonial observances in connexion with them were once the rule. Formerly ox-racing was a common sport, the oxen running, riderless, over a ten-mile course. The owner of a champion racing ox was a rich man, and these races were valued at hundreds of head of cattle. Cattle are the currency of the Kaffirs in their wild state. Ten to twenty head are the price of a wife. When a girl marries,

1 Seventh in descent from Zulu, through Kumed, Makeba, Punga, Ndaiba, Yama and Tzengakona or Senzangakona (Bleek, Zulu Legends).

2 P. Topinard, Anthropology (1878), p. 274.

3 This feature varies considerably, in the Tslambie tribes being broad, but more flat than in the Tembu and Bechuana, while among the Ama-Tembu and Ama-Mpondo it assumes more of the European character. In many of them the perfect Grecian and Roman noses are discernible "(Fleming's Kaffiria, p. 92)." The height of the Ama-Xosa is 5'6" to 5'8", that of the Fristo is 5'4" to 5'6", and that of the Zulu is 5'8" to 6'1", or 175 to 178 cm. The Ama-Xosa are seldom more than 5'10" or 6'0", or 178 to 183 cm.

4 Since the early years of the 17th century Protestant and Roman Catholic missions have gained hundreds of thousands of converts among the Kaffirs. Purely native Christian churches have also been organized.
her father (if well off) presents her with a cow from his herd. This animal is called *wulubungu* or "doer of good" and is regarded as sacred. It must never be killed nor may its descendants, as long as it lives. A hair of its tail is tied round the neck of each infant immediately after birth. In large kraals there are 40 to 50 of these cows, usually of red colour. Its horns are trained to peculiar shapes by early mutilations. It figures in many ceremonies when it is paid a kind of knee-worship.

The Kaffar has three, not four, seasons: "Green Heads," "Kicking" and "Cutting"; the first and last referring to the crops, the second to the "warm weather." Women and children only eat after the men are satisfied. A light beer made from sorghum is the national drink.

Of the few industries the chief are copper and iron smelting, practised by the Tembu, Zulu and Swazi, who manufacture weapons, spoons and agricultural implements both for their own use and for trade. The Swazi display some taste in wood-carving, and others prepare dried harris for sale. Characteristic of this race is their neglect of the art of navigation. Not the smallest boats are ever made for crossing the rivers, much less for venturing on the sea, except by the Makazana of Delagoa Bay and by the Zambesi people, who have canoes and flat-bottomed boats made of planks.

The Kaffar race has a distinct and apparently very old political system, which may be described as a patriarchal monarchy limited by a powerful aristocracy. Under British rule the tribal independence of the Kaffirs has disappeared. Varying degrees of autocracy have been granted, but the supreme powers of the chiefs have gone, the Swazi being in 1904 the last to be brought to order. In the Transkeian Territories tribal organization exists, but it is modified by special legislation and the natives are under the control of special magistrates. To a considerable extent in Natal and throughout Zululand the Kaffirs are placed in reserves, where tribal organization is abolished by British supervision. In Basutoland the tribal organization is very strong, and the power of chiefs is upheld by the imperial government, which exercises general supervision.

**KAFFRARIA.** The descriptive name given to the S.E. part of the Cape province, South Africa. Kaffraria, i.e. the land of the Kaffirs (q.v.), is no longer an official designation. It used to comprise the districts now known as King William's Town and East London, which formed British Kaffraria, annexed to Cape Colony in 1865, and the territory beyond the Kei River south of the Drakensberg Mountains as far as the Natal frontier, known as Kaffraria proper. As a geographical term it is still used to indicate the Transkeian territories of the Cape provinces comprising the four administrative divisions of Transkei, Pondoland, Tembland and Griqualand East, incorporated into Cape Colony at various periods between 1859 and 1894. They have a total area of 17,310 sq. m., or 310 sq. m. being a square kilometre. (1 sq. m. = 2.471 acres, of whom 16,777 sq. m. are whites. Excluding Pondoland—counted previously to 1904—the population had increased from 4,87,364 in 1891 to 631,887, in 1904.

**Physical Features.**—The physical characteristics of Kaffraria bear a great resemblance to those of the Cape province proper. The country rises from sea-level in a series of terraces to the rugged range of the Drakensberg. Between that range and the coast-lands are many subsidiary ranges with fertile valleys through which a large number of rivers take their way to the Indian Ocean. These rivers have very rapid falls in comparison to their length and when less than 40 m. from the coast are still 2000 ft. above sea-level. The chief, beginning at the south, are the Kei, the Bashee, the Umbathuto, the St. John's or Umzimvubu, and the Umtamvuna, which separates Kaffraria from Natal.

The St. John's River rises in the Drakensberg near the Basuto-Natal frontier. The river valley has a length of 140 m., the river with its many twists being double that length. It receives numerous tributaries, one, the Tzita, possessing a magnificent waterfall, the river leaping over an almost vertical precipice of 375 ft. The St. John's reaches the sea between precipitous cliffs some 1200 ft. high and covered with verdure. The mouth is obstructed by a sand bar over which there are two locks of some of the rivers of Kaffraria except the St. John's is navigable.

Kaffraria is one of the most fertile regions in South Africa. The mountain gorges abound in fine trees, thick forest and bush cover the mountain tops, and the lowlands and valleys are favourable to almost any kind of fruit, field and garden cultivation. The coast districts are very hot in summer, the temperature from October to April on an average of 80° to 90° Fahrenheit; it is generally 60° to 70° in winter, and seldom below 50°, though the nights are very cold. But the variation in altitude places climates of all grades within easy reach, from the burning coast to the often snow-clad mountain. Thunderstorms frequent in summer; they are generally severe. On the whole the climate is extremely healthy. At St. John's are sulphur springs.

A considerable area is devoted to the raising of wheat and other cereals, especially in the northern district (Griqualand East), where the land is largely owned by Europeans. Large quantities of stock are raised. Most of the land is held by the natives under tribal tenure, and the case with which their wants are supplied is detrimental to the full cultivation of the land. Kaffraria is, however, one of the chief districts of the Anglo-Boer Republics on the border of South Africa. Most of the white inhabitants are engaged in trade. The Transkeian Territories are fully described in the art. *Kaffraria,* which has a separate article on it.

**Towns and Communications.**—The chief town is Kokstad (q.v.), pop. (1904), 2903, the capital of Griqualand East. Umtata (2160) is the chief town of Tembland, the residence of an assistant chief magistrate, head-quarters of a division of the Cape Mounted Rifles, and seat of the Anglican bishopric of Kaffraria. The principal buildings are the Court House, Government offices, and a fine building in Renaissance style, erected 1907–1908. Port St John is the chief town in Pondoland, and the only harbour of the country. Butterworth is the chief town in Transkei. Cala (pop. about 1000), in the Transkeian Territories, is the only railway town. The Transkeian judicial system is in force, save as modified by special enactments of the Cape parliament.

A "Native Territories Penal Code," which came into operation on the 1st of January 1887 governs the relations of the natives, who are under the jurisdiction of a chief magistrate (resident magistrates in the Transkeian Territories). The Native courts are the ordinary courts of the territory. In civil affairs the tribal organization and native laws are maintained. No chief, however, exercises criminal jurisdiction. Since 1898 certain provisions of the Glen Grey Act have been applied to the Transkeians, but the Native laws still form the sanitary and educational organization. The expenditure on Kaffraria considerably exceeds the revenue derived from it. The franchise laws are the same as in the Cape proper. Though the Kaffirs outnumber the whites by fifty to one, white men form the bulk of the electorate, which in 1904 numbered 4778.

**Religion.**—Numbers of Protestant missionary societies have churches and educational establishments in Kaffraria, but, except in Natal, they are mainly the Kaffraria heathen. The Griquas profess Christianity and have their own churches and ministers. The Anglican diocese of St. John's, Kaffraria, was founded in 1873.

**Annexation to the Cape.**—The story of the conflicts between the Kaffir tribes and the Cape colonists is told under *CAPE COLONY.* As early as 1819 Kaffraria, or Pondoland, was held not to extend west beyond the Keiskamma River. The region east of that river as far as the Kei River became in 1847 the Crown colony of British Kaffraria, and was annexed to Cape Colony in 1865. The Transkeian territories remained in nominal independence until 1875, when the Tembu sought British protection. An inter-tribal war in 1877 between Fingo and Gcaleka resulted in the territory of the Gcaleka chief Kreli being occupied by the British. It was not, however, till 1879 that Fingoland and the Idutywa Reserve, together with the district then commonly called Noman's-land, were proclaimed an integral part of the Cape. About this time most of the rest of Kaffraria came under British control, but it was not till 1885 before Gcalekaland, the coast region of Transkei, and the various districts comprising Tembland—Bomvanaland on the coast, Tembland Proper and Emigrant Tembland—were annexed to the colony. By the annexation, the frontier of the colony was...
KAFIRISTAN

630

carried to the Umtata River, so that by 1885 only Pondoland,
fronting on the Indian Ocean, separated the Cape from Natal.
In Pondoland, Port St John, proclaimed British territory in 1881,
was, along with the lower reaches of the St John's River, incor-
porated with Cape Colony in 1884; in 1886 the Xesibe country
(Mount Ayliff) was annexed to the Cape and added to Griqua-
land East; and in the following year Rhode Valley was included
within the boundary line. The rest of Pondoland, chiefly in virtue
of a British protectorate established over all the coast region
in 1885, was already more or less under British control, and in
1894 it was annexed to the Cape in its entirety. Thus the whole
of Kaffraria was incorporated in Cape Colony, with the exception
of some 1350 sq. m., then part of Noman's-land, annexed by
Natal in 1866 and named Alfredst. To the wise administra-
tion of Major Sir Henry G. Elliot, who served in Kaffraria in
various official capacities from 1877 to 1903, the country owes
much of its prosperity.

Particulars concerning each of the four divisions of Kaffraria
follow.

Griqualand East (area, 7594 sq. m.), so called to distinguish it
from Griqualand West, a district north of the Orange River, lies
between Basutoland (N.W.), Natal (N.E.), Tembuland (S.W.)
and Pondoland (S.E.). It occupies the southern slopes of the
Drakensberg or the fertile valleys at their feet. It included most of
the region formerly called Noman's-land, and afterwards named
Adam Kok's Land from the Griqua chief who occupied it in 1862
with the consent of the British authorities, and governed the
country from 1856, until 1879, and Okondjekhona, and is now
inhabited by Griqua stock.

The Griquas are still ruled by an officially appointed head-
man. The majority of the inhabitants are Basutos and Kaffirs
(Pondomis, Ama-Baka and other tribes). The Griqualand East
has made fairly rapid progress. The population rose from 121,000
in 1881 to 222,685 in 1904, of whom 5091 were whites. Stock-breeding
on the uplands, tillage on the lower slopes of the Drakensberg,
are the chief industries. On these slopes and uplands the climate
is delightful and well suited to Europeans. There is considerable
trade with Basutoland in grain and stock, and through Kokstad
with Port St John and Port Shepstone, Natal. Much of the best
agricultural produce is exported by Europeans.

Tembuland (area, 4122 sq. m.), which lies S.W. of Griqualand East
and comprises the districts of Tembuland Proper, Emigrant Tembuland
and Bonvannaland, takes its name from the Tembu nation,
calling sometimes Tambookies, one of the most powerful of
the Kaffir groups. In the national genealogies the Tembus hold an
honourable position, being traditionally descended from Tembu,
elder brother of Xosa, from whom most of the other Kaffirs claim
descent. The Tembulans increased from about 16,000 in 1881
to 231,472 in 1904, of whom 8056 were whites. The chief town is
Umtata.

Transkei (area, 2852 sq. m.) comprises the district of Flingsland,
the chief town Flings, and the Ciskei, named after the last
of the Gcaleka nation, who claim to be the senior branch of the
Xosa family, the principal royal line of the Kaffir tribes. They still form
the chief element of the population, which rose from 136,000
in 1885 to 190,000 in 1904 (1707 whites). Here are some prosperous
missionary stations, where the natives are taught agriculture,
mechanical industries and a knowledge of letters. The heroic
deeds of Hinda, Kriel and other chiefs famous in the wars are still
remembered; but witchcraft, rain-making and other pagan prac-
tices seem to have died out. Even more advanced in all social respects
are the Fingo, who give their name to the district of Flingsland, and
also form the bulk of the population in the Idutywa Reserve. They were
formerly a chief tribe recorded before the annexation of the Transkei
by the British. Here they are of considerable influence. As in the
Transkeian South (area, 4040 sq. m.; pop. 1904, 202,757 (including
113 whites), an estimated increase of 26,000 since 1891) is bounded
E. by Natal, S. by Pondoland and Tembuland, and W. by Griqualand
East. In Pondoland the primitive organization of the natives
has been little altered and the influence of the chiefs is very great.
Land is held almost wholly in tribal tenure, though a number of
which is under non-tribal tenure, and must be sold or mortgaged
without the sanction of the indigenous authorities. The Pondo have shown some appreciation of the benefits of
education.

See G. McCauley Theal's History of South Africa and other works
written by Cape Commissions of Enquiry on Transkeian Territories
by C. H. Henkel (Hamburg, 1903), a useful handbook by an ex-official
in the Transkeian Territories.

KAFIRISTAN, a province of Afghanistan. Very little of this
country was known with accuracy and nothing at first hand until
General Sir W. (then Colonel) Lockhart headied a mission to
examine the passes of the Hindu Kush range in 1885-1886. He
penetrated into the upper part of the Bashgal valley, but after
a few days he found himself compelled to return to Chitral.
Previously Major Tanner, R.A., had sought to enter Kafiristan
from Jalalabad, but sudden severe illness cut short his enterprise.
M'Nair, the famous explorer of the Indian Survey department,
believed that he had actually visited this little-known land
during an adventurous journey which he made from India and
through Chitral in disguise; but the internal evidence of his
reports shows that he mistook the Kalash district of Chitral,
with its debated and idolatrous population, for the true Kafir-
istan of his hopes. In 1889 Mr G. S. Robertson (afterwards Sir
George Robertson, K.C.S.I.) was sent on a mission to Kafiristan.
He only remained a few days, but a year later he revisited the
country, staying amongst the Kafirs for nearly a year.

Although his movements were hampered, his presence in the
country being regarded with the shape of a man was always a
thing to the people, and, in spite of intertribal jealousy, to meet members
of many of the tribes. The facts observed and the information
collected by him during his sojourn in eastern Kafiristan,
and during short expeditions to the inner valleys, are the most trust-
worthworthy foundations of our knowledge of this interesting country.

Kafiristan, which literally means "the land of the infidel,"
is the name given to a tract of country enclosed between Chitral
and Afghan territory. It was formerly peopled by pagan
mountaineers, who maintained a wild independence until 1895,
when they were finally subdued by Abdur Rahman, the amir of
Kabul, who also compelled them to accept the religion of Islam.

The territory thus named is included between 34° 30' and
36° N., and from about 76° to 77° 30' E. As the western
and northern boundaries are imperfectly known, its size cannot be
estimated with any certainty. Its greatest extent is from east
at least 35° 30' E.; its greatest breadth is probably about
7° E. The total area is, however, very uncertain. Along the
N. the boundary is the province of Badakshan, on the N.E. the
Lutkho valley of Chitral. Chitral and lower Chitral enclose it to the
E., and the Kunar valley on the S.E. Afghanistan proper
supplies the S. limit. The ranges of the Nijrao and Pansher
valleys of Afghanistan wall it upon the W. The northern
frontier is split by the narrow Minjan valley of Badakshan,
which seems to rise in the very heart of Kafiristan.

Speaking generally, the country consists of an irregular series of
mountains the summits of which are characterised by a varying
number of still deeper, narrower and more twisted valleys,
ruinives and gns pour their torrent water. The mountain
ranges of Metamorphic rock, which separate the main drainage
valleys, are all of considerable altitude, rugged and difficult, with the outline
of a choppy sea petrified. During the winter months, when the
snow lies deep, Kafiristan becomes a number of isolated communities,
which spend their lives. In the whole land rain the giant
arctic climate warms the heart as well as captivates the eye with
its grandeur and varied beauty; much of it is the bare skeleton
of the world wasted by countless centuries of storms and frost,
and provided with a cover of lichen and moss. The variety of
mountain scenery can be found: silent peaks and hard, naked ridges,
snowfields and glaciers; mighty pine forests, wooded slopes
and grazing grounds; or wild vine and pomegranate thickets bordering
streams. At low altitudes the sands are black and white, surrounded
by the wild olive and evergreen oaks. Many kinds of fruit trees—
walnuts, mulberries, apples and oranges grow near the villages
or by the wayside, as well as splendid horse-chestnuts and other
shade trees. Higher in elevation a few pines, often covered
with a mantle of snow, are sprinkled with flowers, the height of
which are in full bloom as early as February. These flowers
are the evergreen, the rose and the pomegranate. On the
other hand, Grant, and the wild plum. Over the mountain
seas, the sheep, the goat and the cattle are numerous. Sheep and
leopards are fairly common, as well as the smaller
hill creatures.
KAFIRISTAN

All the northern passes leading into Badakshan or into the Minjan valley of Badakshan seem to be over 15,000 ft. in altitude. Of these, the chief are the Mandal, the Kunah (these two alone have been explored by a European traveller), the Shina Pass and the Chitral Passes. The first, the east, the Chitral pass, are somewhat lower, ranging from 12,000 to 14,000 ft., e.g. the Zidig, the Shni, the Shalval and the Parpat, which, the Paktan, which crosses one of the dwindling spurs near the Kunar river, itself a tributary of the Kafirs, and the narrow mountainous main valley, is so obstructed by the many communicating footways as to make it pretty useless. The light-framed cattle of these jagged mountains can be forced over many of the worst passes. Ordinarily, the hinging, tracks, near the crest of the ridges and high above the white track, are only discernible by the wind and wave, rise, drop and twist about the irregular precipices, with baffling eccentricity and abruptness. Nevertheless, the cattle are well designed for the temperance and traffic. The rivers find their tumultuous way into the Kabul, either directly, as the Alingar at Lhagham, or after commingling with the

Kunar at Arundu and at Chinjar-Seti. The Bagal, draining the eastern portion of the country, empties itself into the Kunar at Alingar and but a short distance below the three main sources at the head of the Bagal valley. It glides gently through a lake close to this origin, and then through a smaller turn. The first affluent of importance is the Skorigal, which joins it at the point where the Kunar takes its rise. Beyond this point, flows the river, which has been disfigured from the Shalpam valley, which rises the main stream at Lutbr and Bramatmal, the chief settlement of the Bashgal branch of the Kafir tribe. By-and-by, the main stream becomes, at the hamlet of Sunna, on the upper Bagal, which is occupied by the Bagal people. The next affluent is the river which drains the Bagal valley, its passes and branches. This is the left bank, and still lower down, the joining-place of the Gouror and the Kunar valley. Finally, a branch of the Kunar, near the head of the Bagal, namely, is occupied by the Bagal tribes.

The Kunar, the middle portion of Kafirstan, including the valleys occupied by the Presun, Kti, Ashkun and Wai tribes, is drained by a river variously called the Pech, the Kamah, and the Presun or Viron river. It has been only partially explored. Fed by the fountains and snows of the upper Presun valley, it is joined at the village of Shyegorm by the torrent from the Kamah pass. Thence it moves quietly past meadowland, formerly set apart as holy ground, watering on its way. It then turns to the right and runs by Kanim, the neighbouring towns, and the bend, it buries itself in the unexplored and rockbound Tsoar country, where it becomes the right hand the Kti and the Ashkun and on the left the Wai valleys, finally losing itself in the Kunar, close to Kunar. The river is almost entirely ice and snow, which is the drainage of western Kafirstan into the Kabul at Lhagham, there are no trustworthy details. It is formed from the waters of all the valleys inhabited by the Kamal Kafirs, and by that small branch of the Kafirs known as the Kalam tribe.

The climate varies with the altitude, but in the summer time it is hot at all elevations. In higher valleys the winter is rigorous. Snow falls heavily everywhere over 4000 ft. above the sea level. During the winter of 1890-1891 (elevation 6100 ft.) the thermometer never fell below 17° F. In many of the valleys the absence of wind is remarkable. Consequently a great deal of cold can be borne without discomfort. The Kunar valley is an unending undulation; if it falls, melts quickly, gives a much greater sensation of cold than the still Kafiristan valleys of lower much lower temperatures. A deficiency of rain necessitates the employment of a somewhat elaborate system of irrigation, which in its turn is dependent upon the snowfall.

The present inhabitants are probably mainly descended from the brooked tribes of eastern Afghanistan, who, refusing to accept the

The Kafirs. Islam (in the 10th century), were driven away by the

Sefid swordsmen of Mahomet. Descending upon the feebler inhabitants of the trackless slopes and perilous valleys of modern Kafirstan, themselves, most likely, refugees of an earlier date, they subjugated and enslaved them and partially amalgamated with them. These ancient peoples seem to be represented by the Presun tribe, by the slaves and by fragments of lost peoples, now known as the Jazhis and the Aroms. The old division of the tribes into the Presun-Posh, the Shini-black robed Kafirs, and the Safed-Posh, or the white-robed, was neither scientific nor convenient, for while the Posh have much in common in dress, language, customs and appearance, the Safed-Posh divisions were not more dissimilar from the Shini-Posh than they were from one another. Perhaps the best division at present possible is into (1) Shini-Posh, (2) Posh, and (3) Pressun-Posh or Viron people.

The black-robed Kafirs consist of one very large, widely spread tribe, the Kafirs, and, for innumerable villages between Bagram and the Kam, the Madugalis, the Kasthans, and the Gouresh. Numerically, it is probable that the Kafirs are more important than all the remaining tribes put together. They inhabit the chief part of the Kafiristan country, being independent of the others, but all acknowledging the same origin and a general relationship. The Kafirs fall readily into the following groups: (a) Those of the Bashgal valley, also called Kafirs, who occupy the valleys of the upper Bagal, leading directly into the Madugali country, as the Shalpam, the border hamlet of the Madugali country, namely, Peshgum, Pohor, Dapst, Shaldig, Bramagal (Lutbr), Bashgal, Badamak, Oulagal, Chabu, Bapok and Purstom; (b) The Kti or Kunal tribes, found in several valleys in the Kti valley; (c) The Kulam people, who have four villages in the valley of the same name; (d) The Ramgalis, or Garabisks, who are the most numerous, and possess the western part of the Afghan border. Of the remaining tribes of the Shini-Posh, the chief is the Kasthans, or Kasthans, of the Kam, Siah-Posh, the Madugali, and of the Kasthans, or Kasthans, of the Gourish, and the Gouresh. Of these, the Kamare, the Gourish, and the Gouresh, are the most important. The Kamare, whose territory reaches down to the Kunar valley, and the Gourish, is the westernmost of the tribes, the Gourish being the most independent of all. The Kamare include the Khur, the Wai and the Madugali, who have three villages in the short tract between the Kafirs and the Kam in the Kunar valley. The last Shini-Posh tribe is the Kam, who inhabit the valleys of the upper Bagal, where they are found in great numbers, and have been plundered by the Afghan tribes from the Kunar valley. One colony of Shini-Peshgum lives in the Gourish valley; but they differ from all the other tribes, and are believed to be descended, in part at least, from a tribe of ancient people carried away as slaves.

The Presun-Posh. Their origin is probably partly from the very ancient inhabitants and partly from war prisoners. Coarse in feature and dark in tint, they are distinguished from the lowest class of freedom, while their class is capable of enormous labours, and are very enduring. All the work is done by them — Shyegorm, Pontzogirm, Diogirm, Kstigirm, Satasmogirm and Paschigirm.

Women are few, and when present, are slaves. Their origin is probably partly from the very ancient inhabitants and partly from war prisoners. Coarse in feature and dark in tint, they are distinguished from the lowest class of freedom, while their class is capable of enormous labours, and are very enduring. All the work is done by them — Shyegorm, Pontzogirm, Diogirm, Kstigirm, Satasmogirm and Paschigirm.

The Staves. There are certainly three tongues spoken, besides many dialects, that used by the Siah-Posh. The language is of course the most common; and although it has many dialects, the employers of one seem to be understood by the employers of the other. The remaining two, the Wai and the Presun have no similarity; they are also unlike the Siah-Posh. Kafirs themselves maintain that very young children from any valley can acquire the Wai speech, but that only those born in the Presung can ever converse in that language, even roughly. To European ears it is disconcerting difficult, and it is perhaps impossible to learn.
Before their conquest by Abdur Rahman all the Kafirs were idolaters of a rather low type. There were lingering traces of ancestor-worship, and perhaps of fire-worship also. The gods were numerous; tribal, family, household deities had to be propitiated, together with various terrestrial objects, forests, rivers, vales and great stones. Imra was the creator, and all the other supernatural powers were subordinate to him. Of the inferior gods, Moni seemed to be the most ancient; but Gish, the war-god, the most powerful and worshipped by all, was as an afterthought, a type of the god of Nabataean times, under the influence of the great Pantheon of Mahomet. Every village revered his shrine; some possessed two. Imra was allowed a faint reflection of divinity to the extent of a small hereditary temple; and during the offering, together with flour, wine and butter, was cast on the shrines after the animal and the other gifts had been sanctified with water embalmed by the officiating priests, while he cried "Søch, søch!" (Be glittering!). Dense juniper-woods cranked and gave forth pungent incense, added to the spectacle, which was dignified by the bearing of the officials and solemnized by the devout responses of the congregation. There was a certain solemn service at a shrine, was taken away and stabbed before the wooden tomb of some unavenged heathen. Kafirs believed in a kind of Hell where wicked people burned; but the Hereafter was an usher round region entered through a guarded aperture, and bathed in a light from the shapes which men see in dreams. Suicide was as unknown as fear of despair. Melancholy afflicted only the sick and the bereaved. Religious traditions, miracles and anecdotes were puerile, and service and the donation of wood conventionally conducted, with rounder stones for eyes. Different animals were sacrificed at different shrines: cows to Imra, male goats and bulls to Gish, sheep to the god of wealth; but goats were generally acceptable, and were also slain to end a quarrel, to ratify brotherhood. The ministers of religion were a hereditary priest, a well-born chanter of praise, and a bucol of lowborn, who was supposed to become inspired at each sacrifice, and to have the power of seeing fairies and other spirits whenever they were in the temple. The official was greatly respected, but the priest was as was usually Diazi goddess; but three or four of the others would share one between them, each looking out of a small square window. The worshipped object was either a large fragment of stone, a well, a temple, a tomb, a petrified tree, or the grave of a holy man. Before the offering, the holy water of the village was led in procession into the temple, and a libation made at the shrine, only the children of the deceased were to partake of the food. By the Romans, the shrines were very picturesque at a distance, all are dirty and grimed with smoke; bones and horns of slaughtered animals litter the ground. The ground floor of a house is usually a winter stable for the family, and in the old days the tombs of the Kafirs, who, as the middle part contains the family treasures; on top is the living-place. In cold valleys, such as the Presungal, the houses are often clustered upon a hillock, and penetrate into the soil to the depth of two or more apartments. Notched poles are the universal laughing-place. The early Kafirs averaged about 5 ft. 6 in. They are lean; always in hard condition; active jumpers, untricking walkers, expert mountaineers; exceptionally they are tall and heavy. With no handicaps, they are a very hardy and vigorous people, and are capable of some lightness and want of power about the shoulders and arms, and the hand-grasp. In complexion they are purely Eastern. Some tribes, notably the Wai, are fairer than others, which are brown, and look down. Alibus, or red-haired people, number less than ½% of the population. As a rule, the features are well-shaped, especially the nose. The glance is wild and bold, with the wide-ridged, restless gaze of the savage, and the exact converse—a shifty, furtive peer under lowered brows. This look is rather common amongst the wealthier families and the most famous tribesmen. The shape of a man's head not uncommonly indicates his social rank. Several have the prominent forehead or the rounder cartilage of the brow; the bird-of-prey type—low, hairy foreheads, hooked noses with receding chin, or the thickened, coarse features of the dark slave class. Intellectually they are of good average power. Their moral characteristics, however, are究竟ly marked. The word which they use to make jut smoothers prudence. Before finally destroying, it constantly endangered their wildly cherished independence. Revenge, especially on neighbouring Kafirs, is obtained at any price. Kafirs are subtle, crafty, quick in danger and resolve, as might be expected of people who have been plunderers and assassins for centuries, whose lives were the forfeit of a fault in unflinchingness or of a moment's vacillation. Stealthy daring, bors, of wary and healthy men, and the crafty, means which they employ to outwit their enemies, are the characteristic stages of Kafirs. They are cunning and subtle, strong and blacksmiths rather than as skilled thieves. In night robbery and in pilfering they showed little ingenuity. Theft was considered innately dangerous; but a Kafir is far more trustworthy than his Mahommedan neighbours. Although hospitality is generally viewed as a hopeful investment, it can be calculated on, and is understood and appreciated by all nations. They are not such cruel, being kind to children and to animals, and protective to the weak and the old. Family ties and the claim of blood even triumph over jealousy and covetousness.

Before an action in a Kafir village there is a long, carefully considered, but perhaps impossible to be agreed on. An action is a badgered court, strong but clumsy, of slave manufacture, sheathed in wood covered with iron or brass; and often packed with most of the Kafir population. The cause was often a very dark tunic of wool, amble below the shoulders, and edged with red. This is fastened at the bosom by an iron pin, a thorn, or a fibula; it is gathered round the body by a woven band, which is called the Gish, the neck or head-girdle. On the back of the woman's girdle is carried a fantastically handled knife in a leather covering. The woman's tunic is sometimes worn by men. As worn by women it is something between a long frock-coat and an Inverness cape; its hue and the blackness of the hairy goatskin give the name of Siah-Posh, "black-robed," to the majority of the clans. The other tribes wear such articles of cotton attire as they can obtain by barter, by theft, or by killing beyond the border, for heavy doors fastened by a sliding wooden pin, are common. The nature of the ground, its defensible character, the necessity of not encroaching upon the scanty arable land, and such considerations, determine the design of the villages. Speci-
only woollen cloth is made in the country. Of late years long robes from Chitrals and Badakhshans have been imported by the wealthy, as well as the material for loose cotton trousers and wide shirts. Clothing, always hard to obtain, is precious property. Formerly little girls, the children of slaves, or else poor relations, used to be sold in exchange for clothes and ammunition. Mahomedans eagerly bought the children, which enabled them in one transaction to acquire a female slave and to convert an infidel. Men go bareheaded, which makes them prominent in the streets and on horseback. Certain priests and those like them, like wind, strip of cotton cloth round their brows. Siah-Posh women wear national horned caps or a small square white head-dress upon informal occasions. Females of other tribes bind their heads with turbans ornamented richly with gold thread and other rich material and are made of goat's hair for both sexes, and of woollen material for women. Boots, strongly sewn, of soft red leather cannot be used in the snow or when it is wet, because they are imperfectly tanned. For light walking they carry a pair of wooden shoes, which are often carved, made of cheap silk, cotton velvet, and shem cloth-of-gold, are displayed, and false jewelry and tawdry ornaments; but they are not manufactured in the country, but brought from Peshawar by peddlers. Woollen blankets and goat's-hair mats cover the steeds—four-legged wooden frames laced across with string or leather thongs. Low square stools, 18 in. broad, made upon the same principle as the bedsteads, are peculiar to the Kafirs and their half-caste neighbours of the hot and sparsely wooded plains, and are much used as tables. The seats are usually ornamented in the Greek design, are fashioned in Waigal. A warrior's weapons are a matchlock (rarely a flintlock), a bow and arrow and forage, and a dagger which he never puts aside day or night. The axes, often carried, are light and weak, and cannot indicate rank. The most striking feature of the Kafirs are their houses—a great mass of little huts, all built in the shape of a squirrel; their purpose is that of a walking-stick. As they are somewhat long, these walking-clubs have been often supposed to be leaping-poles. Swords are rarely seen, and shields, carried purely for ostentation, seldom protect. Clubs, which are sometimes ornamented with various objects of a decorative nature, are the only weapons of the Kafirs, and are chiefly used in trade. The large mass of weapons, when properly hung, often only looks as if she were yoked with the ox, keeps the beast in the furrows, while a second holds the handle. All the operations of agriculture are done primitive. Grazing and dairy-farming are the real trade of the Kafirs, the surplus produce being exchanged on the frontier or sold for Kabul rupees. Herders watch their charges fully armed against marauders.

History.—The history of Kafiristan has always been of the floating legendary sort. At the present day there are men living in Chitrals and on other parts of the Kafiristan frontier who are prepared to testify as eye-witnesses to marvels observed, and also heard, by them, not only in the more remote valleys but even in the Afghan borderland itself. It is not surprising therefore that the earlier records are to a great extent fairy tales of a more or less imaginative and perhaps piecemeal nature. The history of the Kafirs is interesting in the light of the men interested in folklore. Sir Henry Yule a scientific soldier, a profound geographer and a careful student, as the result of his researches thought that the present Kafiristan was part of that pagan country stretching between Kashmir and Kabul which medival Asiatics referred to vaguely as Bilaur, a name to be found in Marco Polo as Bolor. The first distinct mention of the Kafirs as a separate people appears in the history of Timur. On his march to the invasion of India the people at Andarab appealed to Timur for help against the Kator and the Siah-Posh Kafirs. He responded and entered the country of those tribes through the upper part of the Panjhir valley. It was in deep winter weather and Timur had to be let down the snows by glissade in a basket guided by ropes. A detachment of 10,000 horse which he speaks of as having been sent against the Siah-Posh to his left, presumably therefore to the north, met with disaster, but he himself claims to have been victorious. Nevertheless he seems quickly to have evacuated the impracticable mountain land, quitting the country at Kawkh. He caused an inscription to be carved in the defiles of Kator to commemorate his invasion and to explain its route. Inside the Kafir country on the Najil or Alisang River there is a fort still called Timur's Castle, and in the Kalam fort there is said to be a stone engraved to record that as the farthest point of his advance. In the Memoirs of Baber there is mention of the Kafirs raiding into Panjhir and of their taste for drinking, every man having a leather wine-bottle slung round his neck. The Ain-i-Akbar makes occasional mention of the Kafirs, probably on the authority of the famous Memoirs; it also contains a passage which may possibly have originated the widespread story that the Kafirs were descended of the Greeks. Yule however believed that this passage did not refer to the Kafirs at all, but to the claims to descent from Alexander of the rulers of Swat before the time of the Yusufzai. Many of the preincels of the little Hindu Kush states at the present day pride themselves on a similar origin, maintaining the founders of their race to be Alexander, "the two-horned," and a princess sent down miraculously from heaven to wed him.

Benedict Goes, travelling from Peshawar to Kabul in 1603, heard of the said Kafirs, who were said to be Mahomedan. There were no Mahomedan medders on the road to visit the country, but not the temples. Benedict Goes tasted the Kafir wine, and from all that he heard suspected that the Kafirs might be Christians. Nothing more is heard of the Kafirs until 1788, when Rennell's Memoir of a Map of
Hindostan was published. Twenty-six years later Elphinstone’s Cautab was published. During the British occupation of Kabul in 1839-1840 a deputation of Kafirs journeyed there to invite a visit to their country from the Christians whom they assumed to be their kindred. But the Afghans grew furiously jealous, and the deputation was sent coldly away.

After Sir George Robertson’s sojourn in the country and the visit of several Kafirs to India with him in 1882 an increasing intimacy continued, especially with the people of the eastern valleys, until 1885, when by the terms of an agreement entered into between the government of India and the ruler of Afghanistan the whole of the Kafir territory came nominally under the sway of Kabul. The Amir Abdur Rahman at once set about enforcing his authority, and the curtain, partially lifted, fell again heavily and in darkness. Nothing but rumours reached the outside world, rumours of successful invasions, of the wholesale deportation of boys to Kabul for instruction in the religion of Islam, of rebellions, of terrible represions. Finally even rumour ceased. A powerful Asiatic ruler has the means of ensuring a silence which is absolute, and nothing is ever known from Kabul except what the Amir wishes to be known. Probably larger numbers of the growing boys and young men of Kafiristan are fanatical Mahomedans, fanatical with the zeal of the converts who have recently been indoctrinated, who in the majority of the population cherish their ancient customs in secret and their degraded religion in fear and trembling—waiting dumbly for a sign.

KAGERA, a river of east equatorial Africa, the most remote headstream of the Nile. The sources of its principal upper branch, the Nyabarongo, rise in the hill country immediately east of Lake Kivu. After a course of over 400 m. the Kagera enters Victoria Nyanza on its western shore in 0° 58' S. It is navigable by steamers for 70 m. from its mouth, being obstructed by rapids above that point. The river was first heard of by J. H. Speke in 1858, and was first seen (by white men) by the same traveller (Jan. 16, 1862) on his journey to discover the Nile source. Speke was not aware that the Kagera was the chief river emptying into the Victoria Nyanza and in that sense the headstream of the Nile. By him the stream was called “Kitangulë,” kagera being given as equivalent to “river.” The exploration of the Kagera has been largely the work of German travellers.

See NILE: also Speke’s Discovery of the Source of the Nile (Edinburgh, 1863); R. Kandt’s Caput Nili (Berlin, 1904); and map by P. Spiraude and M. Moisel in Großer deutscher Kolonialatlas, No. 16 (Berlin, 1900).

KAHLUR, or Bilaspur, a native state of India, within the Punjab. It is one of the hill states that came under British protection after the first Sikh war in 1846. The Gurkhas had overrun the country in the early part of the 19th century, and expelled the raja, who was, however, reinstated by the British in 1815. The state occupies part of the basin of the Sutlej amid the lower slopes of the Himalayas. Area, 448 sq. m. Pop. 126,000. Mana, the capital; estimated gross revenue, £10,000; tribute, £8,500. The chief, whose title is raja, is a Chandel Rajput. The town of Bilaspur is situated on the left bank of the Sutlej, 1465 ft. above sea-level; pop. (1901), 3,125.

KAHN, GUSTAVE (1859– ), French poet, was born at Metz on the 21st of December 1859. He was educated in Paris at the École des Chartes and the École des langues orientales, and began to contribute to obscure Parisian reviews. After four years spent in Africa he returned to Paris in 1885, and founded in 1886 a weekly review, La Vague, in which many of his early poems appeared. In the autumn of the same year he founded, with Jean Moréas and Paul Adam, a short-lived periodical, Le Symboliste, in which they preached the nebulus poetic doctrine of Stéphane Mallarmé; and in 1888 he became one of the editors of the Revue indépendante. He contributed poetry and criticism to the French and Belgian reviews favourable to the extreme symbolists, and, with Catulle Mendès, he founded at the Odéon, the Théâtre Antoine and the Théâtre Sarah Bernhardt, matinées for the production of the plays of the younger poets. He claimed to be the earliest writer of the vers libre, and explained his methods and the history of the movement in a preface to his Premiers poèmes (1897). Later books are Le Livre d’images (1897); Les Fleurs de la passion (1900); some novels; and a valuable contribution to the history of modern French verse in Symbolistes et académiciens (1905).

KAHNIS, KARL FRIEDRICH AUGUST (1814–1888), German Lutheran theologian, was born at Greiz on the 22nd of December 1814. He studied at Halle, and in 1850 was appointed professor ordinarius at Leipzig. Ten years later he was made canon of Meissen. He retired in 1886, and died on the 20th of June 1888 at Leipzig. Kahnis was at first a neo-Lutheran, blessed by E. W. Hengstenberg and his pietistic friends. He then attached himself to the Old Lutheran party, interpreting Lutheranism in a broad and liberal spirit and showing some appreciation of rationalism. His Luthersche Dogmatik, historisch-genetisch dargestellt (3 vols., 1861–1868; 2nd ed. in 2 vols., 1873–1875), by making concessions to modern criticism, by spiritualizing and adapting the old dogmas, by attacking the idea of an infallible canon of Scripture and the conventional theory of inspiration, by laying stress on the human side of the Christian religion, and by his two works, brought him into conflict with his former friends. A. W. Diekhoff, Franz Delitzsch (Für und wider Kahnis, 1863) and Hengstenberg (Evangelische Kirchenzeitung, 1862) protested loudly against the heresy, and Kahnis replied to Hengstenberg in a vigorous pamphlet, Zeugniss für die Grundzwecke des Protestantismus gegen Dr Hengstenberg (1862).

Other works by Kahnis are Lehre vom Abendmahl (1851), Der innere Gang des deutschen Protestantismus seit Mitte des vorigen Jahrhunderts (1854; 3rd ed. in 2 vols., 1874; Eng., trans., 1856); Christentum und Lutherismus (1871); Geschichte der deutschen Reformationsbewegung (3 vols., 1872); Der Gang der Kirche im Lebensbildern (1881, &c.); and Über das Verhältnis der alten Philosophie zum Christentum (1884).

K’AI-FÊNG FU, the capital of the province of Honan, China. It is situated in 34° 52′ N., 114° 33′ E., on a branch line of the Peking-Hankow railway, and forms also the district city of Siang-fu. A city on the present site was first built by Duke Chou (774–700 B.C.) to mark off (K’AI) the boundary of his fief (feng); hence its name. It has, however, passed under several aliases in Chinese history. During the Chow, Suy, and T’ang dynasties (557–907) it was known as P’ien-ch’ü. During the Wu-tai, or five dynasties (907–960), it was the Tung-king, or eastern capital. Under the Sung and Kin dynasties (960–1260) it was called P’ien-king. By the Yuan or Mongol dynasty (1260–1368) its name was again changed to P’ien-liang, and on the return of the Chinese to power with the establishment of the Ming dynasty (1368–1644), its original name was restored. The city is situated at the point where the last spur of the Kuen-lun mountain system merges in the eastern plain, and a few miles south of the Hwang-ho. Its position, therefore, lays it open to the destructive influences of this river. In 1642 it was captured by the Chinese and restored to the Tung-king. On several prior and subsequent occasions it has suffered injury from the same cause. The city is large and imposing, with broad streets and handsome buildings, the most notable of which are a twelve-storied pagoda 600 ft. high, and a watch tower from which, at a height of 200 ft., the inhabitants are able to observe the approach of the yellow waters of the river in times of flood. The city wall forms a substantial protection and is pierced by five gates. The whole neighbourhood, which is the site of one of the earliest settlements of the Chinese in China, is full of historical associations, and it was in this city that the Jews who entered China in A.D. 1163 first established a colony. For many centuries these people held themselves aloof from the natives, and practised the rites of their religion in a temple built and supported by themselves. At last, however, they fell upon evil times, and in 1851, out of the seventy families which constituted the original colony, only seven remained. For fifty years no rabbi
KAILAS—KAIRAWAN

635

had ministered to the wants of this remnant. In 1853 the city was attacked by the Tai'-ping rebels, and, though, at the first assault its defenders successfully resisted the enemy, it was subsequently taken. The captors looted and partially destroyed the town. It has now little commerce but contains several schools on Western lines—including a government college opened in 1902, and a military school near the railway station. A mint was established in 1905, and there is a district branch of the imperial post. The population—largely Mahomedan—was estimated (1908) at 200,000. Jews numbered about 400.

KAILAS, a mountain in Tibet. It is the highest peak of the range of mountains lying to the north of Lake Manasorwar, with an altitude of over 22,000 ft. It is famous in Sanskrit literature as Siva’s paradise, and is a favourite place of pilgrimage with Hindus, who regard it as the most sacred spot on earth. A track encircles the base of the mountain, and it takes the pilgrim three weeks to complete the round, prostrating himself all the way.

KAIN, the name of a sub-province and of a town of Khurasan, Persia. The sub-province extends about 200 m. N. to S., from Khaf to Seistan, and about 150 m. W. to E., from the hills of Tum to the Afghan frontier, comprising the whole of southwestern Khurasan. It is very hilly, but contains many wide plains and fertile villages at a mean elevation of 4000 ft. It has a population of about 150,000, rears great numbers of camels and produces much grain, saffron, wool, silk and opium. The chief manufactures are felts and other woolen fabrics, principally carpets, which have a world-wide reputation. The best Kaini carpets are made at Daraksh, a village in the Zirkh district and 30 m. N.E. of Birjend. It is divided into eleven administrative divisions: Sharihābad (with the capital Birjend), Naharjān, Alghur, Tabas sunnî Khan, Zirkh Shakhān, Kain, Nimbulūk, Nohbandān, Khūs, Arab Khāneh or Momenābād.

The town of Kain, the capital of the sub-province until 1740, when it was supplanted by Birjend, is situated 65 m. N. of Birjend on the eastern side of a broad valley, stretching from N. to S., at the base of the mountain Abyzar, in 3° 42’ N. and 50° 8’ E., and at an elevation of 4500 ft. Its population is barely 5000. It is surrounded by a mud wall and bastions, and near it, on a hill rising 500 ft. above the plain, are the ruins of a castle which, together with the old town, was destroyed either by Shah Rukh (1406–1447), a son, or by Baysunkur (d. 1433), a grandson of Timur (Tamerlane), who afterwards built a new town. After a time the Uzbek took possession and held the town until Shah Abbas I. (1587–1629) expelled them. In the 18th century it fell under the sway of the Afghans, who erected a depot here. A large number of windmills are at work outside the town. The great mosque, now in a ruinous state, was built a.h. 796 (A.D. 1394) by Kārēn b. Jamshid and repaired by Yusuf Dowlatyār.

KAIRA, or KICED, a town and district of British India, in the northern division of Bombay. The town is 20 m. S.W. of Ahmedabad and 7 m. from Mehmadabad railway station. Pop. (1901), 10,302. Its antiquity is proved by the evidence of copper-plate grants to have been known as early as the 8th century. Early in the 16th century it passed to the Babī family, with whom it remained till 1763, when it was taken by the Maharrats; it was finally handed over to the British in 1803. It was a large military station till 1830, when the cantonment was removed to Deesa.

The District of Kaira has an area of 1505 sq. m.; pop. (1901), 16,557, showing a decrease of 18% in the decade, due to the results of famine. Except a small corner of hilly ground near its northern boundary and in the south-east and south, where the land along the Mahi is furrowed into deep ravines, the district forms one unbroken plain, sloping gently towards the south-west. The north and north-east portions are dotted with patches of rich rice-land, broken by untilled tracts of low-brushwood. The centre of the district is very fertile and highly cultivated; the luxuriant fields are surrounded by high hedges, and the whole country is clothed with clusters of shapely trees. To the west this belt of rich vegetation passes into a bare though well-cultivated tract of rice-land, growing more barren and open till it reaches the maritime belt, whitened by a salt-ridge crust, along the Gulf of Cambay. The chief rivers are the Mahi on the south-east and south, and the Sabarmati on the north. The Mahi, owing to its deeply cut bed and sandbanks, is impracticable for either navigation or irrigation; but the waters of the Sabarmati are largely utilized for the latter purpose. A smaller stream, the Khari, also waters a considerable area by means of canals and sluices. The principal crops are cotton, millets, rice and pulse; the industries are calico-printing, dyeing, and the manufacture of soap and glass. The chief centre of trade is Nadiad, on the railway, with a cotton-mill. A special article of export is ghi, or clarified butter. The Bombay & Baroda railway runs through the district. The famine of 1899–1900 was felt more severely here than in any other part of the province, the loss of cattle being specially heavy.

KAIRAWAN (Kerouan), the "sacred" city of Tunisia, 36 m. S. by W. by rail from Susa, and about 80 m. due S. from the capital. Kairawān is built in an open plain a little west of a stream which flows south to the Sidi-el-Hani lake. Of the luxuriant gardens and olive groves mentioned in the early Arabic accounts of the place hardly a remnant is left. Kairawan, in shape an irregular oblong, is surrounded by a crenellated brick wall with towers and bastions and five gates. The city, however, spreads beyond the walls, chiefly to the south and west. Some of the finest treasures of Saracen art in Tunisia are in Kairawān; but the city suffered greatly from the vulguration which followed the Turkish conquest, and also from the blundering attempts of the French to restore buildings falling into ruin. The streets have been paved and planted with trees, but the town retains much of its Oriental aspect.

The houses are built round a central courtyard, and present nothing but bare walls to the street. The chief buildings are the mosques, which are open to Christians, Kairawān being the only town in Tunisia where this privilege is granted.

In the northern quarter stands the great mosque founded by Sidi Okba Ibn Nafi, and containing his shrine and the tombs of many rulers of Tunisia. To the outside it presents a heavy buttressed wall, with little of either grandeur or grace. It consists of three parts: a cloistered court, from which rises the massive and stately minaret, the mabsura or mosque proper, and the vestibule. The mabsura is a rectangular domed chamber divided by 296 marble and porphyry columns into 17 aisles, each aisle having 8 arches. The central aisle is wider than the others, the columns being arranged by threes. All the columns are Roman or Byzantine, and are the spoil of many ancient buildings. The walls are decorated with columns of sculptured wood known as the Beautiful Gate. It has an inscription with the record of its construction. The walls are of painted plaster-work; the mimbar or pulpit is of carved wood, each panel bearing a different design. The court is surrounded by a double arcade with coupled columns. In all the mosque contains 439 columns, including two of alabaster given by one of the Byzantine emperors. To the Mahomedan mind the crowning distinction of the building is that through divine inspiration the founder was enabled to set it absolutely true to Mecca. The mosque of Sidi Okba is the prototype of many other notable mosques (see MOSQUE). Of greater external beauty than that of Sidi Okba is the mosque of the Three Gates. Cufic inscriptions on the façade record its erection in the 9th and 10th centuries. A.D. Internally the mosque is a single chamber supported by sixteen Roman columns. One of the finest specimens of Moorish architecture in Kairawān is the Jawwā of Sidi Abul-el-Chariani (d. A.D. 1400), one of the Almoravides, in whose family is the hereditary governorship of the city. The entrance to a door in a false arcade of black and white marble, leads into a court whose arches support an upper colonnade. The town contains many other notable buildings, but none of such importance as the mosque of the Companion (i.e. of the Prophet), outside the walls to the N.W. This mosque is specially sacred as possessing what are said to be three hairs of the Prophet’s beard, buried with the saint, who
KAISERSLAUTERN—KAKAPO

was one of the companions of Mahomet. (This legend gave rise to the report that the tomb contained the remains of Mahomet's barber.) The mosque consists of several courts and chambers, and contains some beautiful stained glass. The court which forms the entrance to the shrine of the saint is richly adorned with tiles and plaster-work, and is surrounded by an arcade of white marble columns, supporting a painted wooden roof. The minaret is faced with tiles and is surmounted by a gilded crescent. The 19th-century mosque of Sidi Amar Abada, also outside the wall, is in the form of a cross and is crowned with seven cupolas. In the suburbs are huge cisterns, attributed to the 9th century, which still supply the city with water. The cemetery covers a large area and has thousands of Cufic and Arabic inscriptions.

Formerly famous for its carpets and its oil of roses, Kairawân is now known in northern Africa rather for copper vessels, articles in morocco leather, potash, and saltpetre. The town has a population of about 20,000, including a few hundred Europeans.

Arab historians relate the foundation of Kairawân by Okba with miraculous circumstances (Tabari i. 63; Yaqút iv. 215). The date is variously given (see Weil, Gesch. der Chalifen, i. 283 seq.); according to Tabari it must have been before 670. The legend says that Okba, before setting out on a pilgrimage to Mecca, allowed himself to be guided by the followers of Mahomet in Africa. He led his companions into the desert, and having exorted the serpents and wild beasts, in the name of the Prophet, to retire, he struck his spear into the ground exclaiming, "This shall be a royal city," Kairawân took this name. Once taken, Okba made it the capital of the country. 1

In the 8th century Kairawân was the capital of the province of Ifrikiya governed by the caliphs. Later it became the capital of the Aglabite princes, thereafter followed the Fatimids, of whom the Kairawân rulers were a branch. The name of the city. 2

The 8th century Kairawân was the capital of the province of Ifrikiya governed by the caliphs. Later it became the capital of the Aglabite princes, thereafter followed the Fatimids, of whom the Kairawân rulers were a branch. The name of the city. 2

During the occupation of Okba Christian worship was allowed to pass through the gates without a special permit from the bey, whilst Jews were altogether forbidden to approach the holy city. To expectation no opposition was offered by the citizens to the occupation of the place by the Franks in 981, and the occupants, that is the forty mosques, were commanded by the Franks to keep open the entrances of the mosques and the gates. The Franks were not only allowed to pass through the gates, but there they were allowed by the Muslims to perform their devotions; they were followed by European soldiers, and the mosques having thus been "violated have remained open ever since to non-Mahomedans."

KAISERSLAUTERN, a town in the Bavarian palatinate, on the Waldlauter, in the hilly district of Westrich, 41 m. by rail of W. of Mannheim. Pop. (1905), 52,306. Among its educational institutions are a gymnasium, a Protestant normal school, a commercial school and an industrial museum. The house of correction occupies the site of Frederick Barbarossa's castle, which was demolished by the French in 1713. Kaiserslautern is one of the most important industrial towns of the country. Its industries include cotton and wool spinning and weaving, iron-founding, and the manufacture of beer, tobacco, gloves, boots, furniture, &c. There is some trade in fruit and in timber.

Kaiserslautern takes its name from the emperor (Kaiser) Frederick I., who built a castle here about 1152, although it appears to have been a royal residence in Carolingian times. It became an imperial city, a dignity which it retained until 1357, when it passed to the palatinate. In 1621 it was taken by the Spaniards, in 1631 by the Swedish, in 1635 by the imperial and in 1713 by the French troops. During the War of 1793 and 1794 it was the scene of fighting; and in the Franco-Prussian War of 1870 it was the base of operations of the Second German army, under Prince Frederick Charles. It was one of the early stations of the Reformation, and in 1849 was the centre of the revolutionary spirit in the palatinate.

See Lehmann, Urdnliche Geschichte von Kaiserslautern (Kaiserslautern, 1853), and E. Jost, Geschichte der Stadt Kaiserslautern (Kaiserslautern, 1886).

KAIPO, a town in the Prussian Rhine province, on the right bank of the Rhine, 6 m. below Düsseldorf. Pop. (1905), 2462. It possesses a Protestant and a large old Romanesque Roman Catholic church of the 12th or 13th century, with a valuable shrine, said to contain the bones of St Siutber, and several benefice institutions, of which the chief is the Diakonissen Anstalt, or training-school for Protestant sisters of charity.

This institution, founded by Pastor Theodor Fliedner (1800–1864) in 1836, has more than 100 branches, some being in Asia and America; the head establishment at Kaiserswerth includes an orphanage, a lunatic asylum and a Magdalen institution. The Roman Catholic hospital occupies the former Franciscan convent. The population is engaged in silk-weaving and other small industries.

In 1702 the fortress was captured by the Austrians and Prussians, and the Kaiserswalde, whence the young emperor Henry IV., was abdicated by Archbishop Anno of Cologne in 1692, was blown up.

J. Desselhoff, Das Diakonissenmutterhaus zu Kaiserswerth (new ed. 1903; Eng. trans. 1883).

KAIPO, Kythah, or Kythah, an ancient town of British India in Karnal district, Punjab. Pop. (1901), 14,408. It is said to have been founded by the mythical hero Yudhisthira, and is connected by tradition with the monkey-god Hanuman. In 1767 it fell into the hands of the Sikh chieftain, Bhai Desu Singh, whose descendants, the bhaís of Kithah, ranked among the most powerful Cis-Sutlej chiefs. Their territories lapsed to the British in 1843. There remain the fort of the bhaís, and several Mahomedan tombs of the 13th century and later. There is some trade in grain, sal-ammoniac, live stock and blankets; and cotton, saltpetre, lac ornaments and toys are manufactured.

KAKAPO, the Maori name, signifying "night parrot," and frequently adopted by English writers, of a bird, commonly classed under the British in New Zealand the "ground-potato" or "owl parrot." The existence of this singular form was first made known in 1843 by Ernst Dieffenbach (Travels in N. Zealand, ii. 194), from some of its tail-feathers obtained by him, and he suggested that it was one of the Cuculidae, possibly belonging to the genus Centropus, but he added that it was becoming scarce, and that no example had been seen for many years. G. R. Gray, noticing it in June 1845 (Zool. Vey. "Erebus" and "Terror," pt. ix. p. 9), was able to say little more of it, but very soon afterwards a skin was received at the British Museum, of which, in the following September, he published a figure (Gen. Birds, pt. xvii.), naming it Strigops habroptilus, and rightly placing it among the parrots, but he did not describe it technically for another eighteen months (Proc. Zool. Society, 1847, p. 61). Many specimens have now been received in Europe, so that it is represented in most museums, and several examples have reached England alive.

In habits the kakapo is almost wholly nocturnal, hiding in holes (which in some instances it seems to make for itself) under the roots of trees or rocks during the day time, and only issuing forth about sunset to seek its food, which is solely vegetable in kind, and consists of the twigs, leaves, seeds and fruits of trees, grass and fern roots—some observers say mosses also. It sometimes climbs trees, but generally remains on the ground, with its comparatively short wings to balance itself running or to break its fall when it drops from a tree—though not always then—being apparently incapable of real flight. It thus becomes an easy prey to the marauding creatures—cats, rats and so forth—which European colonists have, by accident or design, let loose in New Zealand. Sir G. Grey says it had been, within the memory of old people, abundant in every part of that country.

1 Though Okba founded his city in a desert place, excavations undertaken in 1908 revealed the existence of Roman ruins, including a temple of Saturn, in the neighbourhood.

2 This generic term was subsequently altered by Van der Hoeven, rather pedantically, to Strigops, a spelling now generally adopted.

3 It has, however, been occasionally observed abroad by day; and, in captivity, one example at least is said to have been active by day as by night.
but (writing in 1854) was then found only in the unsettled districts.

The kakapo is about the size of a raven, of a green or brownish-green colour, thickly freckled and irregularly barred with dark brown, and dashed here and there with longitudinal stripes of light yellow. Examples are subject to much variation in colour and shade, and in some the lower parts are deeply tinged with yellow. Externally the most striking feature of the bird is its head, armed with a powerful beak that it well knows how to use, and its face clothed with hairs and elongated feathers that sufficiently resemble the physiognomy of an owl to justify the generic name bestowed upon it. Of its internal structure little has been described, and that not always correctly. Its furcula has been said (Proc. Zool. Society, 1874, p. 594) to be "lost," whereas the clavicles, which in most birds unite to form that bone, are present, though they do not meet, while in like manner the bird has been declared (op. cit., 1867, p. 624, note) to furnish among the Carininae "the only apparent exception to the presence of a keel" to the sternum. The keel, however, is undoubted there, as remarked by Blanchard (Ann. Nat. Sc., Zoology, 4th series, vol. vii, p. 94), and Milne Edwards (Oise. Foss. de la France, ii, 516), and, though much reduced in size, is nearly as much developed as in the Dodo and the Ocydrome. The aborted condition of this process can hardly be regarded but in connexion with the incapacity of the bird for flight, and may very likely be the result of disuse. There can be scarcely any doubt as to the propriety of considering this genus the type of a separate family of Psitaci; but whether it stands alone or some other forms (Pseporus or Geopsitacus, for example, which in coloration and habits present some curious analogies) should be placed with it, must await future determination. In captivity the kakapo is said to show much intelligence, as well as an affectionate and playful disposition. Unfortunately it does not seem to share the longevity characteristic of most parrots, and none that has been held in confinement appears to have long survived, while many succumb speedily.

For further details see Gould's Birds of Australia (ii. 247), and Handbook (ii. 539); Dr Finch's Die Papageien (i. 241), and Sir Walter Buller's Birds of New Zealand especially.

KAKAR, a Pathan tribe on the Zob valley frontier of Baluchistan. The Kakars inhabit the back of the Suliman mountains between Quetta and the Gomal river; they are a very ancient race, and it is probable that they were in possession of these slopes long before the advent of Afghan or Arab. They are divided into many distinct tribes who have no connexion beyond the common name of Kakar. Not only is there no chief of the Kakars, or general jirghah (or council) of the whole tribe, but in most cases there are no recognized heads of the different clans. In 1901 they numbered 105,444. During the second Afghan War the Kakars caused some annoyance on the British line of communications; and the Kakars inhabiting the Zob valley were punished by the Zob valley expedition of 1884.

KALA-AZAR, or Dum-Dum fever, a tropical disease, characterized by remittent fever, anaemia and enlargement of the spleen (splenomagnetically) and often of the liver. It is due to a protozoon parasite (see Parasitic Diseases), discovered in 1900 by Leishman in the spleen, and of a malarial type. The treatment is similar to that for malaria. In Assam good results have been obtained by segmentation.

KALABAGH, a town of British India in the Mianwali district of the Punjab. Pop. (1901), 5824. It is picturesquely situated at the foot of the Salt range, on the right bank of the Indus, opposite the railway station of Mari. The houses nestle against the side of a precipitous hill of solid rock-salt, piled in successive tiers, the roof of each tier forming the street which passes in front of the row immediately above, and a cliff, also of pure rock-salt, towers above the town. The supply of salt, which is worked from open quarries, is practically inexhaustible. Alam also occurs in the neighbouring hills, and forms a considerable item of local trade. Iron implements are manufactured.

KALACH, also known as Donskaya, a village of S.E. Russia, in the territory of the Don Cossacks, and a river port on the Don, 31 m. N.E. of Nishnje-Chirskaya, in 43° 30' E. and 48° 43' N. Its permanent population, only about 2000, increases greatly in summer. It is the terminus of the railway which connects the Don with Tsarsitsyn on the Volga, and all the goods (especially fish, petroleum, cereals and timber) brought from the Caspian Sea up the Volga and destined for middle Russia, or for export through the Sea of Azov, are unloaded at Tsarsitsyn and sent over to Kalach on the Don.

KALANDHI (formerly KAROND), a feudatory state of India, which was transferred from the Central Provinces to the Orissa division of Bengal in 1905. A range of the Eastern Ghats runs from N.E. to S.W. through the state, with open undulating country to the north. Area 3745 sq. m.; pop. (1901), 350,529; estimated revenue, £8000; tribute, £800. The inhabitants mostly belong to the aboriginal race of Khonds. A murderous outbreak against Hindu settlers called for armed intervention in 1882. The chief, Raghu Kishor Deo, was murdered by a servant in 1897, and during the minority of his son, Brij Mohan Deo, the state was placed in charge of a British political agent.

The capital is Bhawani Patna.

KALASHAHARI DESERT, a region of South Africa, lying mainly between 20° and 28° S. and 19° and 24° E., and covering fully 120,000 sq. m. The greater part of this territory forms the western portion of the (British) Bechuanaland protectorate, but it extends south into that part of Bechuanaland annexed to the Cape and west into German South-West Africa. The Orange river marks its southern limit; westward it reaches to the foot of the Nama and Damara hills, eastward to the cultivable parts of Bechuanaland, northward and north-westward to the valley of the Okavango and the bed of Lake Ngami. The Kalahari, part of the immense inner table-land of South Africa, has an average elevation of over 3000 ft. with a general slope from east to west and a dip northward to Ngami. Described by Robert Moffat as "the southern Sahara," the Kalahari resembles the great desert of North Africa in being generally arid and in being scored by the beds of dried-up rivers. It presents however many points of difference from the Sahara. The surface soil is mainly red sand, but in places limestone overlie sand and form extensive layers. The land is undulating and its appearance is comparable with that of the ocean at times of heavy swell. The crests of the waves are represented by sand dunes, rising from 30 to 100 ft.; the troughs between the dunes vary greatly in breadth. On the eastern border long tongues of sand project into the veld, while the veld in places penetrates far into the desert. There are also, and especially along the river beds, extensive mud flats. After heavy rains these become pans or lakes, and water is then also found in mud-bottomed pools along the beds of the rivers. The water in the pans is often brackish, and in some cases thickly encrusted with salt. Pans also occur in crater-like depressions where rock rises above the desert sands. A tough, sun-bleached grass, growing knee-high in tufts at intervals of about 15 in., covers the dunes and gives the general colour of the landscape. Considerable parts of the Kalahari, chiefly in the west and north, are however covered with dense scrub and there are occasional patches of forest. Next to the lack of water the chief characteristics of the desert are the tenuous and herbaceous plants and the large numbers of big game found in it. Of the plants the most remarkable is the water-melon, of which both the bitter and sweet variety are found, and which supplies both man and beast with water. The game includes the lion, leopard, hippopotamus, rhinoceros, buffalo, zebra, quagga, many kinds of antelope (among them the kudu and gnu), baboon and ostrich. The elephant, giraffe and eland are also found. The hunting of these three last-named animals is prohibited, and for all game there is a close time from the beginning of September to the end of February.

The climate is hot, dry and healthy, save in the neighbourhood of the large marshes in the north, where malarial fever is prevalent. In this region the drainage is N.E. to the great Makarikari marsh and the Botteile, the river connecting the marsh with the Ngami system. In the south the drainage is towards the Orange. The Molopo and the Kuruman, which in their upper course in
eastern Bechuana land are perennial streams, lose their water by evaporation and percolation on their way westward through the Kalahari. The Molopo, a very imposing river on the map, is dry in its lower stretches. The annual rainfall does not exceed 10 in. It occurs in the summer months, September to March, and chiefly in thunderstorms. The country is suffering from progressive desiccation, but there is good evidence of an abundant supply of water not far beneath the surface. In the water-melon season a few white farmers living on the edge of the desert send their herds thither to graze. Such few spots as have been under cultivation by artificial irrigation yield excellent returns to the farmer; but the chief commercial products of the desert are the skins of animals.

The Kalahari is the home of wandering Bushmen (g.e.), who live entirely by the chase, killing their prey with poisoned arrows, of Ba-Kalahari, and along the western border of Hottentots who are both hunters and cattle-rearers. The Ba-Kalahari (men of the Kalahari), who constitute the majority of the inhabitants, appear to belong to the Batau tribe of the Bechuana, now no longer having separate tribal existence, and traditionally reported to be the oldest of the Bechuana tribes. Their features are markedly negroid, though their skin is less black than that of many negro peoples. They have thin legs and arms. The Ba-Kalahari are said to be proud and haughty. In consequence of their isolation, they are deprived of them and driven into the desert by a fresh migration of more powerful Bechuana tribes. Unlike the Bushmen, and in spite of desert life, the Ba-Kalahari have a true passion for agriculture and are generally careful in the cultivation of the ground. In many cases all they can grow is a scanty supply of melons and pumpkins, and they rear small herds of goats. They are also clever hunters, and from the neighbouring Bechuana chiefs obtain spears, knives, and all kinds of hunting apparels. The Bechuana, however, kill in disposition they are peaceful to timidity, grave and almost morose. Livingstone states that he never saw Ba-Kalahari children at play. An ingenious method is employed to obtain water when the earth is dry and running streams are few or non-existent. About 2 ft. long a bunch of grass is tied, and this end of the reed is inserted in a hole dug at a spot where water is known to exist underground, the wet sand being rammed down firmly round it. An ostrich egg is then inserted in the vessel made by the reed. The water-drawer, generally a woman, then sucks up the water through the reed, dexterously squirming it into the adjacent egg-shell. To aid her aim she places between her lips a straw, the other end of which is inserted in the shell. The shells, when filled, are buried, the object of the Ba-Kalahari being to preserve their supplies from any sudden raid by Bushmen or other foe. Early travellers stated that no amount of bullying or hunting in a Ba-Kalahari village would result in a find of water; but that on friendly relations being established the natives would bring a supply, however arid the district. The British government has since sunk wells in one or two districts. Though the Ba-Kalahari have no religious beliefs similar to those of the Bechuana, they show an attachment to their ancestors, and as Batau, i.e. "men of the lion," reverence rather than fear that beast.

The Kalahari was first crossed to Lake Ngami by David Livingstone, accompanied by William C. Osnell, in 1849. In 1878-1879 a party of Boers, with about three hundred wagons, trekked from the Transvaal across the Kalahari to Ngami and thence to the hinterland of Angola. Many of the party, men, women and children, perished of thirst during the journey. Survivors stated that in all some 250 people and 9000 cattle died. See BECHUANALAND. Die Kalahari, by Dr Siegfried Passarge (Berlin, 1904), is a valuable treatise on the geology, topology, botany, and fauna of the Kalahari desert, with a large number of illustrations. Another valuable work is British Kalahari, by Ronald H. Dorrough, a recent publication.

Vessels load and discharge by means of lighters, the outer harbour having a depth at entrance of 24 ft. and inside of 14 ft. The inner harbour has a depth of 15 ft. and is sheltered by a breakwater 1640 ft. in length; in the winter months the fishing craft take shelter in the haven of Armynur. The silk industry, formerly important, still employs about 300 women and girls in four spinning establishments. Olive oil and silk are the chief exports.

KALAMAZOO, a city and the county-seat of Kalamazoo county, Michigan, U.S.A., on the W. bank of the Kalamazoo River, about 49 m. S. of Grand Rapids and 144 m. W. of Detroit. Pop. (1900) 24,404, of whom 4720 were foreign-born; (1910 census) 30,437. It is served by the Michigan Central, the Lake Shore & Michigan Southern, the Grand Rapids & Indiana, the Kalamazoo, Lake Shore & Chicago, and the Chicago, Kalamazoo & Saginaw railways, and by interurban electric lines. The city has a public library, and is the seat of Kalamazoo College (Baptist), which grew out of the Kalamazoo literary institute (1833) and was chartered under its present name in 1855; the Michigan female seminary (Presbyterian), established in 1866; the Western State normal school (1904); Nazareth Academy (1897), for girls; Barbour Hall (1899), a school for boys; two private schools for the feeble-minded; and the Michigan asylum for the insane, opened in 1859. The surrounding country is famous for its celery, and the city is an important manufacturing centre, ranking third among the cities of the state in the value of its factory products in 1904. The value of the factory product in 1904 was $13,141,767, an increase of 82% since 1900. The waterworks and electric-lighting plant are owned and operated by the municipality. Kalamazoo was settled in 1829, was known as Bronson (in honour of Titus Bronson, an early settler) until 1850, was incorporated as the village of Kalamazoo in 1858, and in 1884 became a city under a charter granted in the preceding year.

KALAPYA, or CALLAPOOYA, a tribe and stock of North-American Indians, whose former range was the valley of the Willamette River, Oregon. They now number little more than a hundred, on a reservation on Grande Ronde reservation, Oregon.

KALAT, the capital of Baluchistan, situated in 29° 2' N. and 66° 35' E., about 6780 ft. above sea-level, 88 m. from Quetta. The town gives its name also to a native state with an area, including Makran and Kharan, of 71,593 m. and a population (1901) of 470,336. The word Kalat is derived from kala—a fortress; and Kalat is the most picturesque fortress in the Baluch highlands. It crowns a low hill, round the base of which clusters the closely built mass of flat-roofed mud houses which form the insignificant town. A minar or citadel, having an imposing appearance, dominates the town, and contains within its walls the palace of the khan. It was in an upper room of this residence that Mehrab Khan, ruler of Baluchistan, was killed during the storming of the town and citadel by the British troops at the close of the first Afghan War in 1839. In 1901 it had a population of only 2000. The valleys immediately surrounding the fortress are well cultivated and thickly inhabited, in spite of their elevation and the extremes of temperature to which they are exposed. Recent surveys of Baluchistan have determined the position of Hozdur or Khodzar (27° 48' N., 66° 38' E.) to be about 50 m. S. of Kalat. Khodzar was the former capital of Baluchistan, and is as directly connected with the southern branches of the Mulla Pass as Kalat is with the northern, the Mulla being the ancient trade route to Gandava (Kandahar) and Sind. In spite of the rugged and barren nature of the mountain country which connects the two streams, the main routes through them (concentrating on Khodzar rather than on Kalat) are comparatively easy. The old " Pathan vat," the trade highway between Kalat and Karachi by the Hab valley, passes through Khodzar. From Khodzar another route strikes a little west of south to Wad, and then passes easily into Las Bela. This is the " Kohan vat." A third route runs to Nal, and leads to the head of the Kolwa valley (meeting with no great physical obstruction), and then strikes into the open high road to Persia. Some of the
valleys about Kalat (Mastang, for instance) are wide and fertile, full of thriving villages and strikingly picturesque; and in spite of the great preponderance of mountain wilderness (a wilderness which is, however, in many parts well adapted for the pasturage of sheep) existing in the Sarawan lowlands almost equally with the Jalawan highlands, it is not difficult to understand the importance which the province of Kalat, anciently called Turan (or Tubaran), maintained in the eyes of medieval Arab geographers (see BALUCHISTAN). New light has been thrown on the history of Kalat by the translation of an unpublished manuscript obtained at Tatia by Mr Tate, of the Indian Survey Department, who has added thereto notes from the Tufat-ul-Kiram, for the use of which he was indebted to Khan Sahib Rasul Baksh, mukhtiar of Tatia. According to these authorities, the family of the khans of Kalat is of Arabic origin, and not, as is usually stated, of Brahui extraction. They belong to the Ahmadzai branch of the Mirwai clan, which originally emigrated from Oman to the Kolwa valley of Mekran. The khan of Kalat, Mir Mahmud Khan, who succeeded his father in 1893, is the leading chieftain in the Baluch Confederacy. The revenue of the khan is estimated at nearly 60,000, including subsidies from the British government; and an accrued surplus of £240,000 has been invested in Indian securities.

See G. P. Tate, Kalat (Calcutta, 1865); BALUCHISTAN District Gazetteer, vol. vi. (Bombay, 1907).

KALAT-I-GHILZAI, a fort in Afghanistan. It is situated on an isolated rocky eminence 5543 ft. above sea-level and 200 ft. above the plain, on the right bank of the river Tarnak, on the road between Kabul and Kandahar, 87 m. from Kandahar and 229 m. from Kabul. It is celebrated for its gallant defence by Captain Craigie and a sepoy garrison against the Afghans in the first Afghan War of 1842. In memory of this feat of arms, the 12th Pioneers still bear the name of "The Kalat-i-Ghilzai Regiment," and carry a special colour with the motto "Invicta."

KALB, JOHANN ("BARON DE KALB") (1721-1780), German soldier in the American War of Independence, was born in Hüttendorf, near Bayreuth, on the 29th of June 1721. He was of peasant parentage, and left home when he was sixteen to become a butcher; in 1742 he was a lieutenant in a German regiment in the French service, calling himself at this time Jean de Kalb. He went with the French in the War of the Austrian Succession, becoming captain in 1747 and major in 1756; in the Seven Years' War he was in the corps of the comte de Broglie, rendering great assistance to the French after Rossbach (November 1757) and showing great bravery at Bergen (April 1759); and in 1763 he resigned his commission. As secret agent, appointed by Choiseul, he visited America in 1768-1769 to inquire into the feeling of the colonists toward Great Britain. From his retirement at Milon la Chapelle, Kalb went to Metz for garrison duty under de Broglie in 1775. Soon afterwards he received permission to volunteer in the army of the American colonies, in which the rank of major-general was promised to him by Silas Deane. After many delays he sailed with eleven other officers on the ship fitted out by Lafayette and arrived at Philadelphia in July 1777. His commission from Deane was disallowed, but the Continental Congress granted him the rank of major-general (dating from the 15th of September 1777), and in October he joined the army, where his growing admiration for Washington soon led him to take a cold view of Broglie's scheme for putting a European officer in chief command. Early in 1778, as second in command to Lafayette for the proposed expedition against Canada, he accompanied Lafayette to Albany; but no adequate preparations had been made, and the expedition was abandoned. In April 1780, he was sent from Morristown, New Jersey, with his division of Maryland men, his Delaware regiment and the 1st artillery, to relieve Charleston, but on arriving at Petersburg, Virginia, he learned that Charleston had already fallen. In his camp at Buffalo Ford and Deep River, General Horatio Gates joined him on the 25th of July; and next day Gates led the army by the short and desolate road directly towards Camden. On the 11th-12th of August, when Kalb advised an immediate attack on Rawdon, Gates hesitated and then marched to a position on the Salisbury-Charlotte road which he had previously refused to take. On the 14th Cornwallis had occupied Camden, and a battle took place here on the 16th when the other American troops having broken and fled, Kalb, unhorsed and fighting fiercely at the head of his right wing, was wounded eleven times. He was taken prisoner and died on the 10th of August 1780 in Camden. Here in 1825 Lafayette laid the corner-stone of a monument to him. In 1867 a statue of him by Ephraim Keyser was dedicated in Annapolis, Maryland.

See Friedrich Kapp, Leben des amerikanischen Generals Johann Kalb (Stuttgart, 1862; English version, privately printed, New York, 1870), which is summarized in George W. Greene's The German Element in the War of American Independence (New York, 1876).

KALKREUTH, FRIEDRICH ADOLF, COUNT VON (1737-1818), Prussian soldier, entered the regiment of Gardes du Corps in 1752, and in 1758 was adjutant or aide de camp to Frederick the Great's brother, Prince Henry, with whom he served throughout the later stages of the Seven Years' War. He won special distinction at the battle of Freiberg (Sept. 29, 1762), for which Frederick promoted him major. Personal differences with Prince Henry severed their connexion in 1766, and he retired from the service of the Prussians. But he made the campaign of the War of the Bavarian Succession as a colonel, and on the accession of Frederick William II. was restored to favour. He greatly distinguished himself as a major-general in the invasion of Holland in 1787, and by 1792 had become count and lieutenant-general. Under Brunswick he took a conspicuous part in the campaign of Valmy in 1792, the siege and capture of Mainz in 1793, and the battle of Kaiserslautern in 1794. In the campaigns against Napoleon in 1806 he played a marked part for good or evil, both at Auerstädt and in the miserable retreat of the beaten Prussians. In 1807 he defended Danzig for 78 days against the French under Marshal Lefebvre, with far greater skill and energy than he had shown in the previous year. He was promoted field marshal soon afterwards, and conducted many of the negotiations at Tilsit. He died as governor of Berlin in 1818.

The Dictionnaire de l'Academie de Kalkreuth were published by his son (Paris, 1844).

KALKREUTH, LEOPOLD, COUNT VON (1855- ), German painter, a direct descendant of the famous field-marshall (see above), was born at Düsseldorf, received his first training at Weimar from his father, the landscape painter Count Stanislava von Kalkreuth (1820-1894), and subsequently studied at the academies of Weimar and Munich. Although he painted some portraits remarkable for their power of expression, he devoted himself principally to depicting with relentless realism the monotonous life of the fishing folk on the sea-coast, and of the peasants in the fields. His palette is joyless, and almost melancholy, and in his technique he is strongly influenced by the impressionists. He was one of the founders of the szczestonist movement. From 1885 to 1890 Count von Kalkreuth was professor at the Weimar art school. In 1890 he resigned his professorship and retired to his estate of Höckricht in Silesia, where he occupied himself in painting subjects drawn from the life of the country-folk. In 1895 he became a professor at the art school at Karlsruhe. The Munich Pinkotheek has his "Rainbow" and the Dresden Gallery his "Old Age." Among his chief works are the "Funeral at Dachau," "Homewards," "Wedding Procession in the Carpathian Mountains," "The Gleaners," "Old Age," "Before the Fish Auction," "Summer," and "Going to School."

KALEIDOSCOPE (from Gr. καλός, beautiful, ἀδός, form, and αἰσθεῖν, to view). The article REFLECTION explains the symmetrical arrangement of images formed by two mirrors inclined at an angle which is a sub-multiple of four right angles. This is the principle of the kaleidoscope, an optical toy which received its present form at the hands of Sir David Brewster about the
year 1815, and which at once became exceedingly popular owing to the beauty and variety of the images and the sudden and unexpected changes from one graceful form to another. A hundred years earlier R. Bradley had employed a similar arrangement which seems to have passed into oblivion (New Improvements of Planting and Gardening, 1710). The instrument has been extensively used by designers. In its simplest form it consists of a tube about twelve inches long containing two glass plates, extending along its whole length and inclined at an angle of 60°. The eye-end of the tube is closed by a metal plate having a small hole at its centre near the intersection of the glass plates. The other end is closed by a plate of muffled glass at the distance of distinct vision, and parallel to this is fixed a plate of clear glass. In the intervening space (the object-box) are contained a number of fragments of brilliantly coloured glass, and as the tube is turned round its axis these fragments alter their positions and give rise to the various patterns. A third reflecting plate is sometimes employed, the cross-section of the three forming an equilateral triangle. Sir David Brewster modified his apparatus by moving the object-box and closing the end of the tube by a lens of short focus which forms images of distant objects at the distance of distinct vision. These images take the place of the coloured fragments of glass, and they are symmetrically multiplied by the mirrors. In the polyangular kaleidoscope the angle between the mirrors can be altered at pleasure. Such instruments are occasionally found in old collections of philosophical apparatus and they have been used in order to explain to students the formation of multiple images.

(C. J. J.)

KALERGIS, DIMITRI (DEMETRIOS) (1803-1867), Greek statesman, was a Cretan by birth, studied medicine at Paris and on the outbreak of the War of Greek Independence went to the Morea and joined the insurgents. He fought under Karaikasikas, was taken prisoner by the Turks before Athens and mutilated of an ear, later he acted as aide de camp to the French philhellene Colonel Fabre and to Count Capo d’Istria, president of Greece. In 1832 he was promoted lieutenant-colonel. In 1843, as commander of a cavalry division, he was the prime mover in the insurrection which forced King Otto to dismiss his Bavarian ministers. He was appointed military commandant of Athens and aide-de-camp to the king, but after the fall of the Mavrocordato ministry in 1845 was forced to go into exile, and spent several years in London, where he became an intimate of Prince Louis Napoleon. In 1848 he made an abortive descent on the Greek coast, in the hope of revolutionizing the kingdom. He was captured, but soon released and, after a stay in the island of Zante, went to Paris (1853). At the instance of the Western Powers he then took the command of the War and appointed minister of war in the reconstituted Mavrocordato cabinet (1854). He was, however, disliked by King Otto and his consort, and in October 1855 was forced to resign. In 1861 he was appointed minister plenipotentiary in Paris, in which capacity he took an important part in the negotiations which followed the fall of the Bavarian dynasty and led to the accession of Prince George of Denmark to the Greek throne.

KALEWATA, or KALEVALA, the name of the Finnish national epos. It takes its name from the three sons of Kalewa (or Finland), viz. the ancient Wäinämöinen, the inventor of the sacred harp Kantele; the cunning art-smith, Ilmarinen; and the gallant Lemminkäinen, who is a sort of Arctic Don Juan. The adventures of these three heroes are wound about a plot for securing in marriage the hand of the daughter of Louhi, a hero from Pohjola, a land of the cold north, Ilmarinen is set to construct a magic mill, the Sanpo, which grinds out meal, salt and gold, and as this has fallen into the hands of the folk of Pohjola, it is needful to recover it. The poem actually opens, however, with a very poetical theory of the origin of the world. The virgin daughter of the atmosphere, Loungor, wanders for seven hundred years in space, until she betokens her to invoke Ukko, the northern Zeus, who sends his eagle to her; this bird makes its nest on the knees of Loungor and lays in it seven eggs. Out of the substance of these eggs the visible world is made. But it is empty and sterile until Wäinämöinen descends upon it and wows the exquisite Aino. She disappears into space, and it is to recover from his loss and to find another bride that Wäinämöinen makes his series of epical adventures in the dismall country of Pohjola. Various episodes of great strangeness and beauty accompany the lengthy recital of the struggle to acquire the magical Sanpo, which gives prosperity to whoever possesses it. In the midst of a battle the Sanpo is broken and falls into the sea, but one fragment floats on the waves, and, being stranded on the shores of Finland, secures eternal felicity for that country. At the very close of the poem a virgin, Mariatta, brings forth a king who drives Wäinämöinen out of the country, and this is understood to refer to the ultimate conquest of Paganism by Christianity.

The Kalewala was probably composed at various times and by various bard, but always in sympathy with the latent traditions of the Finn. It was not with a view that anything like a realism exactly accordant with the instincts of that race. While in the other antique epics of the world bloodshakes takes a predominant place, the Kalewala is characteristically gentle, lyrical and even domestic, dwelling at great length on situations of moral beauty and romantic pathos. It is entirely concerned with the folk-lore and the traditions of the primeval Finnish race. The poem is written in eight-syllabled trochaic verse, and an idea of its style may be obtained from Longfellow’s Hiawatha, which is a pretty true imitation of the Finnish epic.

Until the 19th century the Kalevala existed only in fragments in the memories and on the lips of the peasants. A collection of a few of these scattered songs was published in 1822 by Dr Zacharius A. V. Forssman, but it was not until 1852 that any attempt was made to recover a complete and systematically arranged collection was given to the world by Dr Elias Lönnrot. For years Dr Lönnrot wandered from place to place in the most remote districts, living with the peasantry, and taking down from their lips all that they knew of their popular songs. Some of the most valuable were discovered in the governments of Archangel and Olofjenz. Unwearied diligence Lönnrot was successful in collecting 12,000 lines. These he arranged as methodically as possible and published in three volumes in 1849 and 1868, exactly as he heard them sung or chanted. Continuing his researches, Dr Lönnrot published in 1849 a new edition of 22,793 verses in fifty runes. A still more complete text was published by Forsman in 1887. The importance of this indigenous epic was at once recognized in Europe, and translations were made into Swedish, German and French. Several translations into English exist, the fullest being that by J. M. Crawford in 1888. The best foreign editions are those of Castren in Swedish (1844) and Leuzon le Duc in French (1849 and 1868), Schiefer in German (1852). (E. G.)

KALGAN (CHANG-CHIA K’ow), a city of China, in the province of Chih-li, with a population estimated at from 70,000 to 100,000. It lies in the line of the Great Wall, 122 m. by rail N.W. of Peking, and by rail S.W. of Harbin. It lies on the great commercial highway, the Trans-Siberian Railway, and commands an important pass between China and Mongolia. Its position is stated as in 40° 50’ N. and 117° 13’ E., and its height above the sea as 2,810 ft. The valley amid the mountains in which it is situated is under excellent cultivation, and thickly studded with villages. Kalgan consists of a walled town or fortress and suburbs 3 m. long. The streets are wide, and excellent shops are abundant, but the ordinary houses have an unusual appearance, from the fact that they are mostly roofed with earth and become covered with green-sward. Large quantities of soda are manufactured; and the town is the seat of a very extensive transit trade. In October 1909 it was connected by railway with Peking. In early autumn long lines of camels come in from all quarters for the conveyance of the tea-chests from Kalgan to Kiakhta; and each caravan usually makes three journeys in the winter. Some Russian merchants have foreign editions are those of Castren in Swedish (1844) Leuzon le Duc in French (1849 and 1868), Schiefer in German (1852). (E. G.)

KALGOORLIE, a mining town of Western Australia, 24 m. by rail E.N.E. of Coolgardie. Pop. (1901), 6652. It is a thriving town with an electric tramway service, and is the junction of four lines of railway. The gold-field, discovered in 1893, is very rich, supporting about 15,000 miners. The town is supplied with water, like Coolgardie, from a source near Perth 360 m. distant.
KALI (black), or Kali Ma (the Black Mother), in Hindu mythology, the goddess of destruction and death, the wife of Siva. According to one theory, Calculata owes its name to her, being originally Kalighat, “Kali’s landing-place.” Siva’s consort has many names (e.g. Durga, Bhawani, Parvati, &c.). Her idol is black, with four arms, and red palms to the hands. Her eyes are red, and her face and breasts are besmeared with blood. Her hair is matted, and she has projecting fang-like teeth, between which protrudes a tongue dripping with blood. She wears a necklace of skulls, her earrings are dead bodies, and she is girded with serpents. She stands on the body of Siva, to account for which attitude there is an elaborate legend. She is more worshipped in Gondwana and the forest tracts to the east and south of it than in any other part of India. Formerly human sacrifice was the essential of her ritual. The victims, always a male, was taken to her temple after sunset and imprisoned there. When morning came he was dead: the priests told the people that Kali had sucked his blood in the night. At Dantewara in Bastar there is a famous shrine of Kali under the name of Dantewari. Here many a human head has been presented on her altar. About 1830 it is said that upwards of twenty-five full-grown men were immolated at once by the raja. Cutting their flesh and burning portions of their body were among the acts of devotion of her worshippers. Kali is goddess of small-pox and cholera. The Thugs murdered their victims in her honour, and to her the sacred pickaxe, wherewith their graves were dug, was consecrated.

The Hook-swinging Festival (Churuk or Churuck Puja), one of the most notable celebrations in honour of the goddess Kali, has now been prohibited in British territory. Those who had vowed themselves to self-torture submitted to be swung in the air supported only by hooks passed through the muscles over the blade-bones. These hooks were hung from a long crossbar, which was raised upon a huge light pole. To this pole into the air by men pulling down the other end of the see-saw beam, the victim was then whirled round in a circle. The torture usually lasted fifteen or twenty minutes.

See A. A. Macdonell, Vedic Mythology (Strassburg, 1897).

KALIDĀSA, the most illustrious name among the writers of the second epoch of Sanskrit literature, which, as contrasted with the age of the Vedic hymns, may be characterized as the period of artificial poetry. Owing to the absence of the historical sense in the Hindu race, it is impossible to fix with chronological exactness the lifetime of either Kālidāsa or any other Sanskrit author. Native tradition places him in the 1st century A.D.; but the evidence on which this belief rests is worthless. The works of the poet contain no allusions by which their date can be directly determined; yet there is strongly a prior form of the Pāरśkī or popular dialects spoken by the women and the subordinate characters in his plays, as compared with the Prākrit inscriptions of ascended age, led such authorities as Weber and Lassen to agree in fixing on the 3rd century A.D. as the approximate period to which the writings of Kālidāsa should be referred.

He was one of the “nine gems” at the court of King Vīkramaditya or Vikrama, at Ujjain, and the tendency is now to regard the latter as having flourished about A.D. 375; others, however, place him as late as the 6th century. The richness of his creative fancy, his delicacy of sentiment, and his keen appreciation of the beauties of nature, combined with remarkable powers of description, place Kālidāsa in the first rank of Oriental poets. The effect, however, of his productions as a whole is gradually impaired by extreme artificiality and a definite attempt to restrict himself to a less extent than in other Hindu poets, not unfrequently takes the form of puerile conceits and plays on words. In this respect his writings contrast very unfavourably with his more genuine poetry of the Vedas. Though a true poet, he is wanting in that artistic sense of proportion so characteristic of the Greek mind, which exactly adjusts the parts to the whole, and combines form and matter into an inseparable poetic unity. Kālidāsa’s fame rests chiefly on his dramas, but he is also distinguished as an epic and a lyric poet.

He wrote three plays, the plots of which all bear a general resemblance, inasmuch as they consist of love intrigues, which, after numerous and seemingly insurmountable impediments of a similar nature, are ultimately brought to a successful conclusion. Of these, Sakāsāda, the latest of them, has enjoyed the greatest fame and popularity. The unqualified praise bestowed upon it by Goethe sufficiently guarantees its poetic merit. There are two recensions of the text in the India, the Bengali and the Devanāgarī; the flexion of the characters and the spelling are different. Sakāsāda was first translated into English by Sir William Jones (Calcutta, 1789), who used the Bengali recension. It was soon after translated into German by G. Forster (1791; new ed. Leipzig, 1876). An English translation of Sanskrit-Prakrit, published by a Prussian Commission, appeared in Berlin in 1797; the Persic, Latin, and English recensions of which were read by C. A. D. Lévi at Paris in 1830. This formed the basis of a translation by B. Hirzel (Zürich, 1839); later trans. by L. Fritze (Chemnitz, 1876). Other editions of the Bengali recension were published by W. Remora (Calcutta, 1841) and by W. H. Wilson, who is the recognized authority for the recension of the poem, and has published the Sanscrit, Prakrit, and Bengali texts, and published the Sanskrit, Prakrit, and Bengali texts, and an English transliteration, in the Oriental Translation Fund (2nd ed., Calcutta, 1889). The same recension has been edited by Dr C. Burkhart with a Sanskrit-Latin vocabulary and short Prakrit gram. (Breslau, 1872), and by Professor Motier Williams (Oxford, 2nd ed. 1876), who also translated the drama (5th ed. 1889). There is another translation by P. N. Patankar (Poona, 1888—).

There are also a South Indian and a Cashmir recension.

The Vikramorvasī or Uraūsī soon by Valour, abounds with fine lyric poetry, and with other characters in the literary principle of Kālidāsa in poetic beauty. It was edited by R. Lenz (Berlin, 1853) and translated into German by C. G. A. Hörer (Berlin, 1837), by B. Hirzel (1838), by E. Lobedanz (Leipzig, 1861) and F. Bollens (Petersburg, 1879). There is also an English edition by M. J. Hook-swinging Festival, a metrical and prose version by H. H. Wilson, and a literal prose translation by Professor E. B. Cowell (1851). The latest editions are by S. P. Pandit (Bombay, 1879) and K. B. Paranjpe (1898).

The third play, entitled Mālavikāṅkāsīma, has considerable poetical and dramatic merit, but is confessedly inferior to the other two. It possesses the advantage, however, that its hero Agnirāta is a character that is more distinctive than those of the other plays. It is edited by O. F. Tullberg (Bonn, 1840), by Shankar P. Pandit, with English notes (1860), and S. S. Ayyar (Poona, 1896); translated into German by A. Weber (Hamburg, 1871), and into English and Calcutta (1868).

Two epic poems are also attributed to Kālidāsa. The longer of these is entitled Rāghuvamsa, the subject of which is the same as that of the Rāmāyana, viz. the history of Rāma, but beginning with a long account of his ancestors, the ancient rulers of Ayodhya (ed. by A. F. Stenzler, London, 1832; and with Eng. trans. and notes by Gopal Raghunath Nandaripkar, Poona, 1897; verse transl. by F. de Lacy Johnstone, 1902). The other epic is the Kumārasambhava, which describes the scheme of the Hindu cosmogony, with a story called Kārttikeya or Skanda, god of war (ed. by Stenzler, London, 1838; K. M. Banerjea, 3rd ed. Calcutta, 1872; Parvaniaka and Parab, Bombay, 1893; and M. R. Kale and S. R. Dhuradhar, ibd. 1907; transl. by R. T. Bowring, 1879). Though containing many fine passages, it is tame as a whole.

His lyrical poems are the Meghdhāta and the Rūṣisthambhara. The Meghdhāta, or the Cloud-Messenger, describes the complaint of an exiled lover, and the message he sends to his wife by a cloud. It is full of deep feeling, and abounds with fine descriptions of the beauties of nature. It was edited with free English translation by H. H. Wilson (Calcutta, 1813), and by J. Gildemeister (Bonn, 1841); a German adaptation by M. Moller appeared at Königsberg (1847), and one by C. Schlütz at Bielefeld (1859). It was edited by F. Johnson, with vocabulary and Wilson’s metrical translation (London, 1855); enlarged edition by L. A. Cowell and K. B. Pathak (Poona, 1894). The Rūṣisthambhara, or Collection of the Seasons, is a short poem, of less importance, on the six seasons of the year. There is an edition by P. von Bohlen, with prose Latin and Sanskrit (Leipzig, 1845; Eng. trans. by C. S. Sitaram Ayyar (Bombay, 1897).

Another poem, entitled the Nālodvī, or Rise of Nāla, edited by F. Benary (Berlin, 1830), W. Yates (Calcutta, 1864) and Vidyasagar (Calcutta, 1875), is only a fragment, and is not of very importance, but describes especially the restoration of Nāla to prosperity and power. It has been ascribed to the celebrated Kālidāsa, but was probably written by another poet of the same name. It is full of metre and verbal beauty, and is more lyric than dramatic.

So many poems, partly of a very different stamp, are attributed to Kālidāsa that it is scarcely possible to avoid the necessity of assuming the existence of more authors than one of that name. It has been shown by recent modern astronomers that the system of Kālidāsa has been falsified; indeed modern native astronomers are so convinced of the existence of a triad of authors of this name that they apply the term Kālidāsa to designate the number three.

Kālidāsa belongs to the age of A. A. Macdonell’s History of Sanskrit Literature (1900), and on his date G. Huth, Die Zeit des K. (Berlin, 1890).
KALIMPONG—KALKBRENNER

KALIMPONG, a village of British India, in the Darjeeling district of Bengal, 6000 ft. above sea-level; pop. (1901), 1069. It is a frontier market for the purchase of wool and mules from Tibet, and an important agricultural fair is held in November. In 1800 Kalimpong was chosen by the Church of Scotland as the site of cottage homes, known as St Andrew's Colonial Homes, for the education and training of poor European and Eurasian children.

KALINGA, or CALINGA, one of the nine kingdoms of southern India in ancient times. Its exact limits varied, but included the eastern Madras coast from Pulicat to Chilcote, running inland from the Bay of Bengal to the Eastern Ghats. The name at one time had a wider and vaguer meaning, comprehending Orissa, and possibly extending to the Ganges valley. The Kalinga of Pilpay certainly included Orissa, but latterly it seems to have been confined to the Telugu-speaking country; and in the time of Hsian Tsang (630 A.D.) it was distinguished on the south and west from Andhra, and on the north from Orda or Orissa. Taranatha, the Tibetan historian, speaks of Kalinga as one division of the country of Telinga. Hsian Tsang speaks of Kalinga ("Kie-ling-kia") having its capital at what has been identified with the site either of Rajahmundry or Coringa. Both these towns, as well as Singapur, Calingapatam and Chica-cole, share the honour of having been the chief cities of Kalinga at different periods; but inscriptions recently deciphered seem to prove that the capital of the Ganga dynasty of Kalinga was at Muhkalingam in the Ganjam district.

KALINJAR, a town and hill fort of British India in the Banda district of the United Provinces. Pop. (1901), 3015. The fort stands on an isolated rock, the termination of the Vindhya range, at an elevation of 1203 ft., overlooking the plains of Bundelkhand. Kalinjar is the most characteristic specimen of the hill-fortresses, originally hill-shrines, of central India. Its antiquity is proved by its mention in the Mahabharata. It was besieged by Mahmud of Ghazni in 1023, and here the Afghan emperor Sher Shah met his death in 1545, and Kalinjar played a prominent part in history down to the time of the Mutiny in 1857, when it was held by a small British garrison. Both the fort and the town, which stands at the foot of the hill, are of interest to the antiquary on account of their remains of temples, sculptures, inscriptions and caves.

KALIR (QALIR), ELEAZER, Hebrew liturgical poet, whose hymns (piyyudim) are found in profusion in the festival prayers of the German synagogue rite. The age in which he lived is unknown. Some (basing the view on Saadiah's Sefer ha-galuyot) place him as early as the 6th century, others regard him as belonging to the 8th century, and Calir's style is powerful but involving; he may be described as a Hebrew Browning.

Some beautiful renderings of Kalir's poems may be found in the volumes of Davis & Adler's edition of the German Festival Prayers entitled Service of the Synagogue.

KALISCH, ISIDOR (1816-1886), Jewish divine, was born at Krotoschin in Prussia on the 15th of November 1816, and was educated at Berlin, Breslau and Prague. In 1848 he came to London, but passed on in 1849 to America, where he ministered as rabbi in Cleveland, Cincinnati, Milwaukee, Detroit and Newark, New Jersey. At Newark from 1857 he gave himself entirely to literary work, and exercised a strong influence as leader of the radical and reforming Jewish party.

Among his works are Wegweisern für rationale Forschungen in den biblischen Schriften (1855); and translations of Nathan der Weise (1865); Sepher Jestrab (1877); and Munz's History of Philosophy among the Jews (1881). He also wrote a good deal of German and Hebrew verse.

KALISCH, MARCUS (or MAURICE) (1828-1885), Jewish scholar, was born in Pomerania in 1828, and died in England 1885. He was one of the pioneers of the critical study of the Old Testament in England. At one time he was secretary to the Chief Rabbi; in 1853 he became tutor in the Rothschild family and enjoyed leisure to produce his commentaries and other works. The first instalment of his commentary on the Pentateuch was Exodus (1855); this was followed by Genesis (1858) and Leviticus in two parts (1867-1872). Kalisch wrote before the publication of Wellhausen's works, and anticipated him in some important points. Besides these works, Kalisch published in 1872-1878 two volumes of Bible studies (on Balaam and Jonah). He was also author of a once popular Hebrew grammar in two volumes (1862-1863). In 1887 he published Path and Goal, a brilliant discussion of human destiny. His commentaries are of permanent value, not only because of the author's originality, but also because of his erudition. No other works in English contain such full citations of earlier literature.

KALISPEN, or PEND d'OREILLE, a tribe of North-American Indians of Salishan stock. They formerly ranged the country around Pend d'Oreille Lake, Washington. They number some 600, and are settled on a reservation in Montana.

KALISZ, a government of Russian Poland, having Prussia on the W., and the governments of Warsaw and Piotrkow on the E. Its area is 4,300 sq. m. Its surface is a lowland, sloping towards the west, and is drained by the Prosa and the Warta and their tributaries, and also by the Bzura. It was formerly covered with countless small lakes and thick forests; the latter are now mostly destroyed, but many lakes and marshes exist still. Pop. (1807), 844,358 of whom 427,978 were women, and 113,000 lived in towns; estimated pop. (1906), 983,200. They are chiefly Poles. Roman Catholic numbers 83%; Jews and Protestants each amount to 7%. Agriculture is carried to perfection on a number of estates, as also livestock breeding. The crops principally raised are rye, wheat, oats, barley and potatoes. Various domestic trades, including the weaving of linen and wool, are carried on in the villages. There are some factories, producing chiefly cloth and cottons. The government is divided into eight districts, the chief towns of which, with their populations (1867), are: Kalisz (21,680), Kolo (9400), Komin (8530), Leczycya (8863), Slupec (1758), Sieradz (7091), Turek (8141) and Wielun (7442).

KALISZ, the chief town of the above government, situated in 51° 46' N. and 18° E., 147 m. by rail W.S.W. of Warsaw, on the banks of the Prosa, which there forms the boundary of Prussia. Pop. (1871), 18,088; (1897), 21,690, of whom 37% were Jews. It is one of the oldest and finest cities of Poland, is the seat of a Roman Catholic bishop, and possesses a castle, a teachers' institute and a large public park. The industrial establishments comprise a brewery, and factories for ribbons, cloth and sugar, and tanneries.

Kalisz is identified with the Calisita of Ptolemy, and its antiquity is indicated by the abundance of coins and other objects of ancient art which have been found on the site, as well as the numerous Jewish burials existing in the vicinity. It was the scene of the decisive victory of Augustus the Strong of Poland over the Swedes on the 29th of October 1706, of several minor conflicts in 1813, and of the friendly meeting of the Russian and Prussian troops in 1839, in memory of which an iron obelisk was erected in the town by Nicholas I. in 1841. The treaty of 1839 between Russia and Prussia was signed here.

KALK, a town in the Prussian Rhine province, on the right bank of the Rhine, 2 m. E. of Cologne. Pop. (1905), 25,478. Kalk is an important junction of railway lines connecting Cologne with places on the right bank of the river. It has various iron and chemical industries, brickworks and breweries, and an electric tramway joins it with Cologne.

KALKAS, or KALKAS, a Mongol people mainly concentrated in the northern steppes of Mongolia near their kinsmen, the Buriats. According to Sir H. Howorth they derive their name from the river Kalka, which runs into the Buir Lake. Of all Mongolians they physically differ most from the true Mongol type (see mongols). Their colour is a brown rather than a yellow, and their eyes are open and not oblique. They have, however, the broad flat face, high cheekbones and lank dark hair of their race. They number some 250,000, and their territory is divided into the four khanates of Tushetu (Tushietu), Tseten (Setzen), Sai'nou'i (Sain Noyan) and Jessaktu (Jassaktu).

KALKBRENNER, FRIEDRICH WILHELM (1784-1849), German pianist and composer, son of Christian Kalckbrenner (1755-1806), a Jewish musician of Cassel, was educated at the
KÁLLAY—KALNÓKY

643

Paris Conservatoire, and soon began to play in public. From 1814 to 1823 he was well known as a brilliant performer and a successful teacher in London, and then settled in Paris, dying at Enghienn, near there, in 1849. He became a member of the Paris piano-manufacturing firm of Pleyel & Co., and made a fortune by his business and his art combined. His numerous compositions are less remembered than his instruction-book, with studies," which have had considerable vogue among pianists.

KÁLLAY, BENJAMIN VON (1830—1903), Austro-Hungarian statesman, was born at Budapest on the 22nd of December 1830. His family derived their name from their estates at Nágy Kallo, in Szabolcs, and claimed descent from the Balogh Semjen tribe, which colonized the counties of Borosd, Szabolcs, and Szatmár, at the close of the 9th century, when the Magyars conquered Hungary. They played a prominent part in Hungarian history as early as the reign of Koloman (1005-1114); and from King Matthias Corvinus (1458-1490) they received their estates at Mező Tur, near Kecskemét, granted to Michael Kállay for his heroic defence of Jajce in Bosnia, and still held by his descendants. The father of Benjamin von Kállay, a superior official of the Hungarian Government, died in 1845, and his widow, who lived in Vienna, with his three daughters, became the wife of his heir. At a very early age Kállay manifested a deep interest in politics, and especially in the Eastern Question. He travelled in Russia, European Turkey and Asia Minor, gaining a thorough knowledge of Greek, Turkish and several Slavonic languages. He became proficient in Servian as in his native tongue. In 1867 he entered the Hungarian Diet as Conservative deputy for Mühlbach (Szásy-Székes); in 1869 he was appointed consul-general at Belgrade; and in 1872 he visited Bosnia for the first time. His views on Balkan questions strongly influenced Count Andrassy, the Austro-Hungarian minister for foreign affairs. Leaving Belgrade in 1875, he resumed his seat in the Diet, and shortly afterwards founded the journal Kézé Nepe, or Eastern Folk, in which he defended the vigorous policy of Andrassy. After the Russo-Turkish War of 1877 he went to Philippopolis as Austro-Hungarian envoy extraordinary on the International Eastern Rumelian Commission. In 1879 he became a member, and soon afterwards first, departmental chief at the foreign office in Vienna. On the 4th of June 1882 he was appointed Imperial minister of finance and administrator of Bosnia and Herzegovina, and the distinction with which he filled this office, for a period of 21 years, is his chief title of fame (see Bosnia AND Herzegovina). Kállay was an honorary member of the Budapest and Vienna academies of science, and attained some eminence as a writer. He translated J. S. Mill's Liberty into Hungarian, adding an introductory critique; while his version of Galatea, a play by the Greek dramatist S. N. Basiliades (1843-1874), proved successful on the Hungarian stage. His monographs on Servian history (Geschichte der Serben) and on the Oriental ambition of Russia (Die Orientalpolitik Russlands) were translated into German by J. H. Schnickere, and published at Leipzig in 1878. But, in his own opinion, his masterpiece was an academic oration on the political and geographical position of Hungary as a link between East and West. In 1873 Kállay married the countess Vilma Bethlen, who bore him two daughters and a son. His popularity in Bosnia was partly due to the tact and personal charm of his wife. He died on the 13th of July 1903.

KALMAR (CALMAR), a seaport of Sweden on the Baltic coast, chief town of the district (län) of Kalmar, 250 m. S.S.W. of Stockholm by rail. Pop. (1900), 12,715. It lies opposite the island of Öland, mainly on two small islands, but partly on the mainland, where there is a pleasant park. The streets are regular, and most of the houses are of wood. The principal public edifices, however, are constructed of limestone from Öland, including the cathedral, built by Nicodemus Tessin and his son Nicodemus the second half of the 17th century. Kalmar, a town of great antiquity, was formerly strongly fortified, and there remains the island-fortress of Kalmarnahus, dating partly from the 12th century, but mainly from the 16th and 17th. It contains the beautiful chamber of King Eric XIV.

(d. 1577), an historical museum, and in the courtyard a fine ornate well-cover. This stronghold stood several sieges in the 14th, 15th and 16th centuries, and the town gives name to the treaty (Kalmar Union) by which Sweden, Norway and Denmark were united into one kingdom in 1397. Kalmar has an artificial harbour, and only the sea-dwellers, who trade chiefly in tobacco and rum, are of importance. The chief trades are shipbuilding and navigation, and tobacco and match factories, the produce of which, together with timber and oats, is exported. Shipbuilding is carried on.

KALMUCK, or Kalmyk Steppe, a territory or reservation belonging to the Kalmuk or Kalmyk Tatars, in the Russian government of Astrakhan, bounded by the Volga on the N.E., the Manych on the S.W., the Caspian Sea on the E., and the territory of the Don Cossacks on the N.W. Its area is 36,900 sq. m., to which has been added a second reservation of 3045 sq. m. on the left bank of the lower Volga. According to I. V. Mushketov, the Kalmuck Steppe must be divided into two parts, western and eastern. The former, occupied by the Ergeni hills, is deeply terraced by ravines and rises 300 and occasionally 630 ft. above the sea. It is built up of Tertiary deposits, belonging to the Sarmanian division of the Miocene period and covered with loam, black earth, and its escarpments represent the old shore-line of the Caspian. No Caspian deposits are found on or within the Ergeni hills. These hills exhibit the usual black earth flora, and they have a settled population. The eastern part of the steppe is a plain, lying for the most part 30 to 40 ft. below the level of the sea, and sloping gently towards the Volga. Post-Pliocene "Aral-Caspian deposits," containing the usual fossils (Hydriobaris, Neritina, eight species of Cardium, two of Dreissena, three of Adacina and Lithoglyphus caspius), attain thicknesses varying from 105 ft. to 7 or 10 ft., and disappear in places. Lacustrine and fluvialite deposits occur intermingled with the above. Large areas of moving sand exist near Enotayevsk, where high dunes or barmhans have been formed. A narrow tract of land along the coast of the Caspian, known as the "hillocks of Baer," is covered with hillocks elongated from west to east, perpendicularly to the coast-line, the spaces between them being filled with water or overgrown with thickets of reed, Salix, Ulmus campestris, almond trees, &c. An archipelago of little islands is thus formed close to the shore by these mounds, which are backed on the N. and N.W. by strings of salt lakes, partly desiccated. Small streams originate in the Ergenis, but are lost as soon as they reach the lowlands, where water can only be obtained from wells. The scanty vegetation is a mixture of the flora of south-east Russia and that of the deserts of central Asia. The steppe has an estimated population of 130,000 persons, living in over 27,700 kibitkas, or felt tents. There are over 60 Buddhist monasteries. Part of the Kalmucks are settled (chiefly in the hilly parts), the remainder being nomads. They breed horses, cattle and sheep, but suffer heavy losses from murrain. Some attempts at agriculture and tree-planting are being made. The breeding of livestock, fishing, and some domestic trades, chiefly carried on by the women, are the principal sources of maintenance.

See I. V. Mushketov, Geol. Researches in the Kalmuk Steppe in 1888-1889 (St Petersburg, 1894, in Russian); Kostenyoven's works (1868-1870); and other works quoted in penny's Geogr. Dict. and Russ. Encycl. Dict. (P. A. K.; J. T. B.)

KALNÓKY, GUSTAV SIEGMUND, COUNT (1832—1898), Austro-Hungarian statesman, was born at Lettowitz, in Moravia, on the 20th of December 1832, of an old Transylvanian family which had held county rank in Hungary from the 17th century. After spending some years in a Hussar regiment, in 1854 he entered the diplomatic service, and was governed by the instructions of the Foreign Office, in which he reached the rank of general in 1879. He was for the ten years 1860 to 1870 secretary of embassy at London, and then, after serving at Rome and Copenhagen, was in 1888 appointed ambassador at St Petersburg. His success in Russia procured for him, on the death of Baron v. Haymerle in 1881, the appointment of minister of foreign affairs for Austria-Hungary, a post which he held for fourteen years. Essentially a diplomatist,
KALOCSA—KALYAN

he took little or no part in the vexed internal affairs of the Dual Monarchy, and he came little before the public except at the annual statement on foreign affairs before the Delegations. His management of the affairs of his department was, however, very successful; he confirmed and maintained the alliance with Germany, which had been formed by his predecessors, and cooperated with Bismarck in the arrangements by which Italy joined the alliance. Kalnoky's special influence was seen in the improvement of Austrian relations with Russia, following on the meeting of the three emperors in September 1884 at Skiernevice, at which he was present. His Russophile policy caused some adverse criticism in Hungary. His friendliness for Russia did not, however, prevent him from strengthening the position of Austria as against Russia in the Balkan Peninsula by the establishment of a closer political and commercial understanding with Servia and Rumania. In 1885 he interfered after the battle of Slivitza to arrest the advance of the Bulgarians on Belgrade, but he lost influence in Servia after the abdication of King Milan. Though he kept aloof from the Clerical party, Kalnoky was a strong Catholic; and his sympathy for the difficulties of the Church caused adverse comment in Italy, when, in 1891, he stated in a speech before the Delegations that the question of the position of the pope was still unsettled. He subsequently explained that by this he did not refer to the Roman question, which was permanently settled, but to the possibility of the pope leaving Rome. The jealousy felt in Hungary against the Ultramontanes led to his fall. In 1895 a case of clerical interference in the internal affairs of Hungary by the nuncio Agliardi aroused a strong protest in the Hungarian parliament, and consequent differences between Bánffy, the Hungarian minister, and the minister for foreign affairs led to Kalnoky's resignation. He died on the 13th of February 1898 at Pézdelitz in Moravia.

KALOCSA, a town of Hungary, in the county of Pest-Plissolt-Kis-Kun, 88 m. S. of Budapest by rail. Pop. (1900), 11,372. It is situated in a marshy but highly productive district, near the left bank of the Danube, and was once of far greater importance than at present. Kalocsa is the see of one of the four Roman Catholic archbishops in Hungary. Amongst its buildings are a fine cathedral, the archiepiscopal palace, an astronomical observatory, a seminary for priests, and colleges for training of male and female teachers. The inhabitants of Kalocsa and its wide-spreading communal lands are chiefly employed in the cultivation of the vine, fruit, flax, hemp and cereals, in the capture of water-fowl and in fishing. Kalocsa is one of the oldest towns in Hungary. The present archbishop of Kalocsa (1735) is a development of about 30,000 said to have been founded in the year 1000 by King Stephen the Saint. It suffered much during the 16th century from the hordes of Ottomans who then ravaged the country. A large part of the town was destroyed by fire in 1875.

KALPI, or CALPE, a town of British India, in the Jalaul district of the United Provinces, on the right bank of the Jumna, 45 m. S.W. of Cawnpore. Pop. (1901), 10,139. It was founded, according to tradition, by Vasudeva, at the end of the 4th century A.D. In 1196 it fell to Kutub-ud-din, the viceroy of Mahomed Ghori, and during the subsequent Mahomedan period it played a large part in the annals of this part of India. About the middle of the 18th century it passed into the hands of the Mahrattas. It was captured by the British in 1803, and since 1806 has remained in British possession. In May 1858 Sir Hugh Rose (Lord Strathnairn) defeated here a force of about 10,000 rebels under the rani of Jhansi. Kalpi had a mint for copper coinage in the reign of Akbar; and the East India Company made it one of its principal stations for providing the “commercial investment.” The old town, which is beside the river, has ruins of a fort, and several temples of interest, while in the neighbourhood are many ancient tombs. There is a lofty modern tower ornamented with representations of the battles of the Ramayana. The new town lies away from the river to the south-east. Kalpi is still a centre of local trade (principally in grain, ghi and cotton), with a station on the Indian Midland railway from Jhansi to Cawnpore, which here crosses the Jumna. There are manufactures of sugar and paper.

KALUGA, a government of middle Russia, surrounded by those of Moscow, Smolensk, Orel and Tula, with an area of 11,042 sq. m. Its surface is an undulating plain, reaching 800 to 900 ft. in its highest parts, which lie in the S.W., and deeply watered by rivers, especially in the N.E. The Oka, a main tributary of the Volga, and its confluent (the Zhizdra and Ugra) drain all but a strip of country in the west, which is traversed by the Bolva, an affluent of the Dnieper. The government is built up mainly of carboniferous deposits (coal-bearing), with patches of the soft Jurassic clays and limestones which formerly covered them. Cretaceous deposits occur in the S.W., and Devonian limestones and shales crop out in the S.E. The government is covered with a thick layer of boulder clay in the north, with vast ridges and fields of boulders brought during the Glacial Period from Finland and the government of Olonets. Large areas in the middle are strown with flint boulders and patches of loess are seen farther south. The mean annual temperature is 41° F. Iron ores are the chief mineral wealth, nearly 40,000 persons being engaged in mining. Beds of coal occur in several places, and some of them are worked. Fireclay, china-clay, chalk, grindstone, pure quartz sand, phosphorite and copper are also extracted. Forests cover 20% of the surface, and occur chiefly in the south. The soil is not very suitable for agriculture, and owing to a rather dense population, considerable numbers of the inhabitants find occupation in industry, or as carriers and carpenters for one-half of the year at the Black Sea ports.

The population (1,025,703 in 1860) was 1,176,353 in 1897, nearly all Great Russians. There were 116 women to 100 men, and out of the total population 94,853 lived in towns. The estimated population in 1900 was 1,287,300. Of the total area over 4,000,000 acres are owned by the peasant communities, nearly 3,000,000 acres by private owners and some 250,000 by the Crown. The principal crops are rye, oats, barley, buckwheat, and potatoes. Hemp is grown for local use and export. Bees are kept. The chief non-agricultural industries are distilleries, iron-works, factories for cloth, cottons, paper, matches, leather and china, flour-mills and oil works. Large quantities of wooden wares are fabricated in the villages of the south. A considerable trade is carried on in hemp, hempseed and hempseed oil, corn and hides; and iron, machinery, leather, glass, chemicals and linen are exported. The government is divided into 11 districts, the chief towns of which, with their populations in 1897, are: Kaluga (49,728), Borovsk (8,407), Kozelsk (9,596), Likhin (1,776), Maloyaroslavets (2,500), Medyn (4,932), Medyn (366,400), Peremysl (262), Peremysl (5,956), Tarusa (10,689) and Zhizdra (5,969). (R. A. K. 1897. 38.)

KALUGA, the chief town of the above government, situated on the left bank of the Oka, 117 m. S.W. of Moscow by rail, in 54° 31' N. and 36° 6' E. Pop. (1870), 36,880; (1897), 40,728. It is the see of a Greek Orthodox bishop. The public buildings include the cathedral of the Trinity (rebuilt in the 19th century in place of an older edifice dating from 1687), two monastic establishments, an ecclesiastical seminary, and a lunatic asylum. The principal articles of industrial production are leather, oil, bast mats, wax candles, starch and Kaluga cakes. The first historical mention of Kaluga occurs in 1389; its incorporation with the principality of Moscow took place in 1518. In 1607 it was held by the second false Demetrius and vainly besieged for four months by the forces of Shitkui, who had ascended the Russian throne as Basil IV. on the death of the first false Demetrius. In 1610 Kaluga fell to the hands of the hetman or chief of the Zaporozhian Cossacks. Later two-thirds of its inhabitants were carried off by a plague; and in 1622 the whole place was laid waste by a conflagration. It recovered, however, in spite of several other conflagrations (especially in 1742 and 1754). On several occasions Kaluga was the residence of political prisoners; among others Shamyl, the Lezghian chief, spent his exile there (1859–1870).

KALYAN, a town of British India, in the Thana district of Bombay, situated 33 m. N.E. of Bombay city, where the two
main lines of the Great Indian Peninsula railway diverge. Pop. (1901), 10,749. There is a considerable industry of rice-huskling. Kalyan is known to have been the capital of a kingdom and a centre of sea-borne commerce in the early centuries of the Christian era. The oldest remains now existing are of Mahomedan times.

KAMA, or KAMADEYA, in Hindu mythology, the god of love. He is variously stated to have been the child of Brahma or Dharma (virtue). In the Rig Veda, Kama (desire) is described as the first movement that arose in the One after it had come into life through the power of fervour or abstraction. In the Atharva-Veda Kama does not mean sexual desire, but rather the yearning after the good of all created things. Later Kama is simply the Hindu Cupid. While attempting to lure Siva to sin, he was destroyed by a fiery glare of the goddess' third eye. Thus in Hindu poetry Kama is known as Ananga, the "bodiless god." Kama's wife Rati (voluptuousness) mourned him so greatly that Siva relented, and he was reborn as the child of Krishna and Rakmini. The baby was called Pradyumna (Cupid). He is represented armed with a bow of sugar-cane; it is strung with bees, and its five arrows are tipped with flowers which overcome the five senses. A fish adorns his flag, and he rides a parrot or sparrow, emblematic of lubricity.

KAMALÁ, a red powder formerly used in medicine as an anthelmintic and employed in India as a yellow dye. It is obtained from Mallotus philippinensis, Mull., a small euphorbiaceous tree from 20 to 45 ft. in height, distributed from southern Arabia in the west to north Australia and the Philippines in the east. In India kámálá has several ancient Sanskrit names, one of which, kapila, signifies dusky or tawny red. Under the name of wars, kanbil, or qinbil, kámálá appears to have been known to the Arabian physicians as a remedy for tapeworm and skin diseases as early as the 10th century, and indeed is mentioned by Paulus Aegineta still earlier. The drug was formerly in the Pharmacopoeia, but is no longer used.

KAMCHATKA, a peninsula of N.-E. Siberia, stretching from the land of the Chukchis S.S.W. for 750 m., with a width of from 80 to 300 m. (5° to 62° N., and 160° to 163° E.), between the Sea of Okhotsk and Bering Sea. It forms part of the Russian Maritime Province. Area, 104,260 sq. m.

The isthmus which connects the peninsula with the mainland is a flat tundra, sloping gently both ways. The mountain chain, which Ditar calls central, seems to be interrupted under 57° N. by a deep indentation corresponding to the valley of the Tighil. There too the hydrographical network, as well as the south-west to north-east strike of the clay-slates and metamorphic schists on Ditar’s map, seem to indicate the existence of two chains running south-west to north-east, parallel to the volcanic chain of S.-E. Kamchatka. Glaciers were not known till the year 1899, when they were discovered by the Byelaya and Usinskaya (54° 40') mountains. Thick Tertiary deposits, probably Miocene, overlie the middle portions of the west coast. The southern parts of the central range are composed of conglomerate, syenites, porphyries and crystalline slates, while in the north of Ichinskaya volcano, which is the highest summit of the peninsula (16,920 ft.), the mountains consist chiefly of Tertiary sandstones and old volcanic rocks. Coal-bearing clays containing fresh-water molluscs and dicotyledous plants, as also conglomerates, alternate with the sandstones in these Tertiary deposits. Amber is found in them. Very extensive layers of melaphyre and andesite, as also conglomerates and volcanic tufts, cover the middle portions of the peninsula. The south-eastern portion is occupied by a chain of volcanoes, running along the indented coast, from Cape Lopatka to Cape Cronotsky (54° 25' N.), and separated from the rest of the peninsula by the valleys of the Bystaya (an affluent of the Bolstraya, on the west coast) and Kamchatka rivers. Another chain of volcanoes runs from Ichinskaya (which burst into activity several times in the 18th and 19th centuries) to Shiveluch, seemingly parallel to the above but farther north. The two chains contain twelve active and twenty-six extinct volcanoes, from 7000 to more than 15,000 ft. high. The highest volcanoes are grouped under 56° N., and the highest of them, Klyuchevskaya (16,990 ft.), is in a state of almost incessant activity (notable outbreaks in 1726, 1737, 1841, 1853-1854, and 1866-1867), a flow of its lava having reached to Kamchatka river in 1853. The active Shiveluch (9900 ft.) is the last volcano of this chain. Several lakes and probably Avacha Bay are old craters. Copper, mercury, and iron ores, as also pure copper, ochre and sulphur, are found in the peninsula. The principal river is the Kamchatka (325 m. long), which flows first north-eastwards in a fertile longitudinal valley, and then, bending suddenly to the east, pierces the above-mentioned volcanic chain. The other rivers are the Tighil (135 m.) and the Bolstraya (120 m.), both flowing into the Sea of Okhotsk; and the Avacha, flowing into the Pacific.

The floating ice which accumulates in the northern parts of the Sea of Okhotsk and the cold current which flows along the west coast of the peninsula, its summers chilly, but in the winter is relatively warm, and temperatures below -46° F. are experienced only in the highlands of the interior and on the Okhotsk littoral. The average temperatures at Petropavlosk (53° N.) are: year 37° F., January 75°, July 58°; while in the valley of the Kamchatka the average temperature of the winter is 16°, and of the summer as high as 58° and 64°. Rain and snow are copious, and dense fogs enshroud the coast in summer; consequently the mountains are well clothed with timber and the meadows with grass, except in the tundras of the north. The natives eat extensively the bulbs of the Margoton lily, and weave cloth out of the fibres of the Kamchatka nettle. Delphinopeterus leucus, the sea-lion (Ostaria Stelleri), and walrus abound off the coasts. The sea-otter (Enhydra marinus) has been destroyed.

The population (5846 in 1870) was 7270 in 1900. The southern part of the peninsula is occupied by Kamchadals, who exhibit many attributes of the Mongolian race, but are more akin to the aborigines of N.E. Asia and N.W. America. Fishing (quantities of salmon enter the rivers) and hunting are their chief occupations. Dog-sledges are principally used as means of communication. The efforts of the government to introduce cattle-breeding have failed. The Kamchadale language cannot be assigned to any known group; its vocabulary is extremely poor. The purity of the tongue is best preserved by the people of the Pechinsk district on the W. coast. North of 57° N. the peninsula is peopled with Koryaks, settled and nomad, and Lamuts (Tunguses), who came from the W. coast of the Sea of Okhotsk. The principal Russian settlements are: Petropavlovsk, on the E. coast, on Avacha Bay, with an excellent roadstead; Verkhne-Kamchatsk and Nizhne-Kamchatsk in the valley of the Kamchatka river; Bolsheyetsk, on the Bolshaya; and Tighil, on the W. coast.

The Russians made their first settlements in Kamchatka in the beginning of the 17th century; in 1606 Atlasov founded Verkhne-Kamchatsk, and in 1704 Robev founded Bolsheyetsk. In 1720 a survey of the peninsula was undertaken; in 1725-1730 it was visited by Bering’s expedition; and in 1733-1745 it was the scene of the labours of the Krasheninnikov and Steller expedition.

KAME (a form of Scandinavian comb, hill), in physical geography, a short ridge or bunched mound of gravel or sand, "rumutuously stratified," occurring in connexion with glacial deposits, having been formed at the mouths of tongues under the ice. When the ice-sheet melts, these features, formerly concealed by the glacier, are revealed. They are common in the glaciated portions of the lower Scottish valleys. By some authorities the term "kame," or specifically "serpentine"
KAMENETS—KAMPEN

Kame,” is taken as synonymous with “esker,” which however is preferably to be applied to the long mound deposited within the ice-tunnel, not to the bunched mound at its mouth.

KAMENETS PODOLSKY, or Podolian Kamenets (Polish Kamieniec), a town of S.-W. Russia, chief town of the government of Podolia. It stands in 48° 40’ N. and 26° 30’ E., on a high, rocky bluff of the river Smotrich, a left-hand tributary of the Dniester, and near the Austrian frontier. Pop. (1863), 20,699; (1900) 39,113, of whom 50% were Jews and 30% Poles. Round the town lies a cluster of suburban villages, Polish Polwark, Russian Polwark, Zinkovtsa, Karvasarui, &c.; and on the opposite side of the river, accessible by a wooden bridge, stands the castle which long frowned defiance across the Dniester to Khotin in Bessarabia. Kamenets is the seat of a Russian bishopric, and it is the seat of the Tatars, a Turkish catholic cathedral of St Peter and St Paul, built in 1672, is distinguished by a minaret, recalling the time when it was used as a mosque by the Turks (1672–1699). The Greek cathedral of John the Baptist dates from the 16th century, but up to 1798 belonged to the Basilian monastery. Other buildings are the Orthodox Greek monastery of the Trinity, and the Catholic Armenian church (founded 1398), possessing a 14th-century missal and an image of the Virgin Mary that saw the Mongol invasion of 1239–1242. The town contains Orthodox Greek and Roman Catholic seminaries, Jewish colleges, and an archaeological museum for church antiquities, founded in 1890. Kamenets was laid waste by the Mongol leader Batu in 1240. In 1434 it was made the chief town of the province of Podolia. In the 15th and 16th centuries it suffered frequently from the invasion of Tartars, Moldavians and Turks; and in 1672 the hetman of the Cossacks, Doroschenko, assisted by Sultan Mahomed IV. of Turkey, made himself master of the place. Restored to Poland by the peace of Karlowitz (1699), it passed with Podolia to Russia in 1795. Here the Turks were defeated by the Poles in 1633, and here twenty years later peace was concluded between the same antagonists. The fortifications were demolished in 1813.

KAMENZ, a town in the kingdom of Saxony, on the Black Elster, 21 m. N.E. of Dresden, on a branch line of railway from Bischofswerda. Pop. (1900), 9726. It has four Evangelical churches, among them a Wendish one, and a handsome new town-hall with a library. The hospital is dedicated to the memory of Lessing, who was born here. A colossal bust of the poet in a glass case in the library, and a monument was raised to him on a neighbouring hill in 1864. The industries of Kamenz include wool-spinning, and the manufacture of cloth, glass, crockery and stone ware. Built about 1200, Kamenz, was known by the name Dreikrketach until the 16th century. In 1318 it passed to the mark of Brandenburg; in 1319 to Bohemia; and in 1635, after suffering much in the Hussite and Thirty Years’ wars, it came into the possession of Saxony. In 1766 and 1842 it was almost entirely burnt by fire.

KAMENZ is also the name of a village in Prussia, not far from Breslau; pop. 900. This is famous on account of its Cistercian monastery, founded in 1054. Of the house, which was closed in 1810, only a few buildings remain.

KAMMEN, or KAMM, or Kammin, or CAMMIN, or Cammen, a town in the Russian province of Pomerania, 2½ m. from the Baltic, on the Kammsinicke Bodden, a lake connected with the sea by the Dievenow. Pop. (1905), 5923. Among its four Evangelical churches, the cathedral and the church of St Mary are noteworthy. Iron-founding and brewing are carried on in the town, which has also some fishing and shipping. There is a steam-communication with Stettin, about 40 m. S.S.W. Kammin is of Wendish origin, and obtained municipal privileges in 1274. From 1539 to 1595 it was the seat of a bishopric, which at the latter date became a secular principality, being in 1645 incorporated with Brandenburg.

KAMMIN, or CAMMEN, or CAMMIN, a town in the Prussian province of Pomerania, 2½ m. from the Baltic, on the Kammsinicke Bodden, a lake connected with the sea by the Dievenow. Pop. (1905), 5923. Among its four Evangelical churches, the cathedral and the church of St Mary are noteworthy. Iron-founding and brewing are carried on in the town, which has also some fishing and shipping. There is a steam-communication with Stettin, about 40 m. S.S.W. Kammin is of Wendish origin, and obtained municipal privileges in 1274. From 1539 to 1595 it was the seat of a bishopric, which at the latter date became a secular principality, being in 1645 incorporated with Brandenburg.

KAMMEN, or CAMMIN, or CAMMIN, a town in the province of Overijssel, Holland, on the left bank of the Yssel, 3½ m. above its mouth, and a terminal railway station 8 m. N.W. of Zwolle. It has regular steamboat communication with Zwolle, Deventer, Amsterdam, and Enkhuisen. Pop. (1900), 16,664. Kampen is surrounded by beautiful gardens and promenades in the place of the old city walls, and has a fine river front. The four turreted gateways furnish excellent examples of 16th and 17th century architecture. Of the churches the Bovenkerk (“upper church”), or church of St Nicholas, ranks with the cathedral of Utrecht and the Janskerk at ’s Hertogenbosch as one of the three great medieval churches in Holland. It was begun in 1369, and has double aisles, ambulatory and radiating chapels, and contains some finely carved woodwork. The Roman Catholic Buitenkerk (“outer church”) is another a fine building of the 14th century, with good modern embellishments. There are some remains of the ancient churches and monasteries of Kampen; but the most remarkable building is the old town hall, which is unsurpassed in Holland. It dates from the 14th century, but was partly restored after a fire in 1543. The exterior is adorned with niched statues and beautiful iron trellis work round the windows. The old council-chamber is wainscoted in black oak, and contains a remarkable sculptured chimney-piece (1545) and fine wood carving. The town-hall contains the municipal library, collections of tapestries, portraits and antiquities, and valuable archives relating to the town and province. Kampen is the seat of a Christian Reformed theological school, a gymnasium, a higher burgher school, a municipal school of design, and a large orphanage. There are few or no local taxes, the municipal chest being filled by the revenues derived from the fertile delta-land, the Kampenland, which is always being built up at the mouth of
the Ysel. There is a considerable trade in dairy produce; and there are shipyards, rope-walks, a tool factory, cigar factories, paper mills, &c.

**KAMPTEE**, or **KAMTHI**, a town of British India, in the Nagpur district of the Central Provinces, just below the confluence of the Kanhon with the rivers Pench and Kolar; 10 m. N.E. of Nagpur by rail. Pop. (1901), 38,888, showing a continuous decrease since 1881. Kampa was founded in 1821, as a military cantonment in the neighbourhood of the native capital of Nagpur, and became an important centre of trade. Since the opening of the railway, trade has largely been diverted to Nagpur, and the garrison has recently been reduced. The town is well laid out with wide roads, gardens and tanks.

**KAMRUP**, a district of British India, in the Brahmaputra valley division of Eastern Bengal and Assam. The headquarters are at Gauhati. Area, 3858 sq. m.; pop. (1901), 589,187, showing a decrease of 7% in the decade. In the immediate neighbourhood of the Brahmaputra, there is low, and exposed to annual inundation. In this marshy tract reeds and canes flourish luxuriantly, and the only cultivation is that of rice. At a comparatively short distance from the river banks the ground begins to rise in undulating knolls towards the mountains of Bhutan on the north, and towards the Khasi hills on the south. The hills south of the Brahmaputra in some parts reach the height of 800 ft. The Brahmaputra, which divides the district into two nearly equal portions, is navigable by river steamers throughout the year, and receives several tributaries navigable by large native boats in the rainy season. The chief of these are the Manas, Chaul Khoya and Barnadi on the north, and the Kuli and Dibru on the south bank. There is a government forest preserve in the district and also a plantation where seedlings of teak, sal, sissu, sum, and nakh are reared, and experiments are being made with the caoutchouc tree. The population is entirely native, the only town with upwards of 3000 inhabitants being Gauhati (1,661). The temples of Hajo and Kamakhy are many pilgrims from all quarters. The staple crop of the district is rice, of which there are three crops. The indigenous manufactures are confined to the weaving of silk and cotton cloths for home use, and to the making of brass cups and plates. The cultivation and manufacture of tea by European capital is not very prosperous. The chief exports are rice, oilseeds, timber and cotton; the imports are fine rice, salt, piece goods, sugar, betel-nuts, coco-nuts and hardware. A section of the Assam-Bengal railway starts from Gauhati, and a branch of the Eastern Bengal railway has recently been opened to the opposite bank of the river. A metalled road runs due south from Gauhati to Shillong.

**KAMYSHTH**, a town of Russia, in the government of Saratov, 145 m. by river S.S.W. of the city of Saratov, on the right bank of the Volga. Pop. (1861), 5644; (1897), 15,034. Being the terminus of the railway to Tavolom, Moscow and the Volga, it is an important port for the export of cereals and salt from the Volga, and it imports timber and wooden wares. It is famous for its water-melons. Peter the Great built here a fort, which was known at first as Dmitrievsk, but acquired its present name in 1750.

**KANAKA**, a Polynesian word meaning “man,” used by Polynesians to describe themselves. Its ethnical value, never great, has been entirely destroyed by its indiscriminate use by the French to describe all South Sea islanders, whether black or brown. The corrupt French form canaque has been used by some English writers. The term came into prominence in 1854-1885 in connexion with the scandals arising over the kidnapping of South Sea islanders for enforced labour on the sugar plantations of north Queensland.

**KANARA**, or **CANAAR**, the name of two adjoining districts of British India: North Kanara in the presidency of Bombay, South Kanara in that of Madras. Both are on the western coast.

**North Kanara District** forms part of the southern division of Bombay. The administrative headquarters are at Karwar, which is also the chief seaport. Area, 3945 sq. m.; pop. (1901), 454,400, showing an increase of 2% in the decade. The trade of the interior, which used to pass down to the seaports, has been largely diverted by the opening of the Southern Mahattara railway. Along the coast rice is the chief crop, and coco-nut palms are also important. In the upland there are valuable gardens of areca palms, cardamoms and pepper. Rice and timber are exported, and sandalwood-cutting and salt manufacture are carried on. The main feature in the physical geography of the district is the range of the Western Ghats, which, running from north to south, divides it into two parts, a lowland or coast strip (Payanghat), and an upland plateau (Balaghat). The coast-line is only broken by the Karwar headland in the north, and by the estuaries of four rivers and the mouths of many smaller streams, through which the salt water finds an entrance into numerous lagoons winding several miles inland. The breadth of the low-lands varies from 5 to 15 miles. From this narrow belt rise a few smooth, flat-topped hills, from 200 to 300 ft. high; and at places it is crossed by lofty rugged, densely wooded spurs, which, starting from the main range, maintain almost to the coast a height of not less than 1000 ft. Among these hills lie well-tilled valleys of garden and rice land. The plateau of the Balaghat is irregular, varying from 1500 to 2000 ft. in height. In some parts the country rises into well-wooded knolls, in others it is studded by small, isolated, steep hills. Except on the banks of streams and in the open glades, the whole is one broad waste of woodland and forest. The open spaces are dotted with hamlets or parcelled out into rice clearings. Of the rivers flowing eastward from the watershed of the Sahyadri hills the only one of importance is the Warha or Varada, a tributary of the Tungabhadra. Of those that flow westwards, the four principal ones, proceeding from north to south, are the Kali, Gungawali, Tadri and Sharavati. The last of these forms the famous Gersoppa Falls. Extensive forests clothe the hills, and are conserved under the rules of the forest department.

**South Kanara District** has its headquarters at Mangalore. Area, 4021 sq. m.; pop. (1901), 1,134,713, showing an increase of 7% in the decade. The district is intersected by rivers, none of which exceeds 100 miles in length. All they take their rise in the Western Ghats, and many are navigable during the fair weather for from 15 to 25 miles from the coast. The chief of these streams are the Netravati, Gurupur and Chendragiri. Numerous groves of coco-nut palms extend along the coast, and green rice-fields are seen in every valley. The Western Ghats, rising to a height of 3000 to 6000 ft., fringe the eastern boundary. Forest land of great extent and value exists, but most of it is private property. Jungle products (besides timber) consist of bamboo, cardamoms, wild arrowroot, gail-nuts, gamboge, catechu, fibrous bark, cinnamon, gums, resin, dyes, honey and beeswax. The forests formerly abounded in game, which, however, is rapidly decreasing under incessant shooting. The staple crop is rice. The chief articles of import are wines, goods, cotton yarn, oils and salt. Tiles are manufactured in several places out of a fine potter’s clay. The Azhikal-Mangalore line of the Madras railway serves the district.

**KANARESE**, a language of the Dravidian family, spoken by about ten millions of people in southern India, chiefly in Mysore, Hyderabad, and the adjoining districts of Madras and Bombay. It has an ancient literature, written in an alphabet closely resembling that employed for Telugu. Since the 12th century the Kanarese-speaking people have largely adopted the Lingayat form of faith, which may be described as an anti-Brahmanical sect of Siva worshippers (see HINDUISM). Most of them are agriculturists, but they also engage actively in trade.

**KANARIS** (or **CANAARIS**), **CONSTANTINE** (1790-1877), Greek patriots who belonged to the class of coasting sailors who produced if possible the most honest, at least the bravest, and the most successful of the combatants in the cause of Greek independence. He belonged by birth to the little island of Psara, to the north-west of Chio. He first became prominent as the effective leader of the signal vengeance taken by the Greeks for the massacre at
KANAUJ—KANDAHAR

Chio in April 1822 by the Turkish Capitan Pasha. The commander of the force of fifty small vessels and eight fireships sent to assail the Turkish fleet was the navarch Miaoulis, but it was Kanaris who executed the attack with the fireships on the flagship of the Capitan Pasha on the night of the 18th of June 1822. The Turks were celebrating the feast of Bahram at the end of the Ramadan fast. Kanaris had two small brigs fitted as fireships, and thirty-six men. He was allowed to come close to the Turkish flagship, and succeeded in attacking his fireships to her, setting them on fire, and escaping with his party. The fire reached the powder and the flagship blew up, sending the Capitan Pasha and 2000 Turks into the air. Kanaris was undoubtedly aided by the almost incredible sloth and folly of his opponents, but he chose his time well, and the service of the fireships was always considered peculiarly dangerous. That Kanaris could carry out the venture with a volunteer party not belonging to a regularly disciplined service, not only proved him to be a clever partisan fighter, but showed that he was a leader of men. He repeated the feat at Tenedos in November of 1822, and was then considered to have disposed of nearly 4000 Turks in the two ventures. When his native island, Psara, was occupied by the Turks he maintained the island with the help of Miaoulis. He was no less distinguished in other attacks with fireships at Samos and Mytilene in 1824, which finally established an utter panic in the Turkish navy. His efforts to destroy the ships of Mehemet Ali at Alexandria in 1825 were defeated by contrary winds. When the Greeks tried to organize a regular navy he was appointed captain of the frigate "Hellas" in 1826. In politics he was a follower of Capo d'Istria. He helped to upset the government of King Otho and to establish his successor, was prime minister in 1864-1865, came back from retirement to preside over the ministry formed during the crisis of the Russo-Turkish war, and died in office on the 15th of September 1877.

KANAUJ, an ancient city of British India, in Farukhabad district, United Provinces, near the left bank of the Ganges. Pop. (1901), 18,852. Kanauj in early times formed the capital of a great Hindu kingdom. Its prosperity dates from a prehistoric period, and seems to have culminated about the 6th century under Harsha. In 1091 it fell before Mahmud of Ghazni, and again in 1104 before Mahommad Ghor. The existing ruins extend over the lands of five villages, occupying a semicircle fully 4 m. in diameter. No Hindu buildings remain intact; but the great mosque, constructed by Ibrahim Shah of Jaunpur in 1406 out of Hindu temples, is still called by Hindus "Sita's Kitchen." Kanauj, which is traditionally said to be derived from Kanyakulja (=the crooked maiden), has given its name to an important division of Brahmans in northern India. Hinduism in Lower Bengal also dates its origin from a Brahman migration southwards from this city, about 800 or 900. Kanauj is noted for the distilling of scents.

KANDAHAR, the largest city in Afghanistan, situated in 31° 37' N. lat. and 65° 47' E. long. 3400 ft. above the sea. It is 370 m. distant from Herat on the N.W., by Girishk and Farah—Girishk being 75 m., and Farah 225 m. from Kandahar. From Kabul, on the N.E., it is distant 315 m., by Kalat-i-Ghilzai and Ghazni—Kalat-i-Ghilzai being 85 m., and Ghazni 225 m. from Kandahar. To the Peshin valley the distance is about 110 m., and from Peshin to India the three principal routes measure approximately as follows: by the Zhob valley to Dera Ismail Khan, 300 m.; by the Bori valley to Dera Ghazi Khan, 275 m.; by Quetta and the Bolan to Dadar, 225 m.; and by Chaparr and Nari to Sibi, 230 m. The Indian railway system extends to New Chaman, within some 80 m. of Kandahar. Immediately round the city is a plain, highly cultivated and well populated to the south and west; but on the north-west barren, and bounded by a double line of hills, rising to about 1000 ft. above its general level, and breaking its dull monotony with irregular lines of scarped precipices, crowned with fantastic pinnacles and peaks. To the north-west these hills form the watershed between the valleys of the Arghandab and the Tarnak, until they are lost in the mountain masses of the Hazarajat—a wild region inhabited by tribes of Tatar origin, which effectually shuts off Kandahar from communication with the north. On the south-west they lose themselves in the sandy desert of Registan, which wraps itself round the plain of Kandahar, and forms another impassable barrier. But there is a break in these hills—a gate, as it were, to the great high road between Herat and India; and it is this gate which the fortress of Kandahar so effectually guards, and to which it owes its strategic importance. Other routes there are, open to trade, between Herat and northern India, either following the banks of the Hari Rud, or, more circuitously, through the valley of the Helmund to Kabul; or the line of hills between the Arghandab and the Tarnak may be crossed close to Kalat-i-Ghilzai; but of the two former it may be said that they are not ways open to the passage of Afghan armies owing to the hereditary hostility existing between the Afghan and the Persians generally, while the latter is not beyond striking distance from Kandahar. The one great high road from Herat and the Persian frontier to India is that which passes by Farah and crosses the Helmund at Girishk. Between Kandahar and India the road is comparatively open, and would be available for railway communication but for the jealous exclusiveness of the Afghans.

To the north-west, and parallel to the long ridges of the Tarnak watershed, stretches the great road to Kabul, traversed by Nott in 1842, and by Stewart and subsequently by Roberts in 1880. Between this and the direct route to Peshin is a road which leads through Maruf to the Kundar river and the Guleri pass into the plains of Hindustan at Dera Ismail Khan. This is the most direct route to northern India, but it involves the passage of some rough country, across the great watershed between the basins of the Helmund and the Indus. But the best known road from Kandahar to India is that which stretches across the series of open stony plains interspersed with rocky hills of irregular formation leading to the foot of the Kwaia Amran (Khojak) range, on the far side of which from Kandahar lies the valley of Peshin. The passage of the Kwaia Amran involves a rise and fall of some 2300 ft., but the range has been tunnelled and a railway now connects the frontier post of New Chaman with Quetta. Two lines of railway now connect Quetta with Sind, the one known as the Harnai loop, the other as the Bolan or Mashkafl line. They meet at Sibi (see BALUCHISTAN). Several roads to India have been developed through Baluchistan, but they are all dominated from Kandahar. Thus Kandahar becomes a sort of focus of all the direct routes converging from the wide-stretching western frontier of India towards Herat and Persia, and the fortress of Kandahar gives protection on the one hand to trade between Hindustan and Herat, and on the other it lends to Kabul security from invasion by way of Herat. Kandahar is approximately a square-built city, surrounded by a wall of about 34 m. circuit, and from 25 to 30 ft. high, with an average breadth of 25 ft. Outside the wall is a ditch 10 ft. wide. The houses and its defences are entirely mud-built. There are four main streets crossing each other nearly at right angles, the central "chouk" being covered with a dome. These streets are wide and bordered with trees, and are flanked by shops with open fronts and verandas. There are no buildings of any great pretension in Kandahar, a few of the more wealthy Hindus occupying the best houses. The tomb of Ahmad Shah is the only attempt at monumental architecture. This, with its rather handsome cupola, and the twelve minor tombs of Ahmad Shah's children grouped around, contains a few good specimens of fretwork and of inlaid decorations. The four streets of the city divide it into convenient quarters for the accommodation of its mixed population of Duransis, Ghilzais, Parsiwans and Kakars, numbering in all some 30,000 souls. Of these the greater proportion are the Parsiwans (chiefly Kizilbashes).
KANDI—KANDY

It is reckoned that there are 1600 shops and 172 mosques in the city. The mullahs of these mosques are generally men of considerable power.

The walls of the gates are pierced by the four principal gates: the gate of "Kabul," "Shikarpur," "Herat" and the "Idgha," opposite the four main streets, with two minor gates, called the Top Khana and the Bardaruni respectively, in the western half of the city. The Idgha gate passes through the citadel, which is a square-built enclosure with sides of about 260 yds. in length. The flank defences of the main wall are insufficient; indeed there is no pretence at scientific structure about any part of the defences; but the site of the city is well chosen for defence, and the water supply (drawn by canals from the Arghandab or derived from wells) is good.

About 4 m. west of the present city, stretched along the slopes of a rocky ridge, and extending into the plains at its foot, are the ruins of the ordinary "Babur" gates. The town, however, is not the site of ancient Babur. The present Babur gate is about the middle of the second half of the 18th century, and is not the Babur gate of the 16th century. The Babur gate is said to have been burned by Nadir Shah in 1738. From the top of the ridge a small citadel overlooks the half-buried ruins. On the north-east face of the hill forty steps, cut out of solid limestone, lead upward to a small, dome-roofed recess, which contains two large inscriptions in black relief on the rock, recording particulars of the history of Kandahar, and defining the vast extent of the kingdom of the emperor Babur.

Popular belief ascribes the foundation of the old city to Alexander the Great.

Although Kandahar has long ceased to be the seat of government, it is nevertheless by far the most important trade centre in Afghanistan, and the revenues of the Kandahar province assist largely in supporting the chief power at Kabul. The trade consists of a general movement of various goods peculiar to Kandahar, but the long lines of bazaars display goods from England, Russia, Hindustan, Persia and Turkistan, embracing a trade area as large probably as that of any city in Asia. The customs and town dues together amount to a sum equal to the land revenue of the Kandahar province, which is of considerable extent, stretching to Pul-i-Sangin, 10 m. south of Kalati-i-Ghilzai on the Kabul side, to the Helmond on the west, and to the Hazara country on the north. Although Fara was formerly governed from Kandahar since 1750. For instance the tariff on animals exposed for sale includes a charge of 5% ad valorem on slave girls, besides a charge of 1 rupee per head. The kidney fat of all sheep and the skins of all goats slaughtered in the public market, as well as the hides of the former before and after the manufacture of soap, which, with snuff, is a government monopoly. The imports consist chiefly of English goods, indigo, cloth, boots, leather, sugar, salt, iron and copper, from Hindustan, and of shirts, blankets, carpets, coats, shoes, silks, and carpets from Mesheh, Herat and Turkistan. The exports are wool, cotton, madder, cummin seed, asafotidia, silk, fruit and tobacco. The system of coinage is also of great importance; it is a 100 rupees gold and 1000 rupees silver; and the silver coinage is is 100 rupees worth of silver; 295 more English rupees are then melted, and the molten metal mixed with the 100 rupees silver; and out of this 808 Kandahari rupees are coined. As the Kandahari rupee is worth about 9 1/2 English rupees the government realizes a profit of 1%. Government accounts are kept in "Kham" rupees, the "Kham" being worth about five-sixths of a Kandahari rupee; in other words, it equals about the fraction 7/8 of a rupee.

Immediately to the south and west of Kandahar is a stretch of well-drained and highly cultivated country, but the valley of the Arghandab is the most fertile in the district, and, from the luxuriant abundance of its orchards and vineyards, offers the most striking secession from the general poverty of Afghanistan. The chief cultivation of the valley is pomegranates, an important feature in the landscape having the pomegranate trees and its "sirr" melons and grapes, being unequalled in quality by any in the East. The vines are grown on artificial banks, probably for want of water necessary to the cultivation of vines exported in a semi-dried state. Fruit, indeed, besides being largely exported, forms the staple food of the inhabitants throughout Afghanistan. The art of irrigation is so well understood that all the cultivable lands are at times cultivated, no river being allowed to run to waste. The plains about Kandahar are chiefly watered by canals drawn from the Arghandab near Baba-wali, and conducted through the same gap in the hills which admits the Herat roads. This river, with its numerous branches, form a considerable impediment to the movements of troops, not only immediately about Kandahar, but in all districts where the main rivers and streams are bordered by green banks of cultivation. Irrigation by "Kare" is also largely resorted to. The Kare is a system of underground channeling which usually taps a sub-surface water supply at the foot of some of the many rugged and apparently waterless hills which cover the face of the country. The water is not brought to the surface, but is carried over long distances by an artifical pipeline, then directed into the fields by small taps, and the shafts at intervals along the required course and connecting the shafts by tunneling. The general agricultural products of the country are wheat, barley, pulse, fruit, madder, asafotidia, laceerne, clover, tobacco, etc.

Of the mineral resources of the Kandahar district not much is known, but an abandoned gold mine exists about 2 m. north of the town. Some general idea of the resources of the Kandahar district may be gained from the fact that in 1846-1847, 55,000 rupees worth of everything except luxuries during the entire period of occupation in 1879-81; and that, in spite of the great strain thrown on these resources by the presence of the two armies of Ayub Khan and the British, and the capital for the expenses of a proportion of the troops and only a partial harvest the previous spring, the army was fed without much difficulty until the final evacuation, at one-third of the prices paid in Quetta for supplies drawn from India.

The town of Kandahar took its name from the Kandi, a noisy locality, near which Mahmud of Ghazni took it in the 11th century from the Afghans who then held it. In the beginning of the 15th century it was taken by Jenghiz Khan, and in the 14th by Timur. In 1507 it was captured by the emperor Babur, but shortly afterwards it fell again into Afghan hands. Babur was succeeded by his son Akbar, and in 1530 by Humayun, who agreed to cede Kandahar to Persia, but failed to keep his word, and the Persians besieged the place unsuccessfully. Thus it remained in the possession of the Moguls till 1625, when it was taken by Shah Jahan, who captured it after a long siege, and held it till 1636, when it was re-occupied by the Persians. It was taken by a French army in 1697, and by Nadir Shah in 1736, who restored the Persians to the possession of the city. Immediately on the news of his death Ahmad Shah (Abdali) seized Nadir Shah's treasure at Kandahar, and proclaimed himself king, with the consent, not only of the Afghans, but, strange to say, of the Huzaras and the Persians. He was assassinated in 1741, and his son, Nadir Shah, who succeeded him, occupied Kandahar with little difficulty. Nadir Shah occupied the city in 1747, and held it, his nephew and successor being deposed in 1750. He had the body of Babur exhumed and placed on the throne of Kandahar.

KANDY, a town near the centre of Ceylon, 75 m. from Colombo by rail, formerly the capital of a kingdom of the same name,
situated towards the heart of the island, 1718 ft. above the sea. It lies round the margin of an artificial lake constructed by the last king of Kandy in 1806, and is beautifully surrounded by hills. The most striking objects are the temples (of which twelve are Buddhist and four Brahman), the tombs of the Kandian kings, and the various buildings of the royal residence, partly allowed to fall into disrepair, partly utilized by the government. Of the temples the Dalada Malagawa is worthy of particular mention; it claims, as the name indicates, to be in possession of a Buddha tooth.

Kandy was occupied by the Portuguese in the 16th century and by the Dutch in 1763; but in both instances the native kings succeeded in shaking off the foreign yoke. The British got possession of the place in 1803, but the garrison afterwards capitulated and were massacred; and it was not till 1814—15 that the king was defeated and dethroned. The British authority was formally established by the convention of March 2, 1815. In 1848, owing to an attempt at rebellion, the town was for a time under martial law. It has been greatly improved of recent years. Sir William Gregory when governor did much to restore the ancient Kandy decorations, while the Victoria Jubilee Commemoration Building, including "Ferguson Memorial Hall," and two fine hotels, add to the improvements. The Royal Botanic Gardens are situated at Peradeniya, 3 m. distant. Kandy is a uniquely beautiful, highland, tropical town, full of interesting historical and Buddhist associations. A water supply and electric lighting have been introduced. Roman Catholic missions are active in the work of education, for which a large block of buildings has been erected. Church of England, Wesleyan and Baptist missions are also at work. The population of the town in 1900 was 26,386; of the district, 377,591. Average annual rainfall, 812 in.; average temperature, 75°.

There is a branch railway from Kandy, north to Matale, 17 m.

KANE, ELISHA KENT (1820-1857), American scientist and explorer, was born in Philadelphia, and was the son of the jurist John Kintzing Kane (1795-1858), a friend and supporter of Andrew Jackson, attorney-general of Pennsylvania in 1845-1846, U.S. judge of the Eastern District of Pennsylvania after 1846, and president of the American Philosophical Society in 1856-1858. Young Kane entered the university of Virginia and obtained the degree of M.D. in 1842, and in the following year entered the U.S. navy as surgeon. He had already acquired a considerable reputation in physiological research. The ship to which he was appointed was ordered to China, and he found opportunities during the voyage for indulging his passion for exploration, making a journey from Rio de Janeiro to the base of the Andes, and another from Bombay through India to Ceylon. On the arrival of the ship at its destination he provided a substitute for his post and crossed over to the island of Luzon, which he explored. In 1844 he left China, and, returning by India, Persia, Syria, Egypt, Greece, Austria, Germany and Switzerland, reached Paris in 1846. In that year he was ordered to the west coast of Africa, where he visited Dahomey, and contracted fever, which told severely on his constitution. On his return in 1847, he exchanged the naval for the military service, and was sent to join the U.S. army in Mexico, where he had some extraordinary adventures, and where he was again stricken with fever.

On the fitting out of the first Grinnell expedition, in 1850, to search for Sir John Franklin, Kane was appointed surgeon and naturalist under Lieut. de Haven, who commanded the ships "Advance" and "Rescue." The expedition, after an absence of sixteen months, during nine of which the ships were ice-bound, returned without having found any trace of the missing vessels. Kane was in feeble health, but worked on at his narrative of the expedition, which was published in 1854. He was determined not to give up his search for Franklin, and in spite of ill-health travelled through the States lecturing to obtain funds, and gave up his pay for twenty months. At length Henry Grinnell fitted out an expedition, in the little brig "Advance," of which Kane was given the command. She sailed in June 1853, and passing up Smith Sound at the head of Baffin Bay advanced into the enclosed sea which now bears the name of Kane Basin, thus establishing the Polar route of many future Arctic expeditions. Here, off the coast of Greenland, the expedition passed two winters, accomplishing much useful geographical, as well as scientific, work, including the attainment of what was to remain for sixteen years the highest northern latitude, 86° 35' N. (June 1854). From this point a large area of open water was seen which was believed to be an "open Polar Sea," a chimera which played an important and delusive rôle in subsequent explorations. After enduring the greatest hardships it was resolved to abandon the ship, Upernivik being reached on the 5th of August 1855, whence a relief expedition brought the explorers home. Medals were authorized by Congress, and in the following year Dr Kane received the founder's medal of the Royal Geographical Society, and, two years later, a gold medal from the Paris Geographical Society. He published The Second Grinnell Expedition in 1856. Dr Kane died at Havana on the 16th of February 1857, at the age of thirty-seven. Between his first and second arctic voyages he made the acquaintance of the Fox family, the spiritualists. With one of the daughters, Margaret, he carried on a long correspondence, which was afterwards published by the lady, who declared that they were privately married.

See Biography of E. K. Kane, by William Elder (1888); Life of E. K. Kane and other American Explorers, by S. M. Smucker (1858); The Lone-Life of Dr Kane, containing the Correspondence and a History of the Engagement and Secret Marriage between E. K. Kane and Miss Fox (New York, 1866); Discoveries of Dr Kane," in Jour. of the Roy. Geog. Soc., vol. xxiii. (reprinted in R. G. S. Arctic Papers of 1875).

KANE, a borough of McKean county, Pennsylvania, U.S.A., about 90 m. E.S.E. of Erie. Pop. (1890), 2044; (1900), 2506; (971 foreign-born); (1910) 6626. It is served by the Pennsylvania, the Baltimore & Ohio, the Kane & Elk, and the Big Level & Kane railroads. It is situated about two miles above the sea in a region producing natural gas, oil, lumber and silica, and has some reputation as a summer resort. The borough has manufactories of window glass, plate glass and bottles, and repair shops of the Pennsylvania railroad. Kane was settled in 1859, and was incorporated as a borough in 1887. It was named in honour of its founder Gen. Thomas L. Kane (1822-1883), brother of Elisha Kent Kane.

KANGAROO, the universally accepted, though not apparently the native, designation of the more typical representatives of the marsupial family Macroperdidae (see Marsupialia). Although intimately connected with the cuscuses and phalangers by means of the musk-kangaroo, the kangaroos and wallabies, together with the rat-kangaroos, are easily distinguishable from other diprotodont marsupials by their general conformation, and by peculiarities in the structure of their limbs, teeth and other organs. They vary in size from that of a large domestic cat to a small rabbit. The head, especially in the larger species, is small, compared with the rest of the body, and tapers forward to the muzzle. The shoulders and fore-limbs are feebly developed, and the hind-limbs of disproportionate strength and magnitude, which give the animals a peculiarly awkward appearance when moving about on all-fours; as they occasionally do when feeding. Rapid progression is, however, performed only by the powerful hind-limbs, the animals covering the ground by a series of immense bounds, during which the fore part of the body is inclined forwards, and balanced by the long, strong and tapering tail, which is carried horizontally backwards. When not moving, they often assume a perfectly upright position, the tail aiding the two hind-legs to form a tripod, and the front-limbs dangling by the side of the chest. This position gives full scope for the senses of sight, hearing and smell to warn of the approach of enemies. The fore-paws have five digits, of which the fourth is the forward or claw. The hind-foot is extremely long, narrow and (except in the musk-kangaroo) without the first toe. It consists mainly of one very large and strong toe, corresponding to the fourth of the human foot, ending in a strong curved and pointed claw.
(fig. 2). Close to the outer side of this lies a smaller fifth digit, and to the inner side two excessively slender toes (the second and third), bound together almost to the extremity in a common

and the radius and ulna are well developed, allowing of considerable freedom of motion of the fore-paw. The pelvis has large epipubic or "marsupial" bones. The femur is short, and the tibia and fibula of great length, as is the foot, the whole of which is applied to the ground when the animal is at rest in the upright position.

The stomach is large and very complex, its walls being pucked by longitudinal muscular bands into a number of folds. The alimentary canal is long, and the caecum well developed. The young (which, as in other marsupials, leave the uterus in an extremely small and imperfect condition) are placed in the pouch as soon as they are born; and to this they resort temporarily for shelter for some time after they are able to run, jump and feed upon the herbage which forms the nourishment of the parent. During the early period of their sojourn in the pouch, the blind, naked, helpless young creatures (which in the great kangaroo scarcely exceed an inch in length) are attached by their mouths to the nipple of the mother, and are fed by milk injected into their stomach by the contraction of the muscle covering the mammary gland. In this stage of existence the elongated upper part of the larynx projects into the posterior nares, and so maintains a free communication between the lungs and the external surface, independently of the mouth and gullet, thus averting danger of suffocation while the milk is passing down the gullet.

Kangaroos are vegetable-feeders, browsing on grass and various kinds of herbage, but the smaller species also eat

roots. They are naturally timid and inoffensive, but the larger kinds when hard pressed will turn and defend themselves, sometimes killing a dog by grasping it in their fore-paws, and inflicting terrible wounds with the sharp claws of their powerful hind-legs, supporting themselves meanwhile upon the tail. The majority are inhabitants of Australia and Tasmania, forming one of the most prominent and characteristic features of the fauna of these lands, and performing the part of the deer and antelopes of other parts of the world. They were important sources of food-supply to the natives, and are hunted by the colonists, both for sport and on account of the damage they do in consuming grass required for cattle and sheep. A few species are found in New Guinea, and the adjacent islands, which belong, in the zoological sense, to the Australian province, beyond the bounds of which none occurs.

The more typical representatives of the group constitute the sub-family Macropodinae, in which the cutting-edges of the upper incisors are nearly level, or the first pair but slightly longer than the others (fig. 3). The canines are rudimentary and often wanting. The molars are usually not longer (from before backwards) than the anterior premolars, and less compressed than in the next section. The crowns of the molars have two prominent transverse ridges. The fore-limbs are small with subequal toes, armed with strong, moderately long, incurved claws. Hind-limbs very long and strongly made. Head small, with more or less elongated muzzle. Ears generally rather long and ovate.
The typical genus Macropus, in which the muzzle is generally naked, the ears large, the fur on the nape of the neck usually directed backwards, the claw of the fourth hind-toe very large, and the tail stout and tapering, includes a large number of species. Among these, the great grey kangaroo (M. giganteus, fig. 1) deserves special mention on account of having been discovered during Captain Cook’s first voyage in 1770. The great red kangaroo (M. rufus) is about the same size, while other large species are M. antilopenus and M. robustus. The red-necked wallaby (M. rufogriseus) constitutes a group of smaller-sized species; while the smaller wallabies, such as the Flinders (q.e.) (M. rufigularis) and M. thektris, constitute yet another section. The genus ranges from the eastern Australian-Malay islands to New Guinea.

Nearly allied are the rock-wallabies of Australia and Tasmania, constituting the genus Petrogale, chiefly distinguished by the thinner tail being more densely haired and terminating in a tuff. Well-known species are P. penicillata, P. antilopenus, and P. lateralis. The few species of nail-tailed wallabies, Onychogalea, which are confined to the Australian mainland, take their name from the presence of a horn spur at the end of the tail, and are further distinguished by the hairy muzzle, O. anguifier, O. frascati, and O. latistriatus represent species of Petrogale, L. rufus and L. constictis, constitute a genus with the same distribution as the last, and likewise with a hairy muzzle, but with a rather short, evenly furled tail, devoid of a spur. They are great leapers and slip runners, mostly frequenting open stony plains.

More distinct is the Papuan genus Dorcopsis, as typified by D. muelleri, although it is to some extent connected with Macropus by D. mclayi. The muzzle is naked, the fur on the nape of the neck directed more or less completely forward, and the hind-limbs are less disproportionately elongated. Perhaps, however, the most distinctive feature of the genus is the great fore-and-aft length of the penultimate premolar in both jaws. Other species are D. ruficaudata, D. musculus, which belong to the tribe Petrogaleini, and include the Papuan Dendrolagus inustus, D. urvissus, D. dorianus, D. benzies, and D. maximus, and the North Queensland D. lumholtzi, the reduction in the length of the hind-limbs is carried to a still further degree, so that the proportions of the fore and hind limbs are almost normal. The genus agrees with Dorcopsis in the direction of the hair on the neck, but the muzzle is only partially hairy, and the elongation of the penultimate premolar is less. These features as in Macropus and its immediate allies may be traced to the ground to descend to the last. Lastly, we have the hinged wallaby, Lagothrophus fasciatus, of Western Australia, a small species characterized by its naked muzzle, the presence of long bristles on the hind-foot, which cover the claws, and bands of dark reverse bands on the lower part of the back. The skull has a remarkably narrow, and pointed muzzle and much inflated auditory bullae: while the two halves of the lower jaw are firmly welded together at their junction, effectually preventing the slasher-like action of the upper incisors distinctive of Macropus and its immediate allies. As regards the teeth, canines are wanting, and the penultimate upper premolar is short, derived, before backwards, with a distinct ledge on the inner side.

In the rat-kangaroos, or kangaroo-rats, as they are called in Australia, constituting the sub-family Petroioidae, the first upper incisor is narrow, curved, and much exceeds the others in length; the upper canines are persistent, flattened, blunt and slightly curved, and the two premolars of both jaws have large, smooth, and pressed crowns, with a nearly straight or slightly concave free cutting edge, and both outer and inner surfaces usually marked by a series of parallel, vertical grooves and ridges. Molars with quadrat crowns and a blunt conical cusps at each corner, the last notable, smaller than the rest, sometimes rudimentary or absent. Forefeet narrow; the three middle toes considerably exceeding the first and fifth in length and their claws long, compressed and but slightly curved. mdbll in Macropus. Tail long, and sometimes partially prehensile when is used for carrying bundles of grass with which these animals build their nests. The group is confined to Australia and Tasmania, and all the species are relatively small.

In the members of the typical genus Potorous (formerly known as Heterolagus) the head is long and slender, with a slender, the small ears somewhat flattened; while the ridges on the first two premolars are few and perpendicular, and there are large vacuities on the palate. The tarsus is short and the muzzle naked. The genus includes Potorous, P. unicinctus, and P. bernardi, the latter on the other hand, is the head shorter and wider, with smaller and more rounded ears, and more swollen auditory bullae. The ridges on the first two premolars are also more numerous and somewhat oblique. The species include B. lesueuri, B. guimardii and B. cuniculata. The South Australian Caloprymnus campestris represents a genus nearly akin to the last, but with the edge of the hairy border of the bare muzzle much more developed in the middle line, still more swollen auditory bullae, of various size, and postero-medial nasals and long anterior vacuities on the palate. The list is completed by Cephyrymnus rufragens, which differs from all the others by the hairy muzzle, and the absence of inflation in the auditory bullae, and of vacuities in the palate.

Perhaps, however, the most interesting member of the whole group is the tiny muscle kangaroo (Hypopodymnon moschatus) of north-east Australia, which alone represents the sub-family Hypopodymini, characterized by the presence of an opposable toe on the hind-foot, and the presence of a penultimate upper premolar, as well as the small and feeble claws. In all these features the muscle-kangaroo connects the Macropoidea with the Phalangeridae. The other teeth are like those of the rat-kangaroos.

KANGAROO-RAT, a name applied in different parts of the world to two widely different groups of mammals. In Australia it is used to denote the small kangaroo-like marsupials technically known as Potoroiaceae, which zoologists prefer to call rat-kangaroos (see Marsupialia and Kangaroo). In North America it is employed for certain small jumping rat-like rodents nearly allied to the pocket-gophers and belonging to the family Geomyidae. Kangaroo-rats in this latter class are represented by three North American genera, of which Dipodomys phillipsii, Cricetodipus agilis and Microdipodops megalophalus may respectively be taken as examples. Resembling pocket-gophers in the processes of cheek pouches and of vacuities in the palate, are distinguished by their elongated hind-limbs and tails, large eyes, well-developed ears and general jerboa-like appearance and habits. The upper incisor teeth are also relatively narrower, and there are important differences in the skull. The cheek-teeth are rootless in kangaroo-rats, but they develop roots in the pocket-mice. The former inhabit open, sandy districts, where they burrow beneath rocks or stones, and hop about like jerboas; their food consisting of grasses and other plants.

KANGAVAR, a small district of Persia, situated between Hamadan and Kermanshah, and, being held in fief by the family of a deceased court official, forming a separate government. The district is very fertile and contains 30 villages. Its revenues amount to about £500 per annum, and its chief place is the large village of Kangavar, which has a population of about 2500 and is a market from Hamadan on the high road to Kermanshah.

KANGRA, a town and district of British India, in the Jullundur division of the Punjab. The town, sometimes called Nagarkot, is situated 2400 ft. above the sea. Pop. (1901), 4746. The Katoch rajahs had a stronghold here, with a fort and rich temples. Mahmud of Ghazni took the fort in 1000 and from one of the temples called off a vast treasure. In 1356 Kangra was again plundered, by Feroz Shah. The temple of Devi Bajreshee was one of the oldest and wealthiest in northern India. It was destroyed, together with the fort and the town, by an earthquake on the 4th of April 1905, when 1339 lives were lost in this place alone, and about 20,000 elsewhere. In 1855 the headquarters of the district were removed to the sanitarium of Dharamsala.

The district of Kangra extends from the Jullundur Dosh far into the southern ranges of the Himalaya. Besides some Rajput states, annexed after the Sikh wars, it includes Lahul, Spiti and Kalu, which are essentially Tibetan. The Beas is the only important river. Area, 978 sq. m., of which Kangra proper has only 2725. Pop. (1901), 768,124; average density 77 persons per sq. m., but with only one person per sq. m. in Spiti.

---

Fig. 4.—Skull and teeth of Lesueuri’s Rat-Kangaroo (Betongia lesueuri). Upper canine. Other teeth as in fig. 3. The anterior premolar has been shed.
cultivation was introduced into Kangra about 1850. The Palampur fair, established by government with a view to fostering commerce with central Asia, attracts a small concourse of Yarkandi merchants. The Lahulis carry on an enterprising trade with Ladakhi and countries beyond the frontier, by means of pack sheep and goats. Rice, tea, potatoes, opium, spices, wool and honey are the chief exports.

*See Kangra District Gazetteer* (Lahore, 1906).

KANISHKA, king of Kabul, Kashmir, and north-western India in the 2nd century A.D., was a Tatar of the Kushan tribe, one of the five into which the Yue-chi Tatars were divided. His dominions extended as far down into India as Madurâ, and probably as far to the north-west as Bokhâra. Private inscriptions found in the Punjab and Sind, in the Yusufzai district and at Madurâ, and referred by European scholars to his reign, are dated in the years five to twenty-eight of an unknown era. It is the references by Chinese historians to the Yue-chi tribes before their invasion into India, together with conclusions drawn from the history of art and literature in his reign, that render the date given the most probable. Kanishka's predecessors on the throne were Pagans; but shortly after his accession he professed himself, probably from political reasons, a Buddhist. He spent vast sums in the construction of Buddhist monuments; and under his auspices the fourth Buddhist council, the council of Jâlandhara (Jullundur) was convened under the presidency of Vusumitra. At this council three treatises, commentaries on the Canon, one on each of the three baskets into which it is divided, were composed. King Kanishka had these treatises, when completed and revised by Asvaghosa, written out on copper plates, and enclosed the latter in stone boxes, which he placed in a memorial mound. For some centuries afterwards these works survived in India; but they exist now only in Chinese translations or adaptations. We are not told in what language they were written. It was probably Sanskrit (not Pâli, the language of the Canon)—just as in Europe we have works of exegetical commentary composed, in Latin, on the basis of the Testament and Septuagint in Greek. This change of the language used as a medium of literary intercourse was partly the cause, partly the effect, of a complete revolution in the intellectual life of India. The reign of Kanishka was certainly the turning-point in this remarkable change. It has been suggested with great plausibility, that the wide extent of his domains facilitated the incursion into India of Western modes of thought; and thus led in the first place to the corruption and gradual decline of Buddhism, and secondly to the gradual rise of Hinduism. Only the English translations of the books written at the time will enable us to say whether this hypothesis—for at present it is nothing more—is really a sufficient explanation of the very important results of his reign. In any case it was a migration of nomad hordes in Central Asia that led, in Europe, to the downfall of the Roman civilization; and then, through the conversion of the invaders, to medieval conditions of life and thought. It was the very same migration of nomad hordes that led, in India, to the downfall of the Buddhist civilization; and subsequently, after the conversion of the Saka and Tarâ invaders, to medieval Hinduism. As India was nearer to the starting-point of the migration, its results were felt there somewhat sooner.

KANKAKEE, a city and the county-seat of Kankakee county, Illinois, U.S.A., in the N.E. part of the state, on the Kankakee river, 56 m S. of Chicago. Pop. (1900), 13,555, of whom 3,346 were foreign-born; (1910 census), 13,086. Kankakee is served by the Cleveland, Cincinnati, Chicago & St Louis, the Illinois Central, and the Chicago, Indiana & Southern (controlled by the New York Central) railways. It is the seat of the Eastern Hospital for the Insane (1879) a state institution; St Joseph's Seminary (Roman Catholic) and a Conservatory of Music. At Bourbonnais Grove, 3 m. N. of Kankakee is St. Viateur's College (founded 1868), a well-known Roman Catholic divinity school, and Notre Dame Academy, another Catholic institution. The city has a public library and four large parks; in Court House Square there is a monument erected by popular subscription in honour of the soldiers from Kankakee county who died in the Civil War. There are rock quarries here, and the city manufactures sewing machines, musical instruments, especially pianos, foundry and machine shop products, agricultural implements and furniture. The total value of the factory product in 1905 was $2,089,143, an increase of 222 % since 1900. Kankakee is also a shipping point for agricultural products. It was laid out as a town in 1832; was platted as the town of Bourbonnais in 1833, when Kankakee county was first organized; was chartered as the city of Kankakee in 1855, and was re-chartered in 1892.

KANKER, a feudatory state of India, within the Central Provinces; area, 1,429 sq. m.; pop. (1901), 103,536; estimated revenue, £1,000. It is a hilly tract, containing the headwaters of the Mahanadi. The extensive forests have recently been made profitable by the opening of a branch railway. The residence of the raja, who is of an old Rajput family though ruling over Gonds, is at Kanker (pop. 3,900).

KANO, one of the most important provinces of the British protectorate of Northern Nigeria. It includes the ancient emirates of Kano, Daura and Kazaure, and covers an area of about 11,000 sq. m. The sub-province of Kano was incorporated with Kano in 1905, and is included within this area. The population of the double province is estimated at about 2,250,000.

Kano was one of the original seven Hausa states. Written annals carry the record of its kings back to about A.D. 900. Legendary history goes back much further. It was conquered by the Songhay (Songhay) in the early part of the 16th century, and more than once appears to have made at least partial submission to Bornu. Mahommadianism was introduced at a period which, according to the system adopted for the dating of the annals, must have been either in the 12th or the 14th century. The Hausa system of government and taxation was adopted by the Fula when in the early part of the 17th century that Mahommadian people overran the Hausa states. It has been erroneously stated that the Fula imposed Mahommadianism on the Hausa states. The fact that they adopted the existing system of government and taxation, which are based upon Koranic law, would in itself be sufficient proof that this was not the case. But the annals of Kano distinctly record the introduction and describe the development of Mahommadianism at an early period of local history.

The capital is the city of Kano, situated in lat. N. and 8° 20′ E., 220 m. S.S.E. of Sokoto and 500 N.E. of Lagos. It is built on an open plain, and is encompassed by a wall 11 m. in perimeter and pierced by thirteen gates. The wall is from 30 to 50 ft. high and about 3 ft. thick at the base. Round the wall is a deep double ditch, a dwarf wall running along its central part. The gates are simply cow-hides, and are set in massive entrance towers. Only about a third of the area (72 sq. m.) enclosed by the walls is inhabited nor was the whole space ever occupied by buildings, the intention of the founders of the city being to wall in ground sufficient to grow food for the inhabitants during a siege. The arable land within the city is mainly on the west and north; only to the south-east do the houses come right to the walls. Within the walls are two steep hills, one, Dala, about 120 ft. high being the most ancient quarter of the town. Dala lies north-west. To its east is a great pond, the Jakara, 14 m. long, and by its north-east shore is the market of the Arab merchants. Here also was the slave market. The palace of the emir, in front of which is a large open space, is in the Fula quarter in the south-east of the city. The palace consists of a number of buildings covering 33 acres and surrounded by a wall 20 to 30 ft. high. The architecture of the city is not without merit. The houses are built of clay with (generally) flat roofs impervious to fire. Traces of Moorish influence are evident and the horseshoe arch is common. The
The audience hall of the emir's palace—25 ft. sq. and 18 ft. high—is decorated with designs in black, white, green and yellow, the yellow designs (formed of micaceous sand) glistening like gold. The dome-shaped roof is supported by twenty arches.

The city is divided into fourteen quarters, each presided over by a headman, and inhabited by separate sections of the community. It is probably the greatest commercial city in the central Sudan. Other towns, like Zaria, may do as much trade, but Kano is pre-eminent as a manufacturing centre. The chief industry is the weaving of cloth from native grown cotton. Leather goods of all kinds are also manufactured, and from Kano come most of the "morocco leather" goods on the European markets. Dyeing is another large trade, as is the preparation of indigo. Of traders there are four distinct classes. They are:

(1) Arabs from Tripoli, who export ostrich feathers, skins and ivory, and bring in burnstones, scents, sweets, tea, sugar, &c.;
(2) Salaga merchants who import kola nuts from the hinterland of the Guinea Coast, taking in exchange cloth and live stock and leather and other goods;
(3) the Ashenawa traders, who come from the oases of Asen or Air with camels laden with salt and "potash" (i.e. sodium carbonates), and with herds of cattle and sheep, receiving in return cotton and hardware and kolas;
(4) the Hauza traders, who carry on a thriving trade in bush goods, and despatches caravans to Illorin and other places, where the Kano goods, the "potash" and other merchandise are exchanged for kolas and European goods. The "potash" finds a ready sale among the Yorubas, being largely used for cooking purposes.

In Kano itself is a great market for livestock: camels, horses, oxen, asses and goats being on sale.

Besides Hausa, who represent the indigenous population, there are large colonies of Kanuri (from Bornu) and Nupeans in Kano. The Fula form the aristocratic class. The population is said to amount to 100,000. About a mile and a half east of Kano is Nassarawa, formerly the emir's suburban residence, but since 1902 the British Residency and barracks.

The city of Kano appears on the map of the Arab geographer, Idrisi, A.D. 1145, and the hill of Dala is mentioned in the earliest records as the original site of Kano. Barth, however, concluded that the present town does not date earlier than the second half of the 16th century, and that before the rise of the Fula power (c. 1800) scarcely any great Arab merchant ever visited Kano. The present town may be the successor of an older town occupying a position of similar pre-eminence. Kano submitted to the Fula without much resistance, and under them in the first half of the 19th century flourished greatly. It was visited by Hugh Clapperton, an English officer, in 1824. Edward John Barbiere visited Kano in 1854.

Barth's description of the wealth and importance of the city attracted great attention in Europe, and Kano was subsequently visited by several travellers, missionaries, and students of Hausa, but was permitted to live in peace by the British until the closing years of the century. Kano became the centre of resistance to British influence, and the emir, Aliu, was the most inveterate of Fula slave raiders. In February 1903 the city was captured by a British force under Colonel W. M. Norland, and a new emir, Abubakar, a brother of Aliu, installed.

After the occupation by the British in 1903 the province was organized for administration on the same system as that adopted throughout northern Nigeria. The emir on his installation takes an oath of allegiance to the British crown and accepts the position of a chief of the first class under British rule. A resident is placed at his court, and assistant residents have their headquarters in the administrative districts of the province. British courts of justice are reconstituted, and a resident is accountable to the government of the province. Taxation is assessed under British supervision and paid into the native treasury. A fixed portion is paid by the emir to the British government. The emir is not allowed to maintain a standing army, and the military dignity is the property of the British government. The conditions of appointment of the emirs are fully laid down in the terms accepted at Sokoto on the close of the Sokoto-Kano campaign of 1903. Since the introduction of British rule there has been great progress in the interior of the province, and the emirs have co-operated, and often acted in concert, with the British and proved himself a ruler of remarkable ability and intelligence. He was indefatigable in dispensing justice, and himself presided over a native court in which he disposed of fifty to a hundred cases a month. He also took an active interest in the reform and reorganization of the system of taxation, and in the opening of the country to trade. He further showed himself helpful in arranging difficulties which at times arose in connexion with the lesser chiefs of his province.

The province of Kano is generally fertile. For a radius of 30 m. round the capital the country is closely cultivated and densely populated, with some 40 walled towns and with villages and hamlets hardly a mile apart. Kano district proper contains 170 walled towns and about 450 villages. There are many streams, but water is chiefly obtained from wells 15 to 40 ft. deep. The principal crops are African grains, wheat, onions, cotton, tobacco, indigo, sugar-cane, cassava, &c. The population is chiefly agricultural, but also commercial and industrial. The chief industries are weaving, leather-making, dyeing, and working in iron and pottery. Cattle abound, and camels are extensively used. (See Nigeria: History; and Sokoto.)

Consult the Travels of Heinrich Barth (new ed., London, 1890); Kajijais (known as the "Sunflower State"), the central commonwealth of the United States of America, lying between 37° and 40° N. lat. and between 94° 38' and 102° 34' W. long. (i.e. 25° W. long. from Washington). It is bounded on the N. by Nebraska, on the E. by Missouri, on the S. by Oklahoma, and on the W. by Colorado. The state is nearly rectangular in shape, with a breadth of about 210 m. from N. to S. and a length of about 410 m. from E. to W. It contains an area of 82,158 sq. m. (including 38 sq. m. of water surface).

Physiography.—Three physiographic regions may be distinguished within the state. In the first, a small portion of the Ozark uplifts is found in the extreme south-western corner, the second, the Prairie Plains, covering approximately the east third of the state; the third, the Great Plains, covering the remaining area. Between the last two there is only the most gradual transition. The entire state is indeed practically an undulating plain, gently sloping from west to east at an average of about 7 ft. per mile.

There is also an inclination in the eastern half from north to south, as indicated by the course of the rivers, most of which flow south-easterly (the Kansas, with its general easterly course, is the principal exception), the north-west corner being the highest portion of the state. The lowest point in the state is its south-eastern part, in Montgomery county, is 725 ft. above sea level.

The average elevation of the east boundary is about 850 ft. while contour lines of 3500-3000 ft. run near the west border. Somewhat more than half the total area is below 2000 ft. The gently rolling prairie surface is diversified by an endless succession of broad plains, isolated hills and ridges, and moderate valleys. In places there are terraced uplands, and in others the undulating plain is cut by erosion into low escarpments. The bluffs along the Missouri are in places 100 ft. high, and along the valley of the Cimarron in the western part, which has decided almost gorges. The west central portion has considerable irregularities of contour, and the north-west is distinctively hilly. In the southwest, below the Arkansas river, is a sea of sandhills, and the Ozark Plateau region, as above stated, extends into the south-east corner, though not there much elevated. The great central valley is traversed by the Kansas (or Kaw) river, which, inclusive of the Smoky Hill Branch, extends the entire length of the state, with lateral valleys on the north. Another broad valley is formed in the south half of the state by the Arkansas river, with lateral valleys on the north and south. The south-east portion contains the important Neosho and smaller valleys. In the extreme west is the valley of the Cimarron, and along the south boundary is a network of the south tributaries of the Arkansas. Numerous small alluvial fans of the Missouri enrich and diversify the north-east quarter. The streams of Kansas are usually fed by perennial springs, and, as a rule, the east and middle portions of the state are well watered. Most of the streams maintain a good flow of water in the driest seasons, and in case of heavy rains many of them give rise to extensive floods, saturating the permeable substratum of the country with the surplus water, which in time drains out and feeds the subsiding streams. This feature is particularly true of the Saline, Solomon and Smoky Hill rivers. The west part is more elevated and water is less abundant.

Climate.—The climate of Kansas is exceptionally salubrious. Extremes of heat and cold occur, but as a rule the winters are dry and mild, while the summer heats are tempered by the perpetual prairie breezes, and the summer nights are usually cool and refreshing. The average annual temperature of the state for seventeen years preceding 1903 was 54° F., the warmest mean being 56°-5°, the
coolest 52°-6°. The extreme variation of yearly means throughout the east, west and middle sections during the same period was very slight, 51°6 to 56°6, and the greatest variation for any one section was 37°. The absolute extremes were 116° and -34°. The dryness of the winter months was considerable, with the coldest part of the winter and the heat of summer. The temperature over the state is very much more uniform than is the precipitation, which diminishes somewhat regularly westward. In the above period of seventeen years, the average annual precipitation for the state is 17.10 in. from the east to 29.21 in. (av. 19.21), in the middle from 18.58 to 34.30 (av. 26.68), in the east from 26.00 to 45.71 (av. 34.78); the mean for the state ranging from 20.12 to 32.50 (av. 27.12). The precipitation in the west is not sufficient for confident agriculture. In any series of years since agriculture is practically dependent upon the mean fall; a fact that has been and is of profound importance in the history of the state. The line of 20 in. fall (about the limit of certain agriculture) is considerably north and east of the state borders. In western Kansas the precipitation is very large in the growing season—Andrew the fall between April and October is 78% of that for the year. Frequent and sporadic storms at the time of work. The former made notable 1844 and 1838; and the lands to the westward, least common in the west. The years 1871, 1879, 1881 and 1892 were made memorable by particularly severe storms. There are 150 to 175 "growing days" for crops between the frosts of spring and autumn, and eight in ten days are bright with sunshine—half of them without a cloud. Winds are prevailingly from the south (in the winter often from the north-west).

Fauna and Flora.—The fauna and flora of the state are those which are typical of the great plains extending generally of which Kansas is a part. The state lies partly in the humid, or Carolinian, and partly in the arid, or Upper Sonoran, area of the Upper Austral life-zone; 100° W. long. is approximately the dividing line between these two.
region salt is produced in immense quantities, within a great north to south belt about Hutchinson. The beds, which are exploited by the brine method at Hutchinson, at Ellsworth (Ellsworth county), at Anthony (Harper county) and at Sterling (Rice county), lie from 10 to 30 feet below the surface and in places as much as 6 feet thick and 99% pure. At Kanopolis in Ellsworth county, at Lyons in Rice county and at Kingman, Kingman county, the salt is mined and sold as rock-salt. In the south-west salt is found in beds and dry runcements, varying in thickness from a few inches to 2 ft. The total output of the state was valued at $882,984, at 1900 (when Kansas ranked fourth among the states producing salt) was valued at $3,946,349; and for foundry and machine shop products (in value of 1905) $3,755,825.

Communications.—Kansas is excellently provided with railways, with an aggregate length in January 1909 of 8,914.77 m. (in 1870, 1880, 1890 respectively, 1,101, 3,244 and 8,710 m.). The most important systems are the Atchison, Topeka & Santa Fe, the Santa Fe, the Union Pacific, the Missouri, Kansas & Texas, the Chicago, Burlington & Quincy, and the St Louis & San Francisco systems. The first train entered Kansas on the Union Pacific in 1860. During the following decade the lines of the Missouri Pacific, the Missouri, Kansas & Texas, and the Texas and Santa Fe were well under construction. The roads give excellent connection with Chicago, the Gulf, and the Pacific. Kansas has an eastern river front of 150 m. on the Missouri, which is navigable for steamboats of good size. The internal rivers of the state are not utilized for commercial purposes.

Population.—In population Kansas ranked in 1900 and 1910 (1,090,949) twenty-second in the Union. The decennial increases of population from 1860 to 1900 were 239-9, 173-4, 43-3 and 3-9% the population in 1910 being 1,479,495, or 18 to the sq. m. Of this number 22-5% lived in cities of 1000 or more inhabitants. Nine cities numbered more than 10,000 inhabitants: Kansas City (51,418), Topeka—the state capital (33,608), Wichita (24,071), Leavenworth (20,735), Atchison (15,772), Lawrence—the seat of the state university (10,862), Fort Scott (10,322), Galena (10,155) and Pittsburg (10,122). The life of all these save the last two goes back to Territorial days; but the importance of Fort Scott, like that of Galena and Pittsburg, is due to the development of the mineral counties in the southeast. Other cities of above 5000 inhabitants were Hutchinson (3979), Emporia (8223), Parsons (7682), Ottawa (6034), Newton (6208), Arkansas City (6140), Salina (6074), Argentine (5878) and Iola (5791). The number of negroes (3-5%) is somewhat large for a northern and western state. This is largely owing to an eodus of coloured people from the South in 1878-1880, at a time when their condition was an unusually hard one: an eodus turned mainly toward Kansas. The population is very largely American-born (91-4% in 1900; 47-1% being natives of Kansas). Germans, British, Scandinavians and Russians constitute the bulk of the foreign-born. The west third of the state is comparatively thinly populated, owing to its unsettled condition, after a succession of wet seasons, and again in the 'eighties settlement was pushed far westward, beyond the limits of the farms, but hundreds of settlers—and indeed many entire communities—were literally starved out by the recurrence of droughts. Irrigation has made a surer future for limited areas, however, and the introduction of drought-resisting crops and the substitution of dairy and livestock interests in the place of agriculture have brightened the outlook in the western counties, whose population increased rapidly after 1900. The early 'eighties were made notable by a tremendous "boom" in real estate, rural and urban, throughout the commonwealth. As regards the distribution of religious sects, in 1906 there were 458,190 communicants of all denominations, and of this number 121,208 were Methodists (108,007 being Methodist Episcopalians of the Northern Church), 93,195 were Roman Catholics, 46,309 were Baptists (34,975 being members of the Northern Baptist Convention and 10,011 of the National (Colored) Baptist Convention), 40,765 were Presbyterians (33,465 being members of the Northern Church) and 40,536 were Disciples of Christ. The General Conference of Methodist Episcopalians was held at Topeka about 1874, furnished at first many examples of communal economy, but these were later abandoned. In 1906 the total number of Mennonites was 74,45, of whom 3581 were members of the General Conference of Mennonites of North America, 1825 belonged to the Schellenberger Bruder-gemeinde, and others were distributed among seven other sects.

¹ According to the state census Kansas had in 1905 a total population of 1,544,968; nearly 28% lived in cities of 2500 or more inhabitants; 13 cities had more than 10,000 inhabitants: Kansas City (67,614), Topeka (37,641), Wichita (31,110), Leavenworth (20,690), Emporia (15,891), Pittsburg (15,106), Atchison (13,196), Galena (12,848), Fort Scott (12,248), Parsons (11,720), Lawrence (11,708), Hutchinson (11,215), Independence (11,06), and Iola (10,287). Other cities of above 5000 inhabitants each were: Chanute (9704), Emporia (8974), and Sedgewick (8454). Salina (7828), Ottawa (7727), Kansas City (7634), Newton (6601), Galena (6449), Argentine (6053), Junction City (5264) and Cherrvylle (5089).
Government.—The constitution is that adopted at Wyandotte on the 29th of July 1859 and ratified by the people on the 4th of October 1859; it came into operation on the 29th of January 1861, and was amended in 1861, 1864, 1867, 1873, 1875, 1876, 1878, 1888, 1900, 1902, 1904 and 1906. An amendment may be proposed by either branch of the legislature, and, if approved by two-thirds of the members elected to each house as well as by a majority of the electors voting on it at a general election, it is adopted. A constitutional convention to revise or amend the constitution may be called in the same manner. Universal manhood suffrage is the rule, but women may vote in school and municipal elections. Kansas being the first state to grant women municipal suffrage as well as the right to hold municipal offices (1887). General elections to state, county, and township offices are biennial, in even-numbered years, and take place on the first Tuesday after the first Monday in November. The state executive officers are a governor, lieutenant-governor, secretary of state, auditor, treasurer, attorney-general and superintendent of public instruction, all elected for a term of two years. The governor appoints, with the approval of the Senate, a board of lands, and some other administrative boards, and he may veto any bill from the legislature, which cannot thereafter become a law unless again approved by two-thirds of the members elected to each house.

The legislature, consisting of a Senate and a House of Representatives, meets in regular session at Topeka, the capital, on the second Tuesday of January in odd-numbered years. The membership of the senate is limited to 40, and that of the house of representatives to 125. Senators are elected for four years and representatives for two years. In regular sessions not exceeding fifty days and in special sessions not exceeding thirty days the members of both houses are paid three dollars a day besides an allowance for travelling expenses, but they receive no compensation for the extra time of longer sessions. In 1908 a direct primary law was passed applicable to all nominations except for presidential elections, school district officers and officers in cities of less than 5,000 inhabitants like public officials of more than five years. Supernumeraries are made a public charge; nomination is by petition signed by a certain percentage (for state office, at least 1%; for district office, at least 2%; for sub-district or county office, at least 3%) of the party vote; the direct nominating system applies to the candidates for the United States Senate, the nominee chosen by the direct primaries of each party being the nominee of the party.

The judicial power is vested in the supreme court, thirty-eight district courts, one probate court for each county, and two or more justices of the peace for each township. All justices are elected; those of the supreme court, seven in number, for six years, two or three every two years; those of the district courts for four years; and those of the peace of the county for four years. The primary powers of each county are managed by a board of commissioners, who are elected by districts for four years, but each county elects also a clerk, a treasurer, a probate judge, a register of deeds, a sheriff, a coroner, an attorney, a county auditor, a district court, and a surveyor, and the district court for the county appoints a county auditor. The township officers, all elected for two years, are a trustee, a clerk, a treasurer, two or more justices of the peace, and a collector of state taxes. Cities are governed under a general law, but by this law they are divided into three classes according to size, and the government is different for each class. Those having a population of more than 15,000, and not more than 15,000 constitute the second class, and those having a population not exceeding 2000 constitute the third class. Municipal elections are far removed from those of the state, being held in odd-numbered years in April. In cities of the first class it requires the election of a mayor, city clerk, city treasurer, police judge and councilmen; in those of the second class it requires the election of a mayor, police judge, city treasurer, councilmen, board of education, justices of the peace and constables; and in those of the third class it requires a mayor, police judge and councilmen. Several other offices provided for in each class are filled by the appointment of the mayor.

The principal grounds for a divorce in Kansas are adultery, extreme neglect of duty, and imprisonment in the penitentiary as a felon subsequent to marriage, but the applicant for a divorce must have resided in the state the entire year preceding the presentment of the petition. A married woman has the same rights to her property after marriage as before marriage, except that she is not permitted to bequeath away from her husband more than one-third of property which he died seized. Whenever a husband dies intestate, leaving a farm or a house and lot in a town or city which was the residence of the family at his death, his widow, widow and children, or his children and children of a preceding marriage, if same, as a homestead to the extent of 160 acres if it be a farm, or one acre if it be a town or city lot. A homestead of this size is exempt from levy for the debts of the intestate except in case of an insolvency or the collection of a legal or equitable lien, but his widow and children still have the right to the homestead, and it is to be considered as a homestead to the extent of 160 acres if it be a farm, or one acre if it be a town or city lot. A homestead of this size is also exempt from levy for the debts of the intestate except in case of an insolvency or the collection of a legal or equitable lien, but his widow and children still have the right to the homestead, and it is to be considered as a homestead to the extent of 160 acres if it be a farm, or one acre if it be a town or city lot. A homestead of this size is also exempt from levy for the debts of the intestate except in case of an insolvency or the collection of a legal or equitable lien, but his widow and children still have the right to the homestead, and it is to be considered as a homestead to the extent of 160 acres if it be a farm, or one acre if it be a town or city lot. A homestead of this size is also exempt from levy for the debts of the intestate except in case of an insolvency or the collection of a legal or equitable lien, but his widow and children still have the right to the homestead, and it is to be considered as a homestead to the extent of 160 acres if it be a farm, or one acre if it be a town or city lot. A homestead of this size is also exempt from levy for the debts of the intestate except in case of an insolvency or the collection of a legal or equitable lien, but his widow and children still have the right to the homestead, and it is to be considered as a homestead to the extent of 160 acres if it be a farm, or one acre if it be a town or city lot. A homestead of this size is also exempt from levy for the debts of the intestate except in case of an insolvency or the collection of a legal or equitable lien, but his widow and children still have the right to the homestead, and it is to be considered as a homestead to the extent of 160 acres if it be a farm, or one acre if it be a town or city lot.

The manufacture and sale of intoxicating liquors except for medical, scientific and mechanical purposes were prohibited by a constitutional amendment adopted in 1881. By the same amendment of 1881, providing for the enforcement of the amendment, was declared constitutional by the state supreme court in 1883. At many sessions of the legislature its enemies vainly attempted its repeal. It was more seriously threatened in 1890 by the "Original Prohibition Club." The decision of the Supreme Court, the decision, namely, that the state law could not apply to liquor introduced into Kansas from another state and sold from the original package, such inter-state commerce being within the exclusive jurisdiction of Congress, that body therupon gave Kansas the power needed, and its action was upheld by the Federal Supreme Court. The enforcement of the law has varied, however, enormously according to the locality. In 1896-1897 a fresh crusade to enforce the law was begun in the eastern counties, and the brewers, distillers, and other companies doing business in the state and secured injunctions against such breweries doing business in the state and the appointment of receivers of their property. The provision of the law permitting the sale of whiskey for medicinal, scientific or mechanical purposes was repealed by a law of 1909 prohibiting the sale, manufacture or barter of spirituous, malt, vinous or any other intoxicating liquors within the state. The severity of this law was ascribed to efforts of a few powerful interest groups.

The constitution forbids the contraction of a state debt exceeding $1,000,000. The actual debt on the 30th of June 1908 was $505,000, which was a permanent school fund. Taxation is on the general property, with the exception of school property, the taxed property being assessed in the manner of counties and cities and the taxes assessed. Taxes are levied for public schools, the payment of state debts, for hospital purposes, and "in such manner as the general assembly may by law direct". Taxes for the support of public schools, the payment of state debts, and for hospital purposes are levied on a valuation of all taxable property, $2,453,691 (859), though significant of taxation methods, are not significant of the general condition or progress of the state.

Education.—Of higher educational institutions, the state supports the university of Kansas at Lawrence (1866), an agricultural college at Manhattan (1863; aided by the United States government); a normal school at Emporia (1865), a western branch of the same at Salina (1873); Kansas state university and normal school at Lawrence, western university (Quindaro) for negroes and the Topeka industrial and educational institute (1862, reorganized on the plan of Tuskegee institute in 1900) also for negroes. The university of Kansas for the education of the children of the state was established in 1864, and opened in 1866. Its engineering department was established in 1870, its normal department in 1872, its agricultural department in 1874, its preparatory department in 1875, and its preparatory department in 1878, and the department of music in 1877, and the department of pharmacy in 1885; in 1891 the preparatory department was abolished and the university was reorganized as the university of Kansas. In 1889 a school of medicine was established, in connexion with which the Eleanor Taylor Bell memorial hospital was erected in 1905. In 1907-1908 the university had a faculty of 211, an enrolment of 2,677, and 18,000 volumes in circulation, 3,000 periodicals in library contained 49,000 volumes and 80,000 pamphlets. An efficient compulsory education law was passed in 1903. Kansas ranks very high among the states in its small percentage of illiteracy (inability to read and write) and in its high percentage of the school age population attended school: the figures for native whites, foreign whites and negroes being respectively 1.7, 2.5 and 2.3. In addition to the state schools, various flourishing private or denominational institutions are maintained. The largest
of these are the Kansas Wesleyan University (Methodist Episcopal, 1886) at Salina and Baker University (Methodist Episcopal, 1859) at Baldwin. Among the many smaller colleges are Washburn College (Congregational, 1869) at Topeka, the Southwest Kansas College (Methodist, 1871) at Andover, the College of Emporia (Presbyterian, 1883) at Emporia, Bethany College (Lutheran, 1881) at Lindsborg, Fairmount College (non-sectarian, 1895) at Wichita, St. Mary’s College (Roman Catholic, 1869) at St. Mary’s, and Ottawa University (Methodist, 1865) at Ottawa. At Topeka is the College of the Sisters of Bethany (Protestant Episcopal, 1861) for women.

There are also various small professional schools and private normal schools. An industrial school for Indian children is maintained by the Bell Institute, 1884. Among the new schools the state charitable and reformatory institutions are state hospitals for the insane at Topeka and Osawatomie and a hospital for epileptics at Parsons; industrial reform schools for girls at Beloit, for boys at Topeka; and at Leavenworth the Home for Girls, the Home for Boys, the Home for Officers at Atchison and a soldiers’ orphan home at Junction City; and schools for feeble-minded youth at Winfield, for the deaf at Olathe, and for the blind at Kansas City. The state institutions are organized on the northern portion of the state and are under the control of the state. The state contributes also to many institutions on a private basis. Most of the counties maintain poor farms and administer outdoor relief, and some care for insane patients at the state hospital.

History.—The territory now included in Kansas was first visited by Europeans in 1541, when Francisco de Coronado led his Spaniards from New Mexico across the buffalo plains in search of the wealth of “Quivira,” a region located by Bandelier and other authorities in Kansas north-east of the Great Bend of the Arkansas. Thereafter, save for a brief French occupation, 1710-1725, and possibly slight explorations equally inconsequential, Kansas remained in undisturbed possession of the Indians until in 1803 it passed to the United States (all save the part west of 100° long and south of the Arkansas river) as part of the Louisiana Purchase. The explorations for the United States of L. M. Pike (1807) and S. H. Long (1819) tended to confirm old ideas of sandy wastes and deserts, or to confirm old ideas of the prairie commerce to Santa Fé (New Mexico), the waves of emigration to the Mormon land and to California, the growth of traffic to Salt Lake, and the explorations for a transcontinental railway, Kansas became well known, and was taken out of that mythical “Great American Desert,” in which, thanks especially to Pike and to Washington Irving, it had been supposed to lie. The trade with Santa Fé began about 1804, although regular caravans were begun only about 1825. This trade is one of the most picturesque chapters in border history, and picturesque in retrospect, too, is the army of emigrants crossing the continent in “prairie schooners” to California or Utah, of whom almost all went through Kansas.

But this movement of hunters, trappers, traders, Mormons, miners and homeseekers left nothing to show of settlement in Kansas, for which, therefore, the succession of Territorial governments was organization, the northern portion of the state, the Kansas-Nebraska Bill of 1854. By that Act Kansas (which from 1854 to 1856 included a large part of Colorado) became, for almost a decade, the storm centre of national political passion, and her history of prime significance in the unfolding prologue of the Civil War. Despite the Missouri Compromise, which had prohibited slavery in the Louisiana Purchase N. of 36° 30’ N. lat. (except in Missouri) Kansas was living at the missions and elsewhere, among Indians and whites, in 1854. The “popular sovereignty” principle of the Kansas-Nebraska Bill involved a sectional struggle for the new Territory. Time showed that the winning of Kansas was a question of the lightest-footed immigrant. Slaveholders were not footloose; they had all to lose if they should carry their blacks into Kansas and should nevertheless fail to make it a slave-state. Thus the South had to establish slavery by other than actual slaveholders, unless Missouri should act for her to establish it. But Missouri did not move her slaves; while her vicinity encouraged border partisans to seek such establishment even without residence—by intimidation, election frauds and outrage. This determined at once the nature of the Kansas struggle and its outcome; and after the South had played and lost in Kansas, “the war for the Union caught up and nationalized the verdict of the Territorial bill.”

In the summer of 1854 Missouri “squatters” began to post claims to border lands and warn away intending anti-slavery settlers. The immigration of these from the North was fostered in every way, notably through the New England Emigrant Aid Company (see Lawrence, A. A.), whose example was widely imitated. Little organized effort was made in the South to settle the Territory; Lawrence (Wakarusa) and Topeka, free-state centres, and Leavenworth, Lecompton and Atchison, pro-slavery towns, were among those settled in 1854.

At the first election (Nov. 1854), held for a delegate to Congress, some 1700 armed Missourians invaded Kansas and stuffed the ballot boxes; and this intimidation and fraud was practised on a much larger scale in the election of a Territorial legislature in March 1855. The resultant legislature (at Pawnee, later at Shawnee Mission) adopted the laws of Missouri almost en bloc, made it a felony to utter a word against slavery, made extreme pro-slavery views a qualification for office, declared death the penalty for aiding a slave to escape, and in general repudiated liberty for its opponents. The radical free-state men thereupon began the importation of rifles. All criticism of this was inconsequent; “fighting gear” was notoriously the only effective asset of Missourians in Kansas, every Southern band in Kansas was militarily organized and armed, and the free-state men armed only the most unorganised. The legislature, however, that was set up, the “bogus” legislature at Shawnee being “repudiated.” Perfecting their organization in a series of popular conventions, they adopted (Dec. 1855) the Topeka Constitution—which declared the exclusion of negroes from Kansas—elected state officials, and sent a contestant delegate to Congress. The Topeka “government” was simply a craftily impressive organization, a standing protest. It met now and then, and directed sentiment, being twice dispersed by United States troops; but it passed no laws, and did nothing that conflicted with the Territorial government censured by Congress. On the other hand, the laws of the “bogus” legislature were generally ignored by the free-state partisans, except in cases (e.g. the service of a writ) where that was impossible without apparent actual rebellion against the authority of the legislature, and therefore of Congress.

Meanwhile the “border war” began. During the (almost bloodless) “Wakarusa War” Lawrence was threatened by an armed force from Missouri, but was saved by the intervention of Governor Shannon. Up to this time the initiative and the bulk of outrages lay assuredly heavily on the pro-slavery side; hereafter they became increasingly common and more evenly divided. In May 1856 another Missouri force entered Lawrence without resistance, destroyed its printing offices, wrecked buildings and pillaged generally. This was the day before the assault on Charles Sumner (g.o.) in the Senate of the United States. These two outrages fired Northern passion and determination. In Kansas they were a stimulus to the most radical elements. Immediately after the sack of Lawrence, John Brown and a small band murdered and mutilated five pro-slavery men, on Pottawatomie Creek; a horrid deed, showing a new spirit on the free-state side, and of ghastly consequence—for it contributed powerfully to widen further the licence of highway robbery, pillage and outrage. The ruin of homes, the burning of settlers, massing expeditions, attacks on towns, outrages in short of every kind that made the following months a welter of lawlessness and crime, until Governor Geary—by putting himself above all partisanship, repudiating Missouri, and using Federal troops—
put an end to them late in 1836. (In the isolated south-eastern counties they continued through 1836-1838, mainly to the advantage of the "jay-hawkers" of free-state Kansas and to the terror of Missouri.)

The struggle now passed into another phase, in which questions of state predominated. But something may be remarked in passing of the leaders in the period of turbulence. John Brown wished to deal a blow against slavery, but did nothing to aid any conservative political organization to that end. James H. Lane was another radical, and always favoured force. He was a political adventurer, an enthusiastic, energetic, ambitious, ill-balanced man, shrewd and magnetic. He assuredly did much for the free-state cause; meek politics were not alone sufficient in those years in Kansas. The leader of the conservative free-soilers was Charles Robinson (1818-1894). He was born in Massachusetts, studied medicine at the Berkshire Medical School, and had had political experience in California, whither he had gone in 1849, and where in 1850-1852 he was a member of the legislature and a successful anti-slavery leader. In 1854 he had come to Kansas as an agent of the Emigrant Aid Company. He was the author of the Topeka government idea, or at least was its moving spirit, serving throughout as the "governor" under it; though averse to force, he would use it if necessary, and was first in command in the Wakarusa War." His partisans say that he saved Kansas, and regard Lane as a foemen of the Cause who accomplished nothing. Andrew H. Reeder (1807-1864), who showed himself a pro-slavery sympathizer as first Territorial governor, was removed from office for favouring the free-state party; he became a leader in the free-state cause. Every governor who followed him was forced by the logic of events and trutb tacitly to acknowledge that right lay with the free-state party. Reeder and Shannon fiel the Territory in fear of assassination by the pro-slavery party, with which at first they had had most sympathy. Among the pro-slavery leaders David Rice Atchison (1807-1886), United States Senator in 1833-1835, accompanied both expeditions against Lawrence; but he urged moderation, as always, at the end of what was a legitimate result of his radical agitation.

In June 1857 delegates were elected to a constitutional convention. The election Act did not provide for any popular vote upon the constitution they should form, and was passed over Governor John W. Geary's veto. A census, miserably deficient (largely owing to free-state abstention and obstruction), was the basis of apportionment of delegates. The free-state party demanded a popular vote on the constitution. On the justice of his cause who accompanied the pro-slavery forces, he first unequivocally agreed, and the governor promised fairplay. Nevertheless only pro-slavery men voted, and the convention was thus pro-slavery. The document it framed is known as the Lecompton Constitution. Before the convention met, the free-state party, abandoning its policy of political inaction, captured the Territorial legislature. On the constitutional convention rested, then, all hope of saving Kansas for slavery; and that would be impossible if they should submit their handwork to the people. The convention declared slave property to be "before and higher than any constitutional sanction" and forbade amendments affecting it; but it provided for a popular vote on the alternatives, the "constitution with slavery" or the "constitution with no slavery." If the latter should be adopted, slavery should cease "except" that the right to property in slaves in the Territory should not be interfered with. The free-state men regarded this as including the right to property in offspring of slaves, and therefore as pure fraud. Governor Walker stood firmly against this iniquitous scheme; he saw that slavery was, otherwise, doomed, but he thought Kansas could be saved to the Democratic party though lost to slavery. Several of the Democratic leaders in Kansas, Provisional government through influence, repudiated his former assurances. There is reason to believe that the whole scheme was originated at Washington, and though Buchanan was not privy to it before the event, yet he adopted it. He abandoned Walker, who left Kansas; and he dismissed Acting-Governor Frederick P. Stanton for convoking the (now free-state) legislature. This body promptly ordered a vote on the third alternative, "Against the Constitution."

The free-state men ignored the alternatives set by the Lecompton Convention; but they participated nevertheless in the provisional election for officers under the Lecompton government, capturing all offices, and then, the same day, voted overwhelmingly against the constitution (Jan. 4, 1858).

Nevertheless, Buchanan, against the urgent counsel of Governor Denver, urged on Congress (Feb. 7) the admission of Kansas under the Lecompton Constitution. He was opposed by Senator Stephen A. Douglas, the leader of the Northern Democracy. The Senate upheld the President; the House of Representatives voted down his policy; and finally both houses accepted the English Bill, by which Kansas was virtually offered some millions of acres of public lands if she should accept the Lecompton Constitution.1 On the 21st of August 1858, by a vote of 11,300 to 1788, Kansas resisted this temptation. The plan of the Administration thus effectually miscarried, and its final result was a profound split in the Democratic party.

The free-state men framed an excellent anti-slavery constitution at Leavenworth in March-April 1858, but the origins of the convention were illegal and their work was still-born. On the 29th of July 1859 still another constitution was therefore framed at Wyandotte, and on the 4th of October it was ratified. Mr. Walker's "government" disappeared, and also, with its single purpose equally served, the free-state party, most of it (once largely Democratic) passing into the Republican party, now first organized in the Territory. On the 29th of January 1861 Kansas was admitted to the Union under the Wyandotte Constitution. The United States Census of 1860 gave her a population of 107,204 inhabitants. The struggle in Kansas, the first physical national struggle over slavery, was of paramount importance in the breaking up of the Whig party, the firm establishment of an uncompromisingly anti-slavery party, the sectionalization of the Democracy, and the general preparation of the country for the Civil War.

Drought and famine came in 1860, and then upon the impoverished state came the strain of the Civil War. Nevertheless Kansas furnished proportionally a very large quota of men to the Union armies. Military operations within her own borders were largely confined to a guerrilla warfare, carrying on the bitter neighbourhood strife between Kansas and Missouri. The Confederate officers began by repressing predatory plundering from Missouri; but after James H. Lane, with an undisciplined brigade, had crossed the border, sacking, burning and killing in his progress. Missouri's troops were demoralized and demoralized command in Territorial licence had a free hand on both sides. Kansas bands were long the more successful. But William C. Quantrill, after sacking various small Kansas towns along the Missouri river (1862-63), in August 1863 took Lawrence (q.v.) and put it mercilessly to fire and sword—the most ghastly episode in border history. In the autumn of 1864 the Confederate general, Sterling Price, aiming to enter Kansas from Missouri but defeated by General Pleasanton's cavalry, retreated southward, zig-zagging on both sides of the Missouri-Kansas line. This ended for Kansas the border raids and the war. Lane was probably the first United States officer to enlist negroes as soldiers. Many of them (and Indians too) fought bravely for the state. Indian raids and wars troubled the state from 1864 to 1878. The tribes domiciled in Kansas were rapidly moved to Indian Territory after 1868.

1 The English Bill was not a bribe to the degree that it has usually been considered to be, inasmuch as it "reserved the grant of land demanded by the Lecompton Ordinance from 23,500,000 acres to 3,500,000 acres, and offered only the normal cession to new states." But this grant of 3,500,000 acres was conditioned on the acceptance of the Lecompton Constitution, and Congress made no promise of any grant if that Constitution were not adopted. The bill was introduced by William Hayden English (1822-1896), a Democratic representative in Congress in 1853-1861 (see Frank H. Hodder, "Some Aspects of the English Bill for the Admission of Kansas," in Annual Report of the American Historical Association for the Year 1906, i, 201-210).
After the Civil War the Republicans held uninterrupted supremacy in national elections, and almost as complete control in the state government, until 1892. From about 1870 onward, however, elements of reform and of discontent were embedded in a succession of radical parties of protest. Prohibition arose thus, was accepted by the Republicans, and passed into the constitution. Woman suffrage became a vital political issue. Much legislation has been passed to control the railways. General control of the media of commerce, economic co-operation, tax reform, banking reforms, legislation against monopolies, disposal of state lands, legislation in aid of the farmer and labourer, have been issues of one party or another. The movement of the Patrons of Industry (1874), growing into the Grange, Farmers' Alliance, and finally into the People's (Populist) party (see Farmers' Movement), was perhaps of greatest importance. In conjunction with the Democrats the Populists controlled the state government in 1892-1894 and 1896-1898. These two parties decidedly outnumbered the Republicans at the polls from 1890-1898; but they could win only by fusion. In 1892-1893, when the Populists elected the governor and the Senate, and the Republicans (as the courts eventually determined) the House of Representatives, political passion was so high as to threaten armed conflicts in the capital. The Australian ballot was introduced in 1893. In the decade following 1880, struggles in the western counties for the location of county seats (the bitterest local political fights known in western states) repeatedly led to bloodshed and the interference of state militia.

Connelley, An Appeal to the Record (Topeka, 1903). W. C. Webb's Republican Election Methods in Kansas, General Election of 1892, and Legislative Investigations (Topeka, 1893) may also be mentioned.

**KANSAS CITY**

A city and the county-seat of Wyandotte county, Kansas, U.S.A., on the W. bank of the Missouri River, at the mouth of the Kansas, altitude about 800 ft. It is separated from its greater neighbour, Kansas City, Missouri, only by the state line, and is the largest city in the state. Pop. (1890), 38,315; (1900), 51,418, of whom 6,377 were foreign-born and 6,990 were negroes; (1910) census 82,331. It is served by the Union Pacific, the Missouri Pacific, the Chicago, Rock Island & Pacific, and the Chicago Great Western railways, and by electric lines connecting with Leavenworth and with Kansas City, Missouri. There are several bridges across the Kansas river. The city covers the low, level bottom-land at the junction of the two rivers, and spreads over the surrounding highlands to the W., the principal residential district. Its plan is regular. The first effective step toward a city park and boulevard system was taken in 1877, when a park, consisting of the property of three members, was appointed by the mayor. The city has been divided into the South Park District and the North Park District, and at the close of 1908 there were 10 m. of boulevards and parks aggregating 160 acres. A massive steel and concrete toll viaduct, about 1 1/2 m. in length, extends from the bluffs of Kansas City, Kan., across the Kansas valley to the bluffs of Kansas City, Mo., and is used by pedestrians, vehicles and street cars. There is a fine public library building given by Andrew Carnegie. The charities of the city are co-ordinated through the associated charities. Among charitable state-aided institutions are the St Margaret's hospital (Roman Catholic), Bethany hospital (Methodist), a children's hospital (1853), and, for negroes, the Douglass hospital training school for nurses (1858)—the last the largest private charity of the state. The medical department of the Kansas state university, the other departments of which are in Lawrence, is in Kansas City; and among the other educational institutions of the city are the Western university and industrial school (a co-educational school for negroes), the Kansas City Baptist theological seminary (1902), and the Kansas City university (Methodist Protestant, 1860), which had 454 students in 1908-1909 and comprises Mather college (for liberal arts), Wilson high school (preparatory), a school of elocution and oratory (in Kansas City, Mo.), a Normal School, Kansas City Hahnemann Medical College (in Kansas City, Mo.), and a school of theology. The city is the seat of the Kansas (State) school for the blind. Kansas City is one of the largest cities in the country without a drinking saloon. Industrially the city is important for its stockyards and its meat-packing interests. With the exception of Chicago, it is the largest livestock market in the United States. The product-value of the city's factories in 1905 was $66,473,020; 93.5% consisting of the product of the wholesale slaughtering and meat-packing houses. Especially in the South-west markets Kansas City is aided over Chicago, St Louis, and other large packing centres (except St Joseph), not only in freights, but in its situation among the “corn and beef” states; it shares also the
extraordinary railway facilities of Kansas City, Missouri. There are various important manufactures, such as soap and candles, subsidiary to the packing industry; and the city has large flour mills, railway and machine shops, and foundries. A large cotton-mill, producing coarse fabrics, was opened in 1907. Natural gas derived from the Kansas fields became available for lighting and heating, and crude oil for fuel, in 1906.

Kansas City was founded in 1886 by the consolidation of “old” Kansas City, Armourdale and Wyandotte (in which Armstrong and Riverview were then included). Of these municipalities Wyandotte, the oldest, was originally settled by the Wyandotte Indians in 1843; it was platted and settled by whites in 1857; and was incorporated as a town in 1858, and as a city in 1859. At Wyandotte were made the first moves for the Territorial organization of Kansas and Nebraska. During the Kansas struggle Wyandotte was a pro-slavery town, while Quindaro (1856), a few miles up the Missouri, was a free-state settlement and Wyandotte’s commercial rival until after the Civil War. The convention that framed the constitution, the Wyandotte Constitution, under which Kansas was admitted to the Union, met here in July 1859. “Old” Kansas City was surveyed in 1860 and was incorporated as a city in 1872. Armourdale was laid out in 1880 and incorporated in 1882. The packing interest was first established in 1867; the first large packing plant was that of Armour & Co., which was removed to what is now Kansas City in 1871.

Kansas City adopted government by commission in 1909.

KANSAS CITY, a city and port of entry of Jackson county, Missouri, U.S.A., the second in size and importance in the state, situated at the confluence of the Missouri and Kansas rivers, adjoining Kansas City, Kansas, and 235 m. W. by N. of St. Louis. Pop. (1890), 132,716; (1900), 163,752, of whom 18,410 were foreign born (German, 4,816; Italian, 3,507; Swedish, 1,800; English, 1,862; Russian, 1,202; and 10,000, or 60.8% were negroes; (1910 census) 248,381. Kansas City, the gateway to the South-west, is one of the leading railway centres of the United States. It is served by the Union Pacific, the Missouri Pacific, the Frisco System, the Chicago, Burlington & Quincy, the Atchison, Topeka & Santa Fé, the Chicago Great Western, the Chicago, Milwaukee & St. Paul, the Chicago & Alton, the Wabash, the Kansas City Southern, the Chicago, Rock Island & Pacific, the Missouri, Kansas & Texas, the Leavenworth, Kansas & Western, the Kansas City, Mexico & Orient, the Saint Louis, Kansas City & Colorado, the Quincy, Omaha & Kansas City, and the St. Joseph & Grand Island railways, and by steamboat lines to numerous river ports.

The present retail, office, and wholesale sections were once high bluffs and deep ravines, but through art and science these well graded streets were constructed. South and west of this highland, along the Kansas river, is a low, level tract occupied chiefly by railway yards, stock yards, wholesale houses and manufacturing establishments; north and east of the highland is a flat section, the Missouri River bottoms, occupied largely by manufactory, railway yards, grain elevators and homes of employees. Much high and dry “made” land has been reclaimed from the river flood-plain. Two great railway bridges across the Missouri, many smaller bridges across the Kansas, and a great interstate toll viaduct extending from bluff to bluff across the valley of the latter river, lie within the metropolitan area of the two cities. The streets of the Missouri city are generally wide and excellently paved. The city-hall (1890–1893), the courthouse (1888–1892), and the Federal Building (1892–1900) are the most imposing of the public buildings. A convention hall about 341 ft. in diameter and 130 ft. high can accommodate about 1,500, is covered by a steel-frame roof without a column for its support; the exterior of the walls is cut stone and brick. The building was erected within three months, to replace one destroyed by fire, for the National Democratic Convention which met here on the 4th of July 1900. The Public Library with walls of white limestone and Texas granite, contained (1908) 95,000 volumes. The Congregational, the Calvary Baptist, the Second Presbyterian, the Independence Avenue Christian, the Independence Avenue Methodist, and the Second Christian Science churches are the finest church buildings. The board of trade building, the building of the Star newspaper, and several large office buildings (including the Swope, Long, and New York Life Insurance buildings) are worthy of mention.

Kansas City has over 2000 acres in public parks; but Swope Park, containing 1354 acres, lies south of the city limits. The others are distributed with a design to give each section a recreation ground within easy walking distance, and all (including Swope) are connected by parkways, boulevards and streets-car lines. The Paseo Parkway, 250 ft. wide, extends from N. to S. through the centre of the city for a distance of 25 m., and adjoining it near its middle is the Parade, or principal playground. The city has eight cemeteries, the largest of which are Union, Elmwood, Mt Washington, St Mary’s and Forest Hill. The charitable institutions and professional schools included in 1908 about thirty hospitals, several children’s homes and homes for the aged, an industrial home, the Kansas City school of law, the University medical college, and the Swope training school. The city has an excellent public school system. A Methodist Episcopal institutional church, admirably equipped, was opened in 1906. The city has a juvenile court, and maintains a free employment bureau.

Kansas City is primarily a commercial centre, and its trade in livestock, grain and agricultural implements is especially large. The annual pure-bred livestock show is of national importance. The city’s factory product increased from $25,388,653 in 1900 to $35,573,049 in 1905, or 50-8%. Natural gas and crude petroleum from Kansas fields became of industrial importance about 1906. Natural gas is used to light the residence streets and to heat many of the residences.

Kansas City is one of the few cities in the United States empowered to frame its own charter. The first was adopted in 1875 and the second in 1880. In 1903 a new charter, drawn on the lines of the model “municipal program” advocated by the National Municipal League, was submitted to popular vote, but was defeated by the influence of the saloons and other special interests. The charter of 1908 is a revision of this proposed charter of 1905 with the objectionable features eliminated; it was adopted by a large majority vote. Under the provisions of the charter of 1908 the people elect a mayor, city treasurer, city comptroller, and judges of the municipal court, each for a term of two years. The legislative body is the common council composed of two houses, each having as many members as there are wards in the city—14 in 1908. The members of the lower house are elected, one by each ward, in the spring of each even numbered year. The upper house members are elected by the city at large and serve four years. A board of public works, board of park commissioners, board of fire and water commissioners, a board of civil service, a city counsellor, a city auditor, a city assessor, a purchasing agent, and subordinate officers, are appointed by the mayor, without confirmation by the common council. A non-partisan board composed of citizens who must not be physicians has general control of the city’s hospitals and health department. A new hospital at a cost of half a million dollars was completed in 1908. The charter provides for a referendum vote on franchises, which may be ordered by the council or by petition of the people, the signatures of 20% of the registered voters being sufficient to force such election. Public work may be prevented by remonstrance of interested property owners except in certain instances, when the city, by vote of the people, may overrule all remonstrances. A civic league attempts to give a non-partisan estimate of all municipal candidates. The city court, the arts and tenement commissions, the municipal employment bureau, and a park board are provided for by the charter. All the members of the city board of election commissioners and a majority of the police board are appointed by the governor of the state; and the police control the grant of liquor licences. The city is supplied with water drawn from the Missouri river above the mouth of the Kansas or Kaw (which is used as a sewer by Kansas City, Kan.); the main pumping station and settling basins being at

Sewer Problem - 1901. The city’s water system was in need of improvement, and a plan was presented to the city council for its consideration. The plan included the construction of new water mains and the improvement of existing ones. The cost of the project was estimated at $1 million, and the city council agreed to proceed with the work. The city’s water system was expanding rapidly, and the new mains would help meet the increasing demand for water. The project was completed in 1903, and the city’s water system was improved significantly.
Quindaro, several miles up the river in Kansas; whence the water is carried beneath the Kansas, through a tunnel, to a high-pressure distributing station in the west bottoms. The waterworks (direct pressure system) were acquired by the city in 1895. All other public services are in private hands. The street-railway service is based on a universal 5-cent transfer throughout the metropolitan area. Some of the first overhead electric trolleys used in the United States were used here in 1885.

The first permanent settlement within the present limits of Kansas City, which took its name from Kansas river, was established by French fur traders about 1811. Westport, a little inland town—platted 1833, a city 1857, merged in Kansas City in 1899—now a fashionable residence district of Kansas City—was a rival of Independence in the Santa Fé trade which she gained almost in late in 1814 when the great Missouri flood (the greatest the river has known) destroyed the great landing at Independence. Here was the old frontier of the Osage, which, in 1835, was annexed to Missouri.

There are about 10,000,000 consumers in the United States using the products of Kansas. Kansas belongs with the Great Lakes states in the production of wheat, corn, and beans. It is the leading producer of milk in the United States and the second in poultry and eggs. The cattle are from 15 to 20 million.

KANSK—KANT

KANSK, a town of eastern Siberia, in the government of Yenisetsk, 153 m. by rail E. of Krasnoyarsk, on the Kan River, a tributary of the Yenisei, and on the Siberian highway. Pop. (1897), 7,504. It is the chief town of a district in which gold is found, but lies on low ground subject to inundation by the river.

KAN-SUH, a north-western province of China, bounded N. by Mongolia, E. by Shen-si, S. by Szech-ouen, W. by Tibet and N.W. by Turkestan. The boundary on the N. remains undefined, but the province may be said to occupy the territory lying between 32° 30' and 40° N., and 108° and 98° E., and to contain about 260,000 sq. m. The population is estimated at 9,800,000. Western Kan-suh is mountainous, and largely a wilderness of sand and snow, but east of the Hwang-ho the country is cultivated. The principal river is the Hwang-ho, and in the mountains to the south of Lan-chow Fu rises the Wei-ho, which traverses Shen-si and flows into the Hwang-ho at Tung-kwan. The chief products of Kan-suh are cloth, horse hides, a kind of curd like butter which is known by the Mongols under the name of touda, musk, plums, onions, dates, sweet melons and medicines. (See China.)

KANT, IMMANUEL (1724-1804), German philosopher, was born at Königsberg on the 22nd of April 1724. His grandfather was an emigrant from Scotland, and the name Cant is not uncommon in the north of Scotland, whence the family is said to have come. His father was a saddler in Königsberg, then a stronghold of Pietism, to the strong influence of which Kant was subjected in his early years. In his tenth year he was entered at the Collegium Fredericianum with the definite view of studying theology. His inclination at this time was towards classics, and he was recognized, with his school-fellow, David Ruhnken, as among the most promising classical scholars of the college. His taste for the greater Latin authors, particularly Lucretius, was never lost, and he acquired at school an unusual facility in Latin composition. With Greek authors he does not appear to have been equally familiar. During his university course, which began in 1740, Kant was principally attracted towards mathematics and physics. The lectures on classics do not seem to have satisfied him, and, though he attended courses on theology, and even preached on one or two occasions, he appears finally to have given up the intention of entering the Church. The last years of his university studies were much disturbed by poverty. His father died in 1746, and for nine years he was compelled to earn his own living as a private tutor. Although he disliked the life and was not specially qualified for it—as he used to say regarding the excellent precepts of his Pädagogik, he was never able to apply them—yet he added to his other accomplishments a grace and polish which he displayed ever afterwards to a degree somewhat unusual in a philosopher by profession.

In 1755 Kant became tutor in the family of Count Kayserling. By the kindness of a friend named Richter, he was enabled to resume his university career, and in the autumn of that year he graduated as doctor and qualified as privatdocent. For fifteen years he continued to labour in this position, his fame as writer and lecturer steadily increasing. Though twice he failed to obtain a professorship at Königsberg, he steadily refused appointments elsewhere. The only academic preferment received by him during the lengthy probation was the post of under librarian (1766). His lectures, at first mainly upon physics, gradually expanded until nearly all descriptions of philosophy were included under them.

In 1770 he obtained the chair of logic and metaphysics at Königsberg, and delivered as his inaugural address the dissertation De mundi sensibilis et intelligibils formae et principiis. Eleven years later he delivered the Kritik of Pure Reason, a work towards which he had been steadily advancing, and of which all his later writings are developments. In 1783 he published the Prolegomena, intended as an introduction to the Kritik, which had been found to stand in need of some explanatory comment. A second edition of the Kritik, with some modifications, appeared in 1787, after which it remained unaltered.

In spite of its frequent obscurity, its novel terminology, and its declared opposition to prevailing systems, the Kantian philosophy made rapid progress in Germany. In the course of ten or twelve years from the publication of the Kritik of Pure Reason, it was expounded in all the leading universities, and it even penetrated into the schools of the Church of Rome. Such men as J. Schulz in Königsberg, J. G. Kiesewetter in Berlin, Jakob in Halle, Born and A. L. Heydenreich in Leipzig, K. L. Reinhold and E. Schmid in Jena, Buhle in Göttingen, Tennemann in Marburg, and Snell in Giessen, with many others, made it the basis of their philosophical teaching, while theologians like Tieftrunk, Stäudlin, and Ammon eagerly applied it to Christian doctrine and morality. Young men flocked to Königsberg as to a shrine of philosophy. The Prussian Government even undertook the expense of their support. Kant was haled by some as a second Messiah. He was consulted as an oracle on all questions of casuistry—as, for example, on the lawfulness of inoculation for the small-pox. This universal homage for a long time left Kant unaffected; it was only in his later years that he...
spoke of his system as the limit of philosophy, and resented all further progress. He still pursued his quiet round of lecturing and authorship, and contributed from time to time papers to the literary journals. Of these, among the most remarkable was his review of Herder's Philosophy of History, which greatly exasperated that author, and led to a violent act of retaliation some years after in his Metakritik of Pure Reason. Schiller at this period in vain sought to engage Kant upon his Horen. He remained true to the Berlin Journal, in which most of his criticisms appeared.

In 1792 Kant, in the full height of his reputation, was involved in a collision with the Government on the question of his religious doctrines. Naturally his philosophy had excited the declared opposition of all adherents of historical Christianity, since its plain tendency was towards a moral rationalism, and it could not be reconciled to the liturgical doctrines of the Lutheran Church. It would have been much better to permit his exposition of the philosophy of religion to enjoy the same literary rights as his earlier works, since Kant could not be interdicted without first silencing a multitude of theologians who were at least equally separated from positive Christianity. The Government, however, judged otherwise; and after the first part of his book, On Religion within the Limits of Reason alone, had appeared in the Berlin Journal, the publication of the remainder, which treats in a more rationalizing style of the peculiarities of Christianity, was forbidden. Kant, thus shut out from Berlin, availed himself of his local privilege, and, with the sanction of the theological faculty of his own university, published the full work in Königsberg. The Government, probably influenced as much by hatred and fear of the French Revolution, of which Kant was supposed to be a partisan, as by love of orthodoxy, resented the act; and a secret cabinet order was received by him intimating the displeasure of the king, Frederick William II., and exacting a pledge not to lecture or write at all on religious subjects in future. With this order Kant, like a logician vegetable, and kept his engagement till 1797, when the death of the king, according to his construction of his promise, set him free. This incident, however, produced a very unfavourable effect on his spirits. He withdrew in 1794 from society; next year he gave up all his classes but one public lecture on logic or metaphysics; and in 1797, before the removal of the interdict on his theological teaching, he ceased altogether his public labours, after an academic course of forty-two years. He previously, in the same year, finished his treatises on the Metaphysics of Ethics, which, with his Anthropology, completed in 1798, were the last considerable works that he revised with his own hand. His Lectures on Logic, on Physical Geography, on Paedagogics, were edited during his lifetime by his friends and pupils. By way of asserting his right to resume theological disquisition, he also issued in 1798 his Kritik der Schule, in which all the strongest points of his work on religion were urged afresh, and the correspondence that had passed between himself and his readers was given to the public.

From the date of his retirement from the chair Kant declined in strength, and gave tokens of intellectual decay. His memory began to fail, and a large work at which he wrought night and day, on the connexion between physics and metaphysics, was found to be only a repetition of his already published doctrines. After 1802, finding himself attacked with a weakness in the limbs attended with frequent fits of falling, he mitigated the Spartan severity of his life, and consented to receive medical advice. A constant restlessness oppressed him; his sight gave way; his conversation became an extraordinary mixture of metaphors; and it was only at intervals that gleams of his former power broke out, especially when some old chord of association was struck in natural science or physical geography. A few days before his decease, with a great effort he thanked his medical attendant for his visits in the words, "I have not yet lost my feeling for humanity." On the 14th of February 1804 he died, having almost completed his eightieth year. His stature was small, and his appearance feeble. He was little more than five feet high; his breast was almost concave, and, like Schleiernacher, he was deformed in the right shoulder. His senses were quick and delicate; and, though of weak constitution, he escaped by strict regimen all serious illness.

His life was arranged with mechanical regularity; and, as he never married, he kept the habits of his studious youth to old age. His man-servant, who awoke him summer and winter at five o'clock, testified that he had not once failed in thirty years to respond to the call. After rising he studied for two hours, then lectured other two, and spent the rest of the forenoon, till one, at his desk. He then dined at a restaurant, which he frequently changed, to avoid the influx of strangers, who crowded to see and hear him. This was his only regular meal; and he often prolonged the conversation till late in the afternoon. He then walked out for at least an hour in all weathers, and spent the evening in lighter reading, except an hour or two devoted to the preparation of his next day's lectures, after which he retired between nine and ten to rest. In his earlier years he often spent his evenings in general society, where his knowledge and conversational talents made him the life of every party. He was especially intimate with the families of two English merchants of the name of Green and Motherby, where he found many opportunities of meeting ship-captains, and other travelled persons, and thus gratifying his passion for physical geography. This social circle included also the celebrated J. G. Hamann, the friend of Herder and Jacobi, who was thus a mediator between Kant and these philosophical adversaries.

Kant's reading was of the most extensive and miscellaneous kind. He cared comparatively little for the history of speculation, but his acquaintance with books of science, general history, travels and belles lettres was boundless. He was well versed in English literature, chiefly of the age of Queen Anne, and had read English philosophy from Locke to Hume, and the Scottish school. He was at home in Voltaire and Rousseau, but had little or no acquaintance with the French sensational philosophy. He was familiar with all German literature up to the date of his Kritik, but had read the Kritik of R. H. S. Schiller. It was his habit to obtain books in sheets from his publishers Kanter and Nicolovius; and he read over for many years all the new works in their catalogue, in order to keep abreast of universal knowledge. He was fond of newspapers and works on politics; and this was the only kind of reading that could interrupt his studies in philosophy.

As a lecturer, Kant avoided altogether that rigid style in which his books were written. He sat behind a low desk, with a few notations on slips of paper, or textbooks marked on the margin, before him, and delivered an extemporaneous address, opening up the subject by partial glimpses, and with many anecdotes or familiar illustrations, till a complete idea of it was presented. His voice was extremely weak, but sometimes rose into eloquence, and always commanded perfect silence. Though kind to his students, he refused to remit their fees, as this, he thought, would discourage independence. It was another principle that his chief exertions should be bestowed on the intermediate class of talent, as the geniuses would help themselves, and the dunces were beyond remedy.

Simple, honourable, truthful, kind-hearted and high-minded as Kant was in all moral respects, he was somewhat deficient in the region of sentiment. He had little enthusiasm for the beauties of nature, and indeed never sailed out into the Baltic, or travelled more than 40 miles from Königsberg. Music he disregarded, and all poetry that was more than sententious prose. His ethics have been reproached with some justice as setting up too low an ideal for the female sex. Though faithful in a high degree to the duties of friendship, he could not bear to visit his friends in sickness, and after their death he reproved all allusion to their memory. His engrossing intellectual labours no doubt tended somewhat to harden his character; and in his zeal for rectitude of purpose he forgot the part which affection and sentiment must ever play in the human constitution.

On the 13th of February 1804, the hundredth anniversary of Kant's death, a Kantian society (Kantgesellschaft) was formed at Halle under the leadership of Professor H. Vaihinger to promote Kantian studies. In 1909 it had an annual membership
of 1755; it supports the periodical Kantstudien (founded 1896; see Bibliography, ad in.).

The Writings of Kant

No other thinker of modern times has been throughout his work so penetrated with the fundamental conceptions of physical science; no other has been able to hold with such firmness the balance between the empirical and the speculative, and to feel the influence which the critical philosophy has exercised and continues to exercise must be ascribed to this characteristic feature in the training of its great author.

Kant's writings are almost without exception on questions of physical science. It was only by degrees that philosophical problems began to engage his attention, and that the main portion of his literary activity was turned towards them. The last years of his life were the most important of those which bear directly on physical science.

1. Gedanken von der wahren Schätzung der lebendigen Kräfte (1747): an essay dealing with the famous dispute between the Cartesians and Newtonians regarding the possibility of producing an effect from a force of a certain amount of air. According to the Cartesians, this quantity was directly proportional to velocity; according to their opponents, it varied with the square of the velocity. The dispute has now lost its interest, for physicists have learned that the waters of the earth must have a secondary effect in the retardation of the earth's motion, and refers to a similar cause that the moon turns always the same face to the earth.

2. Allgemeine Naturschluß und Theorie des Himmlischen, published as an essay in 1752, and as a dissertation, in 1755 (Eng. trans., F. H. E. Smith, 1806). In this remarkable work Kant, proceeding from the Newtonian conception of the solar system, extends his consideration to the entire sidereal system, points out how the whole may be mechanically regulated, and how the imperfection of the original nebula which has received the title of the nebular hypothesis. In some details, such as the rule according to the motion of the earth's system as a portion of the general cosmical mechanism, he had predecessors, among others D. H. Wheatstone of Durham, but the work as a whole contains a wonderfully acute anticipation of much that was afterwards carried out by Herschel and Laplace. The hypothesis of the original nebular condition of the system, with the consequent evidences of the formation of the planets and the meteoric phenomena, is unquestionably to be assigned to Kant. (On this question see discussion in W. Haste's Kant's Cosmogony, as above, 1756.)

3. Dissertation de igne succincta delineatio (1755): an inaugural dissertation, containing little beyond the notion that bodies operate on one another through the medium of a uniformly diffused, elastic and subtle matter (ether) which is the underlying substrate. Both heat and light are regarded as vibrations of this diffused ether.

4. On the Causes of Earthquakes (1755); Description of the Earthquake of 1755 (1756); Consideration of some Recent Experienced Earthquakes (1756). In this brief tract, Kant, apparently in entire ignorance of the explanation given in 1735 by Hadley, points out how the varying velocity of rotation of the successive portions of the earth's surface furnishes a key to the phenomena of periodic wind. His theory is in almost entire agreement with that now received. See the parallel statements from Kant's tract and Dove's essay on the influence of the rotation of the earth upon its atmosphere (1753), given in Zöllner's work, Über die Natur der Cometen (1757), 472, 475.

5. On the Different Races of Men (1775); Determination of the Notion of a Human Race (1785); Conjectural Beginning of Human History (1786): three tracts containing some points of interest as regards the facts and problems of genetics. Reference will be made to them in the notice of the Kritik of Judgment.

6. On the Volcanoes in the Moon (1775); On the Influence of the Moon on the Weather (1794). The second of these contains a remarkable discussion of the relation between the centre of the moon's figure and its centre of gravity. From the difference between these Kant is led to conclude that the climatic conditions of the side of the moon turned away from us must be altogether unlike those of the face presented to us. His views have been restated by Hansen.

7. Lectures on Physical Geography (1822): published from notes of Kant's lectures, with the approval of the author.

Consideration of these works is sufficient to show that Kant's mastery of the science of his time was complete and thorough, and that his philosophy is to be dealt with as having throughout a reference to general scientific conceptions. For more detailed references to his work in this aspect of science, reference may be made to Zöllner's essay on "Kant and his Merits on Natural Science," contained in the work on the Nature of Comets (pp. 426-484); to Dietrich, Kant and Newton; Schultz, Kant and Darwin; Reussche's careful analysis of Kant's thoughts on the Newtonian and the Leibnitzian-Scholastic-Spinozist-Schuller (1685); W. Haste's introduction to Kant's Cosmogony (1900), which summarizes criticism to that date; and articles in Kant-Studien (1895-1907).

The entire of the philosophical writings of Kant need not be more than bibliographical, as in the account of his philosophy it will be necessary to consider at some length the successive stages in the development of his thought. Arranged chronologically these works are as follows—

1755. Principiorum primorum cognitionis metaphysicae nova dilucidatio.
1756. Metaphysicae cum geometria juncta usus in philosophia naturalis et exathenaeum speculativa physica.
1763. Versuch den Begriff der negativen Grössen in die Weltweisheit einzuführen, "Attempt to introduce the Notion of Negative Quantities into Philosophy."
1764. Ein physikalischer Beweisgrund zu einer Demonstration des Dannses Gottes, "The only possible Foundation for a Demonstration of the Existence of God."
1764. Beobachtungen über das Gefühl des Schönen und Erhabenen (Riga, 1775; Königsberg, 1777).
1770. Über die Untersuchung der Deutlichkeit der Grundzüge der natürlichen Theologie und Moral, "Essay on the Evidence (Clearness) of the Fundamental Propositions of Natural Theology and Ethics."
1787. Probleme eines Geistersehers, "Problems of a Ghost-seer (or Clairvoyant) explained by the Dreams of Metaphysics" (Eng. trans. E. F. Goertz, with introd. by F. Sewall, 1900).

The above may all be regarded as belonging to the precritical period of Kant's development. The following introduce the notions and principles characteristic of the critical philosophy.
1793. Prolegomena zu einer jeden künftigen Metaphysik die als Wissenschaft wahrhaft zu erstreben, "Prolegomena to all Future Metaphysic which may present itself as Science" (Eng. trans. B. Erdmann, 1860; Eng. trans., W. S. T. B. Sewall, 1895; Eng. trans., F. Max Müller, 1879 a second ed. 1890; Eng. trans. F. Belfort Bax, 1883 and Paul Carus, 1902; and cf. M. Apel, Kommentar zu Kants Prolegomena, 1908).
1808. "Idee zu einer allgemeinen Geschichte im weltbürgerlichen Altbegriff (Critical History in a Cosmopolitan Sense.)" With this may be coupled the review of Herder in 1785.
1808. Grundlegung zur Metaphysik der Sitten, "Foundations of the Metaphysic of Ethics" (see T. K. Abbott, Fundamental Principles of Metaphysics, Axiomatic and Critical, etc., 1891.)
1808. Über die Grundes teleologischer Prinzipien in der Philosophie, "On the Employment of Teleological Principles in Philosophy."
1790. Uber eine Entdeckung, nach der alle neue Kritik der reinen Vernunft, "On a Discovery by which all the recent Critical of Pure Reason is supplanted by a more ancient" (i.e. by Leibnitz's philosophy).
1791. Uber die wirklichen Fortschritte der Metaphysik seit Leibnitz und Wolff, "On the Real Advances in Metaphysics since Leibnitz and Wolff"; and Uber das Mindesten aller philosophischen Versuche in der Theodizee.
1794. Uber Philosophie überhaupt, "On Philosophy generally, and Das Ende aller Dinge."
1798. Der Streit der Facultäten, "Contest of the Faculties."
1808. Anthropologie in pragmatischer Hinsicht.
The Kantian Philosophy.

Historians are accustomed to divide the general current of speculation into epochs or periods marked by the dominance of some single principle or theory. The evolutionary process in this development of the Kantian philosophy is in no case the character of an epoch more clearly apparent than in that of the critical philosophy. The great work of Kant absolutely closed the lines of speculation along which the philosophical literature of the 18th century had gradually been directed. The method which he has prescribed for the critical philosophy is probably the most comprehensive and most effective method of regarding the essential problems of thought, a method which has prescribed the course of speculations in the present age. The critical system has thus a twofold aspect. It is the result of a systematized and characteristic analysis of the previous efforts of modern thought, shows the imperfect nature of the fundamental notions therein employed, and offers a new solution of the problems to which these notions had been applied. It opens up a new series of questions upon which the subsequent philosophy reflected: it gives them to the form, under which it is possible that they should be fruitfully regarded. A work of this kind is essentially epoch-making.

In any complete account of the Kantian system it is therefore necessary that there be an essential reference, on the one hand, to the peculiar character of the preceding 18th-century philosophy, and, on the other hand, to the problems left for renewed treatment to more modern thought. Fortunately the development of the Kantian system along which investigation must necessarily proceed is the former reference. For the critical philosophy was a work of slow growth. In the early writings of Kant we are able to trace with great definiteness the successive stages through which he passed from the preceding epoch, and to note the comprehensive method which gives it special character to the critical work. Scarcely any great mind, it has been said with justice, ever matured so slowly. In the early essays we find the principles of the doctrine of the individual mind as introduced by Leibnitz and Locke in a definitely applied to various directions to those problems which serve as tests of their truth and completeness; we note the appearance of the difficulties or contradictions which manifest the one-sidedness or imperfection of the approach; we can trace the growth of the new conceptions which were destined, in the completed system, to take the place of the earlier method. To understand the Kantian work it is indispensable to trace the history of its growth in the development of the philosophy of the mind.

Of the two preceding stages of modern philosophy, only the second, that of Locke and Leibnitz, seems to have influenced practically the course of Kant’s speculation. With the Cartesian movement as a whole he shows little acquaintance and no sympathy, and his own philosophic conception is never brought into relation with the systematic treatment of metaphysical problems characteristic of the Cartesian method. The fundamental question for philosophic reflection presented itself to him in the form which had hitherto been left to the research of Locke and his successors in England, of Leibnitz and the Leibnitzian school in Germany. The transition from the Cartesian movement to this second stage of modern thought had doubtless been natural and indeed necessary. Nevertheless, the full development of metaphysic doctrine had never been attempted by the comparatively limited fashion in which it was then regarded.

The tendency towards what may be technically called subjectivism, a tendency which differentiates the modern from the ancient method of metaphysical speculation, is expressed in the philosophy of Locke and Leibnitz in a definite and peculiar fashion. However widely the two systems differ in details, they are at one in a certain fundamental conception which dominates the whole course of their philosophic construction. They are throughout individualistic, i.e. they accept as given fact the existence of the concrete, thinking subject, and endeavour to show how this subject, as an individual conscious being, is related to the wider universe of which he forms part. In dealing with such a problem, there are evident limits to the stage of investigation which is necessary. It may be asked how the individual mind comes to know himself and the system of things with which he is connected, how the varied contents of his experience are to be accounted for, and what certainty attaches to his knowing things. By the individualistic point of view, this line of inquiry becomes purely psychological, and the answer may be presented, as it was presented by Locke, in the fashion of a natural history of the growth of conscious experience in the individual mind. Or, it may be further asked, how is the individual really connected with the system of things apparently disclosed to him in conscious experience? What is the precise significance of the existence which he ascribes both to himself and to the world? Kant could ask himself what is the relation between himself as one part of the system, and the system as a whole? This second inquiry is specifically metaphysical in bearing, and the kind of answer furnished to it by Leibnitz on the one hand, by Berkeley on the other, is in a sense prescribed by the metaphysical conception of the individual with which both begin their investigations. So soon as we make clear to ourselves the essential nature of this method, we are able to discern the specific difficulties or perplexities arising in the attempt to carry it out systematically, and thus to note with precision the special problems presented to Kant at the outset of his philosophic reflections.

Consider, first, the application of the method on its psychological side, as it appears in Locke. Starting with the assumption of the mind as a plane of cognition, he proceeds to relate the universe of things to the mind and to its mechanical operation upon the mind. The result of the interaction of mind, i.e. the individual mind as a whole, and a system of things outside itself, is a relation of ideas, which may be variously compounded, divided, compared, or dealt with by the subjective faculties or powers with which the entity, Mind, is supposed to be endowed. Matter of fact and matter of pure intuition are thus distinguished, which are the real nature of the relation between mind and things leads at once to the counter notion of the absolute restriction of mind to its own subjective nature. That Locke was unable to reconcile these opposed notions is not surprising, indeed is to be expected from the impossibility of reconciling them is evident on the slightest consideration of the main positions of that work. Of these difficulties the philosophies of Berkeley and Hume are systematic treatments. In Berkeley we find the resolute determination to accept only the notion, that of mind as restricted to its own conscious experience, and to attempt by this means to explain the nature of the external reality to which obscure reference is made. Any success in the attempt is due only to the fact that Berkeley introduces alongside his intellectual notion, a totally new conception, that of mind itself as not in the same way one of the matters of conscious experience, but as capable of reflection upon the whole of experience and of reference to the supreme mind as the ground of all reality. It is a wide subject to which we must not further enter. It is not a subject of the philosophy of the mind, since it is only introduced as a way of avoiding the difficult problem of the dissolution of all axiety of cognition, which is the inevitable result of the individualist method, but also the clearest consciousness of the very root of the difficulty. The systematic application of the individualist method to the system of knowledge, impressions or ideas, leads Hume to distinguish between truths reached by analysis and truths which involve real connexion of the objects of knowledge. The first he is willing to accept, and in furthering the analysis which Kant seems to have supposed, that he regarded mathematical propositions as coming under this head (see Hume); with respect to the second, he finds himself, and confesses that he himself, merely at fault. No real connexion between isolated objects of experience are perceived by us. No single matter of fact necessarily implies the existence of any other. In short, if the difficulty be put in its ultimate form, no existence thought as a distinct unit of knowledge can supply a necessary relation to any other existence. If the parts of conscious experience are regarded as so many distinct things, there is no possibility of connecting them other than contingently, if at all. If the individual mind be really thought as individual, it is impossible, as he should have it, that the mind ever perceives any real connexion. The individual cannot in himself single out one item which is not connected with some other item; or, if he single it out, he will be in something simple or individual, or did the mind perceive some real connexion among them, there would be no difficulty in the case (App. to Treatise of Human Nature).

Thus, on the one hand, the individualist conception, when carried out to its full extent, leads to the total negation of all real cognition. If the real system of things, to which conscious experience has reference, be regarded as standing in casual relation to this experience there is no conceivable ground for the extension to reality of the psychological method. But also there is a sort of same result is apparent, on the other hand, when we consider the theory of knowledge implied in the Leibnitzian individualism. The metaphysical conception of the monads, each of which is the universe in itself and in every other respect, and in which the connection or interdependence of the monads is in question, and these difficulties obtrude themselves when the attempt is made to work out a consistent doctrine of cognition. For the whole mass of cognisable fact, he can advance nothing intelligibly to prove or deduce. The same fundamental axioms, the logical principles of identity and sufficient reason, are applicable in explanation of all given propositions. It is true that Leibnitz himself did not work out any complete doctrine of knowledge, but in the hands of his successors the theory took definite shape in the principle that the whole work of cognition is to be in essence analytical. The process of analysis might be complete or incomplete. For finite intelligences there was an inevitable incompleteness so far as knowledge of matters of fact was
concerned. In respect to them, the final result was found in a series of irreducible notions or categories, the prima possibilis, the analysis and elucidation of which was specifically the business of philosophy or metaphysics. It has been observed that, in the Leibnizian as in the empirical individualism, the fundamental notion is still that of the abstract separation of the thinking subject from the materials of conscious experience. From this separation arise all the difficulties in the effort to reconcile the external world with the subjective mind. In the history of Kant's philosophical progress we are able to discern the gradual perception on his part that here was to be found the ultimate cause of the perplexities which became apparent in considering the subject in its relation to the object. The reflective self-consciousness which had already been enumerated as composing Kant's precritical writings are not to be regarded as so many imperfect sketches of the doctrines of the *Kritik*, nor are we to look in them for anticipations of the critical system. Nevertheless, the ideas contained in these earlier writings are of the most unusual clearness in the manner in which the difficulties of a received theory are forced on a wider and more comprehensive view. There can be no doubt that some of the special features of the *Kritik* are to be found in these precritical essays, e.g., the doctrine of the *Aesthetic*, etc. It is certainly foreshadowed in the *Dissertation* of 1770; the *Kritik*, however, is no patchwork, and what appears in the *Dissertation* takes an altogether new form when it is wrought into the more comprehensive conception of the later treatise.

The particular problem which gave the occasion to the first of the precritical writings is, in an imperfect or particular fashion, the fundamental question to which the *Kritik* is an answer. What is the nature of *a priori* knowledge?* Kant has been engaged by the question of notions and knowledge of matters of fact? Kant seems never to have been satisfied with the Wolffian identification of logical axioms and the principle of sufficient reason. The tract on the *False Substances of the *Kritik* is fundamental between the two classes of judgments. In the *Essay en Negatives* [Dissertation] we find a more explicit and direct formulation of the position between logical opposition (the contradistinctions of judgments, which Kant always viewed as formed, definite products of thought) and real opposition. For the one adequate explanation is found in the logical axioms of analytical thinking; for the other no such explanation is to be had. Logical ground and real ground are totally distinct.

"I can understand perfectly well," says Kant, "how a consequence follows from its reason according to the law of identity, since it is contained in the concept. But how have I to think about such a phenomenon?" Such a question is to be answered by saying that it is not possible to think about such a phenomenon. But how something follows from another thing and not according to the law of identity, this I should gladly have made clear to me. . . . How shall I comprehend that, since something is, something else is not? How shall I comprehend that the concept of an object in general is distinct, not necessarily or logically connected in thought. "I have," he proceeds, "reflected on the nature of our knowledge in relation to our judgment of reason and consequent, and I intend to explain it by following closely the course of my reflections. It follows from them that the relation of a real ground to that which is thereby posited or denied cannot be expressed by a judgment but only by means of a notion, which by analysis may certainly be reduced to yet simpler notions of real grounds, but yet in such a way that the final result of my reflections in this regard must be found in simple and irreducible notions of real grounds, the relation of which to their consequents or objects of reason is complex.

The striking similarity between Kant's expressions in this Essay and the remarks with which Hume introduces his analysis of the notion of cause has led to the supposition that at this period of his philosophic career Kant was definitely under the influence of the *Treatise on Human Understanding*. This is quite sufficient to show the groundlessness of this supposition. The difficulty with which Kant is presented was one arising inevitably from reflection upon the Leibnizian theory of knowledge, and the answer that he gives to it does not seem to be any worse. It may well be found that the notion of cause is closely akin to that of a real ground, a logical notion distinct from a notion of objects.

The doctrine of know ledge expressed in the *Dissertation* was the final form which the Wolffian rationalism could have assumed for him, and, though many of the elements of the *Kritik* are contained therein, it was not really in advance of the Wolffian theory. The doctrine of space and time
as forms of sense-perception, the reference of both space and time and the pure intellectual notions to the laws of the activity of mind itself, the distinction between sense and understanding as one of kind, not of degree, with the correlative distinction between phenomena and noumena—all this reference, though of a more modern order of magnitude, is still the same as in the Critique. But, despite this resemblance, it seems clear that, so far as the Dissertation is concerned, the way had only been prepared for the true critical inquiry, and that the real import of Hume's sceptical problem—what knowledge is, and on what principle it is gained—had first been stated in the Dissertation, the further inquiry had been rendered inevitable. It had become quite impossible for Kant to remain longer satisfied with the ambiguous conception of the product of the transcendental faculty of knowledge, the so-called pure intellectual notions. Those notions, according to the Dissertation, had no function save in relation to things-in-themselves, i.e., to objects which are not directly presented to understanding, to objects, in short, to objects in general. They did not serve as the connecting links of forrnéd experience; on the contrary, they were supposed to be absolutely disavowed from all experience which was possible for intelligence like ours. In his previous essays, Kant, while like- wise maintaining that such pure, irreducible notions existed, had asserted in general terms that they applied to experience, and that their applicability or justification rested on experience itself, but had not raised the question as to the ground of such justification. Now Hume's writings were presented—how could such notions have application to any objects whatsoever? For some time the correlative difficulty, how objects of sense-perception were possible, did not seem to have suggested itself to Kant, but it is a question that he had to take on in the Dissertation. Hume's sceptical conception had been taken as receptivity of representations of objects, and experience as the product of the treatment of such representations by or analytical processes of understanding. Some shadow of the idea of pure reason is left even in the Critique, especially perhaps in the Aesthetik, and they give rise to much of the ambiguity which unfortunately attaches to the more developed theory of cognition. So soon, however, as the critical questions were put, on the other hand, the notion of pure experience becomes one of the central notions in the Critique, quite as the experience of the object or thing? in other words, How do we come to have knowledge of objects at all? it became apparent that the problem was one of perfect generality, and applied, not only to the cognition through the senses, but to the cognition of things-in-themselves, or the judgment of the object or thing. It is the generalization of this general problem that we find the new and characteristic feature of Kant's work.

There is thus no reason to doubt the substantial accuracy of Kant's reference to the particular occasion or cause of the critical inquiry. Up to the stage indicated by the Dissertation he had been attempting, in various ways, to unite two radically different modes of explaining cognition, that which would account for the content of experience, by reference to the form of things without us, and that which viewed the intellect itself as somehow furnished with the means of pure, rational cognition. He now discovered that Hume's sceptical analysis of the notion of causation was really the trepanation of an old stock idea of the notion of causation.

If experience, says Hume, consists solely of states of mind somehow given to us, each of which exists as an effect, and therefore as distinct from others, with what right do we make the connection of one state necessarily with another? The only possible answer, drawn from the premises laid down, must be that there is no warrant for such an assumption. Necessity for thought, as Kant had been willing to admit and as Hume also held, involves or implies something more than is given in experience, for that which is given is contingent—and rests upon an a priori or pure notion. But a priori notions, did they exist, could have no claim to regulate experience. Hume, therefore, for his part, rejected entirely the notion of causation as being fictitious and derived, and professed to account for the habit of regarding experience as necessarily connected by reference to artificially formed ideas of thinking. Experience, as given, contours the general, has the self-consciousness, the self-unified, self-universalized in it, the habit of regarding things as necessarily connected. That such a resort to experience for explanation could lead to no valid conclusion has been the whole point of Kant's argument.

The dogmatic or individualist conception of experience had thus proved itself inadequate to the solution of Hume's difficulty regarding the notion of cause,—a difficulty which Kant, erroneously, had thought he had solved in his first essay. The dogmatic perception of its inadequacy in this respect, and the consequent generalization of Hume's problem, are the essential features of the new critical method. For Kant was now prepared to formulate his conception of experience as a definite philosophy of cognition, a reflection on the Wolffian doctrine of knowledge had made clear to him that synthetic connexion, the essence of real cognition, was not contained in the products of thinking as a formal activity of thought, but that it was contained in the very conditions of the activity of thinking itself. Hume's analysis enabled him to see that synthetic connexion was not contained in experience regarded as given material. Thus neither the formal nor the material aspect of conscious experience, when regarded from the individual point of view, supplied any foundation for real knowledge, whether a priori or empirical. An absolutely new conception of experience was necessary, if the fact of cognition was to be explained at all, and the various modes in which Kant expresses the business of his critical philosophy were merely different fashions of stating the one ultimate problem, different methods of approach, but no less different from each other in the new Kantian system than the differences of view which he happened to have in view. To inquire how synthetic a priori judgments are possible, or how far cognition extends, or what worth attaches to metaphysical propositions, is simply to ask, in the Kantian system, how the subject of experience is to be apprehended as the necessary condition of which the subject is conscious. How is it possible for the individual thinking subject to connect together the parts of his experience in the mode we call cognition?

For that is the conception of philosophy is, therefore, the complete analysis of experience from the point of view of the conditions under which such experience is possible for the conscious subject. The central ideas are thus self-consciousness, as the supreme condition of the subjective, the Kantian term of a thinking subject, and the absolute condition of experience, as a conceived of subject. The solution of the problem demanded the utmost care in keeping the due balance between these ideas; and it can hardly be said that Kant was perfectly successful. He was frequently untrue to the more comprehensive conception which dominates his work as a whole. The influence of his previous philosophical training, nay, even the unconscious influence of terminology, frequently induces in his statements a certain laxity and want of clearness. He selects definitely for his starting point neither the idea of self-consciousness nor the details of experience, but in his actual procedure passes from one to the other, rarely, if ever, taking into full consideration the other, and any change in his procedure is rendered merely under the influence of the individualist notion which he had done so much to explode. The conception of conscious experience, which is the net result of the Krutik, is indefinitely pro- longed, in the sense that it is richer than the immediacy of the critical, and for Kant such experience still appears as somehow an arbitrary of the relation between the individual conscious subject and the realm of real facts. When he is actually treating of conditions of experience, the individualist conception is not prominent; the conditions are stated quite generally, as conditions of knowledge. But so soon as the deeper, metaphysical problems present themselves, the shadow of the old dogmatic conception is felt again. Man, as Kant himself said, is furnished with the subject, part given to the subject, and is thus viewed as mechanically divisible into a priori and a posteriori, into pure and empirical, necessary and contingent. The individual as a thinking subject is shown to be the necessary condition of experience, and the Kantian ethical code remains purely formal. The ultimate relation between intelligence and natural fact, expressed in the notion of end, is thought as problematic or contingent. The difficulties or obscurities of the Kantian system, of which the above are merely the more prominent, may all be traced to the one source, the false or at least inadequate idea of the individual. The more thorough explanation of the relation between the content of experience and the individual subject was the problem left by Kant for his successors.

In any detailed exposition of the critical system it would be requisite in the first place to state with some fullness the precise results of Kant's system, and the second place to follow with some closeness the successive stages of the system as presented in the three main works, the Kritik of Pure Reason, the Kritik of Practical Reason and the Kritik of Judgment, with the more important of the minor works, the Metaphysic of Nature and the Metaphysic of Ethics. It would be necessary, also, in any such expanded treatment, to bring out clearly the Kantian classification of the philosophical sciences, and to indicate the relation between the critical or transcendental investigations of the several faculties and the more developed sciences to which that investigation serves as introduction. As any detailed statement of the critical system, however compressed, would be beyond the limits of this essay, a brief statement of the more important representant doctrines, and to point out in connexion with them what advance had been effected by Kant, and what remained for subsequent efforts at complete solution of the problems raised by him. Much of interest will be found in the recent developments of the sketch of so elaborate a system, and for all points of special interpretation reference needs must be made to the many elaborate dissertations on or about the Kantian philosophy.
of given material and synthetic combination. Form and matter may indeed be regarded separable and dealt with in isolation for purposes of critical inquiry, but in experience they are necessarily and inseparably united. The problem of the **Kritik** thus becomes for Kant not a question of how the various results of the elementary processes may be combined in synthesis, and of the subjective processes by which these elements are realized in our individual consciousness. He is not asking, with Locke, whence the details of experience arise; he is not attempting an analysis of the experience as an isolated system, in which any part is definable without reference to any other. He is endeavoring to state exhaustively what conditions are necessarily involved in any fact of knowledge, *i.e.*, in any synthetic combination of parts of experience by the conscious subject.

So far as the elements necessarily involved in conscious experience are concerned, two main lines of thought are prominent: the one giving data of sense, inner or outer; the forms of perception, *i.e.*, space and time; the forms of thought, *i.e.*, the categories; the ultimate condition of knowledge, the identity of the pure ego or self. The ego or self is the only unchanging element among all the parts of experience which are individually recognizable. But the consciousness of self is the foundation of knowledge only when related to given material. The ego has not in itself the element of difference, and the essence of knowledge is the consciousness of its being such as can be experienced as a cognizable whole, make up the form of cognition, and upon this form rests the possibility of any a priori or rational knowledge.

The notion of the ego as a purely logical unity, containing in itself, without reference to any outer world, the whole system of the universe of which it is the subject, is the one case we are treating the ego as one of the objects of experience and denying of it productive efficacy; in the second case we are dealing with the unity of the ego as a condition of knowledge, of any experience whatsoever. In this second sense, it is wholly wrong to assert that the ego is a pure entity, purely rational. The unconscious and therefore inaccessible to the pure ego is not a thing that can be concretized by any faculty of sense.

The consequences of the abstract separation which Kant so draws between the ego and the world of experience are such as will surprise even those who have not a clear grasp of the distinction and still less the relation between them. It is for this reason that the system of forms has been regarded as a mere convention. Kant himself regards it as an opposition between the two, self and matter of knowledge, that he is driven by the exigencies of the problem of reconciliation to insert term after term of means as bringing them together, but never succeeding in action. In the end, the ego remains, partly the pure logical ego, partly the individual spirit, and no explanation is afforded of the relation between them. It is for this reason that the system of forms is said to be conventional. It is not, however, that which supplied for the pure logical ego should present itself necessarily under these forms. These are regarded rather as portions of the subject under which the insights are obtained, and not as part of the ego itself, of the ego as a self in the ego as a self. Kant has pointedly declared that it would be a gross absurdity to suppose that in his view separate, distinct things-in-themselves existed corresponding to the forms of sense, and their union by the ego in the mode of synthesis, that is, expressing the mode of origin, but offers no further explanation of a term which has significance only when interpreted after a somewhat mechanical fashion. Unquestionably, however, the method of his remarks indicate the view that the origin is to be sought in things-in-themselves, but necessarily misinterpretations of such ambiguous statements of systems and the a priori determination of the objective conditions of such affection. Kant is here able to resume, with fresh insight, his previous discussions regarding the synthetic character of mathematical propositions.

In his early essays he had rightly drawn the distinction between the empirical and the a priori, and the existence of the ego, Kant shows how the latter is not the former, in the construction of experience, but consists in the former. Kant is here able to resume, with fresh insight, his previous discussions regarding the synthetic character of mathematical propositions. In the same form and the same constructive activity of imagination are involved in mathematical
KANT

synthesis and in the constitution of objects of sense-experience. The foundation for pure or rational mathematics, there being included under this the pure science of movement, is thus laid in the critical doctrine of space and time.

The first is the doctrine of space, and considers in its forms as though it were an independent, complete faculty. A certain confusion, arising from this, is noticeable in the \textit{Analyst} when the necessity for justifying the position of the categories is under discussion. But the real difficulty is not in the doctrine of space and time, it has its roots even deeper than the erroneous isolation of sensibility. He has not in any way "deduced" space and time, but, proceeding from the ordinary current views of things, which Kant has furnished the phenomena, the relation in which they stand to the categories or pure notions is ambiguous; and, when Kant has to consider in which category and data of sense are to be brought together, it is merely placed by side by side as prior elements the pure categories of space and time. It is not, apparently, only a matter of contingent convenience that they should harmonize with one another and so render cognition possible. To this point also Fichte was the first to call attention.

Affecting all the other pure forms of perception, not matter of knowledge. For cognition there is requisite synthetic combination, and the intellectual function through which such combination takes place. The forms of intellect, as Kant proceeds to enumerate them, are the commonly received logical doctrines. For this reference to logic itself has been severely blamed, but the precise nature of the debt due to the commonly accepted logical classification is very generally missed. It is important to note that the terms which are expressed in a judgment, which is the act of uniting representations. At the foundation of the judgments which express the types of synthetic combination, through which knowledge is possible, lie the categories, about which it is necessary to give an account. The unity and comprehensiveness of which objects are cognizable in experience. General logic has also to deal with the union of representations, though its unity is analytic merely, not synthetic. But the same intellectual function which serves the comprehension of objects in analysis, also serves to give unity to the synthetic combinations of real perception. It appeared evident, then, to Kant that in the forms of judgment, as they are stated in the common logic, there are admitted into the judgment which are not involved in transcendental logic, or in the theory of real content. His means of treating the ordinary logic was wide and comprehensive, though in his restriction of the science to pure form one can trace the influence of his earlier training, and it is no small part of the value of the critical philosophy that it presents a thorough study of the nature of the position assigned to logic by Kant is not, in all probability, one which can be defended, indeed, it is hard to see how Kant himself, in consistency with his doctrine of transcendental idealism denies to the Kant was, in fact, that the thing in itself is not an object of knowledge, but the object which is known is only the idea of it. The interpretation of the term "object of knowledge" by Kant is far from clear. What Kant means by object of knowledge in this sense is not altogether explained, but rather left to the judgment of the reader, as an exercise. The term "object of knowledge" is not used by Kant in a technical sense, but rather as a general term to describe the object of the cognition, and is not to be confused with the term "object of representation" which is sometimes used by Kant to describe the object of the representation of the idea. The term "object of knowledge" is used by Kant to describe the object of the cognition, and is not to be confused with the term "object of representation" which is sometimes used by Kant to describe the object of the representation of the idea. The term "object of knowledge" is used by Kant to describe the object of the cognition, and is not to be confused with the term "object of representation" which is sometimes used by Kant to describe the object of the representation of the idea.
KANT

so long pressed upon him, the difficulty as to the relation of the pure connective notions to experience. These notions are not directly applicable to experience, nor do we find in experience anything corresponding to the pure intellectual notions of substance, cause and effect, of temporal succession, of time, of reason, of sense in the forms of productive imagination, forms determined by the pure intellectual notions, and accordingly experience is possible for us only as in modes corresponding to the notions. The pure intellectual notions rest for the most part on intuition, and experience is possible save through the determination of all changes as in relation to a permanent in time. Determined sequence is the causal relation in any possible experience, and no experience is possible save through the determination of this relation to a determined order in time. So with coexistence and reciprocity.

The states of experience are general expressions of the significance of existence in the experience of a conscious subject. The element of reality in such experience must always be given by intuition, and, so far as determination of existence is assumed, external intuition is a necessary condition of inner intuition. The existence of external things is as certain as the existence of the concrete subject, and the subject cannot cognise himself as existing save in relation to the world of facts of external perception. Inner and outer reality are strictly correlative elements in the experience of the conscious subject.

Throughout the positive portion of his theory of cognition, Kant has been just by the doctrine that the categories, as finished, complete notions, have an import or significance transcending the bounds of pure intellectual intuition, that can be applied to experience in the full sense in which it has ever been treated, so that he regards them as contingent forms, necessary for intelligences like ours, but not to be viewed as absolutely necessary. The real meaning of these peculiar forms is contained in the demonstration that the problem of the matter is to be found in the inadequacy of the positive theory to meet the demands of reason for completed explanation. But the conclusion to which he was led was one of the greatest importance for the development of metaphysics, as necessarily limited. The categories are restricted in their application to elements of possible experience to that which is presented in intuition, and intuition is for the ego contingent. But to assert that we have any notion of an intelligence for whom cognition would not be limited and for whom the data of intuition would not be given, contingent facts, but necessarily produced along with the pure categories. This idea of an inextension of our cognition is the initial foundation for the explanation which reason demands, and it involves the conception of a realm of objects for such an understanding, a realm of objects which, in opposition to the phenomena of our relative and limited experience, may be called noumena or things-in-themselves. The noumena, therefore, is in one way the object of a non-sensuous intuition, but more correctly is the expression of the limited and partial character of our knowledge. The idea of a noumenon is thus a necessary presupposition.

Assuredly, the difficult section of the Kritik, on the ground of the distinction between phenomena and noumena, would not have led to so much misconception as it has done, had Kant then brought forward the demonstration of the limitations of our cognition and its functions. Understanding, as has been seen, is the faculty of cognition strictly so called; and within its realm, that of space, time and matter, positive knowledge is attainable. But the ultimate conclusion to which we are led, the relation of the world of objects, quantitatively determined, and standing in relation of mutual reciprocity to one another, is not a final ground of explanation. We are still able and necessitated to reflect upon the whole world of phenomena as thus cognized, and driven to inquire after its significance. The reflection we necessarily treat the objects, not as phenomena, as matters of positive, scientific knowledge, but as things-in-themselves, as noumena. The distinction between phenomena and noumena is therefore, nothing but an expression of the, not yet determined, and standing in relation of mutual reciprocity to one another, is not a final ground of explanation. We are still able and necessitated to reflect upon the whole world of phenomena as thus cognized, and driven to inquire after its significance. The reflection we necessarily treat the objects, not as phenomena, as matters of positive, scientific knowledge, but as things-in-themselves, as noumena.

The distinction between phenomena and noumena is therefore, nothing but an expression of the, not yet determined, and standing in relation of mutual reciprocity to one another, is not a final ground of explanation. We are still able and necessitated to reflect upon the whole world of phenomena as thus cognized, and driven to inquire after its significance. The reflection we necessarily treat the objects, not as phenomena, as matters of positive, scientific knowledge, but as things-in-themselves, as noumena.

The distinction between phenomena and noumena is therefore, nothing but an expression of the, not yet determined, and standing in relation of mutual reciprocity to one another, is not a final ground of explanation. We are still able and necessitated to reflect upon the whole world of phenomena as thus cognized, and driven to inquire after its significance. The reflection we necessarily treat the objects, not as phenomena, as matters of positive, scientific knowledge, but as things-in-themselves, as noumena.

Experience has presented itself as the complex result of relation between the ego and subject and the world of phenomena. Reason may therefore attempt a completed explanation either of the ego or of any of the world of phenomena or of the total relation between them. The three ideas of reflection of the idea of the ego, the idea of the world of objects, and the idea of the relation of objects, constitute the three basic ideas in the development of the system of transcendental philosophy. So far as these ideas are not the expression of what is in any way possible, the systematic character of the work is necessarily limited. The categories are restricted in their application to elements of possible experience to that which is presented in intuition, and intuition is for the ego contingent. But to assert that we have any notion of an intelligence for whom cognition would not be limited and for whom the data of intuition would not be given, contingent facts, but necessarily produced along with the pure categories. This idea of an inextension of our cognition is the initial foundation for the explanation which reason demands, and it involves the conception of a realm of objects for such an understanding, a realm of objects which, in opposition to the phenomena of our relative and limited experience, may be called noumena or things-in-themselves. The noumena, therefore, is in one way the object of a non-sensuous intuition, but more correctly is the expression of the limited and partial character of our knowledge. The idea of a noumenon is thus a necessary presupposition.

The spatial and temporal determinations of reason are the effort after completed explanation of the experience presented in cognition. But in such effort there are no notions to be employed other than the categories, and these, as has already been seen, have validity only in reference to objects of possible experience. We may expect, then, to find the transcendental employment of the categories to admit difficulties and inconsistencies. The criticism of reason in its specific aspect throws fresh light on the limits to human knowledge and the significance of those limits.

Experience has presented itself as the complex result of relation between the ego and subject and the world of phenomena. Reason may therefore attempt a completed explanation either of the ego or of any of the world of phenomena or of the total relation between them. The three ideas of reflection of the idea of the ego, the idea of the world of objects, and the idea of the relation of objects, constitute the three basic ideas in the development of the system of transcendental philosophy. So far as these ideas are not the expression of what is in any way possible, the systematic character of the work is necessarily limited. The categories are restricted in their application to elements of possible experience to that which is presented in intuition, and intuition is for the ego contingent. But to assert that we have any notion of an intelligence for whom cognition would not be limited and for whom the data of intuition would not be given, contingent facts, but necessarily produced along with the pure categories. This idea of an inextension of our cognition is the initial foundation for the explanation which reason demands, and it involves the conception of a realm of objects for such an understanding, a realm of objects which, in opposition to the phenomena of our relative and limited experience, may be called noumena or things-in-themselves. The noumena, therefore, is in one way the object of a non-sensuous intuition, but more correctly is the expression of the limited and partial character of our knowledge. The idea of a noumenon is thus a necessary presupposition.
in conscious experience. Judgment is here merely reflexive; that is to say, the particular element is given, so determined as to be possible material of knowledge, while the universal, not necessary for cognition, is supplied by reason itself. The empirical details of nature, so far as they are not already determined by a priori principles of intelligence, are judged as being arranged or ordered by intelligence, for in no other fashion could nature, in its particular, contingent aspect, be thought as forming a complete, consistent, intelligible whole.

The Kantian conception of nature to intelligence is conceivable and possible makes up the subject of the third great Kritik, the Kritik of Judgment, a work presenting unusual difficulties to the interpreter of the Kantian system of philosophy. The doctrine of the faculties of cognition has two specific applications, with the second of which it is more closely connected than with the first. In the first place, the adaptation may be merely subjective, when the empirical facts are given, then the laws of understanding, the feeling of pleasure or pain; such adaptation is aesthetic. In the second place, the adaptation may be objective or logical, when empirical facts are given of such a kind that their possibility can be conceived only through the notion of the end realized in them; such adaptation is teleological, and the empirical facts in question are organisms.

Aesthetics, or the scientific consideration of the judgments resting on the feelings of pleasure and pain arising from the harmony or want of harmony between the particular of experience and the laws of understanding, is the special subject of the Kritik of Judgment, but the doctrine of teleology there unfolded is the more important for the ultimate results of the whole Kantian system. From the second application of the teleological judgment and of the consequences flowing from it leads to the final statement of the nature of experience as conceived by Kant. The phenomena of organic production furnish data for a specific example of this application, which serves, in a quite general principle, that of the contingency of the particular element in nature and its subjectively necessary adaptation to our faculty of cognition. The notion of contingency arises, according to Kant, from the condition that our understanding, itself, is incompletely determined, that understanding does not determine the particular of sense, and, consequently, that the principle of the adaptation of the particular to our understanding is merely supplied by reason on account of the law of coherence, which, while maintaining a character of necessity, is in fact only a general law, and therefore, is a subjective or problematical conception, implying the limits of understanding, and consequently resting upon the idea of an understanding constituted unlike ours—of an intuitive understanding of the mind, or an understanding of the world in itself.

The idea of such an understanding is, for cognition, transcendent, for no corresponding fact of intuition is furnished, but it is realized with practical certainty in relation to reason as practical. For we are invested, says Kant, with the idea of a rational self, and a practical necessity to ascribe a certain aim or end to this supreme understanding.

The moral law, or reason as practical, prescribes the realization of the highest good, and such realization implies a higher order than that of our possible experience. To pursue happiness as a cause as a moral cause, and nature as so ordered that realization of the moral end is in it possible. The final conception of the Kantian philosophy is, therefore, that of ethical teleology. As Kant expresses it, and which is the point of view needed in the world of intelligences, which, although as mere nature it is to be called only the world of sense, can yet as a system of freedom be called an intelligible, i.e. moral world (regnum graeciae), leading, together with the cofunction of the teleological unity of all things which constitute this great whole according to universal natural laws, just as the unity of the former is according to universal and necessary moral laws, and unites the practical with the speculative reason. The world must be represented as having originated from an idea is to harmonize with that use of reason without which we should hold ourselves unworthy of reason—viz., the moral use, which rests entirely on the idea of the supreme good. Hence all natural and empirical details, which, to the particular in experience, the highest development would be a physico-theology. But this, since it arises from the moral order as a unity grounded in the inmost essence of freedom and not accidentally instituted by external causes, the question of whether it is free with necessity begins. In all things according to universal and necessary natural laws, since they all have their origin in the absolute necessity of a single primal being (p. 538).

(R. Ad.; X.)

KANURI, or Beriberi, an African tribe of mixed origin, the dominant race of Bornu. They are large-boned and coarse-featured, but contain nevertheless a distinct strain of Fula blood. Beriberi (or Berberi) is the name given them by the Hausa (see Bornu).

KAOLIN, a pure white clay, know also as china-clay, since it is an essential ingredient in the manufacture of china, or porcelain. The word kaolin, formerly written by some authors as kaolin, is said to be a corruption of the Chinese *kau-ling*, meaning "High Ridge," the name of a hill east of King-te-chien, whence the earliest samples of the clay sent to Europe were obtained by the Père d'Entrecelles, a French Jesuit missionary in China in the early part of the 18th century. His specimens, examined in Paris by R. A. Réaumur, showed that true porcelain, the composition of which had not previously been known in Europe, contained two essential ingredients, which came to be known—though it now appears incorrectly—as kaolin and petunse, corresponding respectively to our china-clay and china-stone. The kaolin confers plasticity on the paste and secures retention of form for the ware when exposed to the heat of the kiln, whilst the petunse gives the translucency so characteristic of porcelain. Some of the earliest discoveries of kaolin in Europe were at Aue, near Schneeberg in Saxony, and at St Yrieix, near Limoges in France. In England it was discovered in Cornwall about the year 1750 by Willian Cookworthy, of Plymouth; and in 1768 he took out his patent for making porcelain from moorstone or gowran (china-stone) and gowran clay (kaolin), the latter imparting "whiteness and insulubility" to the china. These raw materials were found first at Treggingon Hill, near Breage, and afterwards at St Stephen's in Brannel, near St Austell; and their discovery led to the manufacture of hard paste, or true porcelain, at Plymouth and subsequently at Bristol.

Kaolin is a hydrous aluminium silicate, having the formula, *H₂Al₂Si₄O₁₀* or *Al₂Si₂O₇·2H₂O*, but in common clay this silicate is largely mixed with impurities. Certain clays contain pearly white hexagonal scales, usually microscopic, referable to the monoclinic system, and having the chemical composition of kaolin. This crystalline substance was termed kaolinite by S. W. Johnson and J. M. Blake in 1867, and it is now regarded as the basis of pure clay. The kaolinite of Anglesey has been studied by Allan Dick. The origin of kaolin may be traced to the alteration of certain aluminium silicates like feldspar, scapolite, beryl and topaz; but all large deposits of china-clay are due to the decomposition of feldspar, generally in granite, but sometimes in gneiss, pitchstone, &c. The turbidity of many feldspars is the result of partial "kaolinitization," or alteration to kaolin. The China-clay rocks of Cornwall and Devon are granites in which the orthoclase has become kaolinized. These rocks are sometimes known as carcaseites, a name proposed by J. S. Collins from a typical locality, the Carcase mine, near St Austell. It has been suggested that the granite has been effected mainly by meteoric agencies, the carbonic acid having decomposed the alkaline silicate of the feldspar, whilst the alumino silicate assumes a hydrated condition and forms kaolin. In many cases, however, it seems likely that the change has been effected by subterranean agencies, probably by heated vapours carrying fluorine and boron, since minerals containing these elements, like tourmaline, often occur in association with the china-clay. According to F. H. Butler the kaolinization of the west of England granite may have been effected by a solution of carbonic acid at a high temperature, acting from below.

The china-stone, or petunse, is a granitic rock which still retains much of the unaltered feldspar, on which its fusibility depends. In order to prepare kaolin for the market, the china-clay rock is broken up, and the clay washed out by means of water. The liquid containing the clay in mechanical suspension is run into channels called "drags," where the coarser impurities settle, and whence it passes to another set of channels known as "micas," where the finer materials settle down. Thus purified, the clay-water is led into a series of pits or tanks, in which the finely divided clay is slowly deposited; and, after acquiring sufficient consistency, it is transferred to the drying-house, or "dry," heated by flues, where the moisture is expelled, and the kaolin obtained as a soft white earthy substance. The clay has extensive application in the arts, being used not only in ceramic manufacture but in paper-making, bleaching and various chemical industries.

Under the species "kaolinite" may be included several minerals which have received distinctive names, such as the Saxon mineral called from its pearly lustre nacrite, a name originally given by A. Bronngiart to a nacreous mica; phylorite found chiefly in cracks of ironstone and named by J. Guillemin from the Greek φύλος, a scale; and lithomarge, the old German Steinmark, a compact clay-like body of white, yellow or red colour. Dr C. Hinz has pointed out that the word "kaolin" should be written "kaolinite" or "kaolinite.

Similarly closely related to kaolinite is the mineral called halloysite, a name given to it by B. Berthier after his uncle Omalus d'Halloy, the Belgian geologist.

(Karachi).

KAPUNDA, a municipal town of Light county, South Australia, 48 m. by rail N.E. of Adelaide. Pop. (1901), 1505. It is the centre of a large wheat-growing district. The celebrated copper mines discovered in 1843 were closed in 1879. There are quarries near the town, in which is found fine marble of every colour from dark blue to white. This marble was largely used in the Houses of Parliament at Adelaide.

KAPURTHALA, a native state of India, within the Punjab. Area, 632 sq. m.; pop. (1901), 314,441, showing an increase of 5% in the decade; estimated gross revenue, £178,000; tribute, £8,700. The Kapurthala family is descended from Jassia Singh, a contemporary of Nadir Shah and Ahmad Shah, who by his intelligence and bravery made himself the leading Sikh of his day. At one time it held possessions on both sides of the Sutlej, as far as the Bari Doab. The cast-Sutlej estates and scattered tracts in the Bari Doab were forfeited owing to the hostility of the chief in the first Sikh war; but the latter were afterwards restored in recognition of the loyalty of Raja Randhir Singh during the mutiny of 1857, when he led a contingent to Oudh which did good service. He also received a grant of land in Oudh, 700 sq. m. in extent, yielding a gross rental of £89,000. In Oudh, however, he exercises no sovereign powers, occupying only the status of a large landholder, with the title of Raja-I-Rajagan. Raja Sir Jagatjit Singh, K.C.S.I., was born in 1872, succeeded his father in 1877, and attained his majority in 1890. During the Tirah expedition of 1897-98 the Kapurthala imperial service infantry took a prominent part. The territory is crossed by the railway from Jullundur to Amritsar. The state has a large export trade in wheat, sugar, tobacco and cotton. The hand-painted cloths and metal-work of Phagwara are well known. The town of Kapurthala is 11 miles from Jullundur; pop. (1901), 18,519.

KARACHI, or Carrachree, a seaport and district of British India, in the Sind province of Bombay. The city is situated at the extreme western end of the Indus delta, 500 m. by sea from Bombay and 820 m. by rail from Lahore, being the maritime terminus of the North-Western railway, and the main gateway for the trade of the Punjab and part of central Asia. It is also the capital of the province of Sind. Pop. (1881), 73,500; (1891), 105,109; (1901), 115,407. Before 1725 no town appears to have existed here; but about that time some little trade began to centre upon the convenient harbour, and the silt of the old Shahbandar, the ancient port of Sind, shortly afterwards drove much of its former trade and population to the rising village. Under the Kalhora princes, the Khan of Kalat obtained a grant of the town, but in 1795 it was captured by the Talpur Mirs, who built the fort at Manora, at the entrance to the harbour. They also made considerable efforts to increase the trade of the port.
and at the time of the British acquisition of the province the town and suburbs contained a population of 14,000. This was in 1843, from which time the importance of the place practically dates.

The harbour of Karachi has an extreme length and breadth of about 5 m. It is protected by the promontory of Manora Head; and the entrance is partially closed by rocks and by the peninsula (formerly an island) of Kiamari. On Manora Head, which is fortified, are the buildings of the port establishment, a cantonment, &c. Kiamari is the landing-place for passengers and goods, and has three piers and railway connections. The harbour improvements were begun in 1854 with the building of the Napier Mole or causeway connecting Kiamari with the mainland. The entrance has a minimum depth of 25 ft.; and a large number of improvements and extensions have been carried out by the harbour board, which was created in 1858, and transformed in 1866 into the port trust.

The great extension of the canal colonies in the Punjab, entirely devoted to the cultivation of wheat, has immensely increased the export trade of Karachi. It now ranks as the third port of India, being surpassed only by Calcutta and Bombay. The principal articles of export, besides wheat, are oilseeds, cotton, wool, hides and bones. The annual value of exports, including specie, amounts to about nine millions sterling. There are iron works and manufactories of cotton cloth, silk scarves and carpets. The fisheries and oyster beds are important.

Among the principal public buildings are government house, the Frere municipal hall, and the Napier barracks. The military cantonments, stretching north-east of the city, form the headquarters of a brigade in the 4th division of the southern army. An excellent water supply is provided by an underground aqueduct 18 m. in length. The chief educational institutions are the Dayaram Jethmal Arts College, with a law class; five high schools, of which two are for Europeans and one for Mahomedans; a convent school for girls; and an engineering class. The average rainfall for the year is about 5 in. The rainy months are July and August, but one or two heavy showers usually fall about Christmas. The end of May, beginning of June, and first fortnight in October are hot. November, December, January, February and March are delightfully cool and dry; the remaining months are damp with a constant cool sea breeze.

The District of Karachi has an area of 11,970 sq. m. Pop. (1901), 607,439, showing an increase of 6% in the decade. It consists of a smiling country stretching to the north-east of the Indus to the Baluch border. It differs in general appearance from the rest of Sind, having a rugged, mountainous region along its western border. The country gradually slopes away to the south-east, till in the extreme south the Indus delta presents a broad expanse of low, flat and unpicturesque alluvium. Besides the Indus and its mouths, the only river in the district is the Hab, forming the boundary between Sind and Baluchistan. The Manchhar lake in Sehwan sub-division forms the only considerable sheet of water in Sind. The hot springs at Pir Mangro are 6 m. N. of Karachi town. The principal crops are rice, millets, oil-seeds and wheat. In addition to Karachi, there are seaports at Sirogonda and Keti Bandar, which conduct a considerable coasting trade. Tatta was the old capital of Sind. Kotri is an important railway station on the Indus. The main line of the North-Western railway runs through the district. From Kotri a bridge has been constructed across the Indus opposite Hyderabad, to connect with the Rajputana railway system.

KARAGEORGE (in Servian, Karadjojorde) (c. 1766–1817), the leader of the Servians during their first revolution against the Turks (1804–13), and founder of the Servian dynasty Karageorgevich. His Christian name was George (Dyordye), but being not only of dark complexion but of gloomy, taciturn and easily excitable temper, he was nicknamed by the Servians "Tsni Dyordye" and by the Turks "Karageorge," both meaning "Black George." The Turkish name becoming soon the generally adopted one. He was born in 1766 (according to some in 1768), the son of an extremely poor Servian peasant, Petronije Petrovich. When quite a young man, he entered the service of a renowned Turkish brigand, Fadzli-Bey, by name, and accompanied his master on his adventurous expeditions. When twenty he married and started a small farm. But having killed a Turk, he left Servia for Syria, in Croatia-Slavonia, where the monks of the monastery Krushedol engaged him as one of their forest guards. He remained in the service of the monks nearly two years, then enlisted into an Austrian regiment, and as sergeant took part in the Austrian war against Turkey (1789–91). He deserted his regiment, returned to Servia, and settled in the village of Topola, living sometimes as a peaceful farmer and sometimes again as the leader of a small band of "hayduks"—men who attacked, robbed and in most cases killed the travelling Turks in revenge for the oppression of their country.

The circumstances in which the Servians rose against the janissaries of the pashalik of Belgrade are related in the article on Servia. The leaders of the insurgents' bands and other men of influence met about the middle of February 1804 at the village of Orashat, and there elected Karageorge as the supreme leader (Vrhovni Vodz) of the nation. Under his command the Servians speedily cleared their country not only of the janissaries disloyal to the Sultan, but of all other Turks, who withdrew from the open country to the fortified places. Karageorge and his armed Servians demanded from the Sultan the privileges of self-government. The Porte, confronted by the chances of a war with Russia, decided in the autumn of 1806 to grant to the Servians a fairly large measure of autonomy. Unfortunately Karageorge was comparatively poor in political gifts and diplomatic tact. While the kaitisherf granting the rights demanded by the Servians was on the way to Servia, Karageorge attacked the Turks in Belgrade and Shabats, captured the towns first and then also the citadels, and allowed the Turkish population of Belgrade to be massacred. At the same time the Russian headquarters in Bucharest informed Karageorge that Russia was at war with Turkey and that the Tsar counted on the co-operation of the Servians. Karageorge and his Servians then definitely rejected all the concessions which the Porte had granted them, and joined Russia, hoping thereby to secure the complete independence of Servia. The Servians were therefore the Russians who of no great importance, and probably disappointing to both parties. But as the principal theatre of war was far away from Servia on the lower Danube, Karageorge was able to give more attention to the internal organization of Servia. The national assembly proclaimed Karageorge the hereditary chief and gospodar of the Servians (Dec. 26, 1808), on his part promising under oath to govern the country "through and by the national council" (senate).

Karageorge's hasty and uncompromising temper and imperious habits, as well as his want of political tact, soon made him many enemies amongst the more prominent Servians (voyvodes and senators). His difficulties were considerably increased by the intrigues of the Russian political agent to Servia, Rodophinikin. A crisis came during the summer months of the year 1813. The treaty of peace, concluded by the Russians somewhat hurrily in Bucharest in 1812, did not secure efficiently the safety of the Servians. The Turks demanded from Karageorge, as a preliminary condition for peace, that the Servians should lay down their arms, and Karageorge refused to comply. Thereupon the entire Turkish army which fought against the Russians on the Danube, being disengaged, invaded Servia. After a few inefficient attempts to stem the invasion, Karageorge gave up the struggle, and with most of the voyvodes and chiefs of the nation left the country, and crossed to Hungary as a refugee (Sept. 20, 1813). From Hungary he went to Russia and settled in Khotin (Bessarabia), enjoying a pension from the Tsar's government. But in the summer of 1817 he suddenly and
KARA-HISSAR—KARAJICH

secretly left Russia and reappeared quite alone in Servia in the neighbourhood of Semendria (Smederevo) on the Danube. The motives and the object of his return are not clear. Some believe that he was sent by the Hetaerists to raise up Servia to a new war with Turkey and thereby facilitate the rising of the Greek people. It is generally assumed, however, that, having heard that Servia, under the guidance of Milosh Obrenovich, had obtained a certain measure of self-government, he desired to put himself again at the head of the nation. This impression seems to have been that of Milosh himself, who at once reported to the Pasha of Belgrade the arrival of Karageorge. The pasha demanded that Karageorge, alive or dead, should be delivered to him immediately, and made Milosh personally responsible for the execution of that order. Karageorge's removal could not unfortunately be separated from the personal interest of Milosh; already acknowledged as chief of the nation, Milosh did not like to be displaced by his old chief, who in a critical moment had left the country. Karageorge was killed (July 27, O.S., 1817) while he was asleep, and his head was sent to the pasha for transmission to Constantinople. It is impossible to exonerate Milosh Obrenovich from responsibility for the murder, which became the starting-point for a series of tragedies in the modern history of Servia.

Karageorge was one of the most remarkable Servians of the 19th century. No other man could have led the bands of undisciplined and badly-armed Servian peasants to such decisive victories against the Turks. Although he never assumed the title of prince, he practically was the first chief and master (gospodar) of the people of Servia. He succeeded, however, not because he was liked but because he was feared. His glossy silence, his easily aroused anger, his habit of punishing without hesitation the slightest transgressions by death, spread terror among the people. He is believed to have killed his own father in a fit of anger when the old man refused to follow him in his flight to Hungary at the beginning of his career. In another fit of anger he gave the report that his brother Marinko had assaulted a girl, he ordered his men to seize his brother and to hang him there and then in his presence, and he forbade his mother to go into mourning for him. Even by his admirers he is admitted to have killed by his own hand no fewer than 125 men who provoked his anger. But in battles he is acknowledged to have been always admirable, displaying marvellous energy and valour, and giving proofs of a real military genius. The Servians consider him one of their greatest men. In grateful remembrance of his services to the national cause they elected his younger son, Alexander, in 1842, to be the reigning prince of Servia, and again in 1903 they chose his grandson, Peter Karageorgevich (son of Alexander) to be the king of Servia.

See SERVIA; also Ranke, Die serbische Revolution; Stoyan Novakovitch, Vashe odisee drzave (Belgrade, 1904); M. G. Milutinovich, Karadjozije (Belgrade, 1894).

(C. M.)

KARA-HISSAR ("Black Castle"). (1) AFIUM KARA-HISSAR (q.v.). (2) ICHJE, or ISCHA KARA-HISSAR (anc. Doci- mishma), a small village about 14 m. N.E. of No. 1. Doci- mishma was a Macedonian colony established on an older site. It was a self-governing municipality, striking its own coins, and stood on the Apamea-Synnada-Pessinus road, by which the celebrated marble called Synnadic, Dociamna and Phrygian was conveyed to the coast. The walls are 3 ft. 8 in. from the range, and the marble was carried thence direct to Synnada (Chifat Kassaba). Some of the marble has the rich purple veins in which poets saw the blood of Atys.

KARA-HISSAR SHARKI [i.e. "eastern Kara-Hissar"], also called Shabin Kara-Hissar from the alum mines in its vicinity, the chief town of a sanjak of the same name in the Sivas- vilayet of Asia Minor. Pop. about 12,000, two-thirds Musul- man. It is the Roman Colonia, which gradually superseded Pompey's foundation, Nicopolis, whose ruins lie at Purk, about 12 m. W. (hence Kara-Hissar is called Nikopoli by the Armenians). In later Byzantine times it was an important frontier station, and did not pass into Ottoman hands till twelve years after the capture of Constantinople. The town, altitude 4860 ft., is built round the foot of a lofty rock, upon which stand the ruins of the Byzantine castle, Muracastron, the Kara Hissar Daula of early Moslem chroniclers. It is connected with its port, Karasund, and with Sivas, Erzincan and Erzerum, by carriage roads.

KARAISKAKIS, GEORGES (1782–1827), leader in the War of Greek Independence, was born at Agrapha in 1782. During the earlier stages of the war he served in the Morea, and had a somewhat discreditable share in the intrigues which divided the Greek leaders. But he showed a sense of the necessity for providing the country with a government, and was a steady supporter of Capo d'Istria. His most honourable services were performed in the middle and later stages of the war. He helped to raise the first siege of Missolonghi in 1823, and did his best to save the town in the second siege in 1826. In that year he commanded the patriot forces in Rumelia, and though he failed to co-operate effectively with other chiefs, or with the foreign sympathizers fighting for the Greeks, he gained some successes against the Turks which were very welcome amid the disasters of the time. He took a share in the unsuccessful attempts to raise the siege of Athens in 1827, and made an effort to prevent the disastrous massacre of the Turkish garrison of fort S Spiridon. He was shot in action on the 4th of May 1827. Finlay speaks of him as a capable partisan leader who had great influence over his men, and describes him as of "middle size, thin, dark-complexioned, with a bright expressive animal eye which indicated gipsy blood."

KARAJICH, VUK STEFANOVIICH (1878–1884), the father of modern Servian literature, was born on the 6th of November 1877 in the Servian village of Trshich, on the border between Bosnia and Servia. Having learnt to read and write in the old Russian language (not his native language), he was engaged as writer and reader of letters to the commander of the insurgents of his district at the beginning of the first Servian rising against the Turks in 1804. Mostly in the position of a scribe to different voyvodes, sometimes as school-teacher, he served his country during the first revolution (1804–1813), at the collapse of which he left Servia, but instead of following Karageorge and other voyvozes to Russia he went to Vienna. There he was introduced to the great Servian scholar Yerney Kopitar, who, having heard him recite some Servian national ballads, encouraged him to collect the poems and popular songs, write a grammar of the Servian language, and, if possible, a dictionary. This programme of literary work was adhered to by Karajich, who all his life acknowledged gratefully what he owed to his learned teacher.

In the second half of the 18th and in the beginning of the 19th century all Servian literary efforts were written in a language which was not the Servian vernacular, but an archaic language, of which the foundation was the Old Servian in use in the churches, but somewhat Russianized, and mixed with Servian words forced into Russian forms. That language, called by its writers "the Servian-Slavonic," was neither Servian nor Servian. It was written in Old Cyrillic letters, many of which had no meaning in the Servian language, while there were several sounds in that language which had no corresponding signs or letters in the Old Slavonic alphabet. The Servian philosopher Dositej Obradovich (who at the end of the 18th century spent some time in London teaching Greek) was the first Servian author to proclaim the principle that the books for the Servian people ought to be written in the language of the people. But the great majority of his contemporaries were of opinion that the language of Servian literature ought to be evolved out of the dead Old Slavonic of the church books. The church natu- rally decidedly supported this view. Karajich was the great reformer who changed all this. Encouraged by Kopitar, he published in 1814 (2nd ed., 1815) in Vienna his first book, Mala Prostonarodna Slaveno-Serbska Pjesmarica ("A small collection of Slavonic-Servian songs of the common people"), containing a
KARA-KALPAKS—KARA-KUM

KARAKORUM (Turkish, “black stone débris”), the name of two cities in Mongolia. One of these, according to G. Potanin, was the capital of the Uighur kingdom in the 8th century, and the other was in the 13th century a capital of the steppe monarchy of Monghol. The same name seems also to have been applied to the Khangai range at the headwaters of the Orkhon. (1) The Uighur Karakorum, also named Mubilik (“bad town”), was situated on the left bank of the Orkhon, in the Talal-khain-dala steppe, to the south-east of Ugehi-nor. It was deserted after the fall of the Uighur kingdom, and in the 18th century Abaki, the founder of the Khitan kingdom, planted on its ruins a stone bearing a description of his victories. (2) The Mongolian Karakorum was founded at the birth of the Mongolian monarchy established by Jenghiz Khan. A palace for the khan was built in it by Chinese architects in 1234, and its walls were erected in 1235. Plano Carpini visited it in 1246, Rubruquis in 1253, and Marco Polo in 1275. Later, the fourth Mongolian king, Kublai, left Karakorum, in order to reside at Kal-pif-nu, near Peking. When the khan Arik-bog declared himself and Karakorum independent of Kublai-Khan, the latter besieged Karakorum, took it by famine, and probably laid it waste so thoroughly that the town was afterwards forgotten.

The exact site of the two Mongolian capitals were only established in 1889–1891. Silas Yule (The Book of Marco Polo, 1871) was the first to distinguish two cities of this name. The Russian traveller Paderin in 1871 visited the Uighur capital (see Ixkks), named now by the Mongols Kar Balghas ("black city") or Khara-kherem ("black wall"), of which only the walls and a tower are in existence, while the streets and ruins outside the wall are seen at a distance of 1½ m. Paderin’s belief that this was the old Mongol capital has been shown to be incorrect. As to the Mongolian Karakorum, it is identified by several authorities with a site on which towards the close of the 16th century the Buddhist monastery of Erdeni Tszu was built. This monastery lies about 25 m. south by east of the Uighur capital. North and north-east of the monastery are ruins of ancient buildings. Professor D. Pozdněev, who visited Erdeni Tszu for a second time in 1892, stated that the earthen wall surrounding the monastery might be part of the wall of the old city. The proper position of the two Karakorums was determined by the expedition of N. Yadrintsev in 1889, and the two expeditions of the Helsingfors Ugro-Finnish society (1890) and the Russian Academy of science, under Dr W. Radlov (1897), which were sent out to study Yadrintsev’s discovery.

See Works (Trudy) of the Orkhon Expedition (St Petersburg, 1892); Yule’s Marco Polo, edition revised by Henri Cordier (of Paris), vol. i. ch. xvi. (London, 1903). Cordier confines the use of Karakorum to the Mongol capital; Potev, Mongolia and the Mongols, 1st (St Petersburg, 1896); C. W. Campbell, “Journeys in Mongolia, Geog. Journ. vol. xx. (1903), with map. Campbell’s report was printed as a parliamentary paper (China No. 1, 1904).

KARA-KUL, the name of two lakes (“Great” and “Little”) of Russian Turkestan, in the province of Ferghana, and on the Pamir plateau. Great Kāra-kul, 12 m. long and 10 m. wide (formerly much larger), is under 39° N., to the south of the Trans-Alai range, and lies at an altitude of 13,300 ft.; it is surrounded by high mountains, and is reached from the north over the Kyzyl-air pass (14,015 ft.). A peninsula projecting from the south shore and about 4 m. off the north shore divide it into two basins, a smaller eastern one which is shallow, 42 to 63 ft., and a larger western one, which has depths of 726 to 756 ft. It has no drainage outlet. Little Kara-kul lies in the north-east, in Pamir, Sarikol, north-west of the Mustaght, at an altitude of 12,700 ft. It varies in depth from 79 ft. in the south to 50 to 70 ft. in the middle, and 1000 ft. or more in the north. It is a moraine lake; and a stream of the same name flows through it, but is named Ghez in its farther course towards Kashgar in East Turkestan.

KARA-KUM (“Black Sands”), a flat desert in Russian Central Asia. It extends to nearly 110,000 sq. m., and is bounded on the north by the Ust-urt plateau, between the Sea of Aral and the Caspian Sea, on the N.E. by the Amu-darya, on the S. by the Turkoman oases, and on the W. it nearly reaches the Caspian.
Sea. Only part of this surface is covered with sand. There are broad expanses (takrys) of clay soil upon which water accumulates in the spring; in the summer these are muddy, but later quite dry, and merely a few Solanaceae and bushes grow on them. There is also shor, similar to the above but encrusted with salt and gypsum, and relied on only by Solanaceae and bushes along their borders. The remainder is occupied with sand, which, according to V. Mainov, assumes five different forms. (1) Barkhans, chiefly in the east, which are mounds of loose sand, 15 to 35 ft. high, hoof-shaped, having their gently sloping convex sides turned towards the prevailing winds, and a concave side, 30° to 40° steep, on the opposite slope. They are disposed in groups or chains, and the winds drive them at an average rate of 20 ft. annually towards the south and south-east. Some grass (Silpha pennaata) and bushes of saksaul (Haloxylon ammodendron) and other steppe bushes (e.g. Calligonum, Halimodont and Atriplex) grow on them. (2) Mounds of sand, of about the same size, but irregular in shape and of a slightly firmer consistency, mostly bearing the same bushes, and also Artemisia and Tamarisc; they are chiefly met with in the east and south. (3) A sandy desert, slightly undulating, and covered in spring with grass and flowers (e.g. tulips, Rheum, various Umbelliferae), which are soon burned by the sun; they cover very large spaces in the south-east. (4) Sands disposed in waves from 50 to 70 ft., and occasionally up to 100 ft. high, at a distance of from 200 to 400 ft. from each other; they cover the central portion, and their vegetation is practically the same as in the preceding division. (5) Dunes on the shores of the Caspian, composed of moving sands, 35 to 80 ft. high and devoid of vegetation.

A typical feature of the Kara-kum is the number of "old river beds," which may have been either channels of tributaries of the Amu and other rivers or depressions which contained elongated salt lakes. Water is only found in wells, to 20 m. apart—sometimes as much as 100 m.—which are dug in the takrys or deserts. The rainfall, however, is insufficient to drink, as the pools of rain-water retained in the lower parts of the takrys. The population of the Kara-kum, consisting of nomad Kirghiz and Turkomans, is very small. The region in the north of the province of Syr-darya, between Lake Aral and Lake Chalkarteniz, is also called Kara-kum.

KARAMAN (anc. Lарanda, a name still used by the Christian inhabitants), a town in the Konia vilayet of Asia Minor, situated in the plain north of Mount Taurus. Pop. 8000. It has few industries and little trade, but the medieval walls, well preserved castle and mosques are interesting, and the old Seljug medresse, or college, is a beautiful building. Karaman is connected with Konia by railway, having a station on the first section of the Bagdad railway. Little is known of its ancient history except that it was destroyed by Perdiccas about 322 B.C., and afterwards became a seat of Isaurian pirates. It was occupied by Frederick Barbarossa in 1176, and in 1177 it was captured by Mahommeth I., and in 1486 by Bayezid II.

KARAMANIA, formerly an independent inland province in the south of Asia Minor, named after Karaman, the son of an Armenian convert to Islam, who married a daughter of Ala-ed-Din Kaikobad, the Seljuk sultan of Rum, and was granted Laranda in fief, and made governor of Selkefe, 1223-1245. The name Karaman is, however, Turkoman and that of a powerful tribe, settled apparently near Laranda. The Armenian convert must have been adopted into this. On the collapse of the Seljuk empire, Karaman's grandson, Mahmul, 1279-1310, founded a state, which included Pamphylia, Lycaonia and large parts of Cilicia, Cappadocia and Phrygia. Its capital, Laranda, superseded Konia. This state was frequently at war with the kings of Lesser Armenia, the Lusigian princes of Cyprus and the knights of Rhodes. It was also engaged in a long struggle for supremacy with the Osmanli Turks, which only ended in 1472, when it was definitively annexed by Mahommeth II. The Osmanli divided Karamania into Kharji north, and Ichili south, of the Taurus, and restored Konia to its metropolitan position. The name Karamania is now often given by geographers to Ichili only; but so far as it has had any exact significance in modern times, it has stood for the whole province of Konia. Before the present provincial division was made (1864), Karamania was the eyalet of which Konia was the capital, and it did not extend to the sea, the whole littoral from Adalia eastward being under the pasha of Adana. Nevertheless, in Levantine popular usage at the present day, "Karamania" signifies the coast from Adalia to Missina.

KARAMNASA, a river of northern India, tributary to the Ganges on its right bank, forming the boundary between Bengal and the United Provinces. The name means "destroyer of religious merit," which is explained by more than one legend. To this day all high-caste Hindus have to be carried over without being defiled by the touch of its waters.

KARA MUSTAPA (d. 1683), Turkish vizier, surnamed "Merzifun," was a son of Urug Bey, a notable Sipahi of Merzifun (Marsovan), and brother-in-law to Ahmed Kuprilli, whom he succeeded as grand vizier in 1676, after having for some years held the office of Kaimmakam or locum tenens. His greed and ostentation were equalled by his incapacity, and he behaved with characteristic insolence to the foreign ambassadors, from whom he extorted large bribes. After conducting a campaign in Poland which terminated unfortunately, he gave a ready response to the appeal for aid made by the Hungarians under Imre Thokoly (q.v.) when they rose against Austria, his hope being to form out of the Habsburg dominions a Musulman empire of the West, of which he should be the sultan. The plan was foiled in part by his own lack of military skill, but chiefly through the heroic resistance of Vienna and its timely relief by John Sobieski, king of Poland. Kara Mustafa paid for his defeat with his life; he was beheaded at Belgrade in 1683 and his head was brought to the sultan on a silver dish.

Another KARA MUSTAPA PASHA (d. 1643), who figures in Turkish history, was by birth a Hungarian, who was enrolled in the Janissaries, rose to be Kapudan Pasha under Murad IV., and a member of the council of state. His character was severe, but just and impartial, and strove to effect necessary reforms by reducing the numbers of the Janissaries, improving the coinage, and checking the state expenditure. The discontent of the Janissaries led to his dismissal and death in 1643.

KARAMZIN, NIKOLAI MIKHAILOVICH (1766-1826), Russian historian, critic, novelist and poet, was born at the village of Mikhailovka, in the government of Orenburg, and not at Simbirsk as many of his English and German biographers incorrectly state, on the 1st of December (old style) 1765. His father was an officer in the Russian army, of Tatar extraction. He was sent to Moscow to study under Professor Schaden, whence he afterwards removed to St. Petersberg, where he made the acquaintance of Dmitriev, a Russian poet of some merit, and occupied himself with translating essays by foreign writers into his native language. After residing some time at St. Petersberg, he went to Simbirsk, where he lived in retirement till induced to revisit Moscow. There, finding himself in the midst of the society of learned men, he again betook himself to literary work. In 1789 he resolved to travel, and visited Germany, France, Switzerland and England. On his return he published his Letters of a Russian Traveller, which met with great success. These letters were first printed in the Moscow Journal, which he edited, but were afterwards collected and issued in six volumes (1797-1801). In the same periodical Karamzin also published translations of some of the tales of Marmontel, and some original stories, among which may be mentioned Poor Liza and Natalia the Boyar's Daughter. In 1794 and 1795 Karamzin abandoned his literary journal, and published a miscellany in two volumes, entitled Aglais, in which appeared, among other things, "The Island of Bornholm" and "Ili Mourometz," a story based upon the adventures of the well-known hero of many a Russian legend. In 1797-1799 he issued another miscellany or poetical almanac, The Aonides, in connexion with Derzhavin and Dmitriev. In 1795 he compiled The Pantheon, a collection of pieces from the works of the most celebrated authors ancient and modern, translated into Russian. Many of his lighter productions were subsequently printed by him in a volume entitled My Trifles. In 1802 and 1803 Karamzin
edited the journal the European Messenger. It was not until after the publication of this work that he realized where his strength lay, and commenced his History of the Russian Empire. In order to accomplish the task, he secluded himself for two years; and, on the cause of his retirement becoming known to the emperor Alexander, Karamzin was invited to Tver, where he read to the emperor the first eight volumes of his history. In 1816 he removed to St Petersburg, where he spent the happiest days of his life, enjoying the favour of Alexander, and submitting to him the sheets of his great work, which the emperor read over with him in the gardens of the palace of Tzarskoë Selo. He did not, however, live to carry his work further than the eleventh volume, terminating it at the accession of Michael Romanov in 1813. He died on the 22nd of May (old style) 1826, in the Taurida palace. A monument was erected to his memory at Simbirsk in 1845.

As an historian Karamzin has deservedly a very high reputation. Till the appearance of his work little had been done in this direction in Russia. The preceding attempt of Tatistchew was merely a rough sketch, inegalent in style, and without the true spirit of criticism. Karamzin was most industrious in accumulating materials, and the notes to his volumes are mines of curious information. The style of his history is elegant and flowing, modelled rather upon the easy sentences of the French prose writers than the long periodical paragraphs of Anna Vasilyevna Karataeff. Karamzin was justly censured for the false goss and romantic air thrown over the early Russian annals, concealing the caresses and cruelty of the native manners; in this respect he reminds us of Sir Walter Scott, whose writings were at this time creating a great sensation throughout Europe, and probably had had some influence upon him. Karamzin appears openly as the panegyrist of the autocracy; indeed, his work has been styled the "Epic of Despotism." He does not hesitate to avow his admiration of Ivan the Terrible, and considers him, in his grant to Ivan III., as the builders up of the Russian greatness, a glory which in his earlier writings, perhaps at that time more under the influence of Western ideas, he had assigned to Peter the Great. In the battle-pieces (e.g. the description of the field of Kouskow, to the battle of Karataeff) he shows considerable powers of description; and the characters of many of the chief personages in the Russian annals are drawn in firm and bold lines. As a critic Karamzin was of great service to his country; in fact he may be regarded as the father of the review and essay (in the Western style) among the Russians.

KARA SEA, a portion of the Arctic Ocean demarcated, and except on the north-west completely enclosed, by Novaya Zemlya, Vaygach Island and the Siberian coast. It is approached from the west by three straits—Matochkin, between the two islands of Novaya Zemlya, and Kara and Yugor to the north and south of Vaygach Island respectively. On the southeast Kara Bay penetrates deeply into the mainland, and to the west of this the short Kara river enters the sea. The sea is all shallow, the deepest parts lying off Vaygach Island and the northern part of Novaya Zemlya. It had long the reputation of being almost constantly ice-bound, but after the Norwegian captain Johannesen had demonstrated its accessibility in 1869, and Nordensköld had crossed it to the mouth of the Tyeckiss at 1875, it was considered by many to offer a possible trade route between European Russia and the north of Siberia. But the open season is in any case very short, and the western straits are sometimes icebound during the entire year.

KARASU-BAZAR, a town of Russia, in the Crimea and government of Taurida, in 45° 3′ N. and 34° 26′ E., 25 m. E.N.E. of Simferopol. Pop. (1897), 12,961, consisting of Tatars, Armenians, Greeks, Qaraite Jews, and about 200 so-called Krymchaki, i.e. Jews who have adopted the Tatar language and dress, and who live chiefly by making morocco leather goods, knives, embroidery and so forth. The site is low, but the town is surrounded by hills, which afford protection from the north wind. The dirty streets full of petty traders, the gloomy bazaar with its multitude of tiny shops, the market squares, the blind alleys, the little gates in the dead courtyard walls, all give the place the stamp of a Tatar or Turkish town. Placed on the high road between Simferopol and Kerch, and in the midst of a country of corn land, vineyards and gardens, Karasu-Bazar used to be a chief seat of commercial activity in the Crimea; but it is gradually declining in importance, though still a considerable centre for the export of fruit.

The caves of Akkaya close by give evidence of early occupation of the spot. When in 1736 Khan Fata Ghrai was driven by the Russians from Bakhchi-sarai he settled at Karasu-Bazar, but next year the town was captured, plundered and burned by the Russians.

KARATEGHIN, a country of Central Asia, subject to Bokhara, and consisting of a highland district bounded on the N. by Samarkand and Ferghana (Kokand), on the E. by Ferghana, on the S. by Darvaz, and on the W. by Hisar and other Bokharan provinces. The plateau is traversed by the Surkhobor Vakhsh, a right-hand tributary of the Amu-darya (Oxus). On the N. border run the Hisar and Zarafshan mountains, and on the S. border the Peter I. (Periokhtan) range (24,900 ft.). The area is 8000 sq. m. and the population about 60,000—five-sixths Tajiks, the rest Karakirghiz. With the neighbouring lands Karateghin has no communication except during summer, that is, from May to September. The winter climate is extremely severe; snow begins to fall in October and it is May before it disappears. During the warmer months, however, the mountain sides are richly clothed with the foliage of maple, mountain ash, apple, pear and walnut trees; the orchards furnish, not only apples and pears, but peaches, cherries, mulberries and apricots; and the farmers grow sufficient corn to export. Both cattle and horses are of a small and hardy breed. Rough woollen cloth and mohair are woven by the natives, who also make excellent fire-arms and other weapons. Gold is found in various places and there are salt-pits in the mountains. The chief town, Harm or Garm, is a place of some 2000 inhabitants, situated on a hill on the right bank of the Surkhab.

The native princes, who claimed to be descended from Alexander the Great, were till 1868 practically independent, though their allegiance was claimed in an ineffective way by Khokand, but eventually Bokhara took advantage of their intestine feuds to secure their real submission in 1877.

KARAU, or Kermowlee, a native state of India, in the Rajputana agency. Area, 1242 sq. m.; pop. (1901), 156,786; assessed value £35,000, revenue about £330,000. Almost the entire territory is composed of hills and broken ground, but there are no lofty peaks, the highest having an elevation of less than 1400 ft. above sea-level. The Chambal river flows along the south-east boundary of the state. Iron ore and building stone comprise the mineral resources. The prevailing agricultural products are millets, which form the staple food of the people. The only manufactures consist of a little weaving, dyeing, wood-turning and stone-cutting. The principal imports are piece goods, salt, sugar, cotton, buffaloes and bullocks; the exports rice and goats. The feudal aristocracy of the state consists of Jadu Rajputs connected with the ruling house. They pay a tribute in lieu of constant military service, but in case of emergency or on occasions of state display they are bound to attend on the chief with their retainers.

The maharaja is the head of the clan, which claims descent from Krishna. Maharaja Bhawan Pal Deo, who was born in 1862 and succeeded in 1866, was appointed G.C.I.E. in 1897, on the occasion of Queen Victoria’s diamond jubilee.

The town of Karnaull had a population in 1891 of 23,482. It dates from 1348, and is well situated in a position naturally defended by ravines on the north and east, while it is further protected by a great wall. The palace of the maharaja is a handsome block of buildings dating mainly from the middle of the 18th century.

KAREN, one of the chief hill races of Burma. The Karens inhabit the central Pegu Yoma range, forming the watershed between the Sittang and Irrawaddy rivers, the Paunglaung range between the Sittang and the Salween, and the eastern slopes of the Arakan Yoma mountains to the west of the Irrawaddy delta. They are supposed to be the descendants of Chinese tribes driven southwards by the pressure of the Shan races, before they were again made to retire into the hills by the expansion of the Mon power. Their own traditions ascribe their original home to the west of the sandy desert of Bokhoro stretching between China and Tibet. According to the census of 1901 they numbered in all 777,235 persons within British India, divided into the Sgaw, 96,434, the Pwo, 174,070, and the Bgaih, 4036.
KAREN-NI—KARLI

while 457,355 are returned as "unspecified." The Sagw and Pwo are collectively known as the "White Karens," and chiefly inhabit British territory. They take their name from the colour of their clothing, or "Red Karens," who are regarded by some to be an entirely distinct race, chiefly inhabit the independent hill state of Karen-ni (p.n.). The Karen is of a squarer build than the Burman, his skin is fairer, and he has more of the Mongolian obliquity of the eyes. In character also the people differ from the Burmese. They are singularly devoid of humour, they are stolid and cautious, and lack altogether the light gaiety and fascination of the Burmese. They are noted for truthfulness and chastity, but are dirty and addicted to drink. The White Karens furnish perhaps the most notable instance of conversion to Christianity of any native race in the British empire. Prepared by prophecies current among them, and by curious traditions of a biblical favour, in addition to their antagonism to the dominant Burmese, they embraced with fervour the new creed brought to them by the missionaries, so that out of the 147,525 Christians in Burma according to the census of 1901 upwards of a hundred thousand were Karens. The Red Karens differ considerably from the White Karens. They are the wildest and most lawless of the so-called Karen tribes. Every male belonging to the clan used to have the rising sun tattooed in bright vermilion on his back. The men are small and wizened, but athletic, and have broad reddish-brown faces. Their dress consists of a short pair of breeches, usually of a reddish-cloth, with white and blue stripes interwoven like a tartan, and a handkerchief is tied round the head. The Karen language is tonal, and belongs to the Siamese-Chinese branch of the Indo-Chinese family.

See D. M. Smeaton, The Loyal Karens of Burma (1887); J. Nisbet, Burma under British Rule (1901); M. and F. Ferrars, Burma (1900); and O'Connor Scott, The Silken East (1904). (J. G. Sc.)

KAREN-NI, the country of the Red Karens, a collection of small states, formerly independent, but now feudatory to Burma. It is situated approximately between 18° 50' and 19° 55' N., and between 97° 10' and 97° 50' E. The tract is bounded on the N. by the Shan states of Mong P'ai, Hsautung and Mawkmai; on the E. by Siam; on the S. by the Papau district of Lower Burma; and on the W. a stretch of mountainous country, inhabited by the Bre and various other small tribes, formerly in a state of independence, divides it from the districts of Toungoo and Yamethin. It is divided in a general way into eastern and western Karen-ni; the former consisting of one state, Gantara-wadi, with an approximate area of 2500 sq. m.; the latter of the four small states of Kyegogyi, area about 350 sq. m.; Baw-lake, 200 sq. m.; Nammekon, 50 sq. m.; and Naungpale, about 30 sq. m. The small states of western Karen-ni were formerly all subject to Bawlake, but the subordination has now ceased. Karen-ni consists of two widely differing tracts of country, which roughly mark now, and formerly actually did mark, the division into east and west. Gantara-wadi has, however, encroached westwards beyond the boundaries which nature would assign to it. The first of these two divisions is the southern portion of the valley of the Hphil, or Balu stream, an open, fairly level plain, well watered and in some parts swampy. The second division is a series of chains of hills, intersected by deep valleys, through which run the two main rivers, the Salween and the Pawn, and their feeder streams. Many of the latter are dried up in the hot season and only flow freely during the rains. The whole country being hilly, the most conspicuous ridge is that lying between the Pawn and the Salween, which has an average altitude of 5000 ft. It is crossed by several tracks, passable for pack-animals, the most in use being the road between Sawlon, the capital of Gantara-wadi and Man Maü. The principal peak east of the Salween is on the Loi Lan ridge, 7100 ft. above mean sea-level. Parts of this ridge form the boundary between eastern Karen-ni and Mawkmai on the west and Siam on the east. It falls away rapidly to the south, and at Pang Salang is crossed at a height of 2000 ft. by the road from Hsataw to Meahngshaw. West of the Balu valley the continuation of the eastern rim of the Myelat plateau rises in Loi Nangpa to about 5000 ft. The Nam Pawn is a large river, with an average breadth of 100 yds., but is un navigable owing to its rocky bed. Even boats cannot be floated down it without the assistance of elephants. The Salween throughout Karen-ni is navigated by large native craft. Its tributary, the Me Pai, on the eastern bank, is navigable as far as Meahngshaw in Siamese territory. The Balu stream flows out of the Inle lake, and is navigable from that point to close on Lawpita, where it sinks into the ground in a marsh or succession of tunnel holes. Its breadth averages 50 yds., and its depth is 15 ft. in some places.

The chief tribes are the Red Karens (24,043), Bres (3500), and Padaungs (1867). Total revenue, Rs. 37,000. An agent of the British government, with a guard of military police, is posted at the village of Loikaw. Little of the history of the Red Karens is known; but it appears to be generally admitted that Bawlake was originally the chief state of the whole country, east and west, but eastern Karen-ni under Papaw-gyi early became the most powerful. Slaving raids far into the Shan states brought on invasions from Burma, which, however, were not very successful. Eastern Karen-ni was never reduced until Sawlapaw, having defied the British government, was overcome and deposed by General Collett in the beginning of 1899. Sawlawi was then appointed myoza, and received a sanad, or patent of appointment, on the same terms as the chiefs of the Shan states. The independence of Karen-ni has been acknowledged by the British government in a treaty with King Mindon in 1875. They were, however, formally recognized as feudatories in 1892, and were presented with sanads on the 23rd of January of that year. Gantara-wadi pays a regular tribute of Rs. 5000 yearly, whereas these chieflets pay an annual kadaw, or mussion, of about Rs. 100. They are forbidden to carry out a sentence of death passed on a criminal without the sanction of the superintendent of the southern Shan states, but otherwise retain nearly all their customary law.

Tin, or what is called tin, is worked in Bawlake. It appears, however, to be very impure. It is worked intermittently by White Karens on the upper waters of the Hkampayu stream. Rubies, spinels and other stones are found in the upper Tu valley and in the upper Salween. Nor are the Karens, as a rule, used to clothing. The trade in teak is the chief or only source of wealth in Karen-ni. The largest and most important forests are those on the left bank of the Salween. Others lie on both banks of the Nam Pawn, and in western Karen-ni on the Nam Tu. The annual out-turn is estimated at over 1000 sods, and forest officers have estimated that an annual out-turn of 9000 logs might be kept up without injury to the forests. Some quantity of cutch is exported, as also stick-lac, which the Red Karens graft so as to foster the production. Other exports of the forest, but not exported. Rice, areca-nuts, and betel-vine leaf are the chief agricultural products. The Red Karen women weave their own and their husbands' clothing. A characteristic manufacture is the pa-si or Karen metal drum, which is made at Ngwehol. These drums are from 2½ to 4 ft. across the boss, with sides of about the same depth. The sound is out of proportion to the metal used, and is inferior to that of the Shan and Burmese gongs. It is thought that the population of Karen-ni is steadily increasing, but the number of the people is considered to exceed the death-rate by very little, and the Red Karen habit of life is most unworthy. Numbers have enlisted in the Burma police, but there are various opinions as to their value.

(J. G. Sc.)

KARLI, a French settlement in India, situated on the south-east coast, within the limits of Tanjore district, with an area of 53 sq. m., and a population (1901) of 56,595. The site was promised to the French by the Tanjore raja in 1738, in return for services rendered, but was only obtained by them by force in 1739. It was captured by the British in 1760, restored in 1765, again taken in 1768, and finally restored in 1817. The town is neatly built on one of the mouths of the Cauvery, and carries on a brisk trade with Ceylon, exporting rice and importing chiefly European articles and timber. A chef de l'administration, subordinate to the government at Pondicherry, is in charge of the settlement, and there is a tribunal of first instance.

KARLI, a village of British India, in the Bombay presidency, famous for its rock caves. Pop. (1901), 903. The great cave of Karli is said by Ferguson to be without exception the largest and finest chaitya cave in India; it was
excavated at a time when the style was in its greatest purity, and is splendidly preserved. The great *chaitya* hall is 136 ft. long, 71 ft. 7 in. wide, and about 46 ft. high. A row of ornamental columns rises on either side to the ribbed teak roof, and at the far end of the nave is a massive *dagoba*. Dating from the beginning of the Christian era or earlier, this cave has a woody roof, which repeats the pattern of the walls, and which Ferguson considers to be part of the original design. Since wood rapidly deteriorates in India owing to the climate and the ravages of white ants, the state of preservation of this roof is remarkable.

**Karlowitz**, or **Karlowitz** (Hungarian, *Karlowa*; Croatian, *Karlovci*), a city of Croatia-Slavonia, in the county of Syrmia; on the right bank of the Danube, and on the railway from Peterwardein, 6 m. N.W. to Belgrade. Pop. (1900), 5,934. Karlowitz is the seat of an Orthodox metropolitan, and has several churches and schools, and a hospital. The fruit-farms and vineyards of the Fruska Gora, a range of hills to the south, yield excellent plum brandy and red wine. An obelisk at Slankamen, 13 m. E. by S., commemorates the defeat of the Turks by Louis of Baden, in 1691. The treaty of Karlowitz, between Austria, Turkey, Poland and Venice, was concluded in 1699; in 1848-1849 the city was the headquarters of Servian opposition to Hungary. It was included, until 1881, in the Military Frontier.

**Karlskrona** [Karlskrona], a seaport of Sweden, on the Baltic coast, chief town of the district (*lään*) of Blekinge, and headquarters of the Swedish navy. Pop. (1900), 23,955. It is pleasantly situated upon islands and the mainland, 290 m. S.S.W. of Stockholm by rail. The harbour is capacious and secure, with a sufficient depth of water for the largest vessels. It has three entrances; the principal, and the only one practicable for large vessels, is to the south of the town, and is defended by two strong forts, at Drottningör, the island of Aspö, and on the islet of Kungsholm. The dry docks, of great extent, are cut out of the solid granite. There is slip-accommodation for large vessels. Karlskrona is the seat of the Royal Naval Society, and has a navy-arsenal and hospital, and naval and other schools. Charles XI, the founder of the town as naval headquarters (1658), is commemorated by a bronze statue (1897). There are factories for naval equipments, galvanized in the lobster, and leather and iron, and breweries and granite quarries. Exports are granite and timber, iron, coal, flour, provisions, hides and machinery.

**Karlsruhe**, or **Karlsruhe**, a city of Germany, capital of the grand-duchy of Baden, 33 m. S.W. of Heidelberg, on the railway Frankfurt-on-Main-Basel, and 39 m. N.W. of Stuttgart. Pop. (1865), 84,030; (1905), 111,200. It stands on an elevated plain, 5 m. E. of the Rhine and on the fringe of the Hardtwald forest. Karlsruhe takes its name from Karl Wilhelm, margrave of Baden, who, owing to disputes with the citizens of Durlach, erected here in 1751 a hunting seat, around which the town has been built. The city is surrounded by beautiful parks and gardens. The palace (Schloss), built in 1751-1776 on the site of the previous erection of 1715, is a plain building in the old French style, composed of a centre and two wings, presenting nothing remarkable except the octagon tower (*Blioturm*), from the summit of which there is a splendid view of the city and surrounding country is obtained, and the marble saloon of Count Cassini was fixed or drawn. In front of the palace is the Great Circle, a semicircular line of buildings, containing the government offices. From the palace the principal streets, fourteen in number, radiate in the form of an expanded fan, in a S.E., and S. and S.W. direction, and are again intersected by parallel streets. This fan-like plan of the older city has, however, been abandoned in the more modern extensions. Karlsruhe has several fine public squares, the principal of which are the Schlossplatz, with Schwantshaler's statue of the grand duke Karl Friedrich in the centre, and market square (*Marktplatz*), with a fountain and a statue of Louis, grand duke of Baden. In the centre of the Rondelplatz is an obelisk in honour of the grand duke Karl Wilhelm. The finest street is the Kaiserstrasse, running from east to west and having a length of a mile and a half and a uniform breadth of 72 ft. In it are several of the chief public buildings, notably the technical high school, the arsenal and the post office. Among other notable buildings are the town hall; the theatre; the hall of representatives; the mint; the joint museum of the grand-ducal and national collections (natural history, archaeology, ethnology, art and a library of over 150,000 volumes); the palace of the heir-apparent, a late Renaissance building of 1801-1806; the imperial bank (1803); the national industrial hall, with an exhibition of machinery; the new law courts; and the hall of fine arts, which shelters a good picture gallery. The city has six Evangelical and four Roman Catholic Churches. The most noteworthy of these are the Evangelical town church, the burial-place of the margraves of Baden; the Christuskirche, and the Bernharduskirche. Karlsruhe possesses further the Zähringens museum of curiosities, which is in the left wing of the Schloss; an architectural school (1851); industrial art school and museum; cadet school (1802); botanical and electro-technical institutes; and horticultural and agricultural schools. Of its recent public monuments may be mentioned one to Joseph Victor von Schieffel (1826-1886); a bronze equestrian statue of the emperor William I. (1856); and a memorial of the 1870-71 war. Karlsruhe is the headquarters of the XIV. German army corps. Since 1870 the industry of the city has grown rapidly, as well as the city itself. There are large railway workshops; and the principal branches of industry are the making of locomotives, carriages, tools and machinery, jewelry, furniture, gloves, cement, carpets, perfumery, tobacco and beer. There is an important arms factory. Maxau, on the Rhine, serves as the river port of Karlsruhe and is connected with it by a canal finished in 1901.

See Fecht, *Geschichte der Haupt- und Residenzstaedt Karlsruhe* (1887); F. von Weech, *Karlsruhe, Geschichte der Stadt und ihrer Verwaltung* (Karlsruhe, 1893-1902); Naetzer, *Die Umgebung der Residenz Karlsruhe* (Karlsruhe, 1888); and the annual *Chronik der Haupt- und Residenzstadt Karlsruhe*.

**Karlstad**, a town of Sweden, the capital of the district (*lään*) of Vermland, on the island of Tingvalla under the northern shore of Lake Vener, 205 m. W. of Stockholm by the Christiania railway. Pop. (1905), 11,869. The fine Klar River flows through the city on its way to the north. To the north-west lies the Fryksdal or valley of the Nors River, containing three beautiful lakes and fancifully named the “Swedish Switzerland.” In this and other parts of the district are numerous iron-works. Karlstad was founded in 1584. It is the seat of a bishop and has a cathedral. Trade is carried on by way of the lake and the Göta canal. There are mechanical works, match factories and stockinet factories, and a mineral spring rich in iron, the water of which is bottled for export. Under the constitution of united Sweden and Norway, in the event of the necessity of electing a Regent and the disagreement of the parliaments of the two countries, Karlstad was indicated as the meeting-place of a delegacy for the purpose. Here, on the 31st of August 1905 the conference met to decide upon the severance of the union between Sweden and Norway, the delegates concluding their work on the 23rd of September.

**Karlstadt** or **Karlstad** (Hungarian, *Károlyedvás*; Croatian, *Karlovac*), a royal free city, municipality and garrison town in the county of Agram, Croatia-Slavonia; situated on the left bank of the river Kupa, which here receives the Korana and the Dobra. Pop. (1900), 73,969. Karlstadt is on the railway from Agram to Fiume. It consists of the fortress, now obsolete, the inner town and the suburbs. Besides the Roman Catholic and Orthodox churches, its chief buildings are the Franciscan monastery, law-courts and several large schools, including one for military cadets. Karlstadt has a considerable transit trade in grain, wine, spirits and honey, and manufactures the liqueur called *rosoglio*.

**Karma**, sometimes written Kamran, a Sanskrit noun (from the root *kri*, to do), meaning deed or action. In addition to this simple meaning it has also, both in the philosophical and the colloquial speech of India a technical meaning, denoting “a person’s deeds as determining his future lot.” This is not merely in the vague sense that on the whole good will be rewarded
and evil punished, but that every single act must work out to the uttermost its inevitable consequences, and receive its retribution, however many ages the process may require. Every part of the universal material—man, woman, insect, tree, stone, or whatever it be—is the dwelling of an eternal spirit that is working out its destiny, and while receiving reward and punishment for the past is laying up rewards and punishments for the future. This view of existence as an endless and concomitant sowing and reaping is accepted by learned and unlearned alike as accounting for those inequalities in human life which might otherwise lead men to doubt the justice of God. Every act of every person has not only a moral value producing merit or demerit, but also an inherent power which works out its fitting reward or punishment. To the Hindu this does not make heaven and hell unnecessary. These two exist in many forms more or less grotesque, and after death the soul passes to one of them and there receives its due; but that existence too is marked by desire and action, and is therefore productive of merit or demerit, and as the soul is thus still entangled in the meshes of karma it must again assume an earthly garb and continue the strife. Salvation is to the Hindu simply deliverance from the power of karma, and each of the philosophic systems has its own method of obtaining it. The last is thus explained in the Mahabharata, the “fruit of karma,” and gives many curious details of the way in which sin is punished and merit rewarded. The origin of the doctrine cannot be traced with certainty, but there is little doubt that it is post-vedic, and that it was readily accepted by Buddha in the 6th century B.C. As he did not believe in the existence of soul he had to modify the doctrine (see Buddhism).

KÁRMÁN, JÓZSEF (1769–1795), Hungarian author, was born at Losonc on the 14th of March 1769, the son of a Calvinist pastor. He was educated at Losonc and Pest, whence he migrated to Vienna. There he made the acquaintance of the beautiful and eccentric Countess Markovics, who was for a time his mistress, but she was not, as has often been supposed, the heroine of his famous novel Fanni Hagymányai (Fanny’s testament). Subsequently he settled in Pest as a lawyer. His sensibility, social charm, liberal ideas (he was one of the earliest of the Magyar freemasons) and personal beauty, opened the doors of the best houses to him. He was generally known as the Pest Alcibiades, and was especially at home in the salons of the Protestant magnates. In 1792, together with Count Káday, he founded the first theatrical society at Buda. He maintained that Pest, not Pressburg, should be the literary centre of Hungary, and in 1794 founded the first Hungarian quarterly, Urania, but it met with little support and ceased to exist in 1795, after three volumes had appeared. Kármán, who had long been suffering from an incurable disease, died in the same year. The most important contribution to Urania was his sentimental novel, Fanni Hagymányai, much in the style of La nouvelle Héloïse and Werther, the most exquisite product of Hungarian prose in the 18th century and one of the finest psychological romances in the literature. Kármán also wrote two satires and fragments of an historical novel, while his literary programme is set forth in his dissertation, A menedékelő csodásodás.

Kármán’s collected works were published in Ahaí’s Nemzeti Kármán (Pest, 1878), &c., preceded by a life of Kármán. See F. Barath, Joseph Kármán (Hung., Vas. Ujs., 1874); Zsolc Beéthy, article on Kármán in Közép Irodalomtörténet (Budapest, 1894). (R. N. B.)

KARNAK, a village in Upper Egypt (pop. 1907, 12,583), which has given its name to the northern half of the ruins of Thebes on the east bank of the Nile, the southern being known as Luxor (q.v.). The Karnak ruins comprise three great enclosures built of crude brick. The northernmost and smallest of these contained a temple of the god Mont, built by Amenophis III., and restored by Ramses II. and the Ptolemies. Except a well-preserved gateway dating from the reign of Ptolemy Euergetes I., little more than the plan of the foundations is traceable. Its axis, the line of which is continued beyond the enclosure wall by an avenue of sphinxes, pointed down-stream (N.E.). The southern enclosure contained a temple of the goddess Mut, also built by Amenophis III., and almost as ruinous as the last, but on a much larger scale. At the back is the sacred lake in the shape of a horse-shoe. The axis of the temple runs approximately northward, and is continued by a great avenue of rams to the eastern pylons of the central enclosure. This last is of vast dimensions, forming approximately a square of 1500 ft., and has been occupied in the works of the temple of Thutmose III, the Karnak temple of Ammon (see Architecture, sec. “Egyptian,” with plan). Inside and outside each of these enclosures there were a number of subsidiary temples and shrines, mostly erected by individual kings to special deities. The triad of Thebes was formed by Ammon, his wife Mût and their son Khons. The large temple of Khons is in the enclosure of the Ammon temple, and the temple of Mût, as already stated, is connected with the latter by the avenue of rams. The Mont temple, on the other hand, is isolated from the others and turned away from them; it is smaller than that of Khons. Mont, however, may perhaps be considered a special god of Thebes; he certainly was a great god from very ancient times in the immediate neighbourhood, his seats being about 4 m. N.E. at Medamot, the ancient Madu, and about 10 m. S.W. on the west bank at Hermontis.

It is probable that a temple of Ammon existed at Karnak under Tuthmosis III. (Noe. 1769), and that the earliest temple of Ammon, as is generally supposed, was the temple of Thutmose III. Its restoration to its present dimensions is in the time of Amenophis I. (Noe. 1874), and an inscription in the temple of Amenophis II. (Noe. 1795) gives the year of the foundation of the temple. The temple of Amenophis III. was completed about the year 1750 B.C. Some scholars have supposed that the temple of Amenophis III., though so great a builder at Thebes, seems to have contended with erecting a great pylon (No. III.) at the west end. The closely crowded succession of small pylons here suggests a want of space for westward expansion, and this is perhaps explained by a trace of a quay found by Lefrain in 1805 near the southern line of pylons; a branch of the Nile or a large canal may have limited the growth. As has been stated, Tethmosis III. continued on the southern side; he destroyed the temple of Amenophis I. and erected a larger pylon (No. VII.) to the north of Hatshepsut’s No. VIII. To these Haremheb added two great pylons and the long avenue of ram-figures, changing the axis slightly so as to lead direct to the temple of Mut built by Amenophis III. All of these southern pylons are well spaced. In the angle between these pylons and the main temple was the great rectangular sacred lake. By this time the temple of Karnak had attained to little more than half of its ultimate length from east to west.
With the XIXth Dynasty there is a notable change perhaps due to the filling of the hypothetical canal. No more was added on the southern line of building, but westward Rameses I erected pylon No. II. at an ample distance from that of Amenophis III., and Seti I. and Rameses II. utilized the space between for their immense Hall of Columns. Here we find the most celebrated examples of Egyptian architecture. The materials of which the pylon is composed bear witness to a temple having stood near by of the heretic and unacknowledged kings of the XVIIIth Dynasty. Haremheb’s pylon No. IX. was likewise constructed out of the ruins of a temple dedicated by Amenophis IV. (Akhenaten) to the sun-god Harmakhs. Rameses III. built a fine temple, still well preserved, to Ammon at right angles to the axis westward of pylon No. II.; Sheshonk I. (Dynasty XXII.) commenced a great colonnaded court in front of the pylon, enclosing part of this temple and a smaller triple shrine built by Seti II. In the centre of the court Tirhaka’s pylon (Tirhaka, Dynasty XXV.) set up huge columns 64 ft. high, rivalling those of the central aisle in the Hall of Columns, for some building now destroyed. A vast unfinished pylon at the west end (No. I.), 390 ft. wide and 142½ ft. high, is of later date than the court, and is usually attributed to the Ptolemaic age. It will be observed that the successive pylons diminish in size from the outside inwards. Portions of the solid crude-brick scaffolding are still seen banked against this pylon. About 100 metres west of it is a stone quay, on the platform of which stood a pair of obelisks of Seti II.; numerous graffiti recording the height of the Nile from the XXIst to the XXVIth Dynasties are engraved on the quay.

Besides the kings named above, numbers of others contributed in greater or less measure to the building or decoration of the colossal temple. Alexander the Great restored a chamber in the festival hall of Tethmosis III., and Ptolemy Soter built the central shrine of granite in the name of Philip Arrhiadeus. The walls throughout, usually in Egyptian temples, are covered with scenes and inscriptions, many of these, such as those which record the annals of Tethmosis III., the campaign of Seti I. in Syria, the exploit of Rameses II. at the battle of Kadesh and his treaty with the Hittites, and the dedication of Sheshonk’s victories to Ammon, are of great historical importance. Several large stelae with interesting inscriptions have been found in the ruins, and statues of many ages of workmanship. In December 1903 M. Legrain has been engaged for several years in clearing the temple area systematically, first tapped an immense deposit of colossal statues, stelae and other votive objects large and small in the space between pylon No. VII. and the great hypostyle hall. After three seasons’ work, much of it in deep water, 750 large monuments have been extracted, while the small figures, &c., in bronze and other materials amount to nearly 20,000. The value of the find, both from the artistic and historical standpoint, is immense. The purpose of the deposit is still in doubt; many of the objects are of the finest materials and finest workmanship, and in perfect preservation; even precious metals are not absent. Multitudes of objects in wood, ivory, &c., have decayed beyond recognition, but all were once of immense value. They are found lying in the utmost confusion; in date they range from the XIXth Dynasty to the Ptolemaic period.

The inundation annually reaches the floor of the temple, and the saltpeetre produced from the organic matter about the ruins, annually melting and crystallizing, has disintegrated the soft sandstone in the lower courses of the walls and the lower drums and bases of the columns. There is moreover no solid foundation in any part of the temple. Slight falls of masonry have taken place from time to time, and the accumulation of rubbish was the only thing that prevented a great disaster. Repairs, often on a large scale, have therefore gone on by side by side with the clearance, especially since the fall of many columns in the great hall in 1899. All the columns which fell in that year were re-erected by 1908.

The temple of Khons, in the S.W. corner of the great enclosure, is approached by an avenue of rams, and entered through a fine pylon erected by Euergetes I. It was built by Rameses III. and his successors of the XXth Dynasty, with Hihor of Dynasty XXI. Excavations in the opposite S.E. corner have revealed flint weapons and other sepulchral remains of the earliest periods, proving that the history of Thebes goes back to a remote antiquity.

Karnal, a town and district of British India, in the Delhi division of the Punjab. The town is 7 m. from the right bank of the Jumna, with a railway station 76 m. N. of Delhi. Pop. (1901), 23,559. There are manufactures of cotton cloth and boots, besides considerable local trade and an annual horse fair.

The District of Karnal stretches along the right bank of the Jumna, north of Delhi. It is entirely an alluvial plain, but is broken by the low upfolds of the watershed between the Indian Ocean and the Bay of Bengal. Area, 3,153 sq. m.; pop. (1901), 883,275, showing an increase of nearly 5% in the decade. The principal crops are millets, wheat, pulse, rice, cotton and sugar-cane. There are several factories for ginning and pressing cotton. The district is traversed by the Delhi-Umballa-Kalka railway, and also by the Western Jumna canal. It suffered from famine in 1896–1897, and again to some extent in 1899–1900.

No district of India can boast of a more ancient history than Karnal, as almost every town or stream is connected with the legends of the Mahabharata. The town of Karnal itself is said to owe its foundation to Raja Karna, the mythical champion of the Kauravas in the great war which forms the theme of the national epic. Panipat, in the south of the district, is said to have been one of the pledges demanded from Duryodhana by Yudisthira as the price of peace in that famous conflict. In historical times the plains of Panipat have been the theatre of battles which decided the fate of Upper India. It was here that Ibrahim Lodl and his vast host were defeated in 1526 by the veteran army of Baber; in 1556 Akbar reasserted the claims of his family on the same battlefield against the Hindu general of the house of Adil Shah, which had driven the heirs of Baber from the throne for a brief interval; and at Panipat too, on the 7th of January 1761, the Mahratta Confederation was defeated by Ahmad Shah Durani. During the troublous period which then ensued the Sikhs managed to introduce themselves, and in 1767 one of their chieftains, Desu Singh, appropriated the fort of Khathial, which had been built during the reign of Akbar. His descendants, the bhais of Khathial, were reckoned amongst the most important Cis-Sutlej princes. Different portions of this district have lapsed from time to time into the hands of the British.

Károlyi, Aloys, Count (1825–1880), Austro-Hungarian diplomatist, was born in Vienna on the 8th of August 1825. The greatness of the Hungarian family of Károlyi dates from the time of Alexander Károlyi (1668–1743), one of the generals of Francis Rakoczy II., who in 1711 negotiated the peace of Szatmár between the insurgent Hungarians and the new king, the emperor Charles VI., was made a count of the Empire in 1712, and subsequently became a field marshal in the imperial army. Aloys Károlyi entered the Austrian diplomatic service, and was attached successively to embassies at various European capitals. In 1858 he was sent to St Petersburg on a special mission to seek the support of Russia against Napoleon III. He was ambassador at Berlin in 1866 at the time of the rupture between Prussia and Austria, and after the Seven Weeks’ War was charged with the negotiation of the preliminaries of peace at Nikolsburg. He was again sent to Berlin in 1871, acted as second plenipotentiary at the Berlin congress of 1878, and was sent in the same year to London, where he represented Austria for ten years. He died on the 2nd of December 1889 at Törmegyer.
KAROSS, a cloak made of sheepskin, or the hide of other animals, with the hair left on. It is properly confined to the coat of skin without sleeves worn by the Hottentots and Bushmen of South Africa. These karosses are now often replaced by a blanket. Their chiefs wore karosses of the skin of the wild cat, leopard or caracal. The word is also loosely applied to the cloaks of leopard-skin worn by the chiefs and principal men of the Kaffir tribes. Kaross is probably either a genuine Hottentot word, or else an adaptation of the Dutch kuras (Portuguese couroça), a cuirass. In a vocabulary dated 1673 karos is described as a "corrupt Dutch word."

KARR, JEAN BAPTISTE ALPHONSE (1808-1890), French critic and novelist, was born in Paris, on the 24th of November 1808, and after being educated at the Collège Bourbon, became a teacher there. In 1832 he published a novel, Sous les lilieux, characterized by an attractive originality and a delightful freshness of personal sentiment. A second novel, Une heure tôt bord, followed next year, and was received with universal acclamation. He also published a monthly journal, Les Coûpees, of a keenly satirical tone, a publication which brought him the reputation of a somewhat bitter wit. His epigrams were frequently quoted; e.g., "plus ça change, plus c'est la même chose," and, on the proposal to abolish capital punishment, "je veux bien que messieurs les assassins meurent." In 1848 he founded Le Journal. In 1855 he went to live at Nice, where he indulged his predilections for Mediterranean life, as stated in his name to more than one new visitor. Indeed he practically founded the trade in cut flowers on the Riviera. He was also devoted to fishing, and in Les Soirées de Sainte-Adresse (1853) and Au bord de la mer (1860) he made use of his experiences. His reminiscences, Lièvre de bord, were published in 1879-1880. He died at St Raphael (Var), on the 29th of September 1890.

KARRER, FELIX (1825-1903), Austrian geologist, was born in Venice on the 11th of March 1825. He was educated in Vienna, and served for a time in the war department, but he retired from the public service at the age of thirty-two, and devoted himself to science. He made especial studies of the Tertiary formations and fossils of the Vienna Basin, and investigated the geological relations of the thermal and other springs in that region. He became an authority on the foraminiferæ, on which subject he published numerous papers. He wrote also a little book entitled Der Boden der Hauptstädte Europas (1881). He died in Vienna on the 10th of April 1903.

KARROO, two extensive plateaus in the Cape province, South Africa, known respectively as the Great and Little Karroo. Karroo is a corruption of Karusa, a Hottentot word meaning dry, barren, and its use as a place-name indicates the character of the plateau so designated. They form the two intermediate "steps" between the coast-lands and the inner plateau which constitutes the largest part of South Africa. The Little (also called Southern) Karroo is the table-land nearest the southern coast-line of the Cape, and is bounded north by the Zwaarteberg, which separates it from the Great Karroo. From west to east the Little Karroo has a length of some 200 m., whilst its average width is 10 m. West of the Zwaarteberg the Little Karroo merges into the Great Karroo. Eastward it is limited by the hills which almost reach the sea in the direction of St Francis and Algoa Bays. The Great Karroo is of much larger extent. Both Aegisouth, as stated by the Zwaarteberg, further east by the Zuurberg (of the coast chain), its northern limit is the mountain range which, under various names, such as Nieuwveld and Sneeuwberg, forms the wall of the inner plateau. To the south-west and west it is bounded by the Hex River Moun-
tains and the Cold Bokkeveld, eastward by the Great Fish River. West to east it extends fully 350 m., in a straight line, varying in breadth from more than 80 to less than 40 m. Whilst the Little Karroo is divided by a chain of hills which run across it from east to west, and varies in altitude from 1000 to 2000 ft., the Great Karroo has more the aspect of a vast plain and has a level of from 2000 to 3000 ft. The total area of the Karroo plateaux is stated to be over 100,000 sq. m. The plains are dotted with low ranges of kopjes. The chief characteristics of the Karroo are the absence of running water during a great part of the year and the consequent parched aspect of the country. There is little vegetation save stunted shrubs, such as the mimosa (which generally marks the river beds), wild pomegranate, and wax heaths, known collectively as Karroo bush. After the early rains the bush bursts into gorgeous purple and yellow blossoms and vivid greens, affording striking evidence of the fertility of the soil. Such parts of the Karroo as are under perennial irrigation are among the most productive lands in South Africa. Even the parched bush provides sufficient nourishment for millions of sheep and goats. There are also numerous ostrich farms, in particular in the districts of Oudtshoorn and Ladismith in the Little Karroo, where lcererene grows with extraordinary luxuriance. The Karroo is admirably adapted to sufferers from pulmonary complaints. The dryness of the air tempers the heat of summer, which reaches in January a mean maximum of 85°F., whilst July, the coldest month, has a mean minimum of 30°F. A marked feature of the climate is the great daily range (nearly 30°) in temperature; the Karroo towns are also subject to violent dust storms. Game, formerly plentiful, has been, with the exception of buck, almost exter-
minated. In a looser sense the term Karroo is also used of the vast northern plains of the Cape which are part of the inner table-land of the continent. (See CAPE COLONY.)

KARS, a province of Russian Transcaucasia, having the territory of the old Kars, and Tiflis on the W., of Tiflis and Erivan on the E., and Asiatic Turkey on the S. and W. Its area amounts to 7,410 sq. m. It is a mountainsous, or rather a highland, country, being in reality a plateau, with ranges of mountains running across it. The northern border is formed by the Arzyan range, a branch of the Ajari Mts., which attains altitudes of over 9000 ft. In the south the Kara-dagh reaches 10,270 ft. in Mount Alada-dagh, and the Agry-dagh 10,720 ft. in Mount Askash; and in the middle Allah-akbar rises to 10,215 ft. The passes which connect valley with valley often lie at considerable altitudes, the average of those in the S.E. being 9000 ft. Chaldir-gol (altitude 6520 ft.) and one or two other smaller lakes lie towards the N.E.; the Chaldir-gol is overhung on the S.W. by the Kysyr-dagh (10,470 ft.). The east side of the province is throughout demarcated by the Arpa-chai, which receives from the right the Kara river, and as it leaves the province at its S.E. corner joins the Aras. The Kura rises within the province not far from the Kysyr-dagh and flows across it westwards, then eastwards and north-eastwards, quitting it in the north-east. The winters are very severe. The towns of Kaghyschman (4620 ft.) and Sarykamanish (7800 ft.) have a winter temperature like that of Finland, and at the latter place, with an annual mean (35°F.) equal to that of Hammerfest in the extreme north of Norway, the thermometer goes down in winter to 40° below zero and rises in summer to 99°. The annual mean temperature at Kars is 49° and at Ardahan, farther north, 37°. The Alpine meadows (yavid) reach up to 1000 ft. and afford excellent pasturage in spring and summer. The province is almost everywhere heavily forested. Firs and birches flourish as high as 7000 ft., and the vine up to above 3000 ft. Cereals ripen well, and barley and maize grow up to considerable altitudes. Large numbers of cattle and sheep are bred. Extensive deposits of salt occur at Kaghyschman and Oltu. The population was 107,610 in 1883 and 292,863 in 1897. The estimated population in 1906 was 540,400. It is mixed. In remote antiquity the province was inhabited by Armenians, the ruins of whose capital, Ani, attest the ancient prosperity of the country. To the Armenians succeeded the Turks, while
Kurds invaded the Alpine pasturages above the valley of the Aras; and after them Kabardians, Circassians, Ossetes and Kar-papaks successively found a refuge in this highland region. After the Russo-Turkish War of 1877–78, when this region was transferred to Russia by the treaty of Berlin, some 82,750 Turks emigrated to Asia Minor, their places being taken by nearly 22,000 Armenians, Greeks and Russians. At the census of 1897 the population consisted principally of Armenians (73,400), Kurds (43,000), Greeks (32,600), Kar-papaks (30,000), Russians, Turks and Persians. The capital is Kars. The province is divided into four districts, the chief towns of which are Kars (q.v.), Ardahan (pop. 800 in 1897), Kaghyschman (3435) and Olyt. 

KARS, a fortified town of Russian Transcaucasia, in the province of Kars, formerly at the head of a sanjak in the Turkish vilayet of Erzerum. It is situated in 40° 37' N. and 43° 6' E., 185 m. by rail S.W. of Tiflis, on a dark basalt spur of the Soghanidagh, above the deep ravine of the Kars-chai, a sub-basituary of the Aras. Pop. (1878), 8672; (1897), 20,801. There are three considerable suburbs—Orta-kapi to the S., Bairam Pasha to the E., and Timur Pasha on the western side of the river. At the N.W. corner of the town, overhanging the river, is the ancient citadel, in earlier times a strong military post, but completely commanded by the surrounding eminences. The place is, however, still defended by a fort and batteries. There is a 10th century cathedral, Kars being the see of a bishop of the Orthodox Greek Church. Coarse woollens, carpets and felt are manufactured.

During the 9th and 10th centuries the seat of an independent Armenian principality, Kars was captured and destroyed by the Seljuk Turks in the 11th century, by the Mongols in the 13th, and by Timur (Tamerlane) in 1387. The citadel, it would appear, was built by Sultan Murad III. during the war with Persia, at the close of the 16th century. It was strong enough to withstand a siege by Nadir Shah of Persia, in 1731, and in 1807 it successfully resisted the Russians. After a brave defence it surrendered on the 23rd of June 1828 to the Russian general Count I. F. Paaskevich, 13,000 men becoming prisoners of war. During the Crimean War the Turkish garrison, guided by General Williams (Sir W. Fenwick Williams of Kars) and other foreign officers, kept the Russians at bay during a protracted siege; but, after the garrison had been devastated by cholera, and food had utterly failed, nothing was left but to capitulate (Nov. 1855). The fortress was again stormed by the Russians in the war of 1877–78, and on its conclusion was transferred to Russia.

See Kmetry, The Defence of Kars (1856), translated from the German; H. A. Lake, Kars and our Campaign in Russia (London, 1858); and Narrative of the Defence of Kars (London, 1857): Dr Sandwith, Narrative of the Siege of Kars (London, 1856); C. B. Norman, Armenia and the Campaign of 1877 (London, 1878): Greene, Russian Army and its Campaigns in Turkey (1879).

KARSHI, a town of Bokhara, in Central Asia, situated 96 m. S.E. of the city of Bokhara, in a plain at the junction of two main confluents of the Kashka-darya. It is a large and straggling place, with a citadel, and the population amounts to about 25,000. The town is a fine building inlaid with blue and white tiles. Along the river stretches a fine promenade sheltered by poplars. Poppies and tobacco are largely grown, the tobacco being deemed the best in Central Asia. There is a considerable trade in grain; but the commercial prosperity of Karshi is mainly due to its being a meeting-point for the roads from Samarkand, Bokhara, Hissar, Balkh and Maimana, and serves as the market where the Turkomans and Uzbeks dispose of their carpets, knives and firearms. Its copper-smiths turn out excellent work. Karshi was a favourite residence of Timur (Tamerlane).

KARST, in physical geography, the region east of the northern part of the Adriatic. It is composed of high and dry limestone ridges. The country is excessively faulted by a long series of parallel fractures that border the N.E. Adriatic and continue inland that series of steps which descend beneath the sea and produce the series of long parallel islands off the coast of Triest and along the Dalmatian shore. It has been shown by E. Suess (Amplita der Erde, vol. i. pt. 2, ch. iii.) that the N. Adriatic is a sunken dish that has descended along these fractures and folds, which are not uncommonly the scene of earthquakes, showing that these movements are still in progress. The crust is very much broken in consequence and the water sinks readily through the broken limestone rocks, which owing to their nature are also very absorbent. The result is that the scenery is barren and desolate, and as this structure always, wherever found, gives rise to similar features, a landscape of this character is called a Karst landscape. The water running in underground channels dissolves and denudes away the underlying rock, producing great caves as at Adelsberg, and breaking the surface with sinks, potholes and unroofed chasms. The barren nature of a purely limestone country is seen in the treeless regions of some parts of Derbyshire, while the underground streams and sinks of parts of Yorkshire, and the unroofed gorge formed by the Cheddar cliffs, give some indication of the action that in the high crumbled mountains of the Karst produces a depressing landscape which has some of the features of the "bad lands" of America, though due to a different cause.

KARSTEN, KARL JOHANN BERNHARD (1782–1853), German mineralogist, was born at Bützow in Mecklenburg, on the 26th of November 1782. He was author of several comprehensive works, including Handbuch der Eisenhüttenkunde (2 vols., 1816; 3rd ed., 1841); System der Metallurgie geschichtlich, statistisch, theoretisch und technisch (5 vols. with atlas, 1831–1832); Lehrbuch der Salinenkunde (2 vols., 1846–1847). He was well known as editor of the Archiv für Bergbau und Hüttenwesen (20 vols., 1818–1834); and (with H. von Dechen) of the Archiv für Mineralogie, Geognosie, Bergbau und Hüttenkunde (26 vols., 1829–1834). He died at Berlin on the 22nd of August 1853. His son, Dr Hermann Karsten (1809–1877), was professor of mathematics and physics in the university of Rostock.

KARTIKEYA, in Hindu mythology, the god of war. Of his birth there are various legends. One relates that he had no mother but was produced by Siva alone, and was suckled by six nymphs of the Ganges, being miraculously endowed with six faces that he might simultaneously obtain nourishment from each. Another story is that six babies, miraculously conceived, were born of the six nymphs, and that Parvati, the wife of Siva, in her great affection for them, embraced the infants so closely that they became one, but preserved six faces, twelve arms, feet, eyes, &c. Kartikeya became the victor of giants and the leader of the armies of the gods. He is represented as riding a peacock. In southern India he is known as Subramanya.

KARUN, an important river of Persia. Its head-waters are in the mountain cluster known since at least the 14th century as Zardeh Kuh (13,000 ft.) and situated in the Bakhtiari country about 115 m. W. of Isfahan. In its upper course until it reaches Shushter it is called Ab i Kurang (also Kurand and Kuran), and in the Bundeshik, as old cosmographical work in Pahlavi, it is named Kharad. 1 From the junction of the two principal sources in the Zardeh Kuh at an altitude of about 8000 ft., the Ab i Kurang is a powerful stream, full, deep and flowing with great velocity for most of its upper course between precipices varying in height from 1000 to 3000 ft. The steepness and height of its banks make it in general useless for irrigation purposes. From its principal sources to Shushter the distance as the crow flies is only about 75 m., but the course of the river is so tortuous that it travels 250 m. before it reaches that city. Besides being fed on its journey through the Bakhtiari country by many mountain-side streams, fresh-water and salt, it receives various tributaries, the most important being the Ab i Bazult from the right and the Ab i Barz from the left. At Shushter it divides into two branches, one the Gergir, an artificial channel cut in old times and flowing east of the mountain, and the other the main stream, the Kuran, which flows west of the mountain. The real principal source of the river has been correctly located at ten miles above the supposed principal source, but the name Kurang has been erroneously explained as standing for Kuh i rang and has been given to the mountain with the real principal source. Kuh i rang has been wrongly explained as meaning the "variegated mountain."

1 The real principal source of the river has been correctly located at ten miles above the supposed principal source, but the name Kurang has been erroneously explained as standing for Kuh i rang and has been given to the mountain with the real principal source. Kuh i rang has been wrongly explained as meaning the "variegated mountain."
KARWAR—KASAI

city, the other the "Shaitat" flowing west. These two branches, which are navigable to within a few miles below Shusher, unite after a run of about 50 m. at Band i Kir, 24 m. S. of Shusher, and there also take up the Ab i Diz (river of Difaf). From Band i Kir to a point two miles above Muhamarah the river is called Karun (Rio Carom of the Portuguese writers of the 16th and 17th centuries) and is navigable all the way with the exception of about two miles at Ahvaz, where a series of cliffs and rocky shelves cross the river and cause rapids. Between Ahvaz and Band i Kir (46 m. by river, 24 m. by road) the river has an average depth of about 20 ft., but below Ahvaz down to a few miles above Muhamarah it is in places very shallow, and vessels with a draught exceeding 3 ft. are liable to ground. About 12 m. above Muhamarah and branching off to the left is a choked-up river bed called the "blind Karun," by which the Karun found its way to the sea in former days. Ten miles farther a part of the river branches off to the left and due S. by a channel called Bahmashir (from Bhahmardash, the name of the district in the early middle ages) which is navigable to the sea for vessels of little draught. The principal river, here about a quarter of a mile broad and 20 to 30 ft. deep, now flows west, and after passing Muhamarah enters into the Shatt el Arab about 20 m. below Basra. This part of the river, from the Bahmashir to the Shatt, is a little over three miles in length and, as its name, Hafar ("dug") implies, an artificial channel. It was dug c. a.d. 980 by Azud ed-Dowleh to facilitate communication by water between Basra and Ahvaz, as related by the Arab geographer Mukaddasi a.d. 986. The total length of the river is 460 to 470 m. while the distance from the sources to its junction with the Shatt el Arab is only 160 m. as the crow flies. The Karun up to Ahvaz was opened to international navigation on the 30th of October 1888, and Messrs Lynch of London established a fortnightly steamer service on it immediately after.

To increase the water supply of Isfahan Shah Tahmasp I. (1524-1576) and some of his successors, notably Shah Abbas I. (1587-1629), undertook some works for diverting the Karun into a valley which drains into the Zayendehe-rud, the river of Isfahan, by tunnelling, or cutting through a narrow rocky ridge separating the two river systems. The result of many years' work, a cleft 300 yds. long, 15 broad and 18 deep, cut into the rock, probably amounting to no more than one-twentieth of the necessary work, can be seen at the junction of the two principal sources of the Karun.

KARWAR, or Carwar, a seaport of British India, administrative headquarters of North Kanara district in the Bombay presidency; 205 m. S. of Bombay city. Pop. (1901), 16,847. As early as 1660 the East India Company had a factory here, with a trade in muslin and pepper; but it suffered frequently from Dutch, Portuguese and native attacks, and in 1752 the English agent was withdrawn. Old Carwar fell into ruins, but a new town grew up after the transfer of North Kanara to the Bombay presidency. It is the only safe harbour all the year round between Bombay and Cochin. In the bay is a cluster of islets called the Oyster Rocks, on the largest of which is a lighthouse. Two smaller islands in the bay afford good shelter to native craft during the strong north-west winds that prevail from February to April. The commercial importance of Carwar has decreased with the opening of the railway to Marmagao in Portuguese territory.

KARWI, a town of British India, in the Banda district of the United Provinces, on a branch of the Indian Midland railway; pop. (1901), 7,743. Before the Mutiny it was the residence of a Mahratta noble, who lived in great state, and whose accumulations constituted the treasure afterwards famous as "the Kirwee and Banda Prize Money.

KARYOGAMY (Gr.  καρυόγαμος, nut or kernel, thus "nucleus," and  γάμος, marriage), in biology: (1) the fusion of nuclei to form a single nucleus in syngamic processes (see Reproduction); (2) the process of pairing in Infusoria (q.v.), in which two migratory nuclei are interchanged and fuse with two stationary nuclei, while the cytoplasmic bodies of the two mates are in intimate temporary union.

KASAI, or Cassai, a river of Africa, the chief southern affluent of the Congo. It enters the main stream in 3° 10' S., 16° 10' E. after a course of over 800 m. from its source in the highlands which form the south-western edge of the Congo basin—separating the Congo and Zambezi systems. The Kasai and its many tributaries cover a very large part of the Congo basin. The Kasai rises in about 12° 3, 10' E. and flows first in a north-easterly direction. About 10° 33' S., 20° 15' E. it makes a rectangular bend northward and then takes a north-westly direction. Five rivers—the Luemo, Chiumbo, Luulimo, Chikapa and Loyua or Lolo—rise west of the Kasai, and branch off for considerable distances, falling successively into the parent stream (between 7° and 6° S.) as it bends westward in its northern course. The Luemo and Chiumbo join and enter the Kasai as one river. A number of rapids occur in these streams. A few miles below the confluence of the Loluwa, the last of the five rivers named to join the Kasai, the main stream is interrupted by the Wissmann Falls which, though not very high, bar further navigation from the north. Below this point the river receives several right-hand (eastern) tributaries. These also have their source in the Zambezi-Congo watershed, rising just north of 12° S., flowing north in parallel lines, and in their lower course bending west to join the Kasai. The chief of these affluents are the Lulu and the Sankuru, the Lulu running between the Kasai and the Sankuru. The Sankuru makes a bold curve westward on reaching 4° S., following parallel of latitude a considerable distance. Its waters are of a bright yellow colour. After the junction of the two rivers (in 4° 17' S., 20° 15' E.), the united stream of the Kasai flows N.W. to the Congo. From the south it is joined by the Loango and the Kwango. The Kwango is a large river rising a little north of 12° S., and west of the source of the Kasai. Without any marked bends it flows south—joined by the east by the Juma, Wamba and other streams—and has a course of 600 m. before joining the Kasai in 3° 8', 18° E. The lower reaches of the Kwango are navigable; the upper course is interrupted by rapids. On the north (in 3° 8' S., 17° E.) the lower Kasai is joined by the Lukyenye or Ikatta. This river, the most northerly affluent of the Kasai, rises between 24° and 25° E. and, about 3° S. in swampy land through which the Lomami (another Congo affluent) flows northward. The Lukyenye is the only affluent of the lower Kasai river once occupied by a lake, of which Lake Leopold II. (q.v.), connected with the lower course of the Lukyenye, is the scanty remnant. Below the lake the Lukyenye is known as the Muni. Near its mouth the Kasai, in its lower course generally a broad stream strewn with islands, is narrowed to about half a mile on passing through a gap in the inner line of the West African highlands, by the cutting of which the old lake of the Kasai basin must have been drained. The Kasai enters the Congo with a minimum depth of 25 feet and a breadth of about 700 yards, at a height of 942 ft. above the sea. The confluence is known as the Kwama mouth, Kwai being an alternative name for the lower Kasai. The volume of water entering the Congo averages 321,000 cuf. ft. per second: far the largest amount discharged by any of the Congo affluents. In floodtime the current at the rate of 5 or 6 m. an hour. The Kasai and its tributaries are navigable for at least 120 miles.

The Kwango affluent of the Kasai was the first of the large affluents of the Congo known to Europeans. It was reached by the Portuguese from their settlements on the west coast in the 16th century. Of its lower course they were ignorant. Portuguese travellers in the 18th century are believed to have reached the upper Kasai, but the first accurate knowledge of the river basin was obtained by David Livingstone, who reached the upper Kasai from the east and explored in part the upper Kwango (1854-1855). A. H.—S.
outlet of the Kwanlo, though not surmising it was also the outlet of the Kasai. In 1882 Stanley ascended the river to the Kwanlo-Kasai confluence and thence, proceeding up the Minni discovered Lake Leopold II. In 1884 George Grenfell journeyed up the river beyond the Kwanlo confluence. The systematic exploration of the main stream and its chief tributaries was, however, mainly the work of Hermann von Wissmann, Ludwig Wolf, Paul Pogge and other Germans during 1880–1887. (See Wissmann’s books, especially Im Inneren Afrikas, Leipzig, 1888.) On his third journey, 1886, Wissmann was accompanied by Grenfell. Major von Mecow, an Austrian, explored the middle Kwanlo in 1880, and its lower course was subsequently surveyed by Grenfell and Holman Bentley, a Baptist Missionary, in 1889–1890. Captain C. Lemaire traced the Congo-Zambezi watershed, obtaining valuable information concerning the upper courses of the southern Kasai tributaries. The upper Kasai basin and its peoples were further surveyed by E. Tucker, in 1899. (See Torday’s paper in Geog. Journ., 1910; also Congo and the authorities there cited.)

**KASBEK** (Georgian, Mkin-wari; Ossetian, Urs-khokh), one of the chief summits of the Caucasus, situated in 42°42’ N. and 44°30’ E., 7 m. as the crow flies from a station of the same name on the high road to Tiflis. Its altitude is 16,545 ft. It rises on the range which runs north of the main range (main water-parting), and which is pierced by the gorges of the Ardon and the Terek. It represents an extinct volcano, built up of trachyte and sheathed with lava, and has the shape of a double cone, whose base lies at an altitude of 5600 ft. Owing to the steepness of its slopes, its eight glaciers cover an aggregate area of not more than two square miles. Its height, however, is 16 m. long. The best-known glacier is the Dedyvorak, or Devdorak, which creeps down the northern slope into a gorge of the same name, reaching a level of 7530 ft. At its eastern foot runs the Georgian military road through the pass of Darial (7809 ft.). The summit was first climbed in 1868 by D. W. Freshfield, A. W. Moore, and C. Tucker, with a Swiss guide. Several successful ascents have been made since, the most valuable in scientific results being that of Pastukhov (1889) and that of G. Merzbacher and L. Pertscheller in 1890. Kasbek has a great literature, and has left a deep mark in Russian poetry.

**KASHAN**, a small province of Persia, situated between Isfahan and Kham. It is divided into the two districts germisir, the "warm," and sardisir, the "cold," the former with the city of Kashan in the plains, the latter in the hills. It has a population of 75,000 to 80,000, and pays a yearly revenue of about £18,000. Kashan (Cashan) is the provincial capital, in 34°0’ N. and 51°27’ E., at an elevation of 3100 ft., 150 m. from Teheran; pop. 35,000, including a few hundred Jews occupied as silk-winders, and a few Zoroastrians engaged in trade. Great quantities of silk stuffs, from raw material imported from India, and copper utensils are manufactured at Kashan, and sent to all parts of Persia. Kashan also exports rose-water made in villages in the hilly districts about 20 m. from the city, and is the only place in Persia where cobalt can be obtained, from the mine at Kamsar, 19 m. to the south. At the foot of the hills, 4½ M. W. of the city are the beautiful gardens of Fin, the scene of the official murder, on the 9th of January 1852, of Mirza Taki Khan, Amir Nizam, the grand vizier, one of the ablest ministers that Persia has had in modern times.

**KASHGAR**, an important city of Chinese Turkestan, in 39°24’26” N. lat., 76°6’47” E. long., 4043 ft. above sea-level. It consists of two towns, Kuhna Shah or "old city," and Yangi Shah or "new city," about five miles apart, and separated from one another by the Kyzyol Su, a tributary of the Tarim river. It is called Su-luh by the Chinese, which perhaps represents an original Sorek or Sorak. This name seems to be older than Kashgar, which means "vagranged houses." Situated at the junction of routes from the valley of the Oxus, from Khokand and Samarkand, Alma, Aksu, and Khotan, the last two leading from China and India, Kashgar has been noted from very early times as a political and commercial centre. Since all other cities of Central Asia, it has changed hands repeatedly, and was from 1864–1887 the seat of government of the Amir Yakub Beg, surnamed the Atalik Ghazi, who established and for a brief period ruled with remarkable success a Mahomedan state comprising the chief cities of the Tarim basin from Turfan round along the skirt of the mountains to Khotan. But the kingdom collapsed with his death and the Chinese retook the country in 1877 and have held it since.

Kuhna Shah is a small fortified city on high ground overlooking the river Tuman. Its walls are lofty and supported by buttress bastions with loopholed turrets at intervals; the fortifications, however, are but of hard clay and are much in repair. The city contains about 2500 houses. Beyond the bridge, a little way off, are the ruins of ancient Kashgar, which once covered a large extent of country on both sides of the Tuman, and the walls of which even now are 12 feet wide at the top and twice that in height. This city—Askia Shah (Old Town)—is called—Yakub Beg's city, and was the abode of the babakhs (Abubek) on the approach of Sultan Said Khan's army. About two miles to the north beyond the river is the shrine of Hazrat Afak, the saint king of the country, who died and was buried here in 1603. It is a handsome mausoleum faced with blue and white glazed tiles, standing under the shade of some magnificent silver poplars. About it Yakub Beg erected a commodious college, mosque and monastery, the whole being surrounded by rich orchards, fruit gardens and vineyards. The Yangi Shah of Kashgar is, as its name implies, modern, having been built in 1838. It is of oblong shape running north and south, and is entered by a single gateway. The walls are lofty and massive and topped by turrets, while on each side is a projecting bastion. The whole is surrounded by a deep and wide ditch, which can be filled from the river, at the risk, however, of bringing down the whole structure, for the walls are of mud, and stand upon a popularly Yangi Shah. In the time of the Chinese, before Yakub Beg's sway, Yangi Shah held a garrison of two thousand men, and was the residence of the amban or governor. Yakub erected his orda or palace on the site of the amban's residence, and two hundred ladies of his harem occupied a commodious enclosure hard by. The population of Kashgar has been recently estimated at 60,000 in the Kuhna Shah and only 2000 in the Yangi Shah.

With the overthrow of the Chinese rule in 1865 the manufacturing industries of Kashgar declined. Silk culture and carpet manufacture have flourished for ages at Khotan, and the products always find a ready sale at Kashgar. Other manufactures consist of a strong coarse cotton cloth called kham (which forms the dress of the common people, and for winter wear is padded with cotton and quilted), boots and shoes, saddle, felts, furs and sheeepskins made up into cloaks, and various articles of domestic use. A curious street sight in Kashgar is presented by the hawkers of meat pies, pasted and wrapped, which they tumble about on hand-barrows just as their counterparts do in Europe; while the knife-grinder's cart, and the vegetable seller with his tray or basket on his head, recall exactly similar itinerant traders further west.

The earliest authentic mention of Kashgar is during the second period of ascendency of the Han dynasty, when the Chinese conquered the Huungni, Yutien (Khotan), Sulei (Kashgar), and a group of smaller states in the Tarim basin, and forthwith brought Shang Shih (Shan Shih) and the other ranges of the mountains. This happened in 70 B.C. Kashgar does not appear to have been known in the West at this time but Ptolemy speaks of Sichya beyond the Imaus, which is in a Kasia Regio, possibly exhibiting the name whence Kashgar and Kashgaris (often applied to the district) are formed. Next ensues a long epoch of obscurity. The country was converted to Buddhism and probably ruled by Indo-Scychian or Kashan kings. Hsian Tsang passed through the region in 648 and he calls Kashgar and return journey from India to China. The Buddhist religion, then beginning to decay in India, was working its way to a new growth in China, and contemporaneously the Nestorian Christians were establishing bishoprics at Herat, Merv and Samarkand, whence they subsequently proceeded to Kashgar, and finally to China itself. In the 8th century came the Arab invasion from the west, and we find Kashgar and Turkestan lending assistance to the reigning queen of Bokhara, to enable her to repel an enemy. But although the Muhommads, as soon from the very commencement sustained checks, it nevertheless made its
weight felt upon the independent states of Turkestan to the north
and east, and thus acquired a steadily growing influence. It was
not, however, till the 16th century that Islam was established
at Kashgar, under the Qarakhanid kingdom (see TURKS). The Qarakhanids
appear to have been the descendants of the people called Tolas and
to have been one of the many Turkish tribes who migrated westwards
from Chorasmia. Boghara Khan, the most celebrated prince of this
period, was converted to Islam and acknowledged the suzerainty of
the Chinese emperor, an event which marks the beginning of the
Hunza dynasty of the Chorasmian Turkomans. The Qarakhanids
employed an ally to quell the disturbances of Persia and the
Turkoman tribes, and they were succeeded by the Kalmucks,
originating in the region of Khokand.

In 1864-1865 Timur ravaged Kashgar, Andijan, and the intervening
countryside. Kashgar passed through a troublous time, but when
the invasion of the Khan Sultan Said, was destroyed by Mirza Abbaka-
bar, who with the aid of ten thousand men built the new fort with
massive defences higher up on the banks of the Tuman. The dynasty
of the Kayshou Khan collapsed in 1572 by the dismemberment of
the principalities and the rise of several powerful Khaja factions,
wars towards the Chinese frontier, who in their turn were swept away
in 1219 by Jenghiz Khan. His invasion gave a decided check to the
progress of the Mahomedan creed, but on his death, and during the
period succeeding it, the Turchak and Kalmuck tribes, from amongst
whom the Chagatai dynasty of the Kalmucks rose, they in turn
began to assert its ascendancy. Marco Polo visited the city,
which he calls Casar, about 1275 and left some notes on it.

In 1289-1290 Tamerlane ravaged Kashgar, Andijan, and the intervening
areas. Kashgar experienced a period of peace and prosperity
under the Tola dynasty, and the city remained as an important
centre of commerce and culture. It was not until 1420 that the
city was again invaded, this time by the army of Timur, who
ruined the city and destroyed many of its monuments.

Kashmir—KASHMIR

KASHI—KASHMIR

KASHI, or KASI, formerly the Persian word for all glazed
and enamelled pottery irrespectively; now the accepted
term for certain kinds of enamelled tile-work, including brick-work
and tile-mosaic work, manufactured in Persia and parts of Mahom-
medan India, chiefly during the 16th and 17th centuries.\(^1\)

Undoubtedly originating in the Semitic word for glass, k\(\text{a}s,\)
\(\text{ka}\)

it is quite possible that the name kashi is immediately derived
from Kashan, a town in Persia noted for its faience. This ancient
pottery site, in turn, probably receives its name from the old-
line form of the name of a state in Western Asia, Kassia, of
which there is no record in the East. It is not to be
confused with the: Kassite Dynasty of Babylonia. The
KASS, or KASHMIR, a native state of India, including
much of the Himalayan mountain system to the north of the
Punjab. It has been in fabled in song for its beauty (e.g. in Moore's
Lalla Rookh), and is the chief health resort for Europeans in India,
while politically it is important as guarding one of the
approaches to India on the north-west frontier. The proper

1 Kashi, the Hindu name for the sacred city of Benares, has no
ceramic significance.
name of the state is Jammu and Kashmir, and it comprises in all an estimated area of 80,000 sq. m., with a population (1901) of 3,902,578, showing an increase of 21% in the decade. It is bounded on the north by some petty hills, the Karakoram ranges, and on the Karakoram mountains, on the east by Tibet; and on the south and west by the Punjab and North-West Frontier provinces. The state is in direct political subordination to the Government of India, which is represented by a resident. Its territories comprise the provinces of Jammu (including the jagir of Punch), Kashmir, Ladakh, Baltistan, and Gilgit; the Shin states of Yaghtistan, of which the most important are Chilas, Darel and Tangir, are nominally subordinate to it, and the two former pay a tribute of gold dust. The following are the statistics for the main divisions of the state:—

Area in sq. m.  
Pop. in 1901.  
Jammu  
Kashmir  
Frontier Districts  
Ladakh  
Baltistan  
Gilgit  
453  
7,922  
5,223  
1,521,307  
1,157,806  

The remainder of the state consists of uninhabited mountains, and its only really important possessions are the districts of Jammu and Kashmir.

Physical Conformation.—The greater portion of the country is mountainous, and with the exception of a strip of plain on the south-west, which is continuous with the great level of the Punjab, may be conveniently divided into the following regions:

(1) The outer hills and the central mountains of Jammu district.

(2) The valley of Kashmir.

(3) The far side of the great central range, including Ladakh, Baltistan, and Gilgit.

The hills in the outer region of Jammu, adjoining the Punjab plains, begin with a height of 100 to 200 ft., followed by a tract of rugged country, including various ridges running nearly parallel, with long narrow valleys between. The average height of these ridges is from 3000 to 4000 ft. The central mountains are commonly 8000 to 10,000 ft., covered with pasture or else with forest. Then follow the more lofty mountain ranges, including the region of perpetual snow. A great chain of snowy mountains branching off south-east and south from the Kishenganga and the Jhelum rivers from that of the higher branches of the Indus. It is within spurs from this chain that the valley of Kashmir is enclosed amid hills which rise from 14,000 to 15,000 ft., while the valley itself forms a cup-like basin at an elevation of 5000 to 6000 ft. All beyond that great range is a wide tract of mountainous country, bordering the north-western part of Tibet and embracing Ladakh, Baltistan, and Gilgit.

The length of the Kashmir valley, including the inner slopes of its surrounding hills, is about 120 m. from north-west to south-east with a maximum width of about 75 m. The low and comparatively level floor of the basin is 84 m. long and 20 to 24 m. broad.

The hills forming the northern half-circuit of the Kashmir valley, and running beyond, include many lofty mountain masses and peaks, the most conspicuous of which, a little outside the confines of Kashmir, is Nanga Parbat, the fourth highest mountain in the world, 26,656 ft. above the sea, with an extensive area of glacier on its eastern face. The great ridge which is thrown off to the south-west by Nanga Parbat rises, at a distance of 12 m., to another summit 20,740 ft. in height, and this is followed by another range, and yet another, which are the northern watershed boundary of Kashmir. The former range, after running 70 m. south-west, between the valleys of the Kishenganga and the Kunhar or Nain-sukh, turns southward, closes off the valley of the Indus, and runs parallel to it for about 30 m. The whole, after it has received the Kishenganga, with a break a few miles farther south which admits the Kunhar. This range presents several prominent summits, the highest of which are 16,487 and 15,544 ft. above the sea. The range which runs south-east from the Kunhar is the southernmost outlier of the Kishenganga from that of the Astor and other tributaries of the Indus. The highest point on this range, where it skirts Kash- 

Kashmir, is 17,202 ft. above the sea. For more than 50 m. from Nanga Parbat there are no higher peaks in this range; thence eastward they increase; one, near the Zoji-la pass, is only 10,850 ft. above the sea. The mountains at the east end of the valley, running nearly north and south, drain inwards to the Jhelum, and on the other side to the Wular, a tributary of the Chenab. The highest part of this eastern boundary is 14,700 ft. There are no glaciers. The highest point on the Panjal range, which forms the south and south-west boundary, is 15,523 ft. above the sea.

The river Jhelum (q.v.) or Behat (Sanskrit, Vitasta)—the Hydaspes of Greek historians and geographers—flows north-westward through the middle of the valley. After a slow and winding course it expands about 25 m. below Srinagar, over a slight depression in the plain, and forms the Wular lake and marsh, which is about 12 m. by 5 m. in area, and is surrounded by a belt of marshy ground over the north and east of the valley. Leaving the lake on the south-west side, near the town of Sopur, the river pursues its sluggish course south-westward, about 18 m. to the gorge at Baramulla. The river has several affluents in the southern part of the valley, which conducts it westward 75 m. to Muzaffarabad, where it turns sharply south, joined by the Kishenganga. At Islamabad, about 40 m. above Srinagar, the river is 5400 ft. above sea-level, and at 14,213 ft. It flows north-west and then southward, a fall of about 4 ft. per mile in this part of its course. The next 24 m. to the Wular lake, and thence to Baramulla, its fall is only about 2 ft. in the mile. On the 80 m. of the river in the flatter valley between Islamabad and Baramulla, there is much boat traffic; but none below Baramulla, till the river comes out into the plains.

On the north-east side of this low narrow plain of the Jhelum is a broad hill tract between which and the higher boundary range runs the Kishenganga River. Near the east end of this interior valley lies Punch, an estimated area of 14,213 ft. Among the highest rises a conspicuous mountain mass, 16,903 ft. in height, from which on its north side descend tributaries of the Kishenganga, and on the south the Wangtarg River, which flows into the Sind. By these rivers and numerous affluents the whole valley of Kashmir is watered abundantly.

Around the foot of many spurs of the hills which run down on the Kashmir plain are pieces of low table-land, called karewa. These table-lands, in height, extending from 100 to 300 ft. above the alluvial plain. Those which are near each other are mostly about the same level, and separated by deep ravines. The level plain in the middle of the Kashmir valley consists of fine sand, with here and there horizontal beds of clay and sand, the lacustrine nature of which is shown by the shells which they contain.

Two passes lead northward from the Kashmir valley, the Burzil (3810 ft.) and the Panjal (3840 ft.) For the Burzil pass between Srinagar and Gilgit via Astor. It is naturally practicable only between the middle of July and the middle of September. The road from Srinagar to Leh, via Ladakh, follows the Sind valley to the Zoji-la pass (14,300 ft.). A short piece of the road, where snow accumulates, prevents this pass being used all the year. At the south-east end of the valley the great three passes, the Margen (11,500 ft.), the Hoksar (13,315) and the Marbal (11,500), leading to the valleys of the Chenab and the Ravi. South of Islamabad, on the direct route to Jammu and Sialkot, is the Banial pass (9360 ft.). Further west on the Panjal range is the Pir Panjal or Panchal pass (11,400 ft.), with a second pass, the Rattan Pir (8260 ft.), across a ridge about 15 m. south-west of it. Between the two passes is the beautiful lakes in the centre of the fort of Baltistan. This lake is divided by the delta of the raja of Punch, cousin and tributary of the maharaja of Kashmir.

At Rajaori, south of these passes, the road divides; one leads to Bhamber and Gujrat, the other to Jammu and Sialkot by Aknor. South of the last bridge over the Turtara, is the site of the ancient capital of Kargil, Pass or Bhalo, and the ancient capital of the Darya, which indicates the road to Punch. From Punch one road leads to the plains at the town of Jhelum, another eastward through the hills to the Rattan Pir pass and Rajaori. Lastly, there is the river pass of the Indus, with its higher reaches from the Wular, 25 m. westward, having two ways down to the plains, one by Muzaffarabad and the Hazara valley to Hasan Abdul, the other by the British hill station of Murree to Kaimpali.

Geology.—The general character of the beds, and of the folds which have affected them, from N.W. to S.E., parallel to the mountain ranges. Along the south-western border lies the zone of Tertiary beds which forms the Sub-Himalayas. Next to this is a great belt of Palaeozoic rocks, through which rise the granite, gneiss and schist of the Zoisic series. The latter in its upper part extends to the middle of the Palaeozoic area lie the alluvium and Pleistocene deposits of the Srinagar valley, and the Mesozoic and Carboniferous basin of the upper part of the Sind valley. Beyond the great Palaeozoic belt is a series of Mesozoic deposits, the Karakoram, which extends south-eastward past the Kashmir boundary to Spiti and beyond. Finally, in Baltistan and the Ladakh range there is a broad zone composed chiefly of gneiss and schist of ancient date.

The Tertiary series are of various localities, superimposed on the Silurian systems. But it is not until the Carboniferous is reached that fossils become at all abundant (so far as is yet known). The Mesozoic deposits belong chiefly to the Trias and Jura, but Cretaceous beds have been found near the head of the Tararit valley. The Tertiary system includes representatives of all the principal divisions recognized in other parts of the Himalayas.

Climate.—The valley of Kashmir, sheltered from the south-west monsoon by the Panjal range, has not the periodical rains of India. Its rainfall is irregular, greatest in the spring months. Occasional
storms in the monsoon pass over the crests of the Panjand and give heavy rain on the elevated plateaus on the Kashmir side. And again clouds pass over the valley and are arrested by the higher hills on the north-east side. Snow falls on the surrounding hills at intervals of 90° to 95°, and about one-third of the country is covered with snow between November and March. This snow falls about the end of December, but never to any great amount. The hottest months are July, August, and the greater part of September, during which the noon shade temperature varies from 85° to 90° and is never sharply diminished by a light breeze. The Chief snow line of the Himalayas begins to descend in May, and the final melting of the season occurs about the middle of July, and the valley submerged. In 1843 a serious flood caused great damage to life and property; there was another in 1893, when six out of the seven bridges in Srinagar were washed away, 25,426 acres under crops were submerged and 2225 houses were wrecked; another flood occurred in 1915, and on the 19th March last a great and dangerous flood occurred, with the river Jhelum giving way, and the lake rose 10 ft. in half an hour. Between two and three thousand houses in and around Srinagar collapsed, while over 40 miles of the tonga road were submerged. Since the 15th century there have been ten great rains occurring in all the districts of Kashmir, and accompanied by great loss of life. During the 19th century there were four severe earthquakes, the last two occurring in 1864 and 1865, when some 3500 people were killed. Native historians record that the 1864 earthquake was so great as to produce an autumn in the valley, and during the years 1866 to 1870 there was a severe famine, during which 160,000 persons are said to have died in Srinagar and at least 1,000,000 in the districts of the province. The centre of infection was generally supposed to be the squidal capital of Srinagar, and some efforts to improve its sanitation have been made of recent years.

**Crops.**—The staple crop of the valley is rice, which forms the chief food of the people. Indian corn comes next; wheat, barley and oats are also grown. Every kind of English vegetable thrives well, especially asparagus, chicory, seakale, broad beans, scarlet runners, beetroot, carrotilier and cabbage. Fruit trees are met with all over the valley, wild but bearing fruit, and the cultivated orchards yield pears, apples, peaches, cherries, &c., equal to the best English produce. The chief trees are deodar, fir and pines, _lancor, avocados_, and the fruits include almonds, cherries, apricots, currants, oranges and _fruits de viticulturc_, hops, horticulture and sericulture. A complete list of the flora and fauna of the valley will be found in Sir Walter Lawrence's _Kashmir_.

**History.**—The metrical chronicle of the kings of Kashmir, called _Rajatarangini_, was pronounced by Professor H. H. Wilson to be the only Sanskrit composition yet discovered to which the title of history can with any propriety be applied. It first became known to the Mahomedans when, on Akbar's invasion of Kashmir in 1588, a copy was presented to the emperor. A translation into Persian was made by his order, and a summary of its contents, from this Persian translation, is given by 'Abul Fazl in the _A'in-i-Akbari_. The _Rajatarangini_, the first of a series of four Sanskrit histories, was written about the middle of the 12th century by P. Kalhana. His work, in six books, makes use of earlier writings now lost. Commencing with traditional history of very early times, it comes down to the reign of Sangrama Deva, 1006; the second work, by Joraraja, takes up the history in continuation of Kalhana's, and, entering the Malommedan period, gives an account of the reigns down to that of Zain-ul-ab-ad-din, 1412. P. Srivara carried on the record to the accession of Fah Shah, 1486. And the fourth work, called _Rajatarangini_, written by Pranjini, completes the history to the time of the incorporation of Kashmir in the dominions of the Mogul emperor Akbar, 1588.

In the _Rajatarangini_ it is stated that the valley of Kashmir was formerly a lake, and that it was drained by the great _rishi_ or sage, Kashapa, son of Marichi, son of Brahma, by cutting a gap in the hills at Baramulla (Varaha-mula). When Kashapa had been drained, he brought in the Brahmans to occupy it. This is still the local tradition, and in the existing physical condition of the country we may see some ground for the story which has taken this form. The name of Kashapa is by history and tradition connected with the draining of the lake, and the chief town or collection of dwellings in the valley was called Kashapa-pur—a name which has been plausibly identified with the _Kashapura_ of Hercatesus (Steph. Byz., s. l.) and _Kashapura_ of Herodotus (ii. 102, iv. 44). Kashmir is the country meant also by Ptolemy's _Kashpura_. The ancient
KASHMIRI

name Kasyapa-pur was applied to the kingdom of Kashmir when it comprehended great part of the Punjab and extended beyond the Indus. In the 7th century Kashmir is said by the Chinese traveller Hsuan Tsang to have included Kabul and the Punjab, and the hill region of Gandhara, the country of the Gandarae of classical geography.

At an early date the Sanskrit name of the country became Kāśmīr. The earliest inhabitants, according to the Rajatarangini, were the people called Naga, a word which signifies “snake.” The history shows the prevalence in early times of tree and serpent worship, of which some sculptured stones found in Kashmir still retain the memorials. The town of Islamabad is called also by its ancient name Anant-nag (“eternal snake”). The source of the Jhelum is at Vir-nag (the powerful snake), &c. The other races mentioned as inhabiting this country and the neighbouring hills are Gardhara, Kasara and Diradara. The Kasara people are supposed to have given the name Kasmir. In the Mihābhārata the Kasmira and Diradara are named together among the Kshatriya races of northern India. The question whether, in the immigration of the Aryans into India, Kashmir was taken on the way, or entered afterwards by that people after they had occupied the Mitraun and the Jumna country, and the attempt to require an answer in favour of the latter view (see vol. ii. of Dr J. Muir’s Sanskrit Texts). The Aryan races of Kashmir and surrounding hills, which bave at the present time separate geographical distribution, are given by Mr Drew as Kasmiri (mostly Mahommedan), in the Kashmir basin and a few scattered places outside; Dard (mostly Mahommedan) in Gilgit and hills north of Kashmir; Dogra (Hindu) in Jamma; Dogra (Mahommedan, called Chibilāi) in Punch and hill country west of Kashmir; Pahāri or mountaineers (Hindu) in Kishtwar, east of Kashmir, and hills about the valley of the Chenab.

In the time of Asoka, about 245 B.C., one of the Indian Buddhist missions was sent to Kashmir and Gardhara. After his death Brahmanism revived. Then in the time of the three Kushan princes, Huviška, Jushka and Kanishka, who ruled over Kashmir about the beginning of the Christian era, Buddhism was to a great extent restored, though for several centuries the two religions existed together in Kashmir, Hinduism predominating. Yet Kashmir, when Buddhism was gradually losing its hold, continued to send Buddhist teachers to regions beyond the mountains. This Hindu-Buddhist period, and chiefly between the 5th and 7th centuries of the Christian era, were erected the Hindu temples in Kashmir. In the 6th and 7th centuries Kashmir was visited by some of the Chinese Buddhist pilgrims to India. The country is called Sīhi-mi in the narrative of To Yeng and Sung Yun (578). One of the Chinese travellers of the next century was for a time an elephant-tamer to the king of Kashmir. Hsuan Tsang spent two years (631–633) in Kashmir (Kia-cht-ml-lo). He entered by Baramula and left by the Pir Panjal pass. He describes the hill-girt valley, and the abundance of flowers and fruits, and he mentions the tradition about the lake. He found in Kashmir many Buddhists as Hindus. In the following century the kings of Kashmir appear to have paid homage and tribute to China, though this is not attested to in the Kashmir chronicles. Hindu kings continued to reign till about 1200, when Udiana Deva was put to death by his Mahommedan vizier, Amir Shah, who ascended the throne under the name of Shams-ud-din.

Of the Mahommedan rulers mentioned in the Sanskrit chronicles, one, who reigned about the close of the 14th century, has made his name prominent by his active opposition to the Hindu religion, and his destruction of temples. This was Sikandar, known as But-shikan, or the “idol-breaker.” It was in his time that India was invaded by Timur, to whom Sikandar made submission and paid tribute. The country fell into the hands of the Moguls in 1588. In the time of Alamgir it passed to Ahmad Shah Durani, on his third invasion of Indira (1756); and from that time it remained in the hands of Afghans till it was wrested from them by Ranjit Singh, the Sikh monarch of the Punjab, in 1819. Eight Hindu and Sikh governors under Ranjit Singh and his successors were followed by two Mahommedans similarly appointed, the second of whom, Sheikh Imam-ud-din, was in charge when the battles of the first Sikh war of 1846 brought about new relations between the British Government and the Sikhs.

Gulab Singh, a Dogra Rajput, had from a humble position been raised to high office by Ranjit Singh, who conferred on him the small principality of Jammu. On the final defeat of the Sikhs at Sobraon (February 1846), Gulab Singh was called to take a leading part in arranging conditions of peace. The treaty of Lahore (March 9, 1846) sets forth that, the British Government having demanded, in addition to a certain assignment of territory, a payment of a crore and a half of rupees (1½ millions sterling), and the Sikh government being unable to pay the whole, the maharaja (Dhulip Singh) cedes, as equivalent for one crore, the hill country belonging to the Punjab between the Bhāsa and the Indus, including Kashmir and Hazara. The governor-general, Sir Henry Hardinge, considered it expedient to make over Kashmir to the Jammu chief, securing his friendship while the British government was administering the Punjab on behalf of the young maharaja. Gulab Singh was well prepared to make up the payment in default of which Kashmir was ceded to the British; and so, in consideration of his services in restoring the revenue and security of the country, the title of Maharaja of Kashmir was conferred upon him by the British government, and the maharaja was recognized, and he was admitted to a separate treaty. Gulab Singh had already, after several extensions of territory east and west of Jammu, conquered Ladakh (a Buddhist country, and till then subject to Lhasa), and had then annexed Skardo, which was under independent Mahommedan rulers. He had thus by degrees half encircled Kashmir, and by this last addition his possessions attained nearly their present form and extent. Gulab Singh died in 1857, and was succeeded by his son, Ranbir Singh, who died in 1885. The next ruler, Maharajah Partab Singh, G.C.S.I. (b. 1850), immediately on his accession inaugurated the settlement reforms already described. His rule was remarkable for the reassertion of the Kashmir sovereignty over Gilgit (p. 37). Kashmir imperial service troops participated in the Black Mountain expedition of 1891, the Hunza Nagar operations of 1891, and the Tirah campaign of 1897–1898. The total revenue of the state is about £666,000.

KASHMIRI (properly Kāśmīrī), the name of the vernacular language spoken in the valley of Kashmir (properly Kāśmīr) and in the hills adjoining. In the Indian census of 1901 the number of speakers was returned at 1,007,957. By origin it is the most southern member of the Dard group of the Piśāca languages (see Indo-Aryan Languages). The other members of the group are Shīnā, spoken to its north in the country round Gilgit, and Kohīstānī, spoken in the hill country on both sides of the river Indus before it debouches on to the plains of India. The Piśāca languages also include Khōwār, the vernacular of Chitrāl, and the Kāhir group of speeches, of which the most important is the Bashgali of Kāfrīstan. Of all these forms of speech Kashmiri is the only one which possesses a literature, or indeed an alphabet. It is also the only one which has been dealt with in the census of India, and it is therefore impossible to give even approximate figures for the numbers of speakers of the others. The whole family occupies the three-sided tract of country between the Hindu-Kush and the north-western frontier of British India.

As explained in Indo-Aryan Languages, the Piśāca languages are Aryan, but are neither Iranian nor Indo-Aryan. They represent the speech of an independent Aryan migration over the Hindu-Kush directly into their present inhospitable seats, where they have developed a phonetic system of their own, while they have retained unchanged forms of extreme antiquity which have long passed out of current use both in Persia and in India. Their speakers appear to have left the main Aryan body after the great fission which resulted in the Indo-Aryan migration, but before all the typical peculiarities of Iranian speech had fully developed. They are thus representatives of a stage of
KASHMIRI

linguistic progress later than that of Sanskrit, and earlier than that which we find recorded in the Iranian Avesta.

The immigrants into Kashmir must have been Shins, speaking a language closely allied to the ancestor of the modern Shina. They appear to have dispossessed and absorbed an older non-Aryan population, whom local tradition now classes as Nagas, or Snake-gods, and, at an early period, to have come themselves under the influence of Indo-Aryan immigrants from the south, who entered the valley along the course of the river Jhelum. The language has therefore lost most of its original Piśaca character, and is now a mixed one. Sanskrit has been actively studied for many centuries, and the Kashmiri vocabulary, and even its grammar, are now largely Indian. So much is this the case that, for convenience' sake, it is now frequently classed (see Indo-Aryan Languages) as belonging to the north-western group of Indo-Aryan languages, instead of as belonging to the Piśaca family as its origin demands. It cannot be said that either classification is wrong.

Kashmiri has few dialects. In the valley there are slight changes of idiom from place to place, but the only important variety is Kishwāri, spoken in the hills south-west of Kashmir. Smaller dialects, such as Pogul and Rāmbani of the hills south of the Banīhāl pass, may also be mentioned. The language itself is an old one. Pure Kashmiri words are preserved in the Sanskrit Rājatarangini written by Kalhana in the 12th century A.D., and, judging from these specimens, the language does not appear to have changed much since his time.

**General Character of the Language.**—Kashmiri is a language of great philological interest. The two principal features which at once strike the student are the numerous epenthetic changes of vowels and consonants and the employment of pronominal suffixes. In both cases the phenomena are perfectly plain, cause and effect being alike presented to the eye in the somewhat complicated systems of declension and conjugation. The Indo-Aryan languages proper have long ago passed through this stage, and many of the phenomena now presented by them are due to its influence, although all record of it has disappeared. In this way a study of Kashmiri explains a number of difficulties found by the student of Indo-Aryan vernaculars.1

In the following account the reader is presumed to be in possession of the facts recorded in the articles Indo-Aryan Languages and Prakrit for the full or partial character of the Kashmiri. For details, see Kash., Skr., Piśa, Sh. = Shina.

**A. Vocabulary.** The vocabulary of Kashmiri is, as has been explained, mixed. At its basis it has a large number of words which are pronounced in the neighbouring Shina, and these are used to note the most familiar ideas and such as are in most frequent use. Thus, the personal pronouns, the earlier numerals, the words for "father," "mother," "fire," "the sun," are all closely connected with corresponding Shina words. There is also a large Indian element, consisting partly of words derived from Sanskrit vocabularies introduced in ancient times, and partly of words borrowed in later days from the vernaculars of the Punjab. Many of these have been considerably altered in accordance with Kashmiri phonetic rules, so that they sometimes appear in strange forms. Thus the Persian lagām, a bridie, has become lākim, and the Arabic išā, concerning, appears as išā in Kashmiri. Similarly, the ancient Persian mawlān, being, roughly speaking, nine Mahomedan Kashmiris to less than one Hindu. This difference of religion has strongly influenced the vocabulary. The Muslimans use Persian and Arabic words with great freedom, while the Hindus, or "Pandits," as they are called, confine their borrowings almost entirely to words derived from Sanskrit. As the literary class is mostly Hindu, it follows that Kashmiri literature, taken as a whole, while affording most interesting and profitable study, has not preserved the ancient language as well as it has been by the mass of the people. There are, however, a few good Kashmiri works written by Muslimans in their own dialect.

**B. Written Characters.** Muslimans and Christian missionaries employ an adaptation of the Persian character for their writings. This alphabet is known as the "kāndhā" and is used for representing the Kashmiri vowel system. Hindu employ the Sārāda alphabet, of Indian origin and akin to the well-known Nāgari. Kashmiri vowel sounds can be recorded very successfully in this character, but there is, unfortunately, no fixed system of spelling. The Nagari alphabet is also coming into use in printed books, no Sārāda types being yet in existence.

**C. Phonetics.** Comparing the Kashmiri with the Sanskrit alphabet (see Sanskrit), we must first note a considerable extension of the vowel system. Not only does Kash. possess the vowels a, ā, i, ū, u, r, e, a, o, ō, and u, and the anusvāra or nasal symbol "", but it has also a flat a (like the a in " hat") a flat e (like the ē in " met"), a short ḍ (like the o in " hot"), and a broad ā (like the a in " all"). It also has a set of "nasalized" vowels which are represented in the Roman character by small letters above the line, viz. a, u, ō. Of these, a is simply a very short indeterminate sound something like one of the Hebrew sh'wā mobile, except that it may sometimes be the only vowel in a word, as in kā, thou. The ē is a short vowel, as indicated, while u and ō are quite audible at the end of a syllable. When one is followed by a consonant in the same syllable 'generally' and always becomes a full or u respectively and is so pronounced. On the other hand, in similar circumstances, remains unchanged in writing, but is pronounced as a short German ā. It should be observed that this a always represents an older i, and is still considered to be a palatal, not as a labial vowel. Although these mātṛ-vowels are so slightly heard, they give a great influence on the sound of a preceding syllable. We may compare the sound of a in the English word "mar." When we add e to the end of this word we get "mear," in which the sound of the a is altogether changed, although the e is not itself pronounced in its proper place. The back-action of these mātṛ-vowels is technically known as "apenthesis," and is the most striking feature of the Kashmiri language, the structure of which is unintelligible without a thorough knowledge of the system. In the following pages when a vowel is epenthetically affected by a mātṛ-vowel the diacritic will be denoted by a small dot respectively, thus a. This is not the native system, according to which the change is indicated sometimes by a diacritical mark and sometimes by writing a different letter. The changes of pronunciation effected by each mātṛ-vowel are shown in the following table. If we employ a different letter to indicate the change the fact is mentioned. In other cases they contain themselves with diacritical marks. When no entry is made, it should be understood that the sound of the vowel remains unaltered—

---

1 The letters a and e, even when not a or e, often change a preceding long a to d, which is usually written a and é respectively. Thus dūmakh, they have lost, is pronounced duhmakh, and, in the
KASHMIRI

The declension 40 is confined to certain nouns in tv, th, d, n, h and l, in which the final consonant is liable to change owing to a following 

other cases are formed (as in true Indo-Aryan languages) by the addition of postpositions, some of which are added to the accusative, while others are added to the ablative case. To the former are added manz; in, kif, to or for; sūtān, with, and others. To the ablative are added sūtān, when it signifies "by means of" of; pākat, for; pēkat, from. For the feminine, masculine nouns in the singular, signifying animate beings, take sūnd, and if they signify things without life, take kāl. All masculine plural nouns and all feminine nouns whether singular or plural take hund. Sūnd and hund are also the accusative, which drops a final s, while kāl is added to the ablative. Thus, tsūra sūnd, of the thief; maj sūnd, of the father; sūnd (usually written sūnūk), of gold (sūn, abl. sing. sūnā); tsūra sūnd, of thieves; kār̄ hund, of bracelets (second declension); maj sūnd, of the father; kāl sūnd, of books (gen. pl.).

In this connexion we may mention that, tsūra sūnd, of the son of the thief; tsūra sūnd, niece, by the son of the thief; tsūra sūnd, kōr, the daughter of the thief; kūk̄ k̄ lang, a bough of the tree. Sūnd has fem. sing. sūnā; masc. plural sūnd, fem. plural sūnd, masc. plural sūnd. Similarly kāl, sūnd has fem. sing. sū, masc. plural kāl, fem. plural kāl, masc. plural kāl. The plural of the feminine is used in the singular as substantives, the masculine ones belonging to the second declension on the feminine ending, kāl to the third. Note that the feminine plural of sūnd, sūnd is seen, not sūnd, as we might expect; so also feminine nouns in tsā, tāh, and sā.

Adjectives ending in * (second declension) form the feminine in * with the usual change of the preceding consonant. Thus tāh, hor, fem. tāh (pronounced tās). Other adjectives do not change for gender. All adjectives agree with the qualified noun in gender, number and case, the postposition, if any, being added to the latter word of the two. Take, for example, chaṭa white, and guṛ, a horse. From these we have chaṭā guṛ, a white horse; acc. sing. chaṭā guṛis, plural. chaṭā guṛis; and chaṭya guṛis, sūnā, by means of white horses.

The first two personal pronouns are bāh; I, me, by me; as; we; a, us, by us; and tāh, thou; tā, thee, by thee; tāt, ye; tātē you, by you. Possessive pronouns are employed instead of the genitive. Thus, tāh, my; tā, our; cūn; thy; tūhānd, your.

For the three persons, we have sing. masc. suh, fem. suit, pl. suh; agent. sing. masc. sūn, fem. tami. The plural is of common gender throughout. Nom. pl.; acc. pl.; ag. tamius. The possessive pronoun is tānā, of the number only of the noun, tānā, of it; tāhānd of them. The neuter gender is used for all things without life.

Other pronouns are:—This: yih (com. gen.); acc. masc. yemis, of nōměs, neut. yih, nōh; ag. masc. neut. yē, fem. yū̆m, fem. yū̆m. As in the preceding. For the sake of brevity, we have not added all. Nom. pl.; acc. pl.; ag. tānā; sūnā, of the number only of the noun, sūnā, of it; tāhānd of them. The neuter gender is used for all things without life.

That (within sight): masc. neut. kuḥ, fem. kuḥ; accusative, masc. fem. humi̊s, neut. kū̆h, and so on; nom. pl. masc. humā.

Who, masc. yū̆, fem. yū̆s, neut. yū̆; acc. masc. yemis, yē, neut. yē, ag. masc. neut. yō̆m, yō̆m, fem. yō̆m; nom. pl. masc. yō̆m, and so on.

Who? masc. kus, fem. kū̆s, neut. kū̆h; accusative, masc. fem. kāmīs, kā, neut. kū̆h, ag. masc. neut. kāmīs, kāmīs; nom. pl. masc. kāmīs. A list of cognates, which are added to verbs to supply the place of personal terminations. These represent almost any case, and are as follows:

First Person. Second Person. Third Person.

<table>
<thead>
<tr>
<th>Sing.</th>
<th>Dat.</th>
<th>Plur.</th>
<th>Other</th>
</tr>
</thead>
<tbody>
<tr>
<td>s</td>
<td>m</td>
<td>s</td>
<td>none</td>
</tr>
</tbody>
</table>

Before these the verbal terminations are often slightly changed for the sake of euphony, and when necessary for the pronunciation, the vowel i is inserted as a junction vowel.

In the verb set of suffixes also commonly added to verbs, with an adverbial force. Of these no negatives, the verb as in chaḥ, he is; chaʿiens, he is not; and asks a
question, as in chād, is he? it adds emphasis, as in chātu, he is indeed; and by adds a question with emphasis, as in chāyu, is he indeed?

Two or three suffixes may be employed together, as in karā, was made, karā-m, was made by me, karā-m-ak, thou wast made by me; karā-m-akā, dost thou wast made by me? The two kh suffixes become when they are allowed by a pronominal suffix interchange with a vowel, as in karā-h-as (for karā-kh-as), was made by them.

E. Conjugation. As in the case of the modern Indo-Aryan vernaculars, the conjugation of the verb is mainly participial. There are three of the old tenses, the present, the future and the imperfective, which have survived, the first having become a future, and the second a past conditional.

These three we may call radical tenses. The rest, viz. the Kashmiri present, imperfect, past, aorist, perfect and other past tenses are all participial.

The verb substantive, which is also used as an auxiliary verb, has two tenses, a present and a past. The former is made by adding the pronominal suffixes of the nominative to a base chu(h), and the latter by adding the same to a base às. Thus:

<table>
<thead>
<tr>
<th>Singular</th>
<th>Plural</th>
</tr>
</thead>
<tbody>
<tr>
<td>Masculine</td>
<td>Feminine</td>
</tr>
<tr>
<td>chu-s, I am</td>
<td>às-s, I was</td>
</tr>
<tr>
<td>chu-ka, thou art</td>
<td>às-ka, thou was</td>
</tr>
<tr>
<td>chu-h, he is</td>
<td>às-h, he was</td>
</tr>
<tr>
<td>chu-th, yourself are</td>
<td>às-th, you are</td>
</tr>
</tbody>
</table>

As for the finite verb, the modern future (old present), and the past conditional (old future) do not change for gender, and do not employ suffixes, but retain relics of the old personal terminations of the tenses from which they are derived. They are thus conjugated, taking the verbal root kar, as the typical verb.

<table>
<thead>
<tr>
<th>Future, I shall make, &amp;c.</th>
<th>Past Conditional, (if I had made, &amp;c.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Singular</td>
<td>Plural</td>
</tr>
<tr>
<td>kara</td>
<td>kara</td>
</tr>
<tr>
<td>karakh</td>
<td>kara</td>
</tr>
<tr>
<td>kari</td>
<td>kari</td>
</tr>
</tbody>
</table>

For the imperative we have 2nd person singular, kār, plur. karō; 3rd person singular and plural karēn.

Many of the above forms will be intelligible from a consideration of the closely allied Sanskrit, although they are not derived from that language; but some (e.g. those of the second person singular) can only be explained by the analogy of the Persian and of the Pāśka languages.

The present participle is formed by adding an to the root; thus, karān, making. It does not change for gender. From this we get a passive and an imperfective. The present and past participles of the auxiliary verb. Thus, kāran軟, I (masculine) am making, I make; kāran_soft, I (feminine) am making, I make; karēn_quis, I (masculine) was making, and so on.

There are several past participles, all of which are liable to change for gender, and are utilized in conjugation. We have:

### Weak past participle

<table>
<thead>
<tr>
<th>Singular</th>
<th>Plural</th>
</tr>
</thead>
<tbody>
<tr>
<td>Masculine</td>
<td>Feminine</td>
</tr>
<tr>
<td>ḵṟ</td>
<td>ḵṟ</td>
</tr>
<tr>
<td>ḵryā</td>
<td>ḵryā</td>
</tr>
<tr>
<td>ḵryā</td>
<td>ḵryā</td>
</tr>
<tr>
<td>ḵrm̱ts</td>
<td>ḵrm̱ts</td>
</tr>
<tr>
<td>ḵrm̱ts</td>
<td>ḵrm̱ts</td>
</tr>
</tbody>
</table>

In the strong past participle and the pluperfect participle, the final a and y (like the final h of chāh quoted above) are not parts of the words but are only employed for the sake of euphony. The true words are kāryā, kāryā, kāryā and kāryā. There are three conjugations. The first includes all transitive verbs. These have both the weak and the strong past participles. The second conjugation consists entirely of intransitive verbs, which also have both of these participles. The third conjugation consists of the remaining intransitive verbs. These have only the strong past participle. The weak past participle in the first two conjugations refers to something which has lately happened, and is used to form an immediate past tense. The strong past participle is more indefinite, and is employed to form a tense corresponding to the Greek aorist. The pluperfect participle refers to something which happened a long time ago, and is used to form the past tense of narration. As the negative weak past participle, the strong past participle is employed to make the aorist past, and the pluperfect participle is employed to make the aorist past, while the new pluperfect participle is formed to make the tense of negation.

Kāshmirī
KASHUBES—KASSALA

AUTHORITIES.—The scientific study of Kashmiri is of very recent date. The only printed lexicographical work is a short vocabulary by W. J. Elmslie (London, 1872). K. F. Burkhard brought out a grammar of the Mussulman dialect in the Proceedings of the Royal Bavarian Academy of Science for 1887–1888, of which a translation by G. A. Grierson appeared in the Indian Antiquary of 1895 and the following years (reprinted as a separate publication, Bombay, 1897). T. R. Wade's Grammar (London, 1888) is the nearest sketch, and the only attempt at a complete work is the kind in English by G. A. Grierson's Essays on Kaśmirī Grammar (London and Calcutta, 1899).

A valuable native grammar in Sanskrit, the Kaśmirāsābdāmaṭa of Īșvara Kaula, has been edited by the same writer (Calcutta, 1888). For an elucidation of the origin of Kashmiri, especially regarding place names and the Piścā question generally, see G. A. Grierson's "On Certain Suffixes in the Modern Indo-Aryan Vernaculars" in the Zeitschrift für Vergleichende Sprachforschung auf dem Gebiete der Indogermanischen Sprachen and The Piścā Languages of North-Western India (London, 1906).

The only important text which has been published is Burkhard's edition, with a partial translation, of Mahmūd Gāmi's "Yusuf and Zulallāh" in the Zeitschrift der Deutschen Morgenländischen Gesellschaft for 1895 and 1899. The text of the Siwa Pāriṇāya, edited by G. A. Grierson, is in course of publication by the Asiatic Society of Bengal.

KASHUBES (sing. Kaszub, plur. Kaszebe), a Slavonic people numbering about 200,000, and living on the borders of West Prussia and Pomerania, along the Baltic coast between Danzig and Lake Gorden, and inland as far as Konitz. They have no literature and no history, as they consist of peasants and fishermen, the educated classes being mostly Germans or Poles. Their language has been held to be but a dialect of Polish, but it seems better to separate it, as in some points it is quite independent, in some it offers a resemblance to the language of the Polabs (q.v.). This is most seen in the western dialect of the so-called Slovinci (of whom there are about 250 left) and Kabatrki, whereas the eastern Kashube is more like Polish, which is encroaching upon and assimilating it. Lorentz calls the western dialect a language, and distinguishes 38 vowels. The chief points of Kashube as against Polish are that all its vowels can be nasal instead of e and o only, that it has preserved quantity and a free accent, has developed several special vowels, e.g. ơ, ơ, ǚ, and has preserved the original order, e.g. gvard as against gart. The consonants are very like Polish. (See also Slavs.)

KASMIOV, a town of Russia, in the government of Ryazań, on the Oka river, in 54° 50' N. and 32° 3' E., 75 m. E.N.E. of Ryazań. Pop. (1897), 13,545, of whom about 1000 were Tatars. It is famed for its tanneries and leather goods, sheepskins and post-horse bells. Founded in 1152, it was formerly known as Meshcherski Gorodets. In the 15th century it became the capital of a Tatar khanate, subject to Moscow, and so remained until 1667. The town possesses a cathedral, and a mosque supposed to have been built by Kasim, founder of the Tatar principality. Near the mosque stands a mausoleum built by Shah-All in 1555. Lying on the direct road from Astrakhan to Moscow and Nizhni Novgorod, it may be said to be some trade, and has a large annual fair in July. The waiters in the best hotels of St Petersburg are mostly Kasimov Tatars.

See Velaminov-Zernov, The Kasimov Tsars (St Petersburg, 1863–1866).

KASSA (Germ. Kaschau; Lat. Cassovia), the capital of the county of Aboud-Torna, in Hungary, 170 m. N.E. of Budapest by rail. Pop. (1900), 35,850. Kassa is one of the oldest and hand-somest towns of Hungary, and is pleasantly situated on the right bank of the Hernád. It is surrounded on three sides by hills covered with forests and vineyards, and opens to the S.E. towards a pretty valley watered by the Hernád and the Tarcaz. Kassa consists of the inner town, which was the former old town surrounded with walls, and of three suburbs separated from it by a broad glacis. The most remarkable building, considered the grandest masterpiece of architecture in Hungary, is the Gothic cathedral of St Elizabeth. Begun about 1270 by Stephen V., it was continued (1342–1382) by Queen Elizabeth, wife of Charles I., and her son Louis I., and finished about 1468, in the reign of Matthias I. (Corvinus). The interior was transformed in the 18th century to the Renaissance style, and the whole church thoroughly restored in 1875–1886. The church of St Michael and the Franciscan or garrison church date from the 13th century. The royal law academy, founded in 1659, and sanctioned by golden bull of King Leopold I. in 1660, has an extensive library; there are also a museum, a Roman Catholic upper gymnasium and seminary for priests, and other schools and benevolent institutions. Kassa is the see of a Roman Catholic bishopric. It is the chief political and commercial town of Upper Hungary, and the principal entrepôt for the commerce between Hungary and Galicia. Its most important manufactures are toboths, machinery, iron, furniture, textiles and milking. About 3 m. N.W. of the town are the baths of Banţö, with alkaline and ferruginous springs, and about 12 m. N.E. lies Rânc-Helein, with an intermittent chalybeate spring. About 20 m. W. of Kassa lies the famous Premonstratensian abbey of Jâszö, founded in the 12th century. The abbey contains a rich library and valuable archives. In the neighbourhood is a fine stalactite grotto, which often served as a place of refuge to the inhabitants in war time.

Kassa was created a town and granted special privileges by Béla IV, in 1235, and was raised to the rank of a royal free town by Stephen V. in 1270. In 1290 it was surrounded with walls. The subsequent history presents a long record of revolts, sieges and disastrous confabulations. In 1430 the plague carried off a great number of the inhabitants. In 1438 the right of minting money according to the pattern and value of the Buda coinage was granted the municipality by King Matthias I. The bishopric was established in 1804. In the revolutionary wars of 1848–49 the Hungarians were twice defeated before the walls of Kassa by the Austrians under General Schlick, and the town was held successively by the Austrians, Hungarians and Russians.

KASSALA, a town and mudirija of the Anglo-Egyptian Sudan. The town, a military station of some importance, lies on the river Gash (Mareb) in 15° 28' N., 36° 24', 260 m. E.S.E. of Khartoum and 240 m. W. of Massawa, the nearest seaport. Pop. about 20,000. It is built on a plain, 1700 ft. above the sea, at the foot of the Abyssinian highlands 15 m. W. of the frontier of the Italian colony of Eritrea. Two dome-shaped mountains about 2000 ft. high, Jebels Mokram and Kassala, rise abruptly from the plain some 3 m. to the east and south-east. These mountains and the numerous gardens Kassala contains give to the place a picturesque appearance. The chief buildings are of brick, but most of the natives dwell in grass huts. A short distance from the town is Khartoum, containing a tomb mosque with a high tower, the headquarters of the Morgani family. The sheikhs El Morgani are the chiefs of a religious brotherhood widely spread and of considerable influence in the eastern Sudan. The Morgani family are of Afghan descent. Long settled in Jidda, the head of the family removed to the Sudan about 1800 and founded the Morgani sect. Kassala was founded by the Egyptians in 1840 as a fortified post from which to control their newly conquered territory near the Abyssinian frontier. In a few years it grew into a place of some importance. In November 1883 it was besieged by the dervishes. The garrison held out till the 30th of July 1885 when owing to lack of food they capitulated. Kassala was captured from the dervishes by an Italian force under Colonel Baratieri on the 17th of July 1894 and by the Italians was handed over on Christmas day 1897 to Egypt. The bulk of the inhabitants are Hallelna "Arabs." Kassa mudiriya covering some of the most fertile land in the Anglo-Egyptian Sudan. It corresponds roughly with the district formerly known as Taksa. It is a region of light rainfall, and cultivation depends chiefly on the Gash flood. The river is however absolutely dry from October to June. White dura of excellent quality is raised.
KASSASSIN, a village of Lower Egypt 22 m. by rail W. of Ismailia on the Suez Canal. At this place, on the 28th of August and again on the 9th of September 1882 the British force operating against Arabi Pasha was attacked by the Egyptians in both attacks being repulsed (see Egypt: Military Operations).

KASSITES, an Elamite tribe who played an important part in the history of Babylonia. They still inhabited the north-western mountains of Elam, immediately south of Holwan, when Sennacherib attacked them in 702 B.C. They are the Kossaens of Ptolemy, who divides Susiana between them and the Elymaeans; according to Strabo (xi. 13, 3, 6) they were the neighbours of the Medes. Th. Nöldeke (Göt. G. G., 1874, pp. 173 seq.) has shown that they are the Kissians of the older Greek authors who are identified with the Susians by Aeschylus (Choephor. 424, Pers. 17, 120) and Herodotus (v. 49, 52). We already heard of them as attacking Babylonia in the 9th year of Samsu-iluna the son of Khammurabi, and about 1780 B.C. they overran Babylonia and founded a dynasty there which lasted for 576 years and nine months. In the course of centuries, however, they were absorbed into the Babylonian population; the kings adopted Semitic names and married into the royal family of Assyria. Like the other languages of the non-Semitic tribes of Elam that of the Kassites was agglutinative; a vocabulary of it has been handed down in a cuneiform tablet, as well as a list of Kassite names with their Semitic equivalents. It has no connexion with Indo-European, as has erroneously been supposed. Some of the Kassite deities were introduced into the Babylonian pantheon, and the Kassite tribe of Khabirah seems to have settled in the Babylonian plain.

See Fr. Delitzsch, Die Sprache der Kosseri (1884). (A. H. S.)

KASTAMUNI, or KASTAMBOL. (1) A vilayet of Asia Minor which includes Paphlagonia and parts of Pontus and Galatia. It is divided into four sanjakas—Kastamuni, Boli, Changra and Sinope—is rich in mineral wealth, and has many mineral springs and extensive forests, the timber being used for charcoal and building and the bark for tanning. The products are chiefly cereals, fruits, opium, cotton, tobacco, wool, ordinary goat-hair and mohair, in which there is a large trade. There are coal-mines at and near Ereğli (anc. Heraclea) which yield steam coal nearly as good in quality as the English, but they are badly worked. Its population comprises about 933,000 Moslems and 27,000 Christians. (2) The capital of the vilayet, the ancient Castamon, altitude 2500 ft., situated in the narrow valley of the Geuk Irnak (Amnos), and connected by a carriage road, 54 m., with its port Liman on the Black Sea. The town is noted for its copper mines and for its manufactured utensils, but the famous copper mines about 36 m. N., worked from ancient times to the 19th century, are now abandoned. There are over 30 mosques in the town, a dervish monastery, and numerous theological colleges (medresses), and the Moslem inhabitants have a reputation for bigotry. The climate though subject to extremes of heat and cold is healthy; in winter the roads are often closed by snow. The population of 16,000 includes about 2500 Christians. Castamon became an important city in later Byzantine times. It lay on the northern trunk-road to the Euphrates and was built round a strong fortress whose ruins crown the rocky hill west of the town. It was taken by the Danishmend Amirs of Sivas early in the 12th century, and passed to the Turks in 1303. (J. G. C. A.)

KASTORIA (Turkish Kesrie), a city of Macedonia, European Turkey, in the vilayet of Monastir, 45 m. S. by W. of Monastir (Bitolia). Pop. (1905), about 10,000, one-third of whom are Greeks, one-third Slavs, and the remainder Albanians or Turks. Kastoria occupies part of a peninsula on the western shore of Lake Kastoria, which here receives from the north its affluent the Zheleva. The lake is formed in a deep hollow surrounded by limestone mountains, and is drained on the south by the Bitritza, a large river which flows S.E. nearly to the Greek frontier, then sharply turns N.E., and finally enters the Gulf of Salonica. The lake has an area of 20 sq. m., and is 2850 ft. above sea-level. Kastoria is the seat of an Orthodox archbishop. It is usually identified with the ancient Celestrum, captured by the Romans under Sulpicius, during the first Macedonian campaign, 200 B.C., and better known for the defence maintained by Bryennius against Alexius I. in 1084. A Byzantine wall with round towers runs across the peninsula.

KASUB, a town of British India, in the Lahore district of the Punjab, situated on the north bank of the old bed of the river Beas, 34 m. S.E. of Lahore. Pop. (1901), 22,022. A Rajput colony seems to have occupied the present site before the earliest Mahommedan invasion; but Kasur does not appear in history until late in the Mussulman period, when it was settled by a Pathan colony from beyond the Indus. It has an export trade in grain and cotton, and manufactures of cotton and leather goods.

KATAGUM, the sub-province of the double province of Kano in the British protectorate of Northern Nigeria. It lies approximately between 15° and 15° N. and 7° and 10° 10' E. It is bounded N. by the French Sudan, E. by Bornu, S. by Bauchi, and W. by Kano. Katagum consists of several small but ancient Mahommedan emirates—Katagum, Messau, Gummed, Hadeija, Machena, with a fringe of Bedde pagans on its eastern frontier towards Bornu, and other pagans on the south towards Bauchi. The Waube flows from Kano through the province via Hadeija and by Damjiri in Bornu to Lake Chad, affording a route for the transport of goods brought by the Zungeru-Zaria-Kano railway line to the protectorate's Katagum and western Bornu. Katagum is a fertile province inhabited by an industrious people whose manufactures rival those of Kano.

In ancient times the province of Katagum formed the debateable country between Bornu and the Hausa states. Though Mahommedan it resisted the Fula invasion. Its northern emirates were for a long time subject to Bornu, and its customs are nearly assimilated to those of Bornu. The province was taken under administrative control by the British in October 1903. In 1904 the capitals of Gummed, Hadeija, Messau and Jemarai, were brought into touch with the administration and native and provincial courts established. At the beginning of 1905 Katagum was incorporated as a sub-province with the province of Kano, and the administrative organization of a double province was extended over the whole. Hadeija, which is a very wealthy town and holds an important position both as a source of supplies and a centre of trade, received a garrison of mounted infantry and became the capital of the sub-province.

Hadeija was an old Habe town and its name, an evident corruption of Khadija, the name of the celebrated wife and first convert of Mahomet, is a strong presumption of the incorrectness of the former title of Hadeja, which has introduced Islam to its inhabitants. The ruling dynasty of Hadeja was, however, overthrown by Fula usurpation towards the end of the 18th century, and the Fula ruler received a flag and a blessing from Dan Fodio at the beginning of his sacred war in the opening years of the 19th century. Nevertheless the habit of independence being strong in the town of Hadeja the little emirate held its own against Sokoto, Bornu and all comers. Though included nominally within the province at Katagum it was the boast of Hadeja that it had never been conquered. It had made nominal submission to the British in 1903 on the successful conclusion of the Kano-Sokoto campaign, and in 1905, as has been stated, was chosen as the capital of the sub-province. The emir's attitude became, however, in the spring of 1906 openly antagonistic to the British and a military expedition was sent against him. The emir with his disaffected chiefs made a plucky stand but after five hours' street fighting the town was reduced. The emir and three of his sons were killed, and a new emir, the rightful heir to the throne, who had shown himself in favour of a peaceful policy, was appointed. The offices of the war chiefs in Hadeija were abolished and 150 yards of the town wall were broken down.

Slave dealing is at an end in Katagum. The military station at Hadeja forms a link in the chain of British forts which extends along the northern frontier of the protectorate. (See Nigeria.) (F. L. L.)

KATANGA, a district of Belgian Congo, forming the south-eastern part of the colony. Area, approximately, 180,000 sq. m.; estimated population 1,060,000. The natives are members of
the Luha-Lunda group of Bantus. It is a highly mineralized region, being specially rich in copper ore. Gold, iron and tin are also mined. Katanga is bounded S. and S.E. by Northern Rhodesia, and British capital is largely interested in the development of its resources, the administration of the territory being entrusted to a committee on which British members have seats. Direct railway communication with Cape Town and Beira was established in 1909. There is also a rail and river service via the Congo to the west coast. (See CONGO FREE STATE.)

KATER, HENRY (1777-1835). English physicist of German descent, was born at Bristol on the 16th of April 1777. At first he purposed to study law; but this he abandoned on his father’s death in 1794, and entered the army, obtaining a commission in the 12th regiment of foot, then stationed in India, where he rendered valuable assistance in the great trigonometrical survey. Failing health obliged him to return to England; and in 1808, being then a lieutenant, he entered on a distinguished student career in the senior department of the Royal Military College at Sandhurst. Shortly after he was promoted to the rank of captain. In 1814 he retired on half-pay, and devoted the remainder of his life to scientific research. He died at London on the 26th of April 1835.

His first important contribution to scientific knowledge was the comparison of the merits of the Cassegranean and Gregorian telescopes, from which (Phil. Trans., 1813 and 1814) he deduced that the illuminating power of the former exceeded that of the latter in the proportion of 5:2. This inferiority of the Gregorian he explained as being probably due to the mutual interference of the rays as they crossed at the principal focus before reflection at the second mirror. His most valuable work was the determination of the length of the second’s pendulum, first at London and subsequently at various stations throughout the country (Phil. Trans., 1818, 1820). In these researches he skillfully took advantage of the well-known property of reciprocity between the centres of suspension and oscillation of an oscillating body, so as to determine experimentally the precise position of the centre of oscillation; the distance between these centres was then the length of the ideal simple pendulum having the same time of oscillation. As the inventor of the floating collimator, Kater rendered a great service to practical astronomy (Phil. Trans., 1825, 1828). He also published memoirs (Phil. Trans., 1821, 1831) on British standards of length and mass; and in 1832 he published an account of his labours in verifying the Russian standards of length. For his services to Russia in this respect he received in 1814 the decoration of the order of St. Anne; and the same year he was elected a fellow of the Royal Society.

His attention was also turned to the subject of compass needles, his researches leading him to the lecture "On the Best Kind of Steel and Form for a Compass Needle" (Phil. Trans., 1821) containing the results of many experiments. The treatise on "Mechanics" in Lardner’s Cyclopaedia was partly written by him; and his interest in more purely astronomical researches was evidenced by two communications to the Astronomical Society’s Memoirs for 1831–1833—the one on an observation of Saturn’s outer ring, the other on a method of determining longitude by means of lunar eclipses.

KATHA, a district in the northern division of Upper Burma, with an area of 6964 sq. m., 3730 of which consists of the former separate state of Wuntho. It is bounded N. by the Upper Chindwin, Bhamo and Myitkyina districts, E. by the Kaukwe River as far as the Irrawaddy, thence east of the Irrawaddy by the Shan State of Mōng Mú (Momeik), and by the Shweli River, S. by the Ruby Mines in Kachin and Sittwe and W. by the Upper Chindwin district. Three ranges of hills run through the district, known as the Minwun, Gangaw and Mangin ranges. They separate the three main rivers—the Irrawaddy, the Méza and the Mu. The Minwun range runs from north to south, and forms for a considerable part of its length the dividing line between the Katha district proper and what formerly was the Wuntho state. Its average altitude is between 1500 and 2000 ft. The Gangaw range runs from the north of the district for a considerable portion of its length close to and down the right bank of the Irrawaddy as far as Tigyaw, where the Myattheindan pagoda gives its name to the last point. Its highest point is 4400 ft., but the average is between 1500 and 2000 ft. The Katha branch of the railway crosses it at Petsut, a village 12 miles west of Katha town. The Mangin range runs through Wuntho (highest peak, Maingthón, 5420 ft.).

Gold, copper, iron and lead are found in considerable quantities in the district. The Kyaukpyazat gold-mines, worked by an English company, gave good returns, but the quartz reef proved to be a mere pocket and is now worked out. The iron, copper and lead are not now worked. Jade and soapstone also exist, and salt is produced from brine wells. There are three forest reserves in Katha, with a total area of 1110 sq. m. The population in 1901 was 176,253, an increase of 33% in the decade. The number of Shans is about half that of Burmese, and of Kadus half that of Shans. The Shans are mostly in the Wuntho sub-division. Rice is the chief crop in the plains, tea, cotton, sesameum and hill rice in the hills. The valley of the Méza, which is very malignant, was used as a convict settlement under Burmese rule. The district was first occupied by British troops in 1886, but it was not finally quieted till 1890, when the Wuntho sawbwa was deposed and his state incorporated in Katha district. Katha is the headquarters of the district. The principal means of communication are the Irrawaddy Flotilla steamers, which run between Mandalay and Bhamo, and the railway which communicates with Sagaing to the south and Myitkyina to the north. A ferry-steamer plies between Katha and Bhamo.

KATHIWAR, or KATIYWAR, a peninsula of India, within the Gujarat division of Bombay, giving its name to a political agency. Total area, about 25,400 sq. m.; pop. (1901), 2,645,805. These figures include a portion of the British district of Ahmedabad, a portion of the state of Baroda, and the small Portuguese settlement of Diu. The peninsula is bounded N. by the Rann of Cutch, E. by Ahmedabad district and the Gulf of Cambay, and S. and W. by the Arabian Sea. The extreme length is 220 m.; the greatest breadth about 165 m. Generally speaking, the surface is undulating, with low ranges running in various directions. With the exception of the Tangha and Mandav hills, in the west of Jhalawar, and some unimportant hills in Hallar, the northern portion of the country is flat; but in the south, from near Gogo, the Gir range runs nearly parallel with the coast, and at a distance of about 20 m. from it, along the north of Babriawar and Sorath, to the neighbourhood of Girnar. Opposite this latter mountain is the solitary Osam hill, and then still farther west is the Barada group, between Hallar and Barada, running about 20 m. north and south from Gumli to Ranawao. The Girnar group of mountains is an important granitic mass, the highest peak of which rises to 3500 ft. The principal river is the Bhadar, which rises in the Mandav hills, and flowing S.W. falls into the sea at Navi-Bander; it is everywhere marked by highly cultivated lands adorning its course of about 115 m. Other rivers are the Aji, Machhu and Satrunji—the last remarkable for romantic scenery. Four of the old races, the Jaitwas, Churasamas, Solunkis and Wals still exist as proprietors of the soil who exercised sovereignty in the country prior to the immigration of the Jhals, Jadejas, Purmars, Kathis, Gohels, Jats, Mahomedans and Maharratts, between whom the country is now chiefly partitioned. Kathiawar has many notable antiquities, comprising a rock inscription of Asoka, Buddhist caves, and fine Jain temples on the sacred hill of Girnar and at Palitana.

The political agency of Kathiawar has an area of 20,882 sq. m. In 1901 the population was 2,329,196, showing a decrease of 15% in the decade due to the results of famine. The estimated gross revenue of the several states is £1,278,000; total tribute to the British government (besides the Baroda and the nawab of Junagarb) £70,000. There are altogether 103 states of varying size and importance, of which 14 exercise independent jurisdiction, while the rest are more or less under British administration. The eight states of the first class are Junagaw, Nawanagar, Bhunagar, Porbandar, Dhrangadra, Morvi, Gondal and Jafarabad. The headquarters of the political agent are at Rajkot, in the centre of the peninsula, where also is the Rajkumar college, for the education of the sons of the chiefs. There is a similar school for giriasis, or chiefs of lower rank, at Gondal. An
excellent system of metre-gauge railways has been provided at the cost of the leading states. Maritime trade is also very active, the chief ports being Porbandar, Mangrol and Veraval. In 1903-1904 the total sea-borne exports were valued at £1,300,000, and the imports at £1,120,000. The progressive prosperity of Kathiawar received a shock from the famine of 1899-1900, which was felt everywhere with extreme severity.

**KATKOV, MICHAEL NIKIPOROVICH** (1818-1887), Russian journalist, was born in Moscow in 1818. On finishing his course at the university he devoted himself to literature and philosophy, and showed so little individuality that during the reign of Nicholas I. he never once came into disagreeable contact with the authorities. With the Liberal reaction and strong reform movement which characterized the earlier years of Alexander II.'s reign (1855-1881) he thoroughly sympathized, and for some time he warmly advocated the introduction of liberal institutions of the British type, but when he perceived that the agitation was assuming a Socialistic and nihilist tinge, and that in some quarters of the Liberal camp indulgence was being shown to Polish national aspirations, he gradually modified his attitude until he came to be regarded by the Liberals as a renegade. At the beginning of 1863 he assumed the management and editorship of the *Moscow Gazette*, and he retained that position till his death in 1887. During these twenty-four years he exercised considerable influence on public opinion and even on the Government, by representing with great ability the moderately Conservative spirit of Moscow in opposition to the occasionally ultra-Liberal and always cosmopolitan spirit of St. Petersburg. With the Slavophils he agreed in advocating the extension of Russian influence in south-eastern Europe, but he carefully kept aloof from them and condemned their archaeological and ecclesiastical sentimentality. Though generally temperate in his views, he was extremely intransigent and often violent in his modes of expressing them, so that he made many enemies and sometimes incurred the displeasure of the press-censure and the ministers, against which he was more than once protected by Alexander III. in consideration of his able advocacy of national interests. He is remembered chiefly as an energetic opponent of Polish national aspirations, of extreme Liberalism, of the system of public instruction based on natural science, and of German political influence. In this last capacity he helped to prepare the way for the Franco-Russian alliance.

**KATMANDU** (less correctly Khatmandu), the capital of the state of Nepal, India, situated on the bank of the Vishnumati river at its confluence with the Bagmati, in 27° 36' N., 85° 41' E. The town, which is said to have been founded about 723, contains a population estimated at 70,000, occupying 3000 houses made of brick, and usually from two to four storeys high. Many of the houses have large projecting wooden windows or balconies, richly carved. The maharaj’s palace, a huge, rambling, ungainly building, stands in the centre of the town, which also contains numerous temples. One of these, a wooden building in the centre of the town, gives it its name (kat = wood). The streets are extremely narrow, and the whole town very dirty. A British resident is stationed about a mile north of the town.

**KATO, TAKA-AKIRA** (1859- ), Japanese statesman, was born at Nagoya, and commenced life as an employee in the great firm of Mitsui Bishi. In 1887 he became private secretary to Count Okuma, minister of state for foreign affairs. Subsequently he served as director of a bureau in the finance department, and from 1894 to 1899 he represented his country at the court of St. James. He received the portfolio of foreign affairs in the fourth Itō cabinet (1900-1901), which remained in office for only a few months. He was appointed again to the same position in the Sainjō cabinet (1906), he resigned after a brief interval, being opposed to the nationalization of the private railways, which measure the cabinet approved. He then remained without office until 1908, when he again accepted the post of ambassador in London. He was decorated with the grand cross of St. Michael and St. George, and earned the reputation of being one of the strongest men among the junior statesmen.

**KATRINE, LOCH**, a freshwater lake of Scotland, lying almost entirely in Perthshire. The boundary between the counties of Perth and Stirling runs from Glengyle, at the head of the lake, down to the centre to a point opposite Stronachlachar from which it strikes to the south-western shore towards Loch Arklet. The loch, which has a south-easterly trend, is about 8 m. long, and its greatest breadth is 1 m. It lies 36 ft. above the seal-level. It occupies an area of 42 square miles and has a drainage basin of 372 square miles. The average depth is 142 ft., the greatest depth being 405 ft. The average annual rainfall is 78 inches. The mean temperature at the surface is 50·4°F., and at the bottom 41°F. The scenery has been immortalized in Sir Walter Scott’s *Lady of the Lake*. The surrounding hills are of considerable altitude, the most remarkable being the head of Ben A’ain (1730 ft.) and the grassy cliffs and broken contour of Ben Venue (2953 ft.). It is fed by the Gyle and numerous burns, and drained by the Achray to Loch Achray and thence by the Black Avon to Loch Vennacher. Since 1850 it has formed the chief source of the water-supply of Glasgow, the aqueduct leaving the lake about 13 m. S.E. of Stronachlachar. By powers obtained in 1885 the level of the lake was increased by 5 ft. by a system of sluices regulating the outflow of the Achray. One result of this damming up has been to submerge the Silver Strand and to curtail the dimensions of Ellen’s Isle. The principal points on the shores are Glengyle, formerly a fastness of the Macgregors, the Trossachs, the Goblins’ Cave on Ben Venue, and Stronachlachar (Gaelic, “the mason’s nose”), from which there is a ferry to Coilachra on the opposite side. A road has been constructed from the Trossachs for nearly six miles along the northern shore. During summer steamers ply between the Trossachs and Stronachlachar and there is a daily service of coaches from the Trossachs to Callander (about 10 m.) and to Aberfoyle (9 m.), and between Stronachlachar, to Inversnaid on Loch Lomond (about 4½ m.). The road to Inversnaid runs through the Macgregors’ country referred to in Scott’s *Rob Roy*.

**KATSENA**, an ancient state of the western Sudan, now included in the province of Kano in the British protectorate of Northern Nigeria. Katsena was amongst the oldest of the Hausa states. There exist manuscripts which carry back its history for about 1000 years and tradition ascribes the origin of the Hausa population, which is known also by the name of Habe or Habeche, to the union of Bajibda of Bagdad with a prehistoric queen of Daura. The conquest of the Habe of Katsena by the Fula about the beginning of the 19th century made little difference to the country. The most cultivated Habe were already Muslim and the new rulers adopted the existing customs and system of government. These were in many respects highly developed and included elaborate systems of taxation and justice.

The capital of the administrative district is a town of the same name, in 13°6′ N., 7°41′ E., being 160 m. E. by S. of the city of Sokoto, and 84 m. N.W. of Kano. The walls of Katsena have a circuit of between 13 and 14 miles, but only a small part of the enclosed space is inhabited. In the 17th and 18th centuries it appears to have been the largest town in the Hausa countries, and its inhabitants at that time numbered some 100,000. The date of the foundation of the present town must be comparatively modern, for it is believed to have been moved from its ancient site and at the time of Leo Africanus (c. 1513) there was no place of any considerable size in the province of Katsena. Before that period Katsena boasted of being the chief seat of learning throughout the Hausa states and this reputation was maintained to the time of the Fula conquest. In the beginning of the 19th century the town fell into the hands of the Fula, but only after a protracted and heroic defence. In March 1903 Sir F. Lugard visited Katsena on his way from Sokoto and the emir and the chief and chiefs accepted British suzerainty without fighting. The Katsena district has since formed an administrative district in the double province of Kano and Katagum. The emir was unfaithful to his oath of allegiance to the British crown, and was deposed in 1904. His successor was installed and took the oath of allegiance
in December of the same year. Katsena is a rich and populous district.

See the Travels of Heinrich Barth (new ed., London, 1890, chs. xxiii. and xxiv.). Consult also the Annual Reports on Northern Nigeria issued by the Colonial Office, London, particularly the report for 1902.

Katsena is also the name of a town in the district of Katsena-Allah, in the province of Muri, Northern Nigeria. This district is watered by a river of the same name which takes its rise in the mountains of the German colony of Cameroon, and flows into the Benue at a point above Abinsi.

KATSURA, TARO, Marquess (1847— ), Japanese soldier and statesman, was born in 1847 in Choshu. He commenced his career by fighting under the Imperial banner in the civil war of the Restoration, and he displayed such talent that he was twice sent at public expense to Germany (in 1870 and 1884) to study strategy and tactics. In 1886 he was appointed vice-minister of war, and in 1891 the command of division devolved on him. He led the left wing of the Japanese army in the campaign of 1894-95 against China, and made a memorable march in the depth of winter from the north-east shore of the Yellow Sea to Haicheng, finally occupying Niuchwang, and effecting a junction with the second army corps which moved up the Liaotung peninsula. For these services he received the title of viscount. He held the portfolio of war from 1898 to 1901, when he became premier and retained office for four and a half years, a record in Japan. In 1902 his cabinet concluded the first English, American, and Chinese railway contracts for Katsuna and the region of count. He also directed state affairs throughout the war with Russia, and concluded the offensive and defensive treaty of 1905 with Great Britain, receiving from King Edward the grand cross of the order of St Michael and St George, and being raised by the mikado to the rank of marquess. He resigned the premiership in 1905 to Marquess Saionji, but was again invited to form a cabinet in 1908. Marquess Katsura might be considered the chief exponent of conservative views in Japan. Adhering strictly to the doctrine that ministries were responsible to the emperor alone and not at all to the diet, he stood wholly aloof from political parties, only his remarkable gift of tact and conciliation enabling him to govern on such principles.

KATERFELTO (or Katterfelt), Gustavus (d. 1799), quack doctor and conjurer, was born in Prussia. About 1782 he came to London, where his advertisements in the newspapers, headed “Wonders! Wonders! Wonders!” enabled him to trade most profitably upon the credulity of the public during the widespread influenza epidemic of that year. His public entertainment, which, besides conjuring, included chemical and botanical experiments and demonstrations with the microscope, extracted a flattering testimonial from the royal family, who witnessed it in 1784. The poet William Cowper refers to Katterfello in The Task; he became notorious for a long tour he undertook, exciting marvel by his conjuring performances.

KATTOWITZ, a town in the Prussian province of Silesia, on the Rawa, near the Russian frontier, 5 m. S.E. from Beuthen by rail. Pop. (1875), 11,352; (1905), 15,772. There are large ironworks, foundries and machine shops in the town, and near it zinc and anthracite mines. The growth of Kattowitz, like that of other places in the same district, has been very rapid, owing to the development of the mineral resources of the neighbourhood. In 1815 it was a mere village, and became a town in 1867. It has monuments to the emperors William I. and Frederick III.

See G. Hofmann, Geschichte der Stadt Kattowitz (Kattowitz, 1895).

KATWA, or CUTWA, a town of British India, in Burdwan district, Bengal, situated at the confluence of the Bhagirathi and Ajai rivers. Pop. (1901), 7,220. It was the residence of many wealthy merchants, but its commercial importance has declined as it is without railway communication and as the difficulties of the river navigation have increased. It was formerly regarded as the key to Murshidabad. The old fort, of which scarcely a vestige remains, is noted as the scene of the defeat of the Maharratas by Ali Vardi Khan.

KATYDID, the name given to certain North American insects, belonging to the family Locustidae, and related to the green or tree-hoppers of England. As in other members of the family, the chirrup, alleged to resemble the words “Katydid,” is produced by the friction of a file on the underside of the left forewing over a ridge on the undersize of the right. Several species, belonging mostly to the genera Microcentonus and Cyrtophallus, are known.

KAUFBEUREN, a town in the kingdom of Bavaria, on the Wertach, 55 m. S.W. of Munich by rail. Pop. (1905), 8,055. Kaufbeuren is still surrounded by its medieval walls and presents a picturesque appearance. It has a handsome town hall with fine paintings, an old tower (the Herenturm, or witches’ tower), a museum and various educational institutions. The most interesting of the ecclesiastical buildings is the chapel of St Blasius, which was restored in 1896. The chief industries are cotton spinning, weaving, bleaching, dyeing, printing, machine building and lithography, and there is an active trade in wine, beer and cheese. Kaufbeuren is said to have been founded in 842, and is first mentioned in chronicles of the year 1126. It appears to have become a free imperial city about 1288, retaining the dignity until 1803, when it passed to Bavaria. It was formerly a resort of pilgrims, and Roman coins have been found in the vicinity.

See F. Stieve, Die Reichsstadt Kaufbeuren und die bayerische Restaurationspolitik (Munich, 1870); and Schröder, Geschichte der Stadt und Katholischen Pfarrs Kaufbeuren (Augsburg, 1893).

KAUFFMANN, Maria Anna Angelica (1741—1807), the once popular artist and Royal Academician, was born at Coire in the Grisons, on the 30th of October 1741. Her father, John Josef Kauffmann, was a poor man and mediocre painter, but apparently very successful in teaching his precocious daughter. She rapidly acquired several languages, read incessantly, and showed marked talents as a musician. Her greatest progress, however, was in painting; and in her twelfth year she had become a notability, with bishops and nobles for her sitters. In 1754 her father took her to Milan. Later visits to Italy of long duration appear to have succeeded this excursion; in 1763 she visited Rome, returning to it again in 1764. From Rome she passed to Venice, and during her stay there the artist, as much for her talents as for her personal charms. Writing from Rome in August 1764 to her friend Franke, Winckelmann refers to her exceptional popularity. She was then painting his picture, a half-length, of which she also made an etching. She spoke Italian as well as German, he says; and she also expressed herself with facility in French and English—one result of the last-named accomplishment being that she painted all the English visitors to the Eternal City. “She may be styled beautiful,” he adds, “and in singing may vie with our best virtuosos.” While at Venice, she was induced by Lady Wentworth, the wife of the English ambassador to accompany her to London, where she appeared in 1766. One of her first works was a portrait of Garrick, exhibited in the year of her arrival at “Mr Moreing’s great room in Maiden Lane.” The rank of Lady Wentworth opened society to her, and she was everywhere well received, the royal family especially showing her great favour.

Her first great friend, however, was Sir Joshua Reynolds. In his pocket-book her name as “Miss Angelica” or “Miss Angel,” appears frequently, and in 1766 he painted her, a compliment which she returned by her “Portrait of Sir Joshua Reynolds,” etat. 46. Another instance of her intimacy with Reynolds is to be found in the variation of Guercino’s “Et in Arcadia ego” produced by her at this date, a subject which Reynolds repeated a few years later in his portrait of Mrs Bouverie and Mrs Crewe. When, about November 1767, she was entrapped into a clandestine marriage with an adventurer who passed for a Swedish count (the Count de Horn) Reynolds befriended her, and it was doubtless owing to his good offices that her name is found among the signatories to the famous petition to the king for the establishment of the Royal Academy. In its first catalogue of 1769 she appears with “R.A.” after her name (an honour which she shared
KAUFFMANN, C. A KAULBACH

KAUFMANN, CONSTANTINE PETROVICH (1818-1882), Russian general, was born at Maidani on the 3rd of March 1818. He entered the engineer branch in 1838, served in the campaigns in the Caucasus, rose to be colonel, and commanded the sappers and miners at the siege of Kars in 1855. On the capitulation of Kars he was appointed to settle the terms with General Sir W. Fenwick Williams. In 1861 he became director-general of engineers at the War Office, assisting General Milutin in the restoration of the army. Promoted lieutenant-general in 1867, he was nominated aide-de-camp-general and governor of the military conscription of Vilna. In 1867 he became governor of Turkestan, and held the post until his death, making himself a name in the expansion of the empire in central Asia. He accomplished a successful campaign in 1868 against Bokhara, capturing Samarkand and gradually subjugating the whole country. In 1873 he attacked Khiva, took the capital, and forced the khan to become a vassal of Russia. Then followed in 1875 the campaign against Khokand, in which Kaufmann defeated the khan, Nasr-ed-din. Khokand north of the Syr-darya was annexed to Russia, and the independence of the rest of the country became merely nominal. This rapid absorption of the khanates brought Russia into close proximity to Afghanistan, and the reception of Kaufmann’s emissaries by the Amir was a main cause of the British war with Afghanistan in 1878. At this time Kaufmann was unable to induce his government to support all his ambitious schemes of further conquest, so that he retired to Skobelev in 1880 and 1881 against the Akhal Tekkes, and was arranging to add Merv to his annexations when he died suddenly at Tashkend on the 15th of May 1882.

KAUERNA, a city of Outagamie county, Wisconsin, U.S.A., on the Fox river 7 m. N.E. of Appleton and about 100 m. N. of Milwaukee. Pop. (1900), 5115, of whom 1044 were foreign-born (1905) 4091; (1910) 4717. Kaukauna is served by the Chicago & North-Western railway (which has car-shops here), by inter-urban electric railway lines connecting with other cities in the Fox river, valley, and by river steamboats. It has a Carnegie library, a hospital and manufactories of pulp, paper, lumber and woodenware. Dams on the Fox River furnish a good water-power. The city owns its water-works. A small settlement of Indian traders was made here as early as 1820; in 1830 a Presbyterian mission was established, but the growth of the place was slow, and the city was not chartered until 1885.

KAULBACH, WILHELM VON (1805-1874), German painter, was born in Westphalia on the 15th of October 1805. His father, who was poor, combined painting with the goldsmith’s trade, but means were found to place Wilhelm, a youth of seventeen, in the art academy at Düsseldorf, then becoming renowned under the directorship of Peter von Cornelius. Young Kaulbach contended against hardships, even hunger. But his courage never failed; and, uniting genius with industry, he was ere long foremost among the young national party which sought to revive the arts of Germany. The ambitious work by which Louis I. sought to transform Munich into a German Athens afforded the young painter an appropriate sphere. Cornelius had been commissioned to execute the enormous frescoes in the Glyptothek, and his custom was in the winters, with the aid of Kaulbach and others, to complete the cartoons at Düsseldorf, and in the summers, accompanied by his best scholars, to carry out the designs in colour on the museum walls in Munich. But in 1844 Cornelius became director of the Bavarian academy. Kaulbach, not yet twenty, followed, took up his permanent residence in Munich, laboured hard on the public works, executed independent commissions, and in 1849, when Cornelius left for Berlin, succeeded to the directorship of the academy, an office which he held till his death on the 1st of August 1864. His son Hermann (1846-1909) also became a distinguished painter.

Kaulbach matured, after the example of the masters of the Middle Ages, the practice of mural or monumental decoration; he once more conjoined painting with architecture, and displayed a creative fertility and readiness of resource scarcely found since the era of Raphael and Michelangelo. Early in the series of his multitudinous works came the famous Narrenhaus, the appalling memories of a certain madhouse near Düsseldorf; the composition all the more deserves mention for points of contact with Hogarth. Somewhat to the same category belong the illustrations to Reineke Fuchs. These, together with occasional figures or passages in complex pictorial dramas, show how dominant and irreproachable were the artist’s sense of satire and enjoyment of fun; character in its breadth and sharpness is depicted with keenest relish, and at times the sardonic smile bursts into the most robust laugh. Thus occasionally the grotesque degenerates into the vulgar, the grand into the ridiculous, as in the satire on “the Pigtail Age” in a fresco outside the New Pinakothek. Yet these exceptional extravagances came not of weakness but from excess of power. Kaulbach tried hard to become Grecian and Italian; but he never reached Phidias or Raphael; in short the blood of Dürer, Holbein and Martin Schongauer ran strong in his veins. The art products in Munich during the middle of the 19th century were of a quantity to preclude first-rate quality, and Kaulbach contracted a fatal facility in covering wall and canvas by the acre. He painted in the Hofgarten, the Odeon, the Palace and on the external walls of the New Pinakothek. His perspicuous and shrewd manner also gained him abundant occupation as a book illustrator: in the pages of the poets his fancy revelled; he was glad to take inspiration from Wieland, Goethe, even Klopstock; among his engraved designs are the Shakespeare gallery, the Goethe gallery and a folio edition of the Gospels. With regard to these examples of “the Munich school,” it was asserted that Kaulbach had been unfortunate as he found Cornelius for a master and King Louis for a patron, that he attempted “subjects far beyond him, believing
that his admiration for them was the same as inspiration; and supplied the lack of real imagination by a "compound of intellect and fancy."

Nevertheless in such compositions as the Destruction of Jerusalem and the Battle of the Huns Kaulbach shows creative imagination. As a dramatic poet he tells the story, depicts character, seizes on action and situation, and thus as it were takes the spectator by storm. The manner may be occasionally noisy and ranting, but the effect after its kind is tremendous. The cartoon, which, as usual in modern German art, is superior to the ultimate picture, was executed in the artist's prime at the age of thirty. At this period, as here seen, the knowledge was little short of absolute; subtle is the sense of beauty; playful, delicate, firm the touch; the whole treatment artistic.

Ten or more years were devoted to what the Germans term a "cycle"; a series of pictures depicting the Tower of Babel, the Age of Homer, the Destruction of Jerusalem, the Battle of the Huns, the Crusades and the Reformation. These major tableaux, severally 30 ft. long, and each comprising over one hundred figures above life-size, are surrounded by minor compositions making more than twenty in all. The idea is to congregate around the world's historic dramas the prime agents of civilization; thus here are assembled allegoric figures of Architecture and other arts, of Science and other kingdoms of knowledge, together with lawgivers from the time of Moses, not forgetting Frederick the Great. The chosen situation for this imposing didactic and theatrical display is the Treppenhaus or grand staircase in the new museum, Berlin; the surface is a granulated, absorbent wall, specially prepared; the technical method is that known as "water-glass," or "liquid flint," the infusion of silica securing permanence. The same medium was adopted in the later wall-pictures in the Houses of Parliament, Westminster.

The painter's last period brings no new departure; his ultimate works stand conspicuous by exaggerations of early characteristics. The series of designs illustrative of Goethe, which had an immense success, were melodramatic and pandered to popular taste. The vast canvases, more than 30 ft. long, the Sea Fight at Salamis, painted for the Maximilianeum, Munich, evinces wonted imagination and facility in composition; the handling also retains its largeness and vigour; but in this astounding scenic uproar moderation and the simplicity of nature are thrown to the winds, and the whole atmosphere is hot and feverish.

Kaulbach's was a beauty-loving art. He is not supreme as a colourist; he belongs in fact to a school that holds colour in subordinate position to the contours and the masses. The foundation of his art in form and composition. Indeed, the science of composition has seldom if ever been so clearly understood or worked out with equal complexity and exactitude; the constituent lines, the relations of these parts to the whole, are brought into absolute agreement; in modern German painting and music there has trodden parallel paths, and Kaulbach is musical in the melody and harmony of his compositions. His narrative too is lucid, and moves as a stately march or royal triumph; the sequence of the figures is unbroken; the arrangement of the groups accords with even literary form; the picture falls into incident, episode, dialogue, action, plot, as a drama. The style is eclectic; in the Age of Homer the types and the treatment of the human figure recall most manly themes; in the Tower of Babel the severity of the antique gives place to the suavity of the Italian renaissance; while in the Crusades the composition is let loose into modern romanticism, and so the manner descends into the midst of the 19th century. And yet this scholastically classical composition is so nicely adjusted and smoothly blended that it casts off all incongruity and becomes homogeneous as the issue of one mind. But a fickle public craved for change; and so the great master in later years wavered in favour, and had to witness, not without iniquity, the rise of an opposing party of naturalism and realism.

KAUNITZ-RIETBURG, WENZEL ANTON, PRINCE VON (1717–1794). Austrian chancellor and diplomatist, was born at Vienna on the 2nd of February 1711. His father, Max Ulrich, was the third count of Kaunitz, and married an heiress, Maria Ernestine Franziska von Rietburg. The family was ancient, and was believed to have been of Slavonic origin in Moravia. Wenzel Anton, being a second son, was designed for the church, but on the death of his elder brother he was trained for the law and for diplomacy, at Vienna, Leipzig and Leiden, and by travel. His family had served the Habsburgs with some distinction, and Kaunitz had no difficulty in obtaining employment. In 1735 he was a Reichtshofrat. When the Emperor Charles VI. died in 1740, he is said to have hesitated before deciding to support Maria Theresa. If so, his hesitation did not last long, and left no trace on his loyalty. From 1742 to 1744 he was minister at Turin, and in the latter year was sent as minister with the Archduke Charles of Lorraine, the governor of Belgium. He was therefore an eye-witness of the campaigns in which Marshal Saxe overran Belgium. At this time he was extremely discouraged, and sought for his recall. But he had earned the approval of Maria Theresa, who sent him as representative of Austria to the peace congress of Aix-la-Chapelle in 1748. His tenacity and dexterity established his reputation as a diplomatist. He confirmed his hold on the regard and confidence of the empress by the line he took after the conclusion of the peace. In 1749 Maria Theresa appealed to all her counsellors for advice as to the policy Austria ought to pursue in view of the changed conditions produced by the rise of Prussia. The great majority of them, including her husband Francis I., were of opinion that the old alliance with the sea Powers, England and Holland, should be maintained. Kaunitz, either because he was really persuaded that the old policy must be given up, or because he saw that the dominating idea in the mind of Maria Theresa was the recovery of Silesia, gave it as his opinion that Frederick was now the "most wicked and dangerous enemy of Austria," that it was hopeless to expect the support of Protestant nations against him, and that the only way of recovering Silesia was by an alliance with Russia and France. The empress eagerly accepted views which were already her own, and entrusted the adviser with the execution of his own plans. An ambassador to France from 1750 to 1752, and after 1753 as "house, court and state chancellor," Kaunitz laboured successfully to bring about the alliance which led to the Seven Years' War. It was considered a great feat of diplomacy, and established Kaunitz as the recognized master of the art. His triumph was won in spite of personal defects and absurdities which would have ruined most men. Kaunitz had manias rarely found in company with absolute sanity. He would not hear of death, nor approach a sick man. He refused to visit his dying master Joseph II. for two whole years. He would not breathe fresh air. On the warmest summer day he kept a handkerchief over his mouth when out of doors, and his only exercise was riding under glass, which he did every morning for exactly the same number of minutes. He relaxed from his work in the company of a small dependent society of sycophants and buffoons. He was consumed with ennui. When, in 1752, he met Frederick the Great at Mährisch-Neustadt, he came forth with a summary of political principles, which he called a catechism, in his pocket, and assured the king that he must be allowed to speak without interruption. When Frederick, whose interest it was to humour him, promised to listen quietly, Kaunitz rolled his mind out for two hours, and went away with the firm conviction that he had at last enlightened the inferior intellect of the king of Prussia as to what politics really were. Within a very short time Frederick had completely deceived and outmanoeuvred him. With all his pomposity and conceit, Kaunitz was astute, he was laborious and orderly; when his advice was not taken he would carry out the wishes of his masters, while no defeat ever damped his pertinacity.

To tell his history from 1750 till his retirement in 1792 would be to tell part of the internal history of Austria, and all the international politics of eastern and central Europe. His governing principle was to forward the interests of the "august house of Austria," a phrase sometimes repeated at every few lines of his despatches. In internal affairs he in 1758 recommended, and helped to promote, a simplification of the confused and subdivided Austrian administration. But his main concern was always with diplomacy and foreign policy. Here he strove with untiring energy, and no small measure of success, to extend the Austrian dominions. After the Seven Years' War he endeavoured to avoid great risks, and sought to secure his ends by
alliances, exchanges and claims professing to have a legal basis, and justified at enormous length by arguments both pedantic and hypocritical. The French Revolution had begun to alter all the relations of the Powers before his retirement. He never understood its full meaning. Yet the circular dispatch which he addressed to the ambassadors of the emperor on the 17th of July 1794 contains the first outlines of Metternich's policy of "legitimacy," and the first proposal for the combined action of the powers, based on the full recognition of one another's rights, to defend themselves against subversive principles. Kaunitz died at his house, the Garten Palast, near Vienna, on the 27th of June 1794. He married on the 6th of May 1736, Maria Ernestine von Starhemberg, who died on the 6th of September 1754. Four sons were born of the marriage.

See Hornay, Oesterreichischer Plutarch (Vienna, 1823), for a biographical sketch based on personal knowledge. Also see Brunner, Joseph II.; Correspondance avec Cobenial et Kaunitz (Mayence, 1871); A. Beer, Joseph II., Leopold II. und Kaunitz (Vienna, 1873).

KAUP, JOHANN JAKOB (1803-1873). German naturalist, was born at Darmstadt on the 10th of April 1803. After studying at Göttingen and Heidelberg he spent two years at Leiden, where his attention was specially devoted to the amphibians and fishes. He then returned to Darmstadt as an assistant in the grand ducal museum, of which in 1840 he became inspector. In 1829 he published Skizze zur Entwickelungsgeschichte der europäischen Thierwelt, in which he regarded the animal world as developed from lower to higher forms, from the amphibians through the birds to the beasts of prey; but subsequently he repudiated this work as a youthful indiscretion, and on the publication of Darwin's Origin of Species he declared himself against its doctrines. The extensive fossil deposits in the neighbourhood of Darmstadt gave him ample opportunities for palaeontological inquiries, and he gained considerable reputation by his Beiträge zur näheren Kenntniss der urzeitlichen Säugentiere (1835-1862). He also wrote Classification der Säugethiere und Vögel (1844), and, with H. G. Brown (1800-1862) of Heidelberg, Die Gavial-artigen Rester aus dem Lias (1842-1844). He died at Darmstadt on the 4th of July 1873.

KAURI PINE, in botany, Agathis australis, a conifer native of New Zealand where it is abundant in forests in the North Island between the North Cape and 38° south latitude. The forests are rapidly disappearing owing to use as timber and to destruction by fires. It is a tall resiniferous tree, usually ranging from 40 to 120 ft. in height, with a trunk from 3 to 2 ft. in diameter, but reaching 150 ft., with a diameter of 15 to 22 ft.; it has a straight columnar trunk and a rounded bushy head. The thick resiniferous bark falls off in large flat flakes. The leaves, which persist for several years, are very thick and leathery; on young trees they are lance-shaped 2 to 4 in. long and ¼ to ½ in. broad, becoming on mature trees linear-oblong or obovate-oblong and ½ to 1½ in. long. The ripe cones are almost spherical, erect, and 2 to 3 in. in diameter; the broad, flat, rather thin cone-scales fall from the axis when ripe. Each scale bears a single compressed seed with a membranous wing. The timber is remarkable for its strength, durability and the ease with which it is worked. The resin, kauri-gum, is an amber-like deposit dug in large quantities from the trunk of the trees; under pressure from previous forests, the gums generally vary in size from that of a hen's egg to that of a man's head. The colour is of a rich brown or amber yellow, or it may be almost colourless and translucent. It is of value for varnish-making.

KAVA (Cava or Ava), an intoxicating, but non-alcoholic beverage, produced principally in the islands of the South Pacific, from the roots or leaves of a variety of the pepper plant (Piper methysticum). The method of preparation is somewhat peculiar. The roots or leaves are first chewed by young girls or boys, care being taken that only those possessing sound teeth and excellent general health shall take part in this operation. The chewed material is then placed in a bowl, and water or coco-nut milk is poured over it; the whole is well stirred, and subsequently the woody matter is removed by an ingenious but simple mechanical manipulation. The resulting liquid, which has a muddied or cafe-au-lait appearance, or is of a greenish hue if made from leaves, is now ready for consumption. The taste of the liquid is at first sweet, and then pungent and acrid. The usual dose corresponds to about two mouthfuls of the root. Intoxication (but this apparently only applies to those not inured to the use of the liquor) follows in about twenty minutes. The drunkenness produced by kava is of a melancholy, silent and drowsy character. Excessive drinking is said to lead to skin and other diseases, but per contra many medicinal virtues are ascribed to the preparation. There appears to be little doubt that the active principle in this beverage is a poison of an alkaloidal nature. It seems likely that this substance is not present as such (i.e. as a free alkaloid) in the plant, but that it exists in the form of a glucoside, and that by the process of chewing this glucoside is split up by one of the ferment in the saliva into the free alkaloid and sugar.

KAVADH (Kabades, Kauades), a Persian name which occurs first in the mythical history of the old Iranian kingdom as Kai Kobadh (Kaikobad). It was borne by two kings of the Sassanid dynasty.

(1) Kavadh I., son of Peroz, crowned by the nobles in 488 in place of his uncle Balash, who was deposed and blinded. At this time the empire was utterly disorganized by the invasion of the Ephthalites or White Huns from the east. After one of their victories against Peroz, Kavadh had been a hostage among them during two years, pending the payment of a heavy ransom. In 484 Peroz had been defeated and slain with his whole army. Balash was not able to restore the royal authority. The hopes of the magnates and high priests that Kavadh would suit their purpose were soon disappointed. Kavadh gave his support to the communistic sect founded by Mazdak, son of Bamdad, who demanded that the rich should divide their wives and their wealth with the poor. His intention evidently was, by adopting the doctrine of the Mazdakites, to break the influence of the magnates. But in 496 he was deposed and incarcerated in the "Castle of Oblivion" (Lethe) in Susiana, and his brother Jamasp (Zamaspes) was raised to the throne. Kavadh, however, escaped and found refuge with the Ephthalites, whose king gave him his daughter in marriage and aided him to return to his dominions. In 499 he became king again and punished his opponents. He had to pay a tribute to the Ephthalites and applied for subsidies to Rome, which had before supported the Persians. But now the emperor Anastasius refused subsidies, expecting that the two rival powers of the East would exhaust one another in war. At the same time he intervened in the affairs of the Persian part of Armenia. So Kavadh joined the Ephthalites and began war against the Romans. In 502 he took Theodosiopolis in Armenia, in 503 Amida (Diarbekr) on the Tigris. In 503 an invasion of Armenia by the western Huns from the Caucasus led to an armistice, during which the Romans paid subsidies to the Persians for the maintenance of the fortifications on the Caucasus. When Justin I. (518-527) came to the throne the conflict began anew. The Persian vassal, Mondhir of Hira, led the Ephthalites, and one of Kavadh's sons, Farnavaz and nuns. In 531 Belisarius was beaten at Callinicum. Shortly afterwards Kavadh died, at the age of eighty-two, in September 531.

During his last years his favourite son Chosroes I had great influence over him and had been proclaimed successor. He also induced Kavadh to break with the Mazdakites, whose doctrine had spread widely and caused great social confusion throughout Persia. In 529 they were refuted in a theological discussion held before the throne of the king by the orthodox Magians, and were slaughtered and persecuted everywhere; Mazdak himself was hanged. Kavadh evidently was, as Procopius (Pers. I. 6) calls him, an unusually clear-sighted and energetic ruler. Although he could not free himself from the yoke of the Ephthalites, he succeeded in restoring order in the interior and fought with success against the Romans. He built some
towns which were named after him, and began to regulate the taxation.

(2) KAVANAGH II. Sheroe (Stireos), son of Chosroes II., was raised to the throne in opposition to his father in February 628, after the great victories of the emperor Heraclius. He put his father and eighteen brothers to death, began negotiations with Heraclius, but died after a reign of a few months. (Ed. M.)

KAVALA, or CAVALLA, a walled town and seaport of European Turkey in the vilayet of Salonica, on the Bay of Kavala, an inlet of the Aegean Sea. Pop. (1905), about 5000. Kavala is built on a promontory stretching south into the bay, and opposite the island of Thasos. There is a harbour on each side of the promontory. The resident population is increased in summer by an influx of peasants, of whom during the season 5000 to 6000 are employed in curing tobacco and preparing it for export. The finest Turkish tobacco is grown in the district, and shipped to all parts of Europe and America, to the annual value of about £1,200,000. Mehemet Ali was born here in 1796, and founded a Turkish school which still exists. His birthplace, an unpretentious little house in one of the tortuous older streets, can be distinguished by the tablet which the municipal authorities have affixed to its front. Little remains of the house which has since been found in the neighbourhood, of which the chief is the large aqueduct on two tiers of arches which still serves to supply the town and dilapidated citadel with water from Mount Pangaesus.

Kavala has been identified with Neapolis, at which St Paul landed on his way from Samothrace to Philippi (Acts xvi. 11). Neapolis was the port of Philippi, as Kavala now is of Serae; in the bay on which it stands the fleet of Brutus and Cassius was stationed during the battle of Philippi. Some authorities identify Neapolis with Datum (Δέρων), mentioned by Herodotus as famous for its gold mines.

KAVANAGH, ARTHUR MACMORROUGH (1831–1889), Irish politician, son of Thomas Kavanagh, M.P., who traced his descent to the ancient kings of Leinster, was born in Co. Carlow, Ireland, on the 25th of March 1831. He had only the rudiments of arms and legs, but in spite of these physical defects had a remarkable career. He learnt to ride in the most fearless way, was strapped to a special saddle, and managing the horse with the stumps of his arms; and also fished, shot, drew and wrote, various mechanical contrivances being devised to supplement his limited physical capacities. He travelled extensively in Egypt, Asia Minor, Persia and India between 1846 and 1853, and after succeeding to the family estates in the latter year, he married in 1855 his cousin, Miss Frances Mary Leathley. Assisted by his wife, he was a most philanthropic landlord, and was an active county magistrate and chairman of the board of guardians. A Conservative and a Protestant, he sat in Parliament for Co. Wexford from 1866 to 1868, and for Co. Carlow from 1868 to 1880. He was opposed to the disestablishment of the Irish Church, but supported the Land Act of 1870, and sat on the Bessborough Commission. In 1886 he was made a member of the Privy Council in Ireland. He died of pneumonia on the 22nd of December 1889, in London. It is supposed that his extraordinary career suggested the idea of "Lucas Malet's" novel, The History of Sir Richard Calmady.

KAVANAGH, JULIA (1824–1877). British novelist, was born at Thurles in Tipperary, Ireland, in 1824. She was the daughter of Morgan Peter Kavanagh (d. 1874), author of various worthless philological works and some poems. Julia spent several years of her early life with her parents in Normandy, laying there the foundation of a mastery of the French language and insight into French modes of thought, which was perfected by her later frequent and long residences in France. Miss Kavanagh's literary career began with her arrival in London about 1844, and her uneventful life affords few incidents to the biographer. Her first book was Three Paths (1847), a story for the young; but her first work to attract notice was Madelaine, a Tale of Auvergne (1848). Other books followed: A Summer and Winter in the Two Sicilies (1858); French Women of Letters (1861); English Women of Letters (1863); Woman in France during the 18th Century (1850); and Women of Christianity (1852). The scenes of her stories are almost always laid in France, and she handles her French themes with fidelity and skill. Her style is simple and pleasing rather than striking; and her characters are interesting without being strongly individualized. Her most popular novels were perhaps Adèle (1857), Queen Mob (1863), and John Dorrien (1875). On the outbreak of the Franco-German War Julia Kavanagh removed with her mother from Paris to Rouen. She died at Nice on the 28th of October 1877.

KAVASS, or CAVASS (adapted from the Turkish qaawas, a bow-maker; Arabic qaaws, a bow), a Turkish name for an armed police-officer; also for a courier such as it is usual to engage when travelling in Turkey.

KAVIRONDΩ, a people of British East Africa, who dwell in the valley of the Nzoia River, on the western slopes of Mount Elgon, and along the north-east coast of Victoria Nyanza. Kavirondo is the general name of two distinct groups of tribes, one Bantu and the other Nilotic. Both groups are immigrants, the Bantu from the south, the Nilotic from the north. The Bantu appear to have been the first comers. The Nilotic tribes, probably an offshoot of the Acholi (q.v.), appear to have crossed the lake to reach their present home, the country around the town of Gulu. Of the two groups the Bantu now occupy a more northerly position than the Nilotes, and are practically the most northerly representatives of that race" (Hobby). Their further progress north was stopped by the southward movement of the Nilotic tribes, while the Nilotic Kavirondo in their turn had their wanderings arrested by an irruption of Elgumi people from the east. The Elgumi are themselves probably of Nilotic origin. Both groups of Kavirondo are physically fine, the Nilotic stock appearing more virile than the Bantu. The Bantu Kavirondo are divided into three principal types—the Awa-Rimi, the Awa-Ware and the Awa-Kisli. By the Nilotic Kavirondo their Bantu neighbours are known as Ja-Mwa. The generic name for the Nilotic tribes is Ja-Luo. The Bantu Kavirondo call them Awa-Nyoro. The two groups have many characteristics in common. A characteristic feature of the people is their nakedness. Among the Nilotic Kavirondo married men who are fathers wear a small piece of goat-skin, which though practically useless as a covering must be worn according to tribal etiquette. Even among men who have adopted European clothing the goat-skin must still be worn underneath. Contact with whites has led to the adoption of European clothing by numbers of the men, but the women, more conservative, prefer nudity or the scanty covering which they wore before the advent of Europeans. Among the Bantu Kavirondo married women wear a short fringe of black string in front and a tassell of banana fibre suspended from a girdle behind, this tassel having at a distance the appearance of a tail. Hence the report of early travellers as to a tailed race in Africa. The Nilotic Kavirondo women wear the tail, but dispense with the fringe in front. For “dandy” they wear a goat-skin slung over the shoulders. Some of the Bantu tribes practise circumcision, the Nilotic tribes do not. Patterns are tattooed on chest and stomach for ornament. Men, even husbands, are forbidden to touch the women’s tails, which must be worn even should any other clothing be wrapped round the body. The Kavirondo are noted for their independent and pugnacious nature, their honesty and their sexual morality, traits particularly marked among the Bantu tribes. There are more women than men, and thus the Kavirondo are naturally inclined towards polygamy. Among the Bantu tribes a man has the refusal of all the younger sisters of his wife as they attain puberty. Practically no woman lives unmarried all her life, for if no suitor seeks her, she single out a man and offers herself to him at a “reduced price,” an offer usually accepted, as the women are excellent agricultural labourers. The Nilotic Kavirondo incline to exogamy, endeavouring always to marry outside their clan. Girls are betrothed at six or seven, and the husband-elect continually makes small presents to his father-in-law-elect till the bride reaches womanhood. It is regarded as shameful if the girl be not found a virgin on her wedding day. She is sent back to her parents, who have to return the marriage
price, and pay a fine. The wife's adultery was formerly punished with death, and the capital penalty was also inflicted on young men and girls guilty of unchastity. Among the Bantu Kavirondo the usual minimum price for a wife is forty hoes, twenty goats and one cow, paid in instalments. The Nilotic Kavirondo pay twenty sheep and two to six cows; the husband-elect can claim his bride when he has made half payment. If a woman dies without bearing children, the amount of her purchase is returnable by her father, unless the widower consents to replace her by another sister. The women are prolific and the birth of twins is common. This is considered a lucky event, and is celebrated by feasting and dances. Among the Bantu Kavirondo the mother of twins must remain in her hut for seven days. Among the Nilotic Kavirondo the parents and the infants must stay in the hut for a whole month. If a Bantu mother has lost two children in succession the next child born is taken out at dawn and placed on the road, where it is left till a neighbour, usually a woman friend who has gone that way on purpose, picks it up. She takes it to her mother who gives a goat in return. A somewhat similar custom prevails among the Nilotic tribes. Names are not male and female, and a daughter often bears her father's name.

The Kavirondo bury their dead. Among one of the Bantu tribes, the Awoga, a part is buried in the floor of his own hut in a sitting position, but at such a depth that the head protrudes. Over the head an earthenware pot is placed, and his principal wives have to remain in the hut till the flesh is eaten by ants or decomposes, when they are left free to go. The bone of the skeleton is unearthed, and reburied with much ceremony in the sacred burial place of the tribe. Married women of the Bantu tribes are buried in their hut lying on their right side with legs doubled up. Among the Nilotic tribes the grave is dug beneath the veranda of the hut. Men of the Bantu tribes are buried in an open space in the midst of their huts; in the Nilotic tribes, if the first wife of the deceased be alive he is buried in her hut, if not, beneath the veranda of the hut where she has died. A chief has his chief door of his mother's hut. The sign of mourning is a cord of banana fibre wound round the neck and waist. A chief, sometimes years before his death, one of his sons to succeed him, often giving a brass bracelet as insignia. A man’s property is divided equally among his children.

The Kavirondo are essentially an agricultural people: both men and women work in the fields with large iron hoes. In addition to sorghum, Elesine and maize, tobacco and hemp are both cultivated and smoked. Tobacco and hemp are the common drugs of both men and unmarried women, as it is thought to injure child-bearing women. Hemp is smoked in a bubble-bubble. The Kavirondo cultivate sesame and make an oil from its seeds which they burn in lamps. These lamps also furnish the Kavirondo with the pattern being, in Hobley’s opinion, introduced into the country by the coast people. While some tribes live in isolated huts, those in the north have strongly walled villages. The walls are of mud and formerly, among the Nilotic tribes, occasionally of stone. Since the huts are made of the earth of the family, the name of the owner, his wife, children, brothers and sisters. Around this fire-place the family sleep. Cooking pots, water pots and earthenware grain jars are the only other furniture. The food is served in small bowls, and the young men and women eat separately, each wife. The huts of the Masaba Kavirondo of west Elgon have the apex of the roof surmounted by a carved pole which Sir H. H. Johnston says is obviously a phallos. Among the Bantu Kavirondo a father does not eat with his wife, brothers and sisters together. Among the Nilotic tribes father and sons eat together, usually a separate hut with open sides. Women eat apart and only after the men have finished. The Kavirondo keep cattle, sheep, goats, fowls and a few dogs. Women do not eat sheep, fowls or egg, and are not allowed to possess a horse. If the female flesh of the wild cat and leopard is esteemed by most of the tribes. From Elesine a beer is made. The Kavirondo are plucky hunters, capturing the hippopotamus with ropes and traps, and attacking with bows and arrows. Dogs, of which they are very fond, are caught by line and rod or in traps. Bee-keeping is common, and where trees are scarce the hives are placed on the roof of the hut. Among the Bantu Kavirondo goats and sheep are sacrificed, the spout being held until the animal dies. Though a peaceful people the Kavirondo fight well. Their weapons are spears with rather long flat blades without blood-courses, and broad-bladed swords. Some use slings, and most carry shields. Bows and arrows are also used; firearms are however displacing other weapons. Kavirondo warfare was mainly defensive and intertribal, this last a form of vendetta. When a man had killed his enemy in battle he shaved his head on his return and was rubbed with “medicine” (generally goat’s dung), to defend him from the spirit of the dead man. This custom the Awa-Wanga abandoned when they obtained firearms. The young warriors were made to stab the bodies of their slain enemies. Kavirondo literature consists of tales and legends and water-plants and passing water through the ashes; the smoking of iron ore (confined to the Bantu tribes); pottery and basket-work. The Kavirondo have many tribe-singulars, Sir H. H. Johnston suspecting, too often, a mixture of ethnology with ancient worship, but the northern tribes have two gods, Awa-Wanga and Ishis, the spirits of good and evil. To the former cattle and goats are sacrificed. The Kavirondo have great faith in divination from the entrails of a sheep or goat and everything is to the Kavirondo ominous of good or evil. They believe in witchcraft and practise trial by ordeal. As a race the Kavirondo aim on the increase. This is due to their fecundity and mortality. Those who live in the low-lying lands suffer from a mild malaria, while abroad they are subject to dysentery and pneumonia. Epidemics of small-pox have occurred. Native medicine is of the simplest. They dress wounds with butter and leaves, and for inflammation of the lungs or pleurisy pierce a hole in the chest. There are no medicine-men—the women are the doctors. Certain of the incisor teeth are pulled out. If a man retains these he will, it is thought, be killed in warfare. Among certain tribes the women also have the right to retain a child of a deceased husband, or the child before its birth to the husband’s vows. For the same reason the wife sometimes pierces her forehead or stomach. A Kavirondo husband, before starting on a perilous journey, cuts scars on his wife’s body to ensure him good fortune. The peculiar form of the birth dance, the death dance, that at initiation and rites of a propitiatory kind in seasons of drought, their music is plaintive and sometimes pretty, produced by a large lyre-shaped instrument. They use also various drums.

The Ja-Luo women use for ear ornaments small beads attached to pieces of brass. Like the aggy beads of West Africa these beads are not of local manufacture nor of recent introduction. They are ancient, in colour generally blue, occasionally yellow or green, and are picked up in certain districts after being, few years, or they are supposed to come down with the rain. They are identical in shape and colour with ancient Egyptian beads and other beads obtained from ancient cities in Balkhush.

KAW, or KANSA, a tribe of North American Indians of Siouan stock. They were originally an offshoot of the Osages. Their early home was in Missouri, whence they were driven to Kansas by the Dakotas. They were moved from one reservation to another, till in 1873 they were settled in Indian Territory; they have since steadily decreased, and now number some 200.

KAWARDHA, a feudatory state of India, within the Central Provinces; area, 798 sq. m.; pop. (1901), 57,474, showing a decrease of 37 % in the decade, due to famine; estimated revenue, £7,000. Half the state consists of hill and forest. The residence of the chief, who is a Raj Gond, is at Kawardha (pop. 4,772), also the headquarters of the Kangrapani sect (see KABIR).

KAY, JOHN (1742-1826), Scottish caricaturist, was born near Dalkeith, where his father was a mason. At thirteen he was apprenticed to a barber, whom he served for six years. He then went to Edinburgh, where in 1771 he obtained the freedom of the city by joining the corporation of barber-surgeons. In 1785, induced by the favour which greeted certain attempts of his to etch in aquafortis, he took down his barber's pole and opened a small print shop in Parliament Square. There he continued to flourish, painting miniatures, and publishing at short intervals his sketches and caricatures of local celebrities and oddities, who abounded at that period in Edinburgh society. He died on the 21st of February 1826.

Kay's portraits were collected by Hugh Paton and published under the title A series of original portraits and caricature etchings by the late John Kay, with biographical sketches and illustrative anecdotes (Edin., 2 vols. 400, 1838; 8vo ed., 4 vols., 1842; new ed., with additional plates, 2 vols., 1877), forming a unique record.
KAY, Joseph (1824–1878), English economist, was born at Salford, Lancashire, on the 27th of February 1824. Educated privately and at Trinity College, Cambridge, he was called to the bar at the Inner Temple in 1848. He was appointed judge of the Salford Hundred court of record in 1862 and in 1869 was made a queen's counsel. He is best known for a series of works on the social condition of the poor in France, Switzerland, Holland, Germany and Austria, the materials for which he gathered on a four years' tour as travelling bachelor of his university. They were The Education of the Poor in England and Europe (London, 1846); The Social Condition of the People in England and Europe (London, 1850, 2 vols.); The Condition and Education of Poor Children in English and in German Towns (Manchester, 1853). He was also the author of The Law relating to Shipmasters and Seamen (London, 1875) and Free Trade in Land (1879, with a memoir). He died at Dorking, Surrey, on the 28th of October 1878.

KAY, or CAJAK, an Eskimo word for a fishing boat, in common use from Greenland to Alaska. It has been erroneously derived from the Arabic caique, supposed to have been introduced to the native boats by early explorers. The boat is made by covering a light wooden framework with sealskin. A hole is pierced in the centre of the top of the boat, and the kayakker also dressed in sealskin laces himself up securely when seated to prevent the entrance of water. The kayak is propelled like a canoe by a double-bladed paddle. The name kayak is properly only applied to the boat used by an Eskimo man—that used by a woman is called an umiaq.

KAYASTH, the writer caste of Northern India, especially numerous and influential in Bengal. In 1901 their total number in all India was more than two millions. Their claim to be Kshatriyas who have taken to clerical work is not admitted by the Brahmins. Under Mahomedan rule they learnt Persian and filled many important offices. They are now eager students of English, and have applied to several judges to the high court but also the first Hindu to be a member of the governor-general's council. In Bombay their place is taken by the Prabhus, and in Assam by the Kalitas (Kolitas); in Southern India there is no distinct clerical caste.

Kaye, Sir John William (1814–1876), English military historian, was the son of Charles Kaye, a solicitor, and was educated at Eton and the Royal Military College, Addiscombe. From 1832 to 1841 he was an officer in the Bengal Artillery, afterwards spending some years in literary pursuits both in India and in England. In 1856 he entered the civil service of the East India Company, and when the government of India was transferred to the British crown succeeded John Stuart Mill as secretary of the political and secret department of the India Office. In 1871 he was made a K.C.S.I. He died in London on the 24th of July 1876. Kaye's numerous writings include History of the Sappers in India (London, 1860–1876), which was revised and continued by Colonel G. B. Malleson and published in six volumes in 1888–1889; History of the War in Afghanistan (London, 1851), republished in 1858 and 1874; Administration of the East India Company (London, 1853); The Life and Correspondence of Charles, Lord Maccall (London, 1854); The Life and Correspondence of Henry St George Tucker (London, 1854); Life and Correspondence of Sir John Malcolm (London, 1856); Christianity in India (London, 1859); Lives of Indian Officers (London, 1867); and two novels, Peregrine Pulney and Long engagements. He also edited several works dealing with Indian affairs; wrote Essays of an Optimist (London, 1870); and was a frequent contributor to periodicals.

Kayser, Friedrich Heinrich Emanuel (1845–1904), German geologist and palaeontologist, was born at Königsberg, on the 26th of March 1845. He was educated at Berlin where he took his degree of Ph.D. in 1870. In 1882 he became professor of geology at Marburg. He investigated fossils of various ages and from all parts of the world, but more especially from the Palaeozoic formations, including those of South Africa, the Polar regions, and notably the Devonian fossils of Germany, Bohemia and other parts of Europe.

Among his separate works are Lehrbuch der Geologie (5 vols., ii.), Geologische Vorgeschichte der Menschengesellschaft (2nd ed., 1902) and i. Allgemeine Geologie (1863), vol. ii. (the volume first issued) was translated and edited by F. Lake, 1893, under the title Textbook of Comparative Geology. Another work is Beiträge zur Kenntnis der Fauna der Steingemässen Grauwacke (1892).

KAY-SHUTTLEWORTH, Sir James Phillips, Bart. (1804–1877), English politician and educationalist, was born at Rochdale, Lancashire, on the 20th of July 1804, the son of Robert Kay. At first engaged in a Rochdale bank, in 1824 he became a medical student at Edinburgh University. Settling in Manchester about 1827, he worked for the Ancoats and Ardwick Dispensary, and the experience which he thus gained of the conditions of the poor in the Lancashire factory districts, together with his interest in economic science, led to his appointment in 1835 as poor law commissioner in Norfolk and Suffolk and later in the London districts. In 1839 he was appointed first secretary of the committee formed by the Privy Council to administer the Government grant for the public education in Great Britain. He is remembered as having founded at Battersea, London, in conjunction with E. Carleton Tufnell, the first training college for school teachers (1839–1840); and the system of national school education of the present day, with its public inspection, trained teachers and its support by local funds, is largely due to his initiative. In 1842 he married Lady Janet Shuttleworth, assuming by royal licence his bride's name and arms. A breakdown in his health led him to resign his post on the committee in 1849, but subsequent recovery enabled him to take an active part in the working of the central relief committee instituted under Lord Derby, during the Lancashire cotton famine of 1861–1866. He created a baronet in 1849. Until the end of his life he interested himself in the movements of the Liberal party in Lancashire, and the progress of education. He died in London on the 26th of May 1877. His Physiology, Pathology and Treatment of Asphyxia became a standard textbook, and he also wrote numerous papers on public education.

His son, Sir Ughtred James Kay-Shuttleworth (b. 1844), became a well-known Liberal politician, sitting in parliament for Hastings from 1869 to 1880 and for the Clitheroe division of Lancashire from 1885 till 1902, when he was created Baron Shuttleworth. He was chancellor of the duchy of Lancaster in 1886, and secretary to the Admiralty in 1892–1895.

Kazala, or Kazalinsk, a fort and town in the Russian province of Syr-darya in West Turkestan, at the point where the Kazala River falls into the Syr-darya, about 50 m. from its mouth in Lake Aral, in 45° 45' N. and 62° 17' E., "at the junction," to quote Schuyler, "of all the trade routes in Central Asia, as the road from Orenburg meets here with the Khiva, Bokhara and Tashkent roads." Besides carrying on an active trade with the Kirghiz of the surrounding country, it is of growing importance in the general current of commerce. Pop. (1897), 7600. The floods in the river make it an island in spring; in summer it is parched by the sun and hot winds, and hardly a tree can be got to grow. The streets are wide, but the houses, as well as the fairly strong fort, are built of mud bricks.

Kazan, a government of middle Russia, surrounded by the governments of Vyatka, Ufa, Samara, Simbirsk, Nizhni-Novgorod and Kostroma. Area 24,601 sq. m. It belongs to the basins of the Volga and its tributary the Kama, and by these streams the government is divided into three regions; the first, to the right of the main river, is traversed by deep ravines sloping to the north-east, towards the Volga, and by two ranges of hills, one of which (300 to 500 ft.) skirts the river; the second region, between the left bank of the Volga and the left bank of the Kama, is an open steppe; and the third, between the left bank of the Volga and the right bank of the Kama, resembles in its eastern part the first region, and in its western part is covered with forest. Marls, limestones and sandstones, of Permian or Triassic age, are the principal rocks; the Jurassic formation
appears in a small part of the Tetyush district in the south; and Tertiary rocks stretch along the left bank of the Volga. Mineral springs (iron, sulphur and petroleum) exist in several places. The Volga is navigable throughout its course of 2,000 m., through Kazan, as well as the Kama (120 m.); and the Vyatka, Kazanka, Rutka, Tsivyil, Greater Kokshaga, Ilet, Veltuga and Mesha, are not without value as waterways. About four hundred small lakes are enumerated within the government; the upper and lower Kaban supply the city of Kazan with water.

The climate is severe, the annual mean temperature being 37°-8° F. The rainfall amounts to 16 in. Agriculture is the chief occupation, and 82% of the population are peasants. Out of 7,672,600 acres of arable land, 4,516,500 are under crops—chiefly rye and oats, with some wheat, barley, buckwheat, lentils, flax, hemp and potatoes. But there generally results great scarcity, and even famine, in bad years. Live stock are numerous. Forests cover 35% of the total area. Bee-keeping is an important industry. Factories employ about 10,000 persons and include flour-mills, distilleries, factories for soap, candles and tallow, and tanneries. A great variety of petty trades, especially those connected with wood, are carried on in the villages, partly for export. The fairs are well attended. There is considerable shipping on the Volga, Kama, Vyatka and their tributaries. Kazan is divided into twelve districts. The chief town is Kazan (q.v.). The district capitals, with their populations in 1897 are: Cheboksary (4568), Chistopol (20,161), Kozmodemiansk (2312), Laishev (5439), Mamadysh (4213), Spask (2779), Sviyazhsk (2363), Tetyushi (4754), Tavrikovskoi (1654), Tsivyilsk (2317) and Yadrin (2467). Population (1879), 1,872,437; (1897), 2,192,156, of whom 1,111,555 were women, and 176,396 lived in towns. The estimated population in 1906 was 2,904,400. It consists principally of Russians and Tatars, with a variety of Finno-Turkish tribes: Chuvashes, Cheremens, Mordvinians, Votyaks, Meschervians, and the Jews. It is one of the most Russianised of the Orthodox Greek Church or are Nonconformists; the Tatars are Mussulmans; and the Finno-Turkish tribes are either pagans or belong officially to the Orthodox Greek Church, the respective proportions being (in 1897): Orthodox Greek, 69.4% of the whole; Nonconformists, 1%; Mussulmans, 28.8%.

KAZĂN (called by the Cheremenes Oson), a town of eastern Russia, capital of the government of the same name, situated in 55° 48′ N. and 49° 26′ E., on the river Kazanka, 3 m. from the Volga, which however reaches the city when it overflows its banks every spring. Kazan lies 650 m. E. from Moscow by rail and 253 E. of Nizhniy-Novgorod by the Volga. Pop. (1883), 140,726; (1900), 143,707, all Russians except for some 20,000 Tatars. The most striking feature of the city is the kremlin or citadel, founded in 1437, which crowns a high hill on the N.W. Within its walls, capped with five towers, it contains several churches, amongst them the cathedral of the Annunciation, founded in 1562 by Gury, the first archbishop of Kazan, Kazan being an archiepiscopal see of the Orthodox Greek Church. Other buildings in the kremlin are a magnificient monastery, built in 1536; an arsenal; the modern castle in which the governor resides; and the red brick Suyumbeka tower, 246 ft. high, which is an object of great veneration to the Tatars as the reputed burial-place of one of their saints. A little E. of the kremlin is the Bogoroditski convent, built in 1570 for the reception of the Black Virgin of Kazan, a miracle-working image transferred to Moscow in 1612, and in St Petersburg since 1710. Kazan is the intellectual capital of eastern Russia, and an important seat of Oriental scholarship. Its university, founded in 1804, is attended by 3,000 students. It is the repository of a well-stocked library of 220,000 vols., an astronomical observatory, a botanical garden and various museums. The ecclesiastical academy, founded in 1846, contains the old library of the Solovetsk (Solovki) monastery, which is of importance for the history of Russian religious sects. The city is adorned with bronze statues of Tsar Alexander II., set up facing the kremlin in 1893, and of the poet G. R. Derzhavin (1743-1816); also with a monument commemorating the capture of Kazan by Ivan the Terrible. The central parts of the city consist principally of small one-storey houses, surrounded by gardens, and are inhabited chiefly by Russians, while some 20,000 Tatars dwell in the suburbs. Kazan is, further, the intellectual centre of the Russian Mahomedans, who have here their more important schools and their printing-presses. Between the city and the Volga is the Admiralty suburb, where Peter the Great had his Caspian fleet built for his campaigns against Persia. The more important manufactures are leather goods, soap, wax candles, sacred images, cloth, cottons, spirits and bells. A considerable trade is carried on with eastern Russia, and with Turkistan and Persia. Previous to the 13th century, the present government of Kazan formed part of the territory of the Bulgarians, the ruins of whose ancient capital, Bolgari or Boglary, lie 60 m. S. of Kazan. The city of Kazan itself stood, down to the 13th century, 30 m. to the N.E., where traces of it can still be seen. In 1438 Ulugh Mahomed (or Ulu Makhmet), khan of the Golden Horde of the Mongols, founded, on the ruins of the Bulgaran state, the kingdom of Kazan, which in its turn was destroyed by Ivan the Terrible of Russia in 1552 and its territory annexed to Russia. In 1774 the city was laid waste by the rebel Pugachev. It has suffered repeatedly from fires, especially in 1815 and 1825. The Kazan Tatars, from having lived so long amongst Russians and Finnish tribes, have lost a good many of the characteristic features of their Tatar (Mongol) ancestry, and bear now the stamp of a distinct ethnographic type. They are found also in the neighbouring governments of Vyatka, Ufa, Orenburg, Samara, Saratov, Simbirsk, Tambov and Nizhniy-Novgorod. They are intelligent and enterprising, and are engaged principally in trade.

See Pingein's Kazan Old and New (in Russian); Velyaminov-Zernov's Kazinom Tatars (3 vols., St Petersburg, 1863-1866); Zarinsky's Histoire du Kazan (1897); Trollov's Obratnaya Ordina in 1552 (Kazan, 1890); Firsov's books on the history of the native population (Kazan, 1864 and 1869); and Shiplevski, on the antiquities of the town and government, in Ivesiia i Zapiski of the Kazan University (1877). A bibliography of the Oriental books published in the city is printed in Bulletins of the St Petersburg Academy (1867). Compare also L. Leger's 'Kazan et les tatars', in Bibl. Univ. de Genève (1874). (F. A. K.; J. T. B.)

KÄZERÜN, a district and town of the province of Fars in Persia. The district is situated between Shiraz and Bushire. In its centre is the Kazerun Valley with a direction N.W. to S.E., a fertile plain 30 m. long and 7 to 8 m. broad, bounded S.E. by the Parishian Lake (8 m. long, 3 m. broad) N.W. by the Boshvair River, with the ruins of the old city of Beh-Shahpur (Beshaver, Boshavir, also, short, Shapur and Sassanian bastions at the lake banks. Kazerun is situated on the Great Persia road.

The remainder of the district is mostly hilly country intersected by numerous streams, plains and hills being covered with zizyphus, wild almond and oak. The district is divided into two divisions: town and villages, the latter being called Kuh i Marreh and again subdivided into (1) Pushi i Kuh; (2) Yarrık; (3) Shakan. It has forty-six villages and a population of about 15,000; it produces rice of excellent quality, cotton, tobacco and opium, but very little corn, and bread made of the flour of acorns is a staple of food in many villages. Wild almonds are exported.

Kazerun, the chief place of the district, is an un xmalled town situated in the midst of the central plain, in 29° 37′ N., 51° 43′ E. at an elevation of 2800 ft., 70 m. from Shiraz, and 96 m. from Bushire. It has a population of about 8000, and is divided into four quarters separated by open spaces. Adjoining it on the W. is the famous Nazar garden, with a grove of orange trees planted by a former governor, Hajji Ali Kuli Khan, in 1767. A couple of miles N. of the city behind a low range of hills are the imposing ruins of a marble building said to stand over the grave of Sheik Amin ed din Mahomed b. Zia ed din Mas'ud, who died a. D. 740 (A.D. 1339). S.E. of the city on a high mound are ruins of buildings with underground chambers, popularly known as Kal'eh i Gabr, "castle of the fire-worshippers."

KAZINCZY, FERENCZ (1759-1831), Hungarian author, the most indefatigable agent in the regeneration of the Magyar
language and literature at the end of the 18th and beginning of the 19th century, was born on the 27th of October 1790, at Esz-Semlén, in the county of Bihar, Hungary. He studied law at Kassa and Eperies, and in Pest, where he also obtained a thorough knowledge of French and German literature, and made the acquaintance of Gideon Ráday, who allowed him the use of his library. In 1783 Kazinczy became subnotary for the county of Abaúj; and in 1786 he was nominated inspector of schools at Kassa. There he began to devote himself to the restoration of the Magyar language and literature by translations from classical foreign works, and by the augmentation of the native vocabulary from ancient Magyar sources. In 1788, with the assistance of Baróti Szabó and John Bacsáni, he started at Kassa the first Hungarian literary magazine, *Magyar Museet; the Orpheus*, which succeeded it in 1790, was his own creation. Although, upon the accession of Leopold II., Kazinczy, as a non-Catholic, was obliged to resign his post at Kassa, his literary activity in no way decreased. He not only assisted Gideon Ráday in the establishment and direction of the first Hungarian dramatic society, but enriched the repertoire with several translations from foreign authors. His *Hamlet*, which first appeared at Kassa in 1790, is a rendering from the German version of Schröder. Implicated in the democratic conspiracy of the abbot Martinovics, Kazinczy was arrested on the 14th of December 1794, and condemned to death; but the sentence was commuted to imprisonment. He was released in 1801, and shortly afterwards married Sophia Török, daughter of his former patron, and retired to his small estate at Széphalom or "Fairhill," near Sátó-Ujhely, in the county of Zemplén. In 1828 he took an active part in the conferences held for the establishment of the Hungarian academy in the historical section of which he became the first corresponding member. He died of Asiatic cholera, at Széphalom, on the 22nd of August 1831.

Kazinczy, although possessing great beauty of style, cannot be regarded as a powerful and original thinker; his fame is chiefly due to the felicity of his translations from the masterpieces of Lessing, Goethe, Wieland, Klostock, Ossian, La Rochefoucauld, Marmontel, Molière, Metastasio, Shakespeare, Sterne, Ciceró, Sallust, Anacreon, and many other great writers. He also edited the works of Baróczky (Pest, 1812, 8 vols.) and of the poet Zinyi (1817, 2 vols.), and the poems of Dayka (1813, 3 vols.) and of John Kis (1815, 3 vols.). A collective edition of his works (*Szép Literatura*), consisting for the most part of translations, was published at Pest, 1844-1846, in 9 vols. His original productions (*Eredeti Muki*), largely in dactylic hexameters, were edited by Joseph Bajza and Francis Todt at Pest, 1836-1845, in 5 vols. Editions of his poems appeared in 1858 and in 1863.

KAZVIN, a province and town of Persia. The province is situated N.W. of Teheran and S. of Gilan. On the W. it is bounded by Khamseh. It pays a yearly revenue of about £22,000, and contains many rich villages which produce much grain and fruit, great quantities of the latter being dried and exported.

Kazvin, the capital of the province, is situated at an elevation of 4105 ft.; in 36° 15' N. and 50° E., and 92 m. by road from Teheran. The city is said to have been founded in the 4th century by the Sassanian king Shapur II (309-379). It has been repeatedly damaged by earthquakes. Many of its streets and most of its building have been destroyed by Chardin in 1674 and by other travellers during the 17th century. The most remarkable remains are the palace of the Safavid shahs and the mosque with its large blue dome. In the 16th century Shah Tahmasp I. (1524-1576) made Kazvin his capital, and it remained so till Shah Abbas I. (1587-1629) transferred the seat of government to Isfahan. The town still bears the title Dar es Salfeneh, " the seat of government." Kazvin has many baths and cisterns fed by underground canals. The system of irrigation formerly carried on by these canals rendered the plain of Kazvin one of the most fertile regions in Persia; now most of the canals are choked up. The city has a population of about 30,000 and a thriving transit trade, particularly since 1890 when the carriage road between Resht and Teheran with Kazvin as a half-way stage was opened under the auspices of the Russian "Enzeli-Teheran Road Company." Great quantities of rice, fish and silk are brought to it from Gilan for distribution in Persia and export to Turkey.

KEAN, EDMUND (1787-1833), was born in London on the 17th of March 1787. His father was probably Edmund Kean, an architect's clerk; and his mother was an actress, Ann Carey, grand-daughter of Henry Carey. When in his fourth year Kean made his first appearance on the stage as Cupid in Noverre's ballet of *Cymon*. As a child his vivacity and cleverness, and his ready affection for those who treated him with kindness, made him a universal favourite, but the harsh circumstances of his lot, and the want of proper restraint, while they developed strong self-reliance, fostered wayward tendencies. About 1794 a few benevolent persons provided the means of sending him to school, where he mastered his tasks with remarkable ease and rapidity; but finding the restraint intolerable, he shipped as a cabin boy to a island, and having escaped to a more rigorous bondage, he counterfeited both naivety and lameness with a histrionic manner which deceived even the physicians at Madeira. On his return to England he sought the protection of his uncle Moses Kean, mimic, ventriloquist and general entertainer, who, besides continuing his pantomimic studies, introduced him to the study of Shakespeare. At the same time Miss Tidswell, an actress who had been specially kind to him from infancy, taught him the principles of acting. On the death of his uncle he was taken charge of by Miss Tidswell, and under her direction he began the systematic study of the principal Shakespearean characters, displaying the peculiar originality of his genius by interpretations entirely different from those of Kemble. His talents and interesting countenance induced a Mrs Clarke to adopt him, but the slight of a visitor so wounded his pride that he suddenly left her house and went back to his old surroundings. In his fourteenth year he obtained an engagement to play leading characters for twenty nights in York Theatre, appearing as Hamlet, Hastings and Cato. Shortly afterwards, while he was in the strolling troupe belonging to Richardson's show, the rumour of his abilities reached George III., who commanded him to recite at Windsor. He subsequently joined Saunders's circus, where in the performance of an equestrian feat he fell and broke his legs—the accident leaving traces of swelling in his insteps throughout his life. About this time he picked up music from Charles Inclendon, dancing from D'Egville, and fencing from Angelo. In 1807 he played leading parts in the Belfast theatre with Mrs Siddons, who began by calling him " a horrid little man " and on further experience of his ability said that he " played very, very well," but that " there was nothing in him to make a great actor." An engagement in 1808 to play leading characters in Beverley's provincial troupe was brought to an abrupt close by his marriage (July 17) with Miss Mary Chambers of Waterford, the leading actress. For several years his prospects were very gloomy, but in 1814 the committee of Drury Lane theatre, the fortunes of which were then so low that bankruptcy seemed inevitable, resolved to give him a chance among the " experiments" they were making to win a return of popularity. When the expectation of his first appearance in London was close upon him he was so feverish that he exclaimed " If I succeed I shall go mad." His opening at Drury Lane on the 26th of January 1814 as Shylock roused the audience to almost uncontrolled enthusiasm. Successive appearances in Richard III., Hamlet, Othello, Macbeth and Lear served to demonstrate his complete mastery of the whole range of tragic emotion. His triumph was so great that he himself said on one occasion, " I could not feel the stage under me." On the 29th of November 1820 Kean appeared for the first time in New York as Richard III. The success of his visit to America was unequivocal, although he fell into a vexatious dispute with the press. On the 4th of June 1821 he returned to England.

This date is apparently settled by a letter from Kean in 1829, to Dr Gibbon (see Rothassey Express for the 28th of June 1893, where the letter is printed and quoted for the first time). On the 17th of March to celebrate Kean's birthday; various other dates have been given in books of reference, the 4th of November having been formerly accepted by this Encyclopaedia.

KAZVIN—KEAN, EDMUND 705
Probably his irregular habits were prejudicial to the refinement of his taste, and latterly they tended to exaggerate his special defects and mannerisms. The adverse decision in the divorce case of Cox v. Kean on the 17th of January 1825 caused his wife to leave him, and aroused against him such bitter feeling, shown by the almost riotous conduct of the audiences before which he appeared about this time, as nearly to compel him to retire permanently into private life. A second visit to America in 1825 was largely a repetition of the persecution which, in the name of morality, he had suffered in England. Some cities showed him a spirit of charity; many audiences submitted him to the grossest insults and endangered his life by the violence of their disapproval. In Quebec he was much impressed with the kindness of some Huron Indians who attended his performances, and he was made chief of the tribe, receiving the name Alainenouidal. Kean's last appearance in New York was on the 5th of December 1826 in Richard III., the rôle in which he was first seen in America. He returned to England and was ultimately received with all the old favour, but the contest had made him so dependent on the use of stimulants that the gradual deterioration of his gifts was inevitable. Still, even in their decay his great powers triumphed during the moments of his inspiration over the absolute wreck of his physical faculties, and compelled admiration after his gait had degenerated into a weak hobble, and the lighting brilliancy of his eyes had become dull and bloodshot, and the tones of his matchless voice marred by rough and grating hoarseness. His appearance in Paris was a failure owing to a fit of drunkenness. His last appearance on the stage was at Covent Garden, on the 25th of March 1833 when he played Othello to the Iago of his son Charles. At the words "Villain, be sure," in scene 3 of act III., he suddenly broke down, and crying in a faltering voice "O God, I am dying. Speak to them, Charles," fell insensible into his son's arms. He died at Richmond on the 15th of May 1833.

It was in the impersonation of the great creations of Shakespeare's genius that the varied beauty and grandeur of the acting of Kean were displayed in their highest form, although probably his most powerful character was Sir Giles Overreach in Massinger's A New Way to Pay Old Debts, the effect of his first impersonation of which was such that the pit rose en masse, and even the actors and actresses themselves were overcome by the terrific dramatic illusion. His only personal disadvantage as an actor was his small stature. His countenance was strikingly interesting and unusually mobile; he had a matchless command of facial expression; his fine eyes scintillated with the slightest shades of emotion and thought; his voice, though weak and harsh in the upper register, possessed in its lower range tones of penetrating and resistless power, and a thrilling sweetness like the witchery of the finest music; above all, in the grander moments of his passion, his intellect and soul seemed to rise beyond material barriers and to glorify physical defects with their own greatness. Kean especially excelled as the exponent of passion. In Othello, Iago, Shylock and Richard III., characters utterly different from each other, but in which the predominant element is some form of passion, his identification with the personality, as he had conceived it, was as nearly as possible perfect, and each isolated phase and aspect of the plot was elaborated with the minutest attention to details, and yet with an absolute subordination of these to the distinct individuality he was endeavouring to portray. Coleridge said, "Seeing him act was like reading Shakespeare by flashes of lightning." If the range of character in which Kean attained supreme excellence was narrow, no one except Garrick has been so successful in so many great impersonations. Unlike Garrick, he had no true talent for comedy, but in the pressure of biting and satiric wit, of grim and ghostly gaiety, he was unsurpassed. His eccentricities at the height of his fame were numerous. Sometimes he would ride recklessly on his horse Shylock throughout the night. He was presented with a tame lion with which he might be found playing in his drawing-room. The prizefighters Mendoza and Richmond the Black were among his visitors. Grattan was his devoted friend. In his earlier days Talma said of him, "He is a magnificent unculted gem; polish and round him off and he will be a perfect tragedian." Macready, who was much impressed by Kean's Richard III. and met the actor at supper, speaks of his "unassuming manner...partaking in some degree of shyness" and of the "touching grace" of his singing. Kean's delivery of the three words "I answer—NO!" in the part of Sir Edward Mortimer in The Iron Chest, cast Macready into an abyss of despair at rivalling him in this rôle. So full of dramatic interest is the life of Edmund Kean that it formed the subject for a play by the elder Dumas, entitled Kean on désordre et génie, in which Frederick-Lamartine achieved one of his greatest triumphs.

See Francis Phippen, Authentic Memoirs of Edmund Kean (1814); B. W. Procter (Barry Cornwall), The Life of Edmund Kean (1853); G. Hawkins, The Life and Letters of Edmund Kean (1869); J. Fitzgerald Molloy, The Life and Adventures of Edmund Kean (1888); Edward Stirling, Old Drury Lane (1887).

His son, Charles John Kean (1811–1868), was born at Waterford, Ireland, on the 18th of January 1811. After preparatory education at Worclesdon and at Greenford, near Harrow, he was sent to Eton College, where he remained three years. In 1827 he was offered a caddetship in the East India Company's service, which he was prepared to accept if his father would settle an income of £400 on his mother. The elder Kean refused to do this, and his son determined to become an actor. He made his first appearance at Drury Lane on the 1st of October 1827 as Norval in Home's Douglas, but his continued failure to achieve popularity led him to leave London in the spring of 1828 for the provinces. At Glasgow, on the 1st of October in this year, father and son acted together in Arnold Payne's Brutus, the elder Kean in the title-part and his son as Titus. After a visit to America in 1830, where he was received with much favour, he appeared in 1833 at Covent Garden as Sir Edmund Mortimer in Colman's The Iron Chest, but his success was not pronounced enough to encourage him to remain in London, especially as he had already won a high position in the provinces. In January 1838, however, he returned to Drury Lane, and played Hamlet with a success which gave him a place among the principal tragedians of his time. He was married to the actress Ellen Tree (1805–1880) on the 20th of January 1842, and paid a second visit to America with her from 1843 to 1847. Returning to England, he entered on a successful engagement at the Haymarket, and in 1850, with Robert Keeley, became lessee of the Princess Theatre. The most noteworthy feature of his management was a series of gorgeous Shakespearean revivals. Charles Kean was not a great tragic actor. He did all that could be done by the persevering cultivation of his powers, and in many ways manifested the possession of high intelligence and refined taste, but his defects of person and voice made it impossible for him to give a representation at all adequate of the varying and subtle emotions of pure tragedy. But in melodramatic parts such as the king in Boucicaut's adaptation of Casimir Delavigne's Louis XI., and Louis and Fabian dei Franchi in Boucicaut's adaptation of Dumas's The Corsican Brothers, his success was complete. From his "tour round the world" Kean returned in 1866 in broken health, and died in London on the 22nd of January 1868.

KEANE, JOHN JOSEPH (1839–1889). American Roman Catholic archbishop, was born in Ballyshannon, Co. Donegal, in Ireland, on the 17th of September 1839. His family settled in America when he was seven years old. He was educated at St. John's College, Maryville, and at St. Mary's Seminary, Baltimore, and in 1866 was ordained priest and made curate of St. Patrick's, Washington, D.C. On the 25th of August 1875 he was consecrated Bishop of Richmond, to succeed James Gibbons, and he had established the Diocese of Sui-contrary of the Holy Ghost in that diocese, and founded schools and churches for negroes before his appointment as rector of the Catholic University, Washington, D.C., in 1886, and his appointment in 1888 to the see of Ajossa. He did much to uphold the Catholic University, but his democratic and liberal policy
made him enemies at Rome, whence there came in 1896 a request for his resignation of the rectorate, and where he spent the years 1897–1900 as canon of St John Lateran, assistant bishop at the pontifical throne, and counsellor to the Propaganda. In 1900 he was consecrated archbishop of Dubuque, Iowa. He took a prominent part in the Catholic Young Men’s National Union and in the Total Abstinence Union of North America; and was in general charge of the Catholic delegation to the World’s Parliament of Religions held at the Columbian Exposition in 1893. He lectured widely on temperance, education and American institutions, and in 1896 was Dudelian lecturer at Harvard University.

A selection from his writings and addresses was edited by Maurice Francis Egan under the title Onward and Upward: A Year Book (Baltimore, 1902).

KEARNY, a city and the county-seat of Buffalo county, Nebraska, U.S.A., about 130 m. W. of Lincoln. Pop. (1850), 8074; (1900), 5944 (560 foreign-born); (1910), 6262. It is on the main overland line of the Union Pacific, and on a branch of the Burlington & Missouri River railroad. The city is situated in the broad, flat bottom-lands a short distance N. of the Platte River. Lake Kearney, in the city, has an area of 90 acres. The surrounding region is rich farming land, devoted especially to growing of alfalfa and Indian corn. At Kearney are a State Industrial School for boys, a State Normal School, the Kearney Military Academy, and a Carnegie library. Good water-power is provided by a canal from the Platte River about 17 m. above Kearney, and the city’s manufactures include foundry and machine-shop products, flour and bricks. Kearney Junction, as Kearney was called from 1872 to 1875, was settled a year before the two railways actually formed the junction here or the city was platted. Kearney became a town in 1873, a city of the second class and the county seat in 1874, and a city of the first class in 1901. It is to be distinguished from an older and once famous prairie city, popularly known as “Doby Town” (i.e. Adobe), founded in the early 1840s on the reservation of old Fort Kearney (removed in 1848 from Nebraska City), in Kearney county, on the S. shore of the Platte about 6 m. S.E. of the present Kearney; here in 1861 the post office of Kearney City was established. In the days of the prairie freighting caravans Doby Town was one of the most important towns between Independence, Missouri, and the Pacific coast, and it had a rough, wild, picturesque history; but it lost its immense freighting interests after the Union Pacific had been extended through it in 1866. The site of Doby Town, together with the fort, was abandoned in 1871.

KEARNY, Philip (1815–1862), American soldier, was born in New York on the 2nd of June 1815, and was originally intended for the legal profession. He graduated at Columbia University (1833), but his bent was decidedly towards soldiering, and in 1837 he obtained a commission in the cavalry regiment of which his uncle, the General Stephen Watts Kearny (1794–1848), was colonel and Lieutenant Jefferson Davis adjutant. Two years later he was sent to France to study the methods of cavalry training in vogue there. Before his return to the United States in 1842 he had served, on leave, in Algeria. He had inherited a large fortune, but he remained in the service, and his wide experience of cavalry work caused him to be employed on the headquarters staff of the army. After six more years’ service Kearny left the army, but almost immediately afterwards he rejoined, bringing with him a company of cavalry which he had raised and equipped chiefly at his own expense, to take part in the Mexican war. In December 1846 he was promoted captain. In leading a brilliant cavalry charge at Churubusco he lost his left arm, but he remained at the front, and won the brevet of major for his gallantry at Contreras and Churubusco. In 1851 he again resigned, to travel round the world. He saw further active service with his old comrades of the French cavalry in the Italian war of 1859, and received the cross of the Legion of Honour for his conduct at Solferino. Up to the outbreak of the American Civil War he lived in Paris, but early in 1861 he hastened home to join the Federal army. At first as a brigade commander and later as a divisional commander of infantry in the Army of the Potomac, he infused into his men his own cavalry spirit of dash and bravery. At Williamsburg, Seven Pines, and Second Bull Run, he displayed his usual romantic courage, but at Chantilly (Sept. 1, 1862), after repulsing an attack of the enemy, he rode out in the dark too far to the front, and mistaking the Confederates for his own men was shot dead. His body was sent to the Federal lines with a message from General Lee, and was buried in Trinity Churchyard, New York. His commission as major-general of volunteers was dated July 4, 1862, but he never received it.

See J. W. de Peyster, Personal and Military History of Philip Kearny (New York, 1869).

KEARNY, a town of Hudson county, New Jersey, U.S.A., between the Passaic and Hackensack rivers, adjoining Harrison, and connected with Newark by bridges over the Passaic. Pop. (1900), 10,866, of whom 5397 were foreign-born; (1910 census), 18,659. The New Yo k & Greenwood Lake division of the Erie railroad has a station at Arlington, the principal village (in the N.W. part), which contains attractive residences of Newark, Jersey City and New York City business men. The town covers an area of about 7 sq. m., including a large tract of marsh-land. In Kearny are railway repair shops of the Pennsylvania system, and a large abattoir; and there are numerous manufactures. The value of the town’s factory products increased from $1,607,002 in 1900 to $4,447,904 in 1905, or 173.2%. Among its institutions are the State Soldiers’ Home, removed here from Newark in 1886, a Carnegie library, two Italian homes for orphans, and a Catholic Industrial School for boys.

The neck of land between the Passaic and the Hackensack rivers, for 7 m. N. from where they unite, was purchased from the proprietors of East Jersey and from the Indians by Captain William Sandford in 1668 and through Nathaniel Kingsland, sergeant-major of Barbadoes, received the name “New Barbadoes.” After the town under this name had been extended considerably to the northward, the town of Lodi was formed out of the S. portion in 1825, the town of Harrison was founded out of the S. portion of Lodi in 1840, and in 1867 a portion of Harrison was set apart as a township and named in honour of General Philip Kearny, a former resident. Kearny was incorporated as a town in 1895.

KEARY, ANNIE (1825–1879), English novelist, was born near Wetherby, Yorkshire, on the 3rd of March 1825, the daughter of an Irish clergymen. She was the author of several children’s books and novels, of which the best known is Castle Daly, an Irish story. She also wrote an Early Egyptian History (1861) and The Nation Around (1870). She died at Eastbourne on the 3rd of March 1879.

KEATE, JOHN (1773–1832), English schoolmaster, was born at Wells, Somersetshire, in 1773, the son of Prebendary William Keate. He was educated at Eton and King’s College, Cambridge, where he had a brilliant career as a scholar; taking holy orders, he became, about 1797, an assistant master at Eton College. In 1809 he was elected headmaster. The discipline of the school was then in a most unsatisfactory condition, and Dr Keate (who took the degree of D.D. in 1810) took stern measures to improve it. His partiality for the birch became a by-word, but he succeeded in restoring order and strengthening the weakened authority of the masters. Beneath an outwardly rough manner the little man concealed a really kind heart, and when he retired in 1834, the boys, who admired his courage, presented him with a handsome testimonial. A couple of years before he had publicly flogged eighty boys on one day. Keate was made a canon of Windsor in 1820. He died on the 5th of March 1832 at Hartley Westhall, Hampshire, of which parish he had been rector since 1824.

See Maxwell Lyte, History of Eton College (3rd ed., 1890); Collins, Etoniana; Harwood, Alumni Etonenses; Alumni Register (1852); Gentleman’s Magazine (1852).
KEATS, JOHN (1795–1821), English poet, was born on the 9th of October 1795 at the sign of the Swan and Hoop, 24 The Pavement, Moorgate, London. He published his first volume of verse in 1817, his second in the following year, his third in 1820, and died of consumption at Rome on the 23rd of February 1821 in the fourth month of his twenty-sixth year. (For the biographical facts see the later section of this article.)

In Keats's first book there was little foretaste of anything greatly or even genuinely good; but between the tawdry and sandflats of sterile or futile verse there were undoubtedly some few purple patches of floral promise. The style was frequently detestable—a mixture of sham Spenserian and mock Wordsworthian, alternately florid and arid. His second book, Endymion, rises in its best passages to the highest level of Barnfield and of Lodge, the two previous poets with whom, had he published nothing more, he might most properly have been classed; and this, among minor minstrels, is no enviable place. His third book raised him at once to a foremost rank in the highest class of English poets. Shelley, up to twenty, had written little or nothing that would have done credit to a boy of ten; and of Keats also it may be said that the merit of his work at twenty-five was, perhaps, greater than its demerit at twenty-two. His first book fell as flab as the reception of his second, though less considerate than on the whole it deserved, was not more contemptuous than that of immeasurably better books published about the same time by Coleridge, Landor and Shelley. A critic of exceptional carefulness and candour might have noted in the first book so singular an example of a stork among the cranes as the famous and notable sonnet on Chapman's Homer; a just judge would have indicated, a partial advocate might have exaggerated, the value of such golden grain amid a garish harvest of tares as the hymn to Pan and the translation into verse of Titian's Bacchanacl which glorify the weary wilderness of Endymion. But the hardest thing said of that poem by the Quarterly reviewer was unconscious echoed by the future author of Adonais—that it was all but absolutely impossible to read through; and the obscurer insolence of the "Blackguard's Magazine," as Landor afterwards very justly labelled it, is explicable though certainly not excusable if we glance back at such a passage as that where Endymion exchanges fulsome and liquorish endearments with the "lovely unapproachable lady," for such a "passage of essence." Such nauseous and pitiful phrases as these, and certain passages in his correspondence, make us understand the source of the most offensive imputations or insinuations levelled against the writer's manhood; and, while admitting that neither his love-letters, nor the last piteous outcries of his wailing and shrieking agony, would ever have been made public by merciful or respectful editors, we must also admit that, if they ought never to have been published, it is no less certain that they ought never to have been written; that a mortal kind of man or even a manly sort of boy, in his love-making or in his suffering, will not howl and snivel after such a lamentable fashion. One thing hitherto inexplicable a very slight and rapid glance at his amatory correspondence will amply suffice to explain: how it came to pass that the woman so passionately beloved by so great a poet should have thought it the hopeless attempt of a mistaken kindness to revive the memory of a man for whom the best that could be wished was complete and compassionate oblivion.

For the sake of the man's nature presented to her inspection, this prodigy was certain or could have deserved. But that there was a finer side to the man, even if considered apart from the poet, his correspondence with his friends and their general evidence to his character give more sufficient proof than perhaps we might have derived from the general impression left on us by his works; though indeed the preface to Endymion itself, however illogical in its obviously implied suggestion that the poem published was undeniably unworthy of publication, gave proof or hint at least that after all its author was something of a man. And the eighteenth of his letters to Miss Brawne stands out in bright and brave contrast with such as seem incompatible with the traditions of his character on its manner side. But if it must be said that he lived long enough only to give promise of being a man, it must also be said that he lived long enough to give assurance of being a poet who was not born to come short of the first rank. Not even a hint of such a probability could have been gathered from his first or even from his second appearance; after the publication of his third volume it was no longer a matter of possible debate among judges of tolerable competence that this improbability had become a certainty. Two or three phrases cancelled, two or three lines erased, would have left us in Lamia one of the most faultless as surely as one of the most glorious jewels in the crown of English poetry. Isabella, feeble and awkward in narrative to a degree almost incredible in a student of Dryden and a pupil of Leigh Hunt, is overcharged with episodical effects of splendid and pathetic expression beyond the reach of either. The Eve of St Agnes, aiming at no doubtful success, succeeds in evading all casual difficulty in the line of narrative; with no shadow of pretence to such interest as may be derived from stress of incident or depth of sentiment, it stands out among all other famous poems as a perfect and unsurpassable study in pure colour and clear melody—a study in which the figure of Madeline brings back upon the mind's eye, if only as moonlight recalls a sense of sung and spoken phrase, the poetic beauty of Barlow's Hero and the sleeping presence of Shakespeare's Image. Beauty should always be placed the less famous but not less precious Eve of St Agnes, a fragment unexcelled for the simple perfection of its perfect simplicity, exquisite alike on suggestion and in accomplishment. The triumph of Hyperion is as nearly complete as the failure of Endymion; yet Keats never gave such proof of a manly devotion and rational sense of duty to his art as in his resolution to leave this great poem unfinished; not, as we may gather from his correspondence on the subject, for the pitiful reason assigned by his publishers, that of discouragement at the reception assigned to his former work, but on the solid and reasonable ground that a Miltonic study had something in its very scheme and nature too artificial, too studious of a foreign influence, to be carried on and carried out at such length as was implied by his original design. Fortified and purified as it had been on a first revision, when much introductory allegory and much tentative effusion of sonorous and superfluous verse had been rigorously clipped down or pruned away, it could not long have retained its present value without some smoothing over of its rough edges. There is a faculty of assimilation as distinguished from imitation, than which there can be no surer or stronger sign of strong and sure original genius, is not more evident in the most Miltonic passages of the revised Hyperion than in the more Shakespearian passages of the unrevised tragedy which no radical correction could have left other than radically incorrigible. It is no conventional exaggeration, no hyperbolical phrase of flattery with more sound than sense in it, to say that in this chaotic and puerile play of Otho the Great there are such verses as Shakespeare might not without pride have signed at the age when he wrote and even at the age when he rewrote the tragedy of Romeo and Juliet. The dramatic fragment of King Stephen shows far more power of hand and gives far more promise of success than does that of Shelley's Charles the First. Yet we cannot say with any confidence that even this far from extravagant promise would certainly or probably have been kept; it is certain only that Keats in these attempts did at least succeed in showing a possibility of future excellence as a tragedian at least a romantic dramatist. In every other line of high and serious poetry, his talent was both consummate and consummate; here only was it no doubt the potential or intrinsic powers of a man that he was not able to sharpen or to execute with such vigour in the work of dramatic art.
achieved in his verses on the crowning creation of Scott's humaner and manlier genius—Meg Merriles. No little injustice has been done to Keats by such devotees as fix their mind's eye only on the more salient and distinctive notes of a genius which in fact was very much more various and tentative, less limited and peculiar, than would be inferred from an exclusive study of his more specially characteristic work. But within the limits of that work must we look for course for the genuine credentials of his fame; and highest among them we must rate his unequalled and unrivalled odes. Of these perhaps the two nearest to absolute perfection, to the triumphant achievement and accomplishment of the very utmost beauty possible to human words, may be that to Autumn and that on a Grecian Urn; the most radiant, fervent and musical is that to Psyche; the subtlest in sweetness of thought and feeling is that on Melancholy. Greater lyrical poetry the world may have seen than any that is in these; lovelier it surely has never seen, nor ever can it possibly see. From the divine fragment of an unfinished ode to Maia we can but guess that if completed it would have been worthy of a place beside the highest. His remaining lyrics have many beauties about them, but none perhaps can be called thoroughly beautiful. He has certainly left us one perfect sonnet of the first rank and as certainly he has left us but one.

Keats has been promoted by modern criticism to a place beside Shakespeare. The faultless force and the profound subtility of his deep and cunning instinct for the absolute expression of absolute natural beauty can hardly be questioned or overlooked; and this is doubtless the one main distinctive gift or power which denotes him as a poet among all his equals, and gives him a right to rank for ever beside Coleridge and Shelley. As a man, the two admirers who did best service to his memory were Lord Houghton and Matthew Arnold. These alone, among all of their day who have written of him without the disadvantage or advantage of a personal acquaintance, have clearly seen and shown us the manhood of the man. That ridiculous and degrading legend which imposed so strangely on the generous tenderness of Shelley, while evoking the very natural and allowable laughter of Byron, fell to dust at once for ever on the appearance of Lord Houghton's biography, which gave perfect proof to all time that "men have died and worms have eaten them" but not for fear of critics or through suffering inflicted by reviews. Somewhat too sensually sensitive Keats may have been in either capacity; but the nature of the man was as far as was the quality of the poet above the pitiful level of a creature whose soul could "let itself be snuffed out by an article"; and, in fact, owing doubtless to the accident of a death which followed soon after on his early appearance and his dillius reception as a poet, the insolence and injustice of his reviewers in general have been comparatively and even considerably exaggerated. Except from the chief fountain-head of professional ribaldry then open in the world of literary journalism, no reck of personal insult arose to offend his nostrils; and the tactics of such unwashed malignants were inevitably suicidal; the references to his brief experiment of apprenticeship to a surgeon which are quoted from Blackwood, in the shorter as well as in the longer memoir by Lord Houghton, could leave no bad odour behind them save what might hang about men's yet briefer recollection of his assailant's unmemorable existence. The false Keats, therefore, whom Shelley pitted and Byron despised would have been, had he ever existed, a thing beneath compassion or contempt. That such a man could have had such a genius is almost evidently impossible; and yet more evident is the proof which the event on everlastit none was ever further from the chance of decline to such degradation than the real and actual man who made that name immortal.

(A. C. S.)

Subjoined are the chief particulars of Keats's life.

He was the eldest son of Thomas Keats and his wife Frances Jennings, and was baptized at St Botolph's, Bishopsgate, on the 8th of December 1795. The entry of his baptism is supplemented by a marginal note stating that he was born on the 31st of October. Thomas Keats was employed in the Swan and Hoop livery stables, Finsbury Pavement, London. He had married his master's daughter, and managed the business on the retirement of his father-in-law. In April 1804 Thomas Keats was killed by a fall from his horse, and within a year of this event Mrs Keats married William Rawlings, a stablekeeper. The marriage proved an unhappy one, and in 1806 Mrs Rawlings, with her children John, George, Thomas and Frances Mary (afterwards Mrs Llanos, d. 1889), went to live at Edmonton with her mother, who had inherited a considerable competence from her husband. There is evidence that Keats's parents were by no means of the commonplace type that might be hastily inferred from these associations. They had desired to send their sons to Harrow, but John Keats and his two brothers were eventually sent to a school kept by John Clarke at Enfield, where he became intimate with his master's son, Charles Cowden Clarke. His vivacity of temperament showed itself at school in a love of fighting, but in the last year of his school life he developed a great appetite for reading of all sorts. In 1810 he left school to be apprenticed to Mr Thomas Hammond, a surgeon in Edmonton. He was still within easy reach of his old school, where he frequently borrowed books, especially the works of Spenser and the Elizabethans. With Hammond he quarrelled before the termination of his apprenticeship, and in 1814 the connexion was broken by mutual consent. His mother had died in 1810, and in 1814 Mrs Jennings. The children were left in the care of two guardians, one of whom, Richard Abbey, seems to have made himself solely responsible. John Keats went to London to study at Guy's and St Thomas's hospitals, living at first alone at 8 Dean Street, Borough, and later with two fellow students in St Thomas's Street. It does not appear that he neglected his medical studies, but his chief interest was turned to poetry. In March 1816 he became a dresser at Guy's, but about the same time his poetic gifts were stimulated by an acquaintance formed with Leigh Hunt. His friendship with Benjamin Haydon, the painter, dates from later in the same year. Hunt introduced him to Shelley, who showed the younger poet a constant kindness. In 1816 Keats moved to the Poultry to be with his brothers George and Tom, the former of whom was then employed in his guardian's counting-house, but much of the poet's time was spent at Leigh Hunt's cottage at Hampstead. In the winter of 1816-1817 he definitely abandoned medicine, and in the spring appeared Poems by John Keats dedicated to Leigh Hunt, and published by Charles and James Ollier. On the 14th of April he left London to find quiet for work. He spent some time at Shanklin, Isle of Wight, then at Margate and Canterbury, where he was joined by his brother Tom. In the summer the three brothers took lodgings in Well Walk, Hampstead, where Keats formed a fast friendship with Charles Wentworth Dilke and Charles Armitage Brown. In September of the same year (1817) he paid a visit to his friend, Benjamin Bailey, at Oxford, and in November he finished Endymion at Burford Bridge, near Dorking. His youngest brother had developed consumption, and in March John went to Teignmouth to nurse him in place of his brother George, who had decided to sail for America with his newly married wife, Georgiana Wylie. In May (1818) Keats returned to London, and soon after appeared Endymion: A Poetic Romance (1818), bearing on the title-page as motto "The stretched metre of an antique song." Late in June Keats and his friend Armitage Brown started on a walking tour in Scotland, vividly described in the poet's letters. The fatigue and hardship involved proved too great a strain for Keats, who was forbidden by an Inverness doctor to continue his tour. He returned to London by boat, arriving on the 18th of August. His summer was spent in constant attendance on his brother Tom, who died at the beginning of December. There is no doubt that he resented the attacks on him in Blackwood's Magazine (August 1818), and the Quarterly Review (April 1818, published only in September), but his chief preoccupations were elsewhere. After his brother's death he went to live with his friend Brown. He had already made the acquaintance of Fanny Brawne, a girl of seventeen, who lived with her mother close by. For her Keats
quickly developed a consuming passion. He was in indifferent health, and, owing partly to Mr Abbey’s mismanagement, in difficult circumstances. Nevertheless his best work belongs to this period. In July 1819 he went to Shanklin, living with James Rice. They were soon joined by Brown. The next two months Keats spent with Brown at Winchester, enjoying an interval of calmness due to his absence from Fanny Brawne. At Winchester he completed Lamia and Otho the Great, which he had begun in conjunction with Brown, and began his historical tragedy of King Stephen. Before Christmas he had returned to London and his bondage to Fanny. In January 1820 his brother George paid a short visit to London, but received no confidence from him. The fatal nature of Keats’s illness showed itself on the 3rd of February, but in March he recovered sufficiently to be present at the private view of Haydon’s picture of “Christ’s Entry into Jerusalem.” In May he removed to a lodging in Wesleyan Place, Kentish Town, to be near Leigh Hunt who eventually took him into his house. In July appeared his third and last book, Lamia, Isabella, The Eve of St Agnes and other Poems (1820). Keats left the Hunts abruptly in August in consequence of a delay in receiving one of Fanny Brawne’s letters which had been broken open by a servant. He went away to London, and soon after he saw Fanny and Fanny Brawne. The suggestion that he should spend the winter in Italy was followed up by an invitation from Shelley to Pisa. This, however, he refused. But on the 18th of September 1820 he set out for Naples in company with Joseph Severn, the artist, who had long been his friend. The travellers settled in the Piazza de Spagna, Rome. Keats was devotedly tended by Dr (afterwards Sir) James Clarke and Severn, and died on the 23rd of February 1821. He was buried on the 27th in the old Protestant cemetery, near the pyramid of Cestius.

BIBLIOGRAPHY.—Keats’s friends provided the material for the authoritative biography of the poet by Richard Monckton Milnes (afterwards Lord Houghton) entitled Life, Letters and Literary Remains of John Keats (1848; revised ed., 1867). The Poetical Works of John Keats were issued with a memoir by R. M. Milnes in 1854, 1863, 1865, 1866, 1867, and in the Aldine edition, 1876. The standard edition of Keats is The Poetical Works and other Writings of John Keats now first brought together, including Poems and numerous Letters not before published, edited with notes and appendices by Harry Buxton Forman (4 vols., 1883; re-issue with corrections and additions, 1889). Of the many other editions of Keats’s poems may be mentioned that edited by Sir Henry冰箱 Thorne (1884; with illustrations by G. Thorn Drury with an introduction by Robert Bridges, and another by E. de Sélincourt, 1905). The Letters of John Keats to Fanny Brawne (1889) were edited with introduction and notes by H. Buxton Forman, and the Letters of John Keats to his Friends (1851; revised ed., 1881) by Sidney Colvin, who is also the author of the monograph, Keats (1887), in the English Men of Letters Series. See also The Pappers of a Critic. Selected from the Writings of the late Charles Wentworth Duke (1875), and for further bibliographical information and particulars of MS. sources the “Editor’s Preface,” &c. to a reprint edited by H. Buxton Forman (Glasgow, 1900). A facsimile of Keats’s autograph MS. of “Hyperion,” purchased by the British Museum in 1903, was published by E. de Sélincourt (Oxford, 1905). (M. Br.)

KEBLE, JOHN (1792–1866), English poet and divine, the author of the Christian Year, was born on St Mark’s Day (April 25), 1792, at Fairford, Gloucestershire. He was the second child of the Rev. John Keble and his wife Sarah Maule. Descended from a family which had attained some legal eminence in the time of the Commonwealth, John Keble, the father of the poet, was vicar of Cohn St Aldwyn, but lived at Fairford, about 3 m. distant from his cure. He was a clergyman of the old High Church school, whose adherents, untouched by the influence of the Wesleys, had moulded their piety on the doctrines on the non-jurors and the old Anglican divines. Himself a good scholar, he did not send his son to any school, but educated him and his brother at home so well that both obtained scholarships at Corpus Christi College, Oxford. John was elected scholar of Corpus in his fifteenth, and fellow of Oriel in his nineteenth year, April 1811. In Easter term 1810 he had obtained double first class honours, a distinction which had been obtained only once before, by Sir Robert Peel. After his election to the Oriel fellowship Keble gained the University prizes, both for the English essay and also for the Latin essay. But he was more remarkable for the rare beauty of his character than for any academic distinctions. Sir John Taylor Coleridge, his fellow scholar at Corpus and his life-long friend, says of him, after their friendship of five and fifty years had closed, “It was the singular happiness of his nature, remarkable even in his undergraduate days, that love for him was always sanctioned by reverence—reverence that did not make the love less tender, and love that did but add intensity to the reverence.” Oriel College was, at the time when Keble became a fellow, the centre of all the finest ability in Oxford. Copleston, Davison, Whately, were among the fellows who elected Keble; Arnold, Pusey, Newman, were soon after added to the society. In 1815 Keble was ordained deacon, and priest in 1816. His real bent and choice were towards a pastoral cure in a country parish; but he remained in Oxford, acting first as a public examiner in the schools, then as a tutor in Oriel, till 1823. In summer he sometimes took clerical work, sometimes made tours on foot through various English counties, during which he was composing poems, which afterwards took their place in the Christian Year. He had a rare power of attracting to himself the finest spirits, a power which he maintained with the strongest of his genius, for his mind was so simple, so humble, so pure, so unworldly, yet wanting not that severity which can stand by principle and maintain what he holds to be the truth. In 1823 he returned to Oxford, there to assist his father, and with his brother to serve one or two small and poorly endowed curacies in the neighbourhood of Cohn. He had made a quiet but deep impression on all who came within his influence in Oxford, and during his five years of college tutorship had won the affection of his pupils. But it was to pastoral work, and not to academic duty, that he thenceforth devoted himself, associating with it, and scarcely placing on a lower level, the affectionate discharge of his duties as a son and brother. Filial piety influenced in a quite unusual degree his feelings and his action all life through. It was in 1827, a few years after he settled at Fairford, that he published the Christian Year. The poems which make up that book had been the silent gathering of years. Keble had purposed in his own mind to keep them beside him, correcting and improving them, as long as he lived, and to leave them to be published only “when he was fairly out of the way.” This delay was long, the Poets lived on to the fifth generation of his friends, and above all by the strong desire of his father to see his son’s poems in print before he died. Accordingly they were printed in two small volumes in Oxford, and given to the world in June 1827, but with no name on the title-page. The book continued to be published anonymously, but the name of the author soon transpired.

Between 1827 and 1872 one hundred and fifty-eight editions had issued from the press, and it has been largely reprinted since. The author, so far from taking pride in his widespread reputation, seemed all his life long to wish to disconnect his name with the book, and “as if he would rather it had been the work of some one else than himself.” This feeling arose from no false modesty. It was because he knew that in these poems he had painted his own heart, the best part of it; and he doubted whether it was right thus to exhibit himself, and by the revelation of only his better self, to win the good opinion of the world.

Towards the close of 1837 Keble was elected to fill the chair of the poetry professorship in Oxford, as successor to his friend and admirer, Denison Olcott. This chair he occupied for ten eventful years. He delivered a series of lectures, clothed in excellent idiomatic Latin (as was the rule), in which he expounded a theory of poetry which was original and suggestive. He looked on poetry as a vent for overcharged feeling, or a full imagination, or some imaginative regret, which had not found their natural outlet in life and action. This suggested to him a distinction between what he called primary and secondary poets—the first employing poetry to relieve their own hearts, the second, poetic artists, composing poetry from some other and less impulsive motive. Of the former kind were Homer, Lucretius, Burns, Scott; of the latter were Euripides, Dryden, Milton. This view was set forth in an article contributed to the British
in Scott's life, and was more fully developed in two volumes of *Proelectiones Academicae*.

His regular visits to Oxford kept him in intercourse with his old friends in Orium college, and made him familiar with the currents of feeling which swayed the university. Catholic emancipation and the Reform Bill had deeply stirred, not only the political aspect of Oxford, but also the religious principles which had long been stagnant. Cardinal Newman writes: "On Sunday July 14, 1833, Mr Keble preached the assize sermon in the University pulpit. It was published under the title of *National Apostacy*. I have ever considered and kept the day as the start of the religious movement of 1833." The occasion of this sermon was the suppression, by Earl Grey's Reform ministry, of ten Irish bishoprics. Against the spirit which would treat the church as the mere creature of the state Keble had long chafed inwardly, and now he made his outward protest, asserting the claim of the church to a heavenly origin and a divine prerogative. About the same time, and partly stimulated by Keble's sermon, some leading spirits in Oxford and elsewhere began a concerted and systematic course of action to revive High Church principles and the ancient patristic theology, and by these means both to defend the church against the assaults of its enemies, and to enable it to take its place again in the intellectual life of Christian life in England. This design embodied itself in the Tractarian movement, a name it received from the famous *Tracts for the Times*, which were the vehicle for promulgating the new doctrines. If Keble is to be reckoned, as Newman would have it, as the primary author of the movement, it was from Pusey that it received one of its best known names, and in Newman that it soon found its genuine leader. To the tracts Keble made only four contributions: No. 4, containing an argument, in the manner of Bishop Butler, to show that adherence to apostolical succession is the safest course; No. 13, which explains the principle on which the Sunday lessons in the church service are selected; No. 40, on marriage with one who is unbaptized; No. 89, on the mysticism attributed to the early fathers of the church. Besides these contributions from his own pen, he did much for the series by suggesting subjects, by reviewing tracts written by others, and by lending to their circulation the weight of his personal influence.

In 1835 Keble's father died at the age of ninety, and soon after this his son married Miss Clarke, left Oxford, and settled at Hursley vicarage in Hampshire, a living to which he had been presented by his friend and attached pupil, Sir William Heathcote, and which continued to be Keble's home and cure for the remainder of his life.

In 1841 the tracts were brought to an abrupt termination by the publication of Newman's tract No. 90. All the Protestantism of England was in arms against the author of the obnoxious tract. Keble came forward at the time, desirous to share the responsibility and the blame, if there was any; for he had seen the tract before it was published, and approved it. The same year in which burst this ecclesiastical storm saw the close of Keble's tenure of the professorship of poetry, and thenceforward he was seen but rarely in Oxford. No other public event ever affected Keble so deeply as the secession of Newman to the Church of Rome in 1845. It was to him both a public and a private sorrow, which nothing could repair. But he did not lose heart; at once he threw himself into the double duty, which now devolved on himself and Pusey, of counselling the many who had hitherto followed the movement, and who, now in their perplexity, might be tempted to follow their leader's example, and at the same time of maintaining the rights of the church against what he held to be the encroachments of the state, as seen in such acts as the Gorham judgment, and the decision on *Essays and Reviews*. In all the ecclesiastical contests of the twenty years which followed 1835, Keble took a part, not loud or obtrusive, but firm and resolute, in maintaining those High Anglican principles with which his life had been identified. These absorbing duties, added to his parochial work, left little time for literature. But in 1846 he published the *Lyra Innocentium*; and in 1863 he completed a life of Bishop Wilson.
KEEL—KEENE, C. S.

KEEL, the bottom timber or combination of plates of a ship or boat, extending longitudinally from bow to stern, and supporting the framework (see Ship-Building). The origin of the word has been obscured by confusion of two words, the old Norwegian kjole (cf. Swedish köl) and a Dutch and German kiel. The first had the meaning of the English "keel," the other of ship, boat. The modern usage in Dutch and German has approximated to the English. The word kiel is represented in old English by ccele, a word applied to the long galleys of the Vikings, in which sense "keel" or "keele" is still used by archaeologists. On the Tyne "keel" is the name given to a flat-bottomed vessel used to carry coals to the colliers. There is another word "keel," meaning to cool, familiar in Shakespeare (Love's Labour Lost, v. ii. 930), "while greasy Joan doth keep the pot," i.e. prevents a pot from boiling over by pouring in cold water, &c., stirring or skimming. TFs is from the Old English celan, to cool, a common Teutonic word, cf. German kühnen.

KEELEY, MARY ANNE (1806–1899), English actress, was born at Ipswich on the 22d of November 1806 or 1807. Her maiden name was Goward, her father being a brazier and tinman. After some years spent in dancing, Miss Keeley appeared in London on the 2d of July 1825, in the opera Rosina. It was not long before she gave up "singing parts" in favour of the drama proper, where her powers of character-acting could have scope. In June 1829 she married Robert Keeley (1793–1869), an admirable comedian, with whom she had often appeared. Between 1832 and 1842 they acted at Covent Garden, at the Adelphi with Buckstone, at the Olympic with Charles Mathews, and at Drury Lane with Macready. In 1836 they visited America. In 1838 she made her first great success as Nydia, the blind girl, in a dramatized version of Bulwer Lytton's The Last Days of Pompeii, and followed this with an equally striking impersonation of Smike in Nicholas Nickleby. In 1839 came her decisive triumph with her picturesque and spirited acting as the heroine of a play founded upon Harrison Ainsworth's Jack Sheppard. So dangerous was the considerate the popularity of the play, with its glorification of the prison-breaking felon, that the lord chamberlain ultimately forbade the performance of any piece upon the subject. It is perhaps mainly as Jack Sheppard that Mrs Keeley lived. She was a remarkable player, and her career in plays more worthy of her remarkable gifts. Under Macready's management she played Nerissa in The Merchant of Venice, and Audrey in As You Like It. She managed the Lyceum with her husband from 1844 to 1847; acted with Webster and Kean at the Haymarket; returned for five years to the Adelphi; and made her last regular public appearance at the Lyceum in 1859. A public reception was given her at this theatre on her 90th birthday. She died on the 12th of March 1899.

KEELING ISLANDS (often called Cocos and Cocos-Keeling Islands), a group of coral islands in the Indian Ocean, between 12° 4' and 9° 3' S., and 96° 40'–57' E., but including a smaller island in 11° 30' N. and 96° 30' E. The group furnished Charles Darwin with the typical example of an atoll or lagoon island. There are altogether twenty-three small islands, 99 m. being the greatest width of the whole atoll. The lagoon is very shallow and the passages between many of the islands are fordable on foot. An opening on the northern side of the reef permits the entrance of vessels into the northern part of the lagoon, which forms a good harbour known as Port Recherche or Port Albion. The coco-nut (as the name Cocos Islands indicates) is a characteristic product and is cultivated on all the islands. The flora is scanty in species. One of the commonest living creatures is a monstrous crab which lives on the coco-nuts; and in some places also there are great colonies of the pomegranate crab. The group was visited by Dr H. O. Forbes in 1838, and later, at the expense of Sir John Murray, by Dr Guppy, Mr Ridley and Dr Andrews. The object of their visits was the investigation of the fauna and flora of the atoll, more especially of the formation of the coral reefs. Dr Guppy was fortunate in reaching North Keeling Island, where a landing is only possible during the calmest weather. The island he found to be about a mile long, with a shallow enclosed lagoon, less than 3 ft. deep at ordinary low water, with a single opening on its east or west side. A dense vegetation of iron-wood (Cordia) and other trees and shrubs, together with a forest of coco-nut palms, covers its surface. It is tenanted by myriads of sea-fowl, frigate-birds, boobies, and terns (Gygis candida), which find here an excellent nesting-place, for the island is uninhabited, and is visited only once or twice a year. The excrement from this large colony has changed the carbonate of lime in the soil and the coral nodules on the surface into phosphates, to the extent in some cases of 60–70%, thus forming a valuable deposit, beneficial to the vegetation of the island itself and promising commercial value. The lagoon is slowly filling up and becoming cultivable land, but the rate of recovery from the sea has been specially marked since the eruption of Krakatoa, the pumice from which was washed on to it in enormous quantity, so that the lagoon advanced its shores from 20 to 30 yards. Forbes's and Guppy's investigations go to show that, contrary to Darwin's belief, there is no evidence of the lagoon or the lagoon atoll being in either of the Keeling groups.

The atoll has an exceedingly healthy climate, and might well be used as a sanatorium for phthisical patients, the temperature never reaching extremes. The highest annual reading of the thermometer hardly ever exceeds 89° F. or falls beneath 70°. The mean temperature for the year is 78°–8° F., and as the rainfall rarely exceeds 40 in. the atmosphere never becomes unpleasantly moist. The south-east trade blows almost ceaselessly for ten months of the year. Terrific storms sometimes break over the island; and it has been more than once visited by earthquakes. A profitable trade is done in coco-nuts, but there are few other exports. The imports are almost entirely foodstuffs and other necessaries for the inhabitants, who form a patriarchal colony under a private proprietor.

The islands were discovered in 1604 by Captain William Keeling on his voyage from Batavia to the Cape. In 1823 Alexander Hare, an English adventurer, settled on the southernmost island with a number of slaves. Some two or three years after, a Scotchman, J. Ross, who had commanded a brig during the voyage of the Beagle (with his brother, who still (in the ownership) on Direction Island, and his little colony was soon strengthened by Hare's runaway slaves. The Dutch Government had in an informal way claimed the possession of the islands since 1829; but they refused to allow Ross to hoist the Dutch flag, and accordingly the group was taken under British protection in 1856. In 1878 it was attached to the government of Ceylon, and in 1882 placed under the authority of the governor of the Straits Settlements. The ownership and superintendence continued in the Ross family, of whom George Clunies Ross died in 1910, and was succeeded by his son Sydney.

KEEL-MOULDING, in architecture, a round on which there is a small fillet, somewhat like the keel of a ship. It is common in the Early English and Decorated styles.

KHANE, CHARLES SAMUEL (1830–1891), English black-and-white artist, the son of Samuel Browne Keene, a solicitor, was born at Hornsey on the 10th of August 1833. Educated at the Ipswich Grammar School until his sixteenth year, he early showed artistic leanings. Two years after the death of his father he was articled to a London solicitor, but, the occupation proving uncongenial, he was removed to the office of an architect, Mr Pilkington. His spare time was now spent in drawing historical and nautical subjects in water-colour. For these trifles his mother, to whose energy and common sense he was greatly indebted, soon found a purchaser, through whom he was brought to the notice of the Wympers, the wood-engravers. This led to his being bound to them as apprentice for five years. His earliest known
KEENE, L.—KEEP

713

design is the frontispiece, signed “Chas. Keene,” to The Adventures of Dick Boldhero in Search of his Uncle, &c. (Darton & Co., 1842). His term of apprenticeship over, he hired a room in an attic in the block of buildings standing, up to 1900, between the Strand and Holywell Street, and was soon hard at work for the Illustrated London News. At this time he was a member of the “Artists’ Society” in Clipstone Street, afterwards removed to the Langham studios. In December 1831 he made his first appearance in Punch and, after nine years of steady work, was called to a seat at the famous table. It was during this period of probation that he first gave evidence of those transcendent qualities which made his work at once the joy and despair of his brother craftsmen. On the starting of Once a Week, in 1839, Keene’s services were requisitioned, his most notable series in this periodical being the illustrations to Charles Reade’s A Good Fight (afterwards rechristened The Cleoister and the Heath). and to George Meredith’s Evan Harrington. There is a quality of conventionality in the earlier of these which completely disappears in the later.

In 1858 Keene, who was endowed with a fine voice and was an enthusiastic admirer of old-fashioned music, joined the “Jermyn Band,” afterwards better known as the “Morya Minstrels.” He established, also for many years a member of Leslie’s Choir, the Sacred Harmonic Society, the Catch, Gleam and Canon Club, and the Bach Choir. He was also the industrious performer on the bagpipes, of which instrument he brought together a considerable collection of specimens. About 1863 the Arts Club in Hanover Square was started, with Keene as one of the original members. In 1864 John Leech died, and Keene’s work in Punch thenceforward found wider opportunities. It was about this time that the greatest of all modern artists of his class, Meissen, discovered Keene’s existence, and became a subscriber to Punch solely for the sake of enjoying week by week the work of his brother craftsman. In 1872 Keene, who, though fully possessed of the humorous sense, was not within measurable distance of Leech as a jester, and whose drawings were consequently not sufficiently “funny” to appeal to the laughter-loving public, was fortunate enough to make the acquaintance of Mr. Joseph Crawhall, who had been in the habit for many years of jotting down any humorous incidents he might hear of or observe, illustrating them at leisure for his own amusement. These were placed unreservedly at Keene’s disposal, and to their inspiration he owe at least 250 of his most successful drawings in the last twenty years of his connexion with Punch.

A list of more than 300 of these subjects is given at the end of The Life and Letters of Charles Keene of “Punch.” In 1879 Keene removed to 239 King’s Road, Chelsea, which he occupied until his last illness, walking daily to and from his house, 112 Hammersmith Road. In 1881 a volume of his Punch drawings was published by Messrs. Bradbury & Agnew, with the title Our People. In 1883 Keene, who had hitherto been a strong man, developed symptoms of dyspepsia and rheumatism. By 1889 these had increased to an alarming degree, and the last two years of his life were passed in acute suffering borne with the greatest courage. He died unmarried, after a singularly eventful life, on the 4th of January 1891, and his body lies in Hammersmith cemetery.

Keene, who never had any regular art training, was essentially an artists’ artist. He holds the foremost place amongst English craftsmen in black and white, though his work has never been appreciated at its real value by the general public. The main reason for this lack of public recognition was his unconventionality. He drew his models exactly as he saw them, not as he knew the world wanted to see them. He found enough beauty and romance in all that was around him, in his Punch work, enough subtile humor in nature seized at her most humorous moments to satisfy him. He never required his models to grill through a horse collar, as Gillray did, to put on their company manners, as was du Maurier’s wont. But Keene was not unkindly hard in his pen. He had an etcher he also has to be reckoned with, notwithstanding the fact that his plates numbered not more than fifty at the outside. Impressions of them are exceedingly rare, and hardly half a dozen of the plates are now known to be in existence. He himself regarded them only as experiments in a difficult but fascinating medium. But in the opinion of the expert they suffice to place him among the best etchers of the 19th century. Apart from the etched frontispieces to some of the Punch pocket-books, only three, and these by no means the best, have been published. Writing in L’Artiste for May 1891 of a few which he had seen, Bracquemond says: “By the freedom, the largeness of their drawing and execution, these plates must be classed amongst modern etchings of the first rank.” A few impressions are to be found in the British Museum, but in the main they were given away to friends and lies hidden in the albums of the collector.

KEENE, LAURA (c. 1820-1873), Anglo-American actress and manager, whose real name was Martha Moss, was born in England, in 1834, in London, she was playing Pantaloon in The Lady of Lyons. She made her first appearance in New York on the 20th of September 1852, on her way to Australia. She returned in 1855 and till 1863 managed Laura Keene’s theatre, in which was produced, in 1858, Our American Cousin. It was her company that was playing at Ford’s theatre, Washington, on the night of Lincoln’s assassination. Miss Keene was a successful melodramatic actress, and an admirable manager. She died at Montclair, New Jersey, on the 4th of November 1873.

See John Creahan’s Life of Laura Keene (1897).

KEENE, a city and the county-seat of Cheshire county, New Hampshire, U.S.A., on the Ashuelot river, about 45 m. S.W. of Concord, N.H., and about 92 m. W.N.W. of Boston. Pop. (1800), 9105, of whom 1255 were foreign-born; (1910 census), 10,668. Area, 36-5 sq. m. It is served by the Boston & Maine railroad and by the Fitchburg railroad (leased by the Boston & Maine). The site is level, but is surrounded by ranges of lofty hills—Monadnock Mountain is about 10 m. S.E. Most of the streets are pleasantly shaded. There are three parks, with a total area of about 219 acres; and in Central Square stands a soldiers’ and sailors’ monument designed by Martin Milmore and erected in 1871. The principal buildings are the city hall, the county buildings, and the city hospital. The Public Library had in 1908 about 16,530 volumes. There are repair shops of the Boston & Maine railroad here, and manufactures of boots and shoes, woolen goods, furniture (especially chairs), pottery, &c. The value of the factory product in 1905 was $8,600,667. The site of Keene was one of the Massachusetts grants made in 1733, but Canadian Indians made it untenable and it was abandoned from 1746 until 1750. In 1753 it was incorporated and was named Keene, in honour of Sir Benjamin Keene (1697-1757), the English diplomatist, who was agent for the South Sea Company and Minister in Madrid, and as responsible for the commercial treaty between England and Spain in 1750, was in high reputation at the time; it was chartered as a city in 1874.

KEEP, ROBERT PORTER (1844-1904), American scholar, was born in Farmington, Connecticut, on the 26th of April 1844. He graduated at Yale in 1865, was instructor there for two years, and was a United States consul at the Piraeus in Greece in 1869-71, taught Greek in Williston Seminary, Easthampton, Massachusetts, in 1876-1879, and was principal of Norwich Free Academy, Norwich, Connecticut, from 1885 to 1903, the school owing its prosperity to him hardly less than to some of its founders. In 1903 he took charge of Miss Porter’s school for Girls, Farmington, Conn., founded in 1834 and long controlled by his aunt, Sarah Porter. He died in Farmington on the 3rd of June 1904.

KEEP (corresponding to the French donjon), in architecture the innermost and strongest part of a medieval castle, answering to the citadel of modern times. The arrangement is said to have originated with Gundulf, bishop of Rochester (d. 1108), architect of the White Tower. The Norman keep is generally a very massive square tower. There is generally a well in a medieval keep, ingeniously concealed in the thickness of a wall or in a pillar. The most celebrated keeps of Norman times in England are the White Tower in London, those at Rochester.
KEEWATIN—

was from languages. The derivation is unknown; no words related to it are found in cognate languages. The earliest meaning (c. 1000) appears to have been laid hold of, to seize, from which its common uses of to guard, observe, retain possession of, have developed.

KEEWATIN, a district of Canada, bounded E. by Committee Bay, Fox Channel, and Hudson and James bays, S. and S.W. by the Albany and English rivers, Manitoba, Lake Winnipeg, and Nelson river, W. by the 100th meridian, and N. by Simpson and Rae straits and gulfs and peninsula of Boothia; thus including an area of 445,000 sq. m. Its surface is in general barren and rocky, studded with innumerable lakes with intervening elevations, forest-clad below 60° N., but usually bare or covered with moss or lichens, forming the so-called barren lands of the north. With the exception of a strip of Silurian and Devonian rocks, 40 to 80 m. wide, extending from the vicinity of the Severn river to the Churchill, and several isolated areas of Cambrian and Huronian, the district is occupied by Laurentian rocks. The principal river is the Nelson, which, with its great tributary, the Saskatchewan, is 1450 m. long; other tributaries are the Berens, English, Winnipeg, Red and Assiniboine. The Hayes, Severn and Winisk also flow from the south-west into Hudson Bay, and the Ekwian, Attawapiskat and Albany, 500 m. long, into James Bay. The Churchill, 925 m., Thlewiaza, Maguse, and Ferguson rivers discharge into Hudson Bay on the west side; the Kazan, 500 m., and Dubawnt, 600 m., into Chesterfield Inlet; and Back's river, rising near Aymler Lake, flows north-eastwards 350 m. to the Arctic Ocean. The principal lakes are St Joseph and Seul on the southern boundary; northern part of Lake Winnipeg, 710 ft. above the sea; Island, Severn, and Winisk are 490 ft.; the Nuestra Señora is of 350 ft.; Maguse; Kaminuriak; Baker, 30 ft.; Aberdeen, 130 ft.; and Garry. The principal islands are Southampton, area 17,800 sq. m.; Marble Island, the usual wintering place for whaling vessels; and Bell and Coats Islands, in Hudson Bay; and Akimiski, in James Bay. A few small communities at the posts of the Hudson Bay Company constitute practically the whole of the white population. In 1897 there were 852 Indians in the Churchill and Nelson rivers district, but no figures are available for the district as a whole. The principal posts in Keewatin are Norway House, near the outlet of Lake Winnipeg; Oxford House, on the lake of the same name; York Factory, at the mouth of Hayes river; and Forts Severn and Churchill, at the mouths of the Severn and Churchill rivers respectively. In 1905 the district of Keewatin was included in the North-West Territories and the whole placed under an administrator or acting governor. The derivation of the name is from the Cree, "the north wind."

KEF, more correctly El-Kef (the Rock), a town of Tunisia, 135 m. by rail S.S.W. of the capital, and 75 m. S.E. of Bona in Algeria. It occupies the site of the Roman colony of Sicca Veneria, and is built on the steep slope of a rock in a mountainous region through which flows the Melléguze, an affluent of the Mejerda. Situated at the intersection of main routes from the west and south, Keef occupies a position of strategic importance. Though distant some 22 m. from the Algerian frontier it was practically a border post, and its walls and citadel were kept in a state of defence by the Tunisians. The town with its half-dozen mosques and tortuous, dirty streets, is still partly walled. The southern part of the wall has however been destroyed by the French, and the remainder is being left to decay. Beyond the part of the wall destroyed is the French quarter. The kasbah, or citadel, occupies a rocky eminence on the south side of the town. It was built, or rebuilt, by the Turks, the material being Roman. It has been restored by the French, who maintain a garrison here.

The Roman remains include fragments of a large temple dedicated to Hercules, and of the baths. The ancient cisterns remain, but are empty, being used as part of the barracks. The town is however supplied by water from the same spring which filled the cisterns. The Christian abbey is on the site of a basilica. There are ruins of another Christian basilica, excavated by the French, the apse being intact and the narthex serving as a church. Many stones with Roman inscriptions are built into the walls of Arab houses. The modern town is much smaller than the Roman colony. Pop. about 6000, including about 100 Europeans (chiefly Maltese).

The Roman colony of Sicca Veneria appears from the character of its worship of Venus (Val. Max. ii. 6, § 15) to have been a Phoenician settlement. It was afterwards a Numidian stronghold, and under the Vandals became a fashionable residential city and one of the chief centres of Christian influence in North Africa. The Christian apologist Arnobius the Elder lived here.

See H. Barth, Die Küstenländer des Mittelmeeres (1845); Corpus Inscriptionum Celtearum, vol. viii.; Sombrun in Bull. de la soc. d'Hist. de Bordeaux (1878). Also Cardinal Newman's Caligula; A Sketch of the Third Century (1856), for a "reconstruction" of the manner of life of the early Christians and their oppressors.

KEHL, a town in the grand-duchy of Baden, on the right bank of the Rhine, opposite Strassburg, with which it is connected by a railway bridge and a bridge of boats. Pop. 4000. It has a considerable river trade in timber, tobacco and coal, which has been developed by the formation of a harbour with two basins. The chief importance of Kehl is its connexion with the military defence of Strassburg, to the strategic area of which it belongs. It is encircled by the strong forts Bose, Blumenthal and Kirchbach of that system. In 1678 Kehl was taken from the imperialists by the French, and in 1683 a new fortress, built by Vauban, was begun. In 1697 it was restored to the Empire and was given to Baden, but in 1793 and again in 1795 it was taken by the French, who did not however retain it for very long. In 1793 the French again took the town, which was retaken by the Austrians and was restored to Baden in 1805. In 1808 the French, again in possession, restored the fortifications which were dismantled in 1815, when Kehl was again restored to Baden. In August 1870, during the Franco-German War, the French shelled the defenceless town.

KEIGHLEY (locally KEEDEY), a municipal borough in the Keighley parliamentary division of the West Riding of Yorkshire, England, 17 m. W.N.W. of Leeds, on branches of the Great Northern and Midland railways. Pop. (1901), 41,564. It is beautifully situated in a deep valley near the junction of the Worth with the Aire. A canal between Liverpool and Hull affords it water communication with both west and east coasts. The principal buildings are the parish church of St Andrew (dating from the time of Henry I., modernized in 1770, rebuilt with the exception of the tower in 1805, and again rebuilt in 1878), and the handsome Gothic mechanics' institute and technical school (1878). A grammar school was founded in 1873, the operations of which have been extended so as to embrace a trade school (1871) for boys, and a grammar school for girls. The principal industries are manufactures of woollen goods, spinning, sewing and washing machines, and tools. The town was incorporated in 1882, and the corporation consists of a mayor, 6 aldermen and 18 councillors.

KEI ISLANDS [Ke, Key, Kii, &c.; native, Ewali], a group in the Dutch East Indies, in the residency of Amboyna, between 5° and 6° 5' S. and 131° 50' and 132° 15' E., consisting of four parts: Nuhu-Iut or Great Kei, Roa or Little Kei, the Tayanada, and the Kur group. Great Kei differs physically in every respect from the other groups. It is of Tertiary formation (Miocene), and has a chain of volcanic elevations along the axis, reaching a height of 2600 ft. Its area is 290 sq. m., the total land area of the group being 572 sq. m. All the other islands are of post-Tertiary formation and of level surface. The group has submarine connexion, under relatively shallow sea, with the Timorlaut group to the south-west and the chain of islands extending north-westwards through Ceram; deep water separates it on the east from the Aru Islands and on the west from the inner islands of the Banda Sea. Among the products are coco-nuts, sa-o, fish, trepang, timber, copra, maize, yams
and tobacco. The population is about 23,000, of whom 14,000 are pagans, and 8300 Mahomedans.

The inhabitants are of three types. There is the true Kei Islander, a Polynesian by his height and black or brown wavy hair, with a complexion between the Papuan black and the Malay yellow. There is the pure Papuan, who has been largely merged in the Kei type. Thirdly, there are the immigrant Malays. These (distinguished by the use of a special language and by the profession of Mohammedanism) are descendants of natives of the Banda islands who fled eastward before the encroachments of the Dutch. The pagans have rude statues of deities and places of sacrifice indicated by flat-topped cairns. The Kei Islanders are skillful in carving and celebrated boat-builders.

KEIM, KARL THEODOR (1825-1878), German Protestant theologian, was born at Stuttgart on the 17th of December 1825. His father, Johann Christian Keim, was headmaster of a gymnasium. Here Karl Theodor received his early education, and then proceeded to the Stuttgart Obergymnasium. In 1843 he went to the university of Tübingen, where he studied philosophy under J. F. Reiß, a follower of Hegel, and Oriental languages under Heinrich Ewald and Heinrich Meier. F. C. Baur, the leader of the new Tübingen school, was lecturing on the New Testament and the literature and history of religions, and Keim was so impressed by him in particular that Keim was greatly impressed. The special bent of Keim's mind is seen in his prize essay, Verhältniss der Christen in den ersten drei Jahrhunderten bis Konstantin zum römischen Reiche (1847). His first published work was Die Reformation der Reichsstadt Ulm (1851). In 1850 he visited the university of Bonn, where he attended some of the lectures of Friedrich Bleek, Richard Rothe, C. M. Arndt and Isaak Dornern. He taught at Tübingen from June 1851 until 1856, when, having become a pastor, he was made deacon at Esslingen, Württemberg. In 1859 he was appointed archdeacon; but a few months later he was called to the university of Zürich as professor of theology (1859-1873), where he produced his important works. Before this he had written on church history (e.g. Schwäbische Reformationsgeschichte bis zum Augsburger Reichsstag, 1853). His inaugural address at Zürich on the historical development of Jesus, Die künstliche Entwicklung Jesu Christi (1861), and his Die geschichtliche Würde Jesu (1864) were preparatory to his chief work, Die Geschichte Jesu von Nazara in ihrer Verkehrung mit dem Gesamtheben seines Volkes (3 vols., 1867-1872; Eng. trans., Jesus of Nazareth, and the National Life of Israel, 6 vols., 1873-1882).

In 1873 Keim was appointed professor of theology at Giessen. This post he resigned, through ill-health, shortly before his death on the 17th of November 1878. He belonged to the "meditation" school of theology.

Chief works, besides the above: Reformationsblatter der Reichs- stadt Esslingen (1866); Ambrosius Blarer, der Schwäbische Reformator (1866); Der Übergang des Konstantin d. G. zum Christenthun (1868); his sermons, Freundeswoche zur Gemeinde (2 vols., 1861-1862); and Celsus' wahres Wort (1873). In 1881 H. Ziegler published one of Keim's earliest works, Rom und das Christenthum, with a biographical sketch. See also Ziegler's article in Herzog-Hauck, Realencyklopädie.

KEITH, the name of an old Scottish family which derived its name from the barony of Keith in East Lothian, said to have been granted by Malcolm II, king of Scotland, to a member of the house for services against the Danes, who had driven the姓 of the great Earl of Scotland, afterwards hereditary in the Keith family, may have been conferred at the same time; for it was confirmed, together with possession of the lands of Keith, to Sir Robert Keith by a charter of King Robert Bruce, and appears to have been held as annexed to the land by the tenure of a great seigniety. Sir Robert Keith commanded the Scottish horse at Bannockburn, and was killed at the battle of Neville's Cross in 1346. At the close of the 14th century Sir William Keith, by exchange of lands with Lord Lindsay, obtained the crag of Dunnottar in Kincardineshire, where he built the castle of Dunnottar, which became the stronghold of his descendants. He died about 1407. In 1430 a later Sir William Keith was created Lord Keith, and a few years afterwards earl marshall, and these titles remained in the family till 1716. William, fourth earl marshall (d. 1581), was one of the guardians of Mary queen of Scots during her minority, and was a member of her privy council on her return to Scotland. While refraining from extreme partisanship, he was an adherent of the Reformation; he retired into private life at Dunnottar Castle about 1567, thereby gaining the sobriquet "William of the Tower." He was reputed to be the wealthiest man in Scotland. His eldest daughter Anne married the regent Murray. His grandson George, 5th earl marshall (c. 1553-1623), was one of the most cultured men of his time. He was educated at King's College, Aberdeen, where he became a proficient classical scholar, afterwards studying divinity under Theodore Beza at Geneva. He was a firm Protestant, and took an active part in the affairs of the Kirk. His high character and abilities procured him the appointment of special ambassador to Denmark to arrange the marriage of James VI. with the Princess Anne. He was subsequently employed on a number of important commissions; but he preferred literature to public affairs, and about 1620 he retired to Dunnottar, where he died in 1623. He is chiefly remembered as the founder in 1593 of the Marischal College in the university of Aberdeen, which he richly endowed. From an uncle he inherited the title of Lord Altrie about 1590. William, 7th earl marshall (c. 1617-1661), took a prominent part in the Civil War, being at first a leader of the covenanting party in north-east Scotland, and the most powerful opponent of the marquess of Huntly. He co-operated with Montrose in Aberdeenshire and neighbouring counties against the Gordons. With Montrose he signed the Bond of Cumbernauld in August 1640, but took no active steps against the popular party till 1648, when he joined the duke of Hamilton in his invasion of England, escaping from the rout at Preston. In 1650 Charles II. was entertained by the marischal at Dunnottar; and in 1651 the Scottish regalia were left for safe keeping in his castle. Taken prisoner in the same year, he was committed to the Tower and was excluded from Cromwell's Act of Grace. He was made a privy councillor at the Restoration and died in 1661. Sir John Keith (d. 1714), brother of the 7th earl marshall, was, at the Restoration, given the hereditary office of knight marshall of Scotland, and in 1677 was created earl of Kintore, and Lord Keith of Inverurie and Keith-Hall, a reward for his share in preserving the regalia of Scotland, which were secretly conveyed from Dunnottar to another hiding-place, when the castle was besieged by Cromwell's troops, and which Sir John, perversely to himself, swore he had carried abroad and delivered to Charles II., thus preventing further search. From him are descended the earls of Kintore.

George, 10th earl marshall (c. 1693-1778), served under Marlborough, and like his brother Francis, Marshal Keith (q.v.), was a zealous Jacobite, taking part in the rising of 1715, after which he esped to the continent. In the following year he was attainted, his estates and titles being forfeited to the Crown. He lived for many years in Spain, where he concerned himself with Jacobite intrigues, but he took no part in the rebellion of 1745, proceeding about that year to Prussia, where he became, like his brother, intimate with Frederick the Great. Frederick employed him in several diplomatic posts, and he is said to have conveyed valuable information to the earl of Chatham, as a reward for which he received a pardon from George II., and returned to Scotland in 1759. His heir male, on whom but for the attainder of 1716, his titles would have devolved, was apparently his cousin Alexander Keith of Ravelston, to whom the attainted earl had sold the castle and lands of Dunnottar in 1766. From Alexander Keith was descended, through the female line, Sir Patrick Keith Murray of Ochtertyre, who sold the estates of Dunnottar and Ravelston. After the attainder
of 1716 the right of the Keiths of Ravelston to be recognized as the representatives of the earls marshall was disputed by Robert Keith (1681-1757), bishop of Fife, a member of another collateral branch of the family. The bishop was a writer of some repute, his chief work, *The History of the Affairs of the Church and State of Scotland* (Edinburgh, 1734), being of considerable value for the reigns of James V., James VI., and Mary Queen of Scots. He also published a *Catalogue of the Bishops of Scotland* (Edinburgh, 1755), and other less important historical and theological works.

ROBERT KEITH (d. 1774), descended from a younger son of the 2nd earl marshall, was British minister in Vienna in 1748, and subsequently held other important diplomatic appointments, being known to his numerous friends, among whom were the leading men of letters of his time, as ambassador to Russia, High Commissioner for Robert Murray Keith (1730-1795), and later Lord George Sackville's staff at the battle of Minden. He became colonel of a regiment (the 87th foot) known as Keith's Highlanders, who won distinction in the continental wars, but were disbanded in 1763; he was then employed in the diplomatic service, in which he achieved considerable success by his honesty, courage, and knowledge of languages. In 1781 he became lieutenant-general; in 1789 he was made a privy councillor.

From the Keith family through the female line was descended George Keith Elphinstone, Baron Keith of Stonehaven, Marishal and afterwards Viscount Keith (g.o.), whose titles became extinct at the death of his daughter Margaret, Baroness Keith, in 1904.

KEITH, FRANCIS EDWARD JAMES (1696-1738), Scottish soldier and Prussian field marshal, was the second son of William, 9th earl marshall of Scotland, and was born on the 11th of June 1696 at the castle of Inverugie near Peterhead. Through his careful education under Robert Keith, bishop of Fife, and subsequently at Edinburgh University in preparation for the legal profession, he acquired that taste for literature which afterwards secured him the esteem of the most distinguished savants of Europe; but at an early period his preference for a soldier's career was decided. The rebellion of 1715, in which he displayed qualities that gave some augury of his future eminence, compelled him to seek safety on the Continent. After spending two years in Paris, chiefly at the university, he in 1717 took part in the ill-starred expedition of the Pretender to the Highlands of Scotland. He then passed some time at Paris and Madrid in obscurity and poverty, but eventually obtained a colonelcy in the Spanish army, and, it is said, took part in the siege of Gibraltar (1726-27). Finding his Protestantism a barrier to promotion, he obtained from the king of Spain a recommendation to Peter II. of Russia, from whom he received (1727) the appointment of adjutant of the guards. He displayed in numerous campaigns the calm, intelligent and watchful character which was his chief characteristic, obtaining the rank of general of infantry and the reputation of being one of the ablest officers in the Russian service as well as a capable and liberal civil administrator. Judging, however, that his rewards were not commensurate with his merits, he in 1747 offered his services to Frederick II. of Prussia, whom he was to have received the rank of field marshal, in 1749 made him governor of Berlin, and soon came to cherish towards him, as towards his brother, the 10th earl marshall, a strong personal regard. In 1756 the Seven Years' War broke out. Keith was employed in high command from the first, and added to his Russian reputation on every occasion by resolution and promptitude of action, not less than by care and skill. In 1756 he commanded the troops covering the investment of Pirmas, and distinguished himself at Lobositz. In 1757 he commanded at the siege of Prague; later in this same campaign he defended Leipzig against a greatly superior force, was present at Rossbach, and, while the king was fighting the campaign of Leuthen, conducted a foray into Bohemia. In 1758 he took a prominent part in the unsuccessful Moravian campaign, after which he withdrew from the army to recruit his broken health. He returned in time for the autumn campaign in the Lausitz, and was killed on the 14th of October 1758 at the battle of Hochkirch. His body was honourably buried on the field by Marshal Daun and General Lacy, the son of his old commander in Russia, and was shortly afterwards transferred by Frederick to the garrison church of Berlin. Many memorials were erected to him by the king, Prince Henry, and others. Keith died unmourned, but had several children by his mistress, Eva Mertens, who was employed by him during the war of 1741-45.

In 1889 the 1st Silesian infantry regiment, No. 22 of the German army received his name.

KEITH, GEORGE (c. 1630-1716), British divine, was born at Aberdeen about 1639 and was educated for the Presbyterian ministry at Marischal College in his native city. In 1662 he became a Quaker and worked with Robert Barclay (q.v.). After 1666 he edited and issued in London the *Books of the German Gifts* of Germany on an evangelistic tour with George Fox and William Penn. Two further terms of imprisonment in England induced him (1684) to emigrate to America, where he was surveyor-general in East New Jersey and then a schoolmaster at Philadelphia. He travelled in New England defending Quakerism against the attacks of Increase and Cotton Mather, but after a time fell out with his own folk on the subject of the atonement, accused them of deistic views, and started a community of his own called "Christian Quakers" or "Keithians." He endeavoured to advance his views in London, but the Yearly Meeting of 1694 disowned him, and he established a society at Turner's Hall in Philpot Lane, where he so far departed from Quaker usage as to administer the two sacraments. In 1700 he conformed to the Anglican Church, and from 1702 to 1704 was an agent of the Society for the Propagation of the Gospel in America. He died on the 27th of March 1716 at Edburton in Sussex, of which parish he was rector. Among his writings were *The Deism of William Penn and his Brethren* (1699); *The Standard of the Quakers examined; or, an Answer to the Apology of Robert Barclay* (1702); *A Journal of Travels* (1706). Gilbert Burnet, bishop of Salisbury, a fellow-Aberdonian, speaks of him as "the most learned man that ever was in that sect, and well versed in the Oriental tongues, philosophy and mathematics."

KEITH, GEORGE KEITH ELPHINSTONE, VISCOUNT (1746-1823), British admiral, fifth son of the 10th Lord Elphinstone, was born in Elphinstone Tower, near Stirling, on the 7th of June 1746. He joined the Royal Navy in 1759, and obtained his discharge papers by entering the navy in 1761, in the "Gosport," then commanded by Captain Jervis, afterwards Earl St Vincent. In 1767 he made a voyage to the East Indies in the Company's service, and put £2000 lent him by an uncle to such good purpose in a private trading venture that he laid the foundation of a handsome fortune. He became lieutenant in 1770, commander in 1772, and post captain in 1775. During the war in America he was employed against the privateers, and with a naval brigade at the occupation of Charleston, S.C. In January 1781, when in command of the "Warwick" (50), he captured a Dutch 50-gun ship which had beaten off an English vessel of equal strength a few days before. After peace was signed he remained on shore for ten years, serving in Parliament as member first for Dumbartonshire, and then for Stirlingshire. When war broke out again in 1793 he was appointed to the "Robust" (74), in which he took part in the occupation of Toulon by lord Hood. He
particularly distinguished himself by beating a body of the French ashore at the head of a naval brigade of English and Spaniards. He was entrusted with the duty of embarking the fugitives when the town was evacuated. In 1794 he was promoted rear-admiral, and in 1799 he was sent to occupy the Dutch colony of Ceylon. His ship, the Venerable, captured a large share in the capture of the Cape in 1795, and in August 1796 captured a whole Dutch squadron in Saldhana Bay. In the interval he had gone to India, where his health suffered, and the capture at Saldhana was effected on his way home. When the Mutiny at the Nore broke out in 1797 he was appointed to the command, and was soon able to restore order. He was equally successful at Plymouth, where the squadron was also in a state of effervescence. At the close of 1798 he was sent as second in command to St Vincent. It was for a long time a thankless post, for St Vincent was at once half incapacitated by ill-health and very arbitrary, while Nelson, who considered that Keith's appointment was a personal slight to himself, was peevish and insubordinate. The escape of a French squadron which entered the Mediterranean from Brest in May 1799 was mainly due to jarrings among the British naval commanders. Keith followed the enemy to Brest on their retreat, but was unable to bring them to action. He returned to the Mediterranean in November as commander-in-chief. He co-operated with the Austrians in the siege of Genoa, which surrendered on the 4th of June 1800. It was however immediately afterwards lost in consequence of the battle of Marengo, and the French made their re-entry so rapidly that the admiral had considerable difficulty in getting his ships out of the harbour. The close of 1801 and the beginning of the following year were spent in transporting the army sent to recover Egypt from the French. As the naval force of the enemy was completely driven into port, the British admiral had no opportunity of an act at sea, but his management of the convoy carrying the troops, and of the landing at Aboukir, was greatly admired. He was made a baron of the United Kingdom—an Irish barony having been conferred on him in 1797. On the renewal of the war in 1803 he was appointed commander-in-chief in the North Sea, which post he held till 1807. In February 1812 he was appointed commander-in-chief in the Channel, and in 1814 he was raised to a viscountcy. During his last two commands he was engaged first in over-looking the measures taken to meet a threatened invasion, and then in directing the movements of the numerous small squadrons and private ships employed on the coasts of Spain and Portugal, and in protecting trade. He was at Plymouth when Napoleon surrendered and was brought to England in the "Bellerophon" by Captain Maitland (1777-1839). The decisions of the British government were expressed through him to the fallen Emperor. Lord Keith refused to be led into disputes, and confined himself to declaring steadily that he had his orders to obey. He was not much impressed by the appearance of his illustrious charge, and thought that the airs of Napoleon and his suite were ridiculous. Lord Keith died on the 10th of March 1823 at Tullyullan, his property in Scotland, and was buried in the parish church. A portrait of him by Owen is in the Painted Hall in Greenwich. He was twice married: in 1787 to Jane Mercer, daughter of Colonel William Mercer of Aldie; and in 1808 to Hester Maria Thrale, who is spoken of as "Queenie" in Boswell's Life of Johnson and Mme. D'Aubigny's Diary. He had a daughter by each marriage, but no son. Thus the viscountcy became extinct on his death, but the English and Irish baronies descended to his elder daughter Margaret (1788-1867), who married the Comte de Flahaut de la Billardière, only to become extinct on her death.

There is a panegyric Life of Lord Keith by Alex. Allardyce (Edinburgh, 1882); and biographical notices will be found in John Marshall's New Naval Biography, i. 45 (1823-1835), and the Naval Chronicle, x. 1.

KEITH, a police burgh of Banffshire, Scotland, on the Isla, 53½ m. N.W. of Aberdeen by the Great North of Scotland railway. Pop. (1801), 473. A branch of the Highland railway also gives access to Elgin, and there is a line to Buckie and Portessie on the Moray Firth. The burgh includes Old Keith and New Keith on the east bank of the Isla, and Fife-Keith on the west bank. Though Old Keith has a charter dating from William the Lion it fell into gradual decay; New Keith, founded in the 18th century by the second earl of Seafield, being better situated for the growth of a town. Fife-Keith has sprung up since 1816. The principal public buildings include the Tuscan memorial hospital, the Longmore hall, and the Institute. In the Roman Catholic church there is a painting of the "Incredulity of St Thomas," presented by Charles X. of France. The industries include manufactures of tweeds, blankets, agricultural implements, and boots and shoes; there are also distilleries, breweries, flour mills, and lime and manure works. But the main importance of Keith lies in the fact that it is the centre of the agricultural trade of the shire. The "Summer Eve Fair" held in September is the largest cattle and horse fair in the north of Scotland; the town is also the headquarters of the dressed-meat trade in the north.

KEIJ, or KECH, the chief place in a district of the province of Makran in Baluchistan, which has given its name to Kej-Makran, as distinguished from Persian Makran. There is no town, but a number of small villages dominated by a fort built upon a rock, on the eastern bank of the Kej River. This fort, like many others similarly placed throughout the country, is supposed to be impregnable, but is of no strength except against the matchlocks of the surrounding tribes. Kej (or Kiz) was an important trade centre in the days of Arab supremacy in Sind, and the rulers of Kalat at various times marched armies into the province with a view to maintaining their authority. At the beginning of the 19th century it had the reputation of a commercial centre, trading through Panjgur with Kandahar, with Karachi via Bela, and with Muscat and the Persian Gulf by the seaport of Gwadar, distant about 80 m. The present Khan of Kalat exercises but a feeble sway over this portion of his dominion, although he appoints a governor to the province. The principal tribe residing around Kej is that of the Gichki, who claim to be of Rajput origin, and to have settled in Makran during the 17th century, having been driven out of Rajputana. The climate during summer is too hot for Europeans. During winter, however, it is temperate. The principal exports consist of dates, which are considered of the finest quality. A local revolt against Kalat rendered an expedition against Kej necessary in 1898. Colonel Mayne reduced the fortress and restored order in the surrounding districts.

KEKULÉ, FRIEDRICH AUGUST (1829-1896), German chemist, was born at Darmstadt on the 7th of September 1829. While studying architecture at Giessen he came under the influence of Liebig and was induced to take up chemistry. From Giessen he went to Paris, and then, after a short sojourn in Switzerland, he visited England. Both in Paris and in England he enjoyed personal intercourse with the leading chemists of the period. On his return to Germany he started a small chemical laboratory at Heidelberg, where, with a very slender equipment, he carried on several important researches. In 1858 he was appointed professor of chemistry at Ghent, and in 1865 was called to Bonn to fill a similar position, which he held till his death in that town on the 13th of June 1896. Kekulé's main importance lies in the far-reaching contributions which he made to chemical theory, especially in regard to the constitution of the carbon compounds. The doctrine of atomics had already been enunciated by E. Frankland, when in 1858 Kekulé published a paper in which, after giving reasons for regarding carbon as a tetravalent element, he set forth the essential features of his famous doctrine of the linking of atoms. He explained that in substances containing several carbon atoms it must be assumed that some of the affinities of each carbon atom are bound by the affinities of the atoms of other elements contained in the substance, and some by an equal number of the affinities of the other carbon atoms. The simplest case is when two carbon atoms are combined so that one affinity of the one is tied to one affinity of the other; two, therefore, of the affinities of the two atoms are occupied in keeping the two atoms together, and only the remaining six are available for atoms of other elements. The next simplest case consists in the mutual interchange of two affinity units, and so on. This conception led Kekulé to his "closed-chain" or "ring" theory of the constitution
KELLER, A.—KELLERMANN

of benzene which has been called the 'most brilliant piece of prediction to be found in the whole range of organic chemistry,' and this in turn led in particular to the elucidation of the constitution of the 'aromatic compounds,' and in general to new methods of chemical synthesis and decomposition, and to a deeper insight into the composition of numberless organic bodies and their mutual relations. Professor F. R. Japp, in the Kekulé memorial lecture he delivered before the London Chemical Society on the 15th of December 1897, declared that three-fourths of modern organic chemistry is directly or indirectly the product of Kekulé's benzene theory, and that without its guidance and inspiration the industries of the coal-tar colours and artificial therapeutic agents in their present form and extension would have been inconceivable.

Many of Kekulé's papers appeared in the Annalen der Chemie, of which he was editor, and he also published an important work, Lehrbuch der organischen Chemie, of which the first three volumes are dated 1861, 1866 and 1882, while of the fourth only one small section was issued in 1887.

KELLER, ALBERT (1845—), German painter, was born at Gais, in Switzerland; he studied at the Munich Academy under Lenbach and Ramberg, and must be counted among the leading colourists of the modern German school. Travels in Italy, France, England and Holland, and a prolonged sojourn in Paris, helped to develop his style, which is marked by a sense of elegance and refinement all too rare in German art. His scenes of society life, such as the famous 'Dinner' (1890), are painted with thoroughly Parisian esprit, and his portraits are marked by the same elegant distinction. He is particularly successful in the rendering of rustling silk and satin dresses and draperies. His historical and imaginative works are as modern in spirit and as unacademic as his portraits. At the Munich Pinakothek is his painting 'Jairi Töchterlein' (1886), whilst the Königsburg Museum contains his 'Roman Bath,' and the Liebieg collection in Reichenberg the 'Audience with Louis XV.,' the first picture that drew attention to his talent. Among other important works he painted 'Faustina in the Temple of Juno at Praeneste,' 'The Witches' Sleep' (1888), 'The Judgment of Paris,' 'The Happy Sister,' 'Temptation' (1891), 'Autumn' (1893), 'An Adventure' (1896), and 'The Crucifixion.'

KELLER, GOTTFRIED (1810—1890), German poet and novelist, was born at Zürich on the 10th of July 1810. His father, a master joiner, dying while Gottfried was young, his early education was neglected; he, however, was in 1835 apprenticed to a landscape painter, and subsequently spent two years (1840—1842) in Munich learning to paint. Interest in politics drew him into literature, and his talents were first discovered in a volume of short poems, Gedichte (1846). This obtained him recognition from the government of his native canton, and he was in 1848 enabled to take a short course of philosophical study at the university of Heidelberg. From 1850 to 1855 he lived in Berlin, where he wrote his most important novel, Der grüne Heinrich (1851—1853; revised edition 1879—1880), remarkable for its delicate autobiographic portraiture and the beautiful episodes interwoven with the action. This was followed by Die Leute von Seldwyla (1856), studies of Swiss provincial life, including in Romeo und Julia auf dem Dorfe one of the most powerful short stories in the German language, and in Die drei geraden Kammacher, almost as great a master-piece of humour. His poem Der Rhein, a picture of the metropolis city with a considerable reputation, he received in 1861 the appointment of secretary to the canton. For a time his creative faculty seemed paralysed by his public duties, but in 1872 appeared Sieben Légendes, and in 1874 a second series of Die Leute von Seldwyla, in both of which books he displayed no abatement of power and originality. He retired from the public service in 1876 and employed his leisure in the production of Züricher Novellen (1878), Das Simmedicht, a collection of short stories (1881), and a novel, Martin Salander (Berlin, 1886). He died on the 15th of July 1890 at Hottingen. Keller's place among German novelists is very high. Few have united such fancy and imagination to such uncompromising realism, or such tragic earnestness to such abounding humour. As a lyric poet, his genius is no less original; he takes rank with the best German poets of this class in the second half of the 19th century.

Keller's Gesammelte Werke were published in 10 vols. (1889—1890), to which was added another volume, Nachgelassene Schriften und Gedichte (1891), containing the fragment of a tragedy (1893). In English appeared, G. Keller: A Selection of his Tales translated with a Memoir by Kate Freiligrath-Kröeker (1891). For a further estimate of Keller's life and works cf. O. Brahm (1883); E. Brenning, G. Keller nach seinem Leben und Dichten (1892); F. Bultenjesperger, G. Keller: sa vie et ses oeuvres (1893); A. Frey, Erinnerungen an Gottfried Keller (1893); J. Baechtold, Kellers Leben, Seine Briefe und Tagebücher (Berlin, 1894—1897); A. Köster, G. Keller (1900; 2nd ed., 1907); and for his work as a painter, H. E. von Berlesch, Gottfried Keller als Maler (1895).

KELLER, HELEN ADAMS (1880—), American blind deaf-mute, was born at Tuscumbia, Alabama, in 1880. When barely two years old she was deprived of sight, smell and hearing, by an attack of scarlet fever. At the request of her parents, who were acquainted with the success attained in the case of Laura Bridgman (q.v.), one of the graduates of the Perkins Institution at Boston, Miss Anne M. Sullivan, who was familiar with the teachings of Dr S. G. Howe (q.v.), was sent to instruct her at home. Unfortunately an exact record of the steps in her education was not kept; but from 1888 onwards, at the Perkins Institution, Boston, and under Miss Sarah Fuller at the Horace Mann school in New York, and at the Wright Humason school, she not only learnt to read, write, and talk, but became proficient, to an exceptional degree, in the ordinary educational curriculum. In 1900 she entered Radcliffe College, and successfully passed the examinations in mathematics, &c. for her degree of A. B. in 1904. Miss Sullivan, whose ability as a teacher must be considered almost as marvellous as the talent of her pupil, was throughout her devoted companion. The case of Helen Keller is the most extraordinary ever known in the education of blind deaf-mutes (see Deaf and Dumb ad fin.), her acquisitions including several languages and her general culture being exceptionally wide. She wrote The Story of My Life (1903), and volumes on Optimism (1903), and The World I Live in (1908), which both in literary style and in outlook on life are a striking revelation of the results of months of work in educating those who have been so handicapped by natural disabilities.

KELLERMANN, FRANÇOIS CHRISTOPHE DE (1735—1820), duke of Valmy and marshal of France, came of a Saxon family, long settled in Strassburg and emmobilied, and was born there on the 28th of May 1735. He entered the French army as a volunteer, and served in the Seven Years' War and in Louis XV.'s Polish expedition of 1771, on returning from which he was made a lieutenant-colonel. He became brigadier in 1784, and in the following years maréchal-de-camp. In 1789 Kellermann enthusiastically embraced the cause of the Revolution, and in 1791 became general of the army in Alsace. In April 1792 he was made a lieutenant-general, and in August of the same year there came to him the opportunity of his lifetime. He rose to the occasion, and his victory of Valmy (see French Revolutionary Wars) over the Prussians, in Goethe's words, "opened a new era in the history of the world." Transferred to the army on the Moselle, Kellermann was accused by General Custine of neglecting to support his operations on the Rhine; but he was acquitted at the bar of the Convention, Paris, and placed at the head of the army of Italy. Afterwards it is said he showed himself a careful commander and excellent administrator. Shortly afterwards he received instructions to reduce Lyons, then in revolt against the Convention, but shortly after the surrender he was imprisoned in Paris for thirteen months. Once more honourably acquitted, he was reinstated in his command, and did good service in maintaining the south-eastern border against the Austrians until his army was merged into that of General Bonaparte in Italy. He was then sixty-two years of age, still physically equal to his work, but the young generals who had come to the front in these two years represented the new spirit and the new art of war, and Kellermann's active career came to an end. But the hero of Valmy was never forgotten. When Napoleon came to power Kellermann was named
KELLGREN—KELLY

successively senator (1800), honorary marshal of France (1803), and duke of Valmy (1808). He was frequently employed in the administration of the army, the control of the line of communications, and the command of reserve troops, and his long and wide experience made him one of Napoleon's most valuable assistants. In 1814 he voted for the deposition of the emperor and became a peer under the royal government. After the "Hundred Days" he sat in the Chamber of Peers and voted with the Liberals. He died at Paris on the 23rd of September 1820.

See J. G. P. de Salve, Fragments historiques sur M. le maréchal de Kellermann (Paris, 1807), and De Botdoux, Esquisses de la carrière militaire de F. C. Kellermann, duc de Valmy (Paris, 1817).

His son, François Étienne de Kellermann, duke of Valmy (1770–1833), French cavalry general, was born at Metz and served for a short time in his father's regiment of Hussars previous to entering the diplomatic service in 1791. In 1795 he again joined the army, serving chiefly under his father's command in the Alps, and rising in 1796 to the rank of chief of brigade. In the latter part of Bonaparte's celebrated Italian campaign of 1796–97 the younger Kellermann attracted the future emperor's notice by his brilliant conduct at the forcing of the Tagliamento. He was made general of brigade at once, and continued in Italy after the peace of Campo Formio, being employed successively in the armies of Rome and Naples under Macdonald and Championnet. In the campaign of 1800 he commanded a cavalry brigade under the First Consul, and at Marengo (June 14) he initiated and carried out one of the most famous cavalry charges of history, which, with Desaix's infantry attack, regained the lost battle and decided the issue of the war. He was promoted general of division at once, but as early as the evening of the battle he realized what he thought to be an attempt to belittle his exploit. A heated controversy followed as to the influence of Kellermann's charge on the course of the battle, and in this controversy he displayed neither tact nor forbearance. However, his merits were too great for his career to be ruined either by his conduct in the dispute or by the frequent scandals, and even by the frauds, of his private life. Unlike his father's, his title to fame did not rest on one fortunate opportunity. Though not the most famous, he was perhaps the ablest of all Napoleon's cavalry leaders, and distinguished himself at Austerlitz (September 20), in Portugal under Junot (on this occasion as a skilful diplomatist), at the brilliant cavalry combat of Tornes (Nov. 28, 1809), and on many other occasions in the Peninsular War. His capacity was more than ever notorious in Spain, yet Napoleon met his unconvinced excuses with the words, "General, whenever your name is brought before me, I think of nothing but Marengo." He was on sick leave during the Russian expedition of 1812, but in 1813 and 1814 his skill and leading were as conspicuous as ever. He retained his rank under the first Restoration; but joined Napoleon during the Hundred Days, and commanded a cavalry corps in the Waterloo campaign. At Quatre Bras he personally led his squadrions in the famous cavalry charge, and almost lost his life in the mêlée, and at Waterloo he was again wounded. He was disgraced at the second Restoration, and, on the father's title and seat in the Chamber of Peers in 1820, at once took up and maintained till the fall of Charles X. in 1830 an attitude of determined opposition to the Bourbons. He died on the 2nd of June 1835.

His son François Christophe Edmond de Kellermann, duke of Valmy (1802–1868), was a distinguished statesman, political historian, and diplomatist under the July Monarchy.

KELLGREN, JOHAN HENRIK (1751–1795), Swedish poet and critic, was born at Flöby in West Gotland, on the 18th of December 1751. He studied at the university of Abo, and had already some reputation as a poet when in 1774 he there became a "docent" in aesthetics. Three years later he removed to Stockholm, where in conjunction with Assessor Carl Lennegren he began in 1778 the publication of the journal Stockholmsposten, of which he was sole editor from 1788 onwards. Kellgren was librarian to Gustavus III. from 1780, and from 1785 his private secretary. On the institution of the Swedish Academy in 1786 he was appointed one of its first members. He died at Stockholm on the 20th of April 1795. His strong satiric tendency led him into numerous controversies, the chief that with the critic Thomas Thorild, against whom he directed his satire Nyt förskick till orinnad vers, where he snears at the "raving of Shakespeare" and "the convulsions of Goethe." His lack of humour detracts from the interest of his polemical writings. His poetical works are partly lyrical, partly dramatic; of the plays the versification belongs to him, the plots being due to Gustavus III. The songs interspersed in the four operas which they produced in common, viz., Gustaf Vasa, Gustaf Adolf och Ebba Brahe, Aeneas i Kartago, and Drottning Kristina, are wholly the work of Kellgren. From about the year 1788 a higher and graver feeling pervades Kellgren's verses, partly owing to the influence of the works of Lessing and Goethe, but probably more directly due to his controversy with Thorild. Of his minor poems written before that date the most important are the charming spring-song Vintorns tärde lycka, and the satirical Mina löjen och Man eger ej snille för det man är galen. The best productions of what is called his later period are the satire Ljusets sender, the comic poem Dumborns funder, and the collections of his poems called Nya skapelsen, both in thought and form the finest of his works. Among his lyrics are the choicest fruits of the Gustavian age of Swedish letters. His earlier efforts, indeed, express the superficial doubt and pert frivolousness of his character; but in the works of his riper years he is no mere "poet of pleasure," as Thorild contemptuously styled him, but a worthy exponent of earnest moral feeling and wise human sympathies in felicitous and melodious verse.

His Samlade skrifter (3 vols., 1796; a later edition, 1884–1886) were revised by himself. His correspondence with Rosenstein and with Clewelow was edited by H. Schick (1887 and 1892). See Kellgren, Sveriges sköna litteratur (1833–1849); Atterbom, Svenska stjärn och skälders (1841–1855); C. W. Böttiger in Transactions of the Swedish Academy, xiv. 157 seq. (1870); and Gustaf Ljunggren's Kellgren, Leopold, och Thorild, and his Svenska vitterhetens höjder (1873–1877).

KELLOGG, CLARA LOUISE (1842–1920), American singer, was born in Sumterville, South Carolina, in July 1842, and was educated in New York for the musical profession, singing first in opera there in 1861. Her fine soprano voice and artistic gifts soon made her famous. She appeared as prima donna in Italian opera and at concerts, in 1867 and 1868; and from that time till 1887 was one of the leading public singers. She appeared at intervals in London, but was principally engaged in America. In 1874 she organized an opera company which was widely known in the United States, and her enterprise and energy in directing it were remarkable. In 1887 she married Carl Strakosch, and retired from the profession.

KELLS, a market town of county Meath, Ireland, on the Blackwater, 9½ m. N.W. of Navan on a branch of the Great Northern railway. Pop. of urban district (1901), 2428. The prosperity of the town depends chiefly upon its antiquarian remains. The most notable is St Columbkille's house, originally an oratory, but afterwards converted into a church, the chancel of which was in existence in 1752. The present church is modern, with the exception of the bell-tower, built in 1758. Near the church there is a fine though incomplete specimen of the Irish octagonal tower, 90 ft. in height; and there are several ancient crosses, the finest being that now erected in the market-place. Kells was originally a royal residence, whence its ancient name Cosanannus, meaning the dun or circular northern fort, in which the king resided, and the intermediate name Kelli, meaning head fort. Here Conn of the Hundred Hights resided in the 2nd century; and here was a palace of Dermot, king of Ireland, in 544–565. The other places in Ireland named Kells are probably derived from Cealla, signifying church. In the 6th century Kells, it is said, was granted to St Columbkille. Of the monastery which he is reported to have founded there are no remains, and the town owes its chief ecclesiastical importance to the bishopric founded about 807, and united to Meath in the 13th century. The ecclesiastical establishment was noted as a seat of learning, and a monument of this remains in the Book of Kells an illuminated
KELLY, E.—KELP

Copy of the Gospels in Latin, containing also local records, dating from the 8th century, and preserved in the library of Trinity College, Dublin. The illumination is executed with extraordinary delicacy, and the work is asserted to be the finest extant example of early Christian art of this kind. Neighbouring antiquities are the church of Dunale, with a fine doorway, and the dun or fortification of Dimor, the principal erection of a series of defences on the hills about 6 m. W. of Kells. Among several seats in the vicinity is that of the Marquess of Headfort. Kells returned two members to the Irish parliament before the Union.

KELLY, EDWARD (1854–1886), Australian bushranger, was born at Wallan Wallan, Victoria. His father was a transported Belfast convict, and his mother's family included several thieves. As boys he and his brothers were constantly in trouble for horse-stealing, and 'Ned' served three years' imprisonment for this offence. In April 1878, an attempt was made to arrest his brother Daniel on a similar charge. The whole Kelly family resented this and Ned wounded one of the constables. Mrs Kelly and some of the others were captured, but Ned and Daniel escaped to the hills, where they were joined by two other desperadoes, Byrne and Hart. For two years, despite a reward of £3000 offered jointly by the governments of Victoria and New South Wales for their arrest, the gang under the leadership of Kelly terrorized the country on the borderland of Victoria and New South Wales, "holding up" towns and plundering banks. Their intimate knowledge of the district, full of convenient hiding-places, and their elaborate system of well-paid spies, ensured the direct pecuniary interest of many persons and contributed to their long immunity from capture. They never ill-treat a woman, nor preyed upon the poor, thus surrounding themselves with an attractive atmosphere of romance. In June 1880, however, they were last tracked to a wooden shanty at Glenrowan, near Benalla, which the police surrounded, riddled with bullets, and finally set on fire. Kelly himself, who was outside, could, he claimed, have escaped but he not refused to desert his companions, all of whom were killed. He was severely wounded, captured and taken to Beechworth, where he was tried, convicted and hanged in October 1880. The total cost of the capture of the Kelly gang was reckoned at £15,000.

See F. A. Hare, The Last of the Bushrangers (London, 1892).

KELLY, SIR PITZROY (1796–1886), English judge, was born in London in October 1796, the son of a captain in the Royal Navy. In 1824 he was called to the bar, where he gained a reputation as a skilled pleader. In 1834 he was made a king's counsel. A strong Tory, he was returned as member of parliament for Ipswich in 1835, but was unseated on petition. In 1837 however he again became member for that town. In 1843 he sat for Cambridge, and in 1852 was elected member for Harwich, but, a vacancy suddenly occurring in East Suffolk, he preferred to contest that seat and was elected. He was solicitor-general in 1845 (when he was knighted), and again in 1852. In 1858–1859 he was attorney-general in Lord Derby's second administration. In 1866 he was raised to the bench as chief baron of the exchequer and made a member of the Privy Council. He died at Brighton on the 18th of September 1880.

See E. Foss, Lives of the Judges (1870).

KELLY, HUGH (1739–1777), Irish dramatist and poet, son of a Dublin publican, was born in 1739 at Killarney. He was apprenticed to a staymaker, and in 1760 went to London. Here he worked at his trade for some time, and then became an attorney's clerk. He contributed to various newspapers, and wrote pamphlets for the booksellers. In 1767 he published Memoirs of a Magdalen, or the History of Louisa Mildmay (2 vols.), a novel which obtained considerable success. In 1768 he published anonymously Thespis; or, A Critical Examination into the Merits of All the Principal Performers belonging to Drury Lane Theatre, a poem in the heroic couplet containing violent attacks on the then fashionable contemporary actors and actresses. The poem opens with a panegyric on David Garrick, however, and bestows foolish praise on friends of the writer. This satire was partly inspired by Churchill's Rosciad, but its criticism is obviously dictated chiefly by personal prejudice. In 1767 he produced a second part, less scurrilous in tone, dealing with the Covent Garden actors. His first comedy, Falstaff Deliver'd, written in prose, was produced by Garrick at Drury Lane on the 23rd of January 1768, with the intention of rivalling Oliver Goldsmith's Good-Natured Man. It is a moral and sentimental comedy, described by Garrick in the prologue as a sermon preached in acts. Although Samuel Johnson described it as "totally void of character," it was very popular and had a great sale. In French and Portuguese versions it drew crowded houses in Paris and Lisbon. Kelly was a journalist in the pay of Lord North, and therefore hated by the party of John Wilkes, especially as being the editor of the Public Ledger. His Thespis had also made him many enemies; and Mrs Clive refused to act in his pieces. The production of his second comedy, A Word to the Wise (Drury Lane, 3rd of March 1770), occasioned a riot in the theatre, repeated at the second performance, and the piece had to be abandoned. His other plays are: Clementina (Covent Garden, 23rd of February 1771), a blank verse tragedy, given out to be the work of a "young American Clergyman" in order to escape the opposition of the Wilkites; The School for Wives (Drury Lane, 11th of December 1773), a prose comedy given out as the work of Major (afterwards Sir William) ADDINGTON; a two-act piece, The Romance of an Hour (Covent Garden, 2nd of December 1774), borrowed from Marmontel's tale L'Amitié à l'épreuve; and an unsuccessful comedy, The Man of Reason (Covent Garden, 6th of February 1776). He was called to the bar at the Middle Temple in 1774, and determined to give up literature. He failed in his new profession and died in poverty on the 3rd of February 1777.

See The Works of Hugh Kelly, to which is prefixed the Life of the Author (1778); Genest, History of the Stage (v. 163, 263–299, 309, 399, 457, 517). Pamphlets in reply to Thespis are: Anti-Thespis... (1768); the Kelly Scourge; or, The Rescue or Thesplian Scurge... (1767), by John Brown-Smith.

KELLY, MICHAEL (1762–1826), British actor, singer and composer, was the son of a Dublin wine-merchant and dancing-master. He had a musical education at home, and in Italy, and for four years from 1783 was engaged to sing at the Court Theatre at Vienna, where he became a friend of Mozart. In 1786 he sang in the first performance of the Nezze di Figaro. Appearing in London, at Drury Lane in 1787, he had a great success, and thenceforth was the principal English tenor at that theatre. In 1793 he became acting-manager of the King's Theatre, and he was in great request at concerts. He wrote a number of songs (including "The Woodpecker"), and the music for many dramatic pieces, now fallen into oblivion. In 1826 he published his entertaining Reminiscences, in writing which he was helped by Theodore Hook. He combined his professional work with conducting a music-shop and a wine-shop, but with disastrous financial results. He died at Margate on the 9th of October 1826.

KELP (in M.E. culpe or culpe, of unknown origin; the Fr. equivalent is kerve), the ash produced by the incineration of various kinds of seaweed (Fucus, Laminaria, and Alaria) by the action of the sun on the west coasts of Ireland and Scotland, and the coast of Brittany. It is prepared from the deep-sea tangle (Laminaria digitata), sugar wrack (L. saccharina), knobbed wrack (Fucus nodosus), black wrack (F. serratus), and bladder wrack (F. vesiculosus). The Laminarias yield what is termed "drift-weed kelp," obtainable only when cast up on the coasts by storms or other causes. The species of Fucus growing within the tidal range are cut from the rocks at low water, and are therefore known as "cut-weeds." The weeds are first dried in the sun and are then collected into shallow pits and burned till they form a fused mass, which while still hot is sprinkled with water to break it up into convenient pieces. A ton of kelp is obtained from 20 to 22 tons of sea-weed. The average composition may vary as follows: potassium sulphate, 10 to 12%; sodium carbonate, 20 to 23%; sodium carbonate, 5%; other sodium and magnesium salts, 15 to 30%; and insoluble ash from 40 to 50%. The relative richness in iodine of different samples varies largely, good drift kelp yielding as much as 10 to 15 lb per ton of 224 cwt, whilst cut-weed kelp will not give more than 3 to

from which the shire took its name. No trace exists of the town, and of the castle all that is left are a few ruins shaded by ancient ash trees. The castle was built by the Northumbrians, who called it Marchidium, or Marchmount, its present name apparently meaning the same. After some centuries, the kingdom of Scotland it became a favoured royal residence, and a town gradually sprang up beneath its protection, which reached its palmiest days under David I., and formed a member of the kingdom of Four Bourgeoisies with Edinburg, Stirling and Berwick. It possessed a church, court of justice, mint, mills, and, what was remarkable for the 12th century, grammar school. Alexander II. was married and Alexander III. was born in the castle. During the long struggle for Scottish freedom, the town was in the hands of the castle captured. After the defeat of Wallace at Falkirk the castle fell into the hands of the English, from which it was delivered in 1314 by Sir James Douglas. Ceded to Edward III. in 1333, it was recovered in 1342 by Sir Alexander Ramsay of Dalhousie, only to be lost again four years later. The castle was finally retaken and razed to the ground in 1460. It was at the siege that the Lion was killed by the explosion of a huge gun called the “lion.” On the fall of the castle the town languished and was finally abandoned in favour of the rising burgh of Kelso. The town, whose patron-saint was St James, is still commemorated by St James’s Fair, which is held on the 5th of every August on the vacant site, and is the most popular of Border festivals.

Sandyknowe or Smallholm Tower, 6 m. W. of Kelso, dating from the 15th century, is considered the best example of a Border Peel and the most perfect relic of a feudal structure in the South of Scotland. It is 60 ft. N. of Kelso. It was built by Sir John Jamieson (Edenham, “The Village on the Eden”), the birthplace of the poet James Thomson, to whose memory an obelisk, 52 ft. high, was erected on Ferny Hill in 1820.

KELVIN, WILLIAM THOMSON, BARON (1824–1907), British physicist, the second son of James Thomson, L.L.D., professor of mathematics in the university of Glasgow, was born at Belfast, Ireland, on the 26th of June 1824, his father being then teacher of mathematics in the Royal Academy Institution. In 1832 James Thomson accepted the chair of mathematics at Glasgow, and migrated thither with his two sons, James and William, who in 1834 matriculated in that university, William being then little more than ten years of age, and being acquired his early education through his father’s instruction. In 1841 William Thomson entered Peterhouse, Cambridge, and in 1845 took his degree as second wrangler, to which honour he added that of the first Smith’s Prize. The senior wrangler in his year was Stephen Parkinson, a man of a very different type of mind, yet one who was a prominent figure in Cambridge for many years. In the same year Thomson was elected fellow of Peterhouse. At that time there were few facilities for the study of experimental science in Great Britain. At the Royal Institution Faraday held a unique position, and was feeling his way almost alone. In Cambridge science had progressed little since the days of Newton. Thomson therefore had recourse to Paris, and for a year worked in the laboratory of Regnault, who was then engaged in his classical researches on the thermal properties of steam. In 1846, when only twenty-two years of age, he accepted the chair of natural philosophy in the university of Glasgow, which he filled for fifty-three years, attaining universal recognition as one of the greatest physicists of his time. The Glasgow chair was a source of inspiration to scientific men for more than half a century, and many of the most advanced researches of other physicists grew out of the suggestions which Thomson scattered as sparks from his anvil. One of his earliest papers dealt with the age of the earth, and brought him into collision with the geologists of the Uniformitarian school, who were claiming thousands of millions of years for the formation of the stratified portions of the earth’s crust. Thomson’s calculations on the conduction of heat showed that at some time between twenty millions and four hundred millions, probably about one hundred millions, of years ago, the physical conditions of the earth must have been entirely different from those which now obtain. This led to a long controversy, in which the physical principles held their ground. In 1847 Thomson first met James Prescott Joule at the Edinburgh Institution. A fortnight later they again met in Switzerland, and together measured the rise of the temperature of the water in a mountain torrent due to its fall. Joule’s views of the nature of heat strongly influenced Thomson’s mind, with the result that in 1848
Thomson proposed his absolute scale of temperature, which is independent of the properties of any particular thermometric substance, and in 1851 he presented to the Royal Society of Edinburgh a paper on the dynamical theory of heat, which reconciled the work of N. L. Sadi Carnot with the conclusions of Count Rumford, Sir H. Davy, J. R. Mayer and Joule, and placed the dynamical theory of heat and the fundamental principle of the conservation of energy in a position to command universal acceptance. It was in this paper that the principle of the dissipation of energy, briefly summarized in the second law of thermodynamics, was first stated.

Although his contributions to thermodynamics may properly be regarded as his most important scientific work, it is in the field of electricity, especially in its application to submarine telegraphy, that Lord Kelvin is best known to the world at large. From 1851 to 1853 he was most prominent among telegraphists. The stranded form of conductor was due to his suggestion; but it was in the letters which he addressed in November and December of that year to Sir G. G. Stokes, and which were published in the Proceedings of the Royal Society for 1853, that he discussed the mathematical theory of signalling through submarine cables, and enunciated the conclusion that in long cables the retardation due to capacity must render the speed of signalling inversely proportional to the square of the cable’s length. Some held that if this were true ocean telegraphy would be impossible, and sought in consequence to disprove Thomson’s conclusion. Thomson, on the other hand, set to work to overcome the difficulty by improvement in the manufacture of cables, and first of all in the production of copper of high conductivity and the construction of apparatus which would readily respond to the slightest variation of the current in the cable. The mirror galvanometer and the siphon recorder, which was patented in 1857, were the outcome of these researches; but the scientific value of the mirror galvanometer (d’Arsonval’s) now commonly used in electrical laboratories. A mind like that of Thomson could not be content to deal with any physical quantity, however successfully from a practical point of view, without subjecting it to measurement. Thomson’s work in connexion with telegraphy led to the production in rapid succession of instruments adapted to the requirements of the time for the measurement of every electrical quantity, and when electric lighting came to the front a new set of instruments was produced to meet the needs of the electrical engineer. Some account of Thomson’s electric meter is given in the article on that subject, while every modern work of importance on electric lighting describes the instruments which he has specially designed for central station work; and it may be said that there is no quantity which the electrical engineer is ordinarily called upon to measure for which Lord Kelvin did not construct the suitable instrument. Currents from the ten-thousandth of an ampere to ten thousand amperes, electrical pressures from a minute fraction of a volt to 100,000 volts, come within the range of his instruments, while the private consumer of electric energy is provided with a meter recording Board of Trade units.

When W. Weber in 1853 proposed the extension of C. F. Gauss’s system of absolute units to electromagnetism, Thomson took up the question, and, applying the principles of energy, calculated the absolute electromotive force of a Daniell cell, and determined the absolute measure of the resistance of a wire from the heat produced in it by a known current. In 1860 it was Thomson who induced the British Association to appoint its first famous committee for the determination of electrical standards, and it was he who suggested much of the work carried out by J. Clerk Maxwell, Balfour Stewart and Fleming Jenkin as members of that committee. The oscillatory character of the discharge of the Leyden jar, the foundation of the work of H. R. Hertz and of wireless telegraphy were investigated by him in 1853.

It was in 1873 that he undertook to write a series of articles for Good Words on the mariner’s compass. He wrote the first, but so many questions arose in his mind that it was five years before the second appeared. In the meanwhile the compass went through a process of complete reconstruction in his hands—a process which enabled both the permanent and the temporary magnetism of the ship to be readily compensated, while the weight of the 10-in. card was reduced to one-seventeenth of that of the standard card previously in use, although the time of swing was increased. Second only to the compass in its value to the sailor is Thomson’s sounding apparatus, whereby soundings can be taken in 100 fathoms by a ship steaming at 16 knots; and by the employment of piano-wire of a breaking strength of 140 tons per square inch and an iron sinker weighing only 34 lb, with a self-registering pressure gauge, soundings can be rapidly taken in deep ocean. Thomson’s tide gauge, tidal harmonic analyser and tide predictor are famous, and among his work in the interest of navigation must be mentioned his tables for the simplification of Sunner’s method for determining the position of a ship at sea.

It is impossible within brief limits to convey more than a general idea of the work of a philosopher who published more than three hundred original papers bearing upon nearly every branch of physical science; who one day was working out the mathematics of a vortex theory of matter on hydrodynamical principles or discovering the limitations of the capabilities of the vortex atom, on another was applying the theory of elasticity to tides in the solid earth, or was calculating the size of water molecules, and later was designing an electricity meter, a dynamo or a domestic water-tap. It is only by reference to his published papers that any approximate conception can be formed of his life’s work: but the student who had read all these knew comparatively little of Lord Kelvin if he had not talked with him face to face. Extreme modesty, almost amounting to diffidence, was combined with the utmost kindliness in Lord Kelvin’s bearing to the most elementary student, and nothing seemed to give him so much pleasure as an opportunity to acknowledge the efforts of the humblest scientific worker. The progress of physical discovery during the last half of the 19th century was perhaps as much due to the kindly encouragement which he gave to his students and to others who came in contact with him as to his own researches and inventions; and it would be difficult to speak of his influence as a teacher in stronger terms than this.

One of his former pupils, Professor J. D. Cormack, wrote of him: ‘It is perhaps at the lecture table that Lord Kelvin displays most of his characteristics. . . . His master mind, soaring high, sees one vast connected whole, and, alive with enthusiasm, with face and sparkling eye, he shows the panorama to his pupils, pointing out the similarities and differences of its parts, the boundaries of our knowledge, and the regions of doubt and speculation. To follow him in his flights is real mental exhilaration.’

In 1852 Thomson married Margaret, daughter of Walter Crum of Thornliebank, who died in 1870; and in 1874 he married Frances Anna, daughter of Charles R. Blandy of Madeira. In 1866, perhaps chiefly in acknowledgment of his services to trans-Atlantic telegraphy, Thomson received the honour of knighthood, and in 1892 he was raised to the peerage with the title of Baron Kelvin of Largs. The Grand Cross of the Royal Victorian Order was conferred on him in 1896, the year of the jubilee of his professorship. In 1890 he became president of the Royal Society, and he received the Order of Merit out of its inception in 1902. A list of the degrees and other honours which he received during the fifty-three years he held his Glasgow chair would occupy as much space as this article; but any biographical sketch would be conspicuously incomplete if it failed to notice the celebration in 1896 of the jubilee of his professorship. Never before had such a gathering of rank and science assembled as that which filled the halls in the university of Glasgow on the 16th, 16th and 17th of June in that year. The city authorities joined with the university in honouring their most distinguished citizen. About 2000 guests were received in the university buildings, the library of which was devoted to an exhibition of the instruments invented by Lord Kelvin, together with his certificates, diplomas and medals. The Eastern, the Anglo-American and the Commercial
Cable companies united to celebrate the event, and from the university library a message was sent through Newfoundland, New York, Chicago, San Francisco, Los Angeles, New Orleans, Florida and Washington, and was received by Lord Kelvin seven and a half minutes after it had been despatched, having travelled about 20,000 miles and twice crossed the Atlantic during the interval. It was at the banquet in connexion with the jubilee celebration that the Lord Provost of Glasgow thus summarized Lord Kelvin's character: “His industry is unwearied; and he seems to take rest by turning from one difficulty to another—difficulties that would appal most men and be taken as enjoyment by no one else. . . . This life of unwearied industry, of universal honour, has left Lord Kelvin with a lovable nature that charms all with whom he comes in contact.”

Three years after this celebration Lord Kelvin resigned his chair at Glasgow, though by formally matriculating as a student he maintained his connexion with the university, of which in 1904 he was elected chancellor. But his retirement did not mean cessation of active work or any slackening of interest in the scientific thought of the day. Much of his time was given to writing and revising the lectures on the wave theory of light which he had delivered at Johns Hopkins University, Baltimore, in 1884, but which were not finally published till 1904. He continued to take part in the proceedings of various learned societies; and only a few months before his death, at the Leicester meeting of the British Association, he attested the keenness with which he followed the current developments of scientific speculation by delivering a long and searching address on the electronic theory of matter. He died on the 17th of December 1907 at his residence, Netherhall, near Large, Scotland; there was no heir to his title, which became extinct.

In addition to the Baltimore lectures, he published with Professor P. G. Tait a standard but unfinished Treatise on Natural Philosophy (1867). A number of his scientific papers were collected in his Reports on Electricity and Magnetism (1872), and his Mathematical and Physical Papers (1882, 1883 and 1890), and three volumes of his Popular Lectures and Addresses appeared in 1889-1894; he was also the author of the articles on "Heat" and "Elasticiy" in the 9th edition of the Encyclopaedia Britannica.

See Andrew Gray, Lord Kelvin (1908); S. P. Thompson, Life of Lord Kelvin (1910), which contains a full bibliography of his writings.

**KEMBLE**

The name of a family of English actors, of whom the most famous were Mrs Siddons (q.v.) and her brother John Philip Kemble (1721-1802), a strolling player and manager, who in 1753 married an actress, Sarah Wood.

**John Philip Kemble** (1757-1823), the second child, was born at Prescott, Lancashire, on the 1st of February 1757. His mother was a Roman Catholic, and he was educated at Sedgeley Park Catholic seminary, near Wolverhampton, and the English college at Douai, with the view of becoming a priest. But at the conclusion of the four years' course he discovered that he had no vocation for the priesthood, and returning to England he joined the theatrical company of Crump & Chamberlain, his first appearance being as Theodosius in Lee's tragedy of that name at Wolverhampton on the 8th of January 1776. In 1778 he joined the York company of Tate Wilkinson, appearing at Wakefield as Captain Pym in Farquhar's *The Recruiting Officer*; in Hull for the first time as Macbeth on the 30th of October, and in York as Orestes in Ambrose Philips's *Distressed Mother*. In 1781 he obtained a "star" engagement at Dublin, making his first appearance there on the 2nd of November as Hamlet. He also achieved great success as Raymond in *The Count of Narbonne*, a play taken from Horace Walpole's *Castle of Otranto*. Gradually he won for himself a high reputation as a careful and finished actor, and this, combined with the greater fame of his sister, led to an engagement at Drury Lane, where he made his first appearance on the 30th of September 1783 as Hamlet. In this rôle he awakened interest and discussion among the critics rather than the enthusiastic approval of the public. But as Macbeth on the 31st of March 1785 he shared in the enthusiasm aroused by Mrs Siddons, and established a reputation among living actors second only to hers. Brother and sister had first appeared together at Drury Lane on the 22nd of November 1783, as Beverley and Mrs Beverley in Moore's *The Gamester*, and as King John and Constance in Shakespeare's tragedy. In the following year they played Montgomery and Matilda in Cumberland's *The Carmelite*, and in 1785 Adorni and Camiola in Kemble's adaptation of Massinger's *A Maid of Honour*, and Othello and Desdemona. Between 1785 and 1787 Kemble appeared in a variety of rôles, his Mentevoile in Jephson's *Julia* producing an overwhelming impression. On the 8th of December 1787 he married Priscilla Hopkins Brereton (1756-1845), the widow of an actor and herself an actress. Kemble's appointment as manager of Drury Lane in 1788 gave him full opportunity to dress the characters less according to tradition than in harmony with his own conception of what was suitable. He was also able to experiment with whatever parts might strike his fancy, and of this privilege he took advantage with greater courage than discretion. His activity was prodigious, the list of his parts including a large number of Shakespearean characters and also a great many in plays now forgotten. In his own version of *Coriolanus*, which was revived during his first season, the character of the "noble Roman" was so exactly suited to his powers that he not only played it with a perfection that has never been approached, but, it is said, unconsciously allowed its influence to colour his private manner and modes of speech. His tall and imposing person, noble countenance, and solemn and grave demeanour were uniquely adapted for the Roman characters in Shakespeare's plays; and, when in addition he had to depict the gradual growth and development of one absorbing passion, his representation gathered a momentum and majestic force that were irresistible. His defect was in flexibility, variety, rapidity; the characteristic of his style was method, regularity, precision, elaboration even of the minutest details, founded on a thorough psychological study of the special personality he had to represent. His elocutionary art, his fine sense of rhythm and emphasis, enabled him to excel in declamation, but physically he was incapable of giving expression to impetuous vehemence and searching pathos. In Coriolanus and Cato he was beyond praise, and possibly he may have been superior to both Garrick and Kean in Macbeth, although it must be remembered that in it part of his inspiration must have been caught from Mrs Siddons. In all the other great Shakespearean characters he was, according to the best critics, inferior to them, least so in Lear, Hamlet and Wolsey, and most so in Shylock and Richard III. On account of the eccentricities of Sheridan, the proprietor of Drury Lane, Kemble withdrew from the management, and, although he resumed his duties at the beginning of the season 1800-1801, he at the close of 1802 finally resigned connexion with it. In 1803 he became manager of Covent Garden, in which he had acquired a sixth share for £23,000. The theatre was burnt down on the 20th of September 1808, and the raising of the prices after the opening of the new theatre, in 1809, led to riots, which practically suspended the management for three months. Kemble had been frequently visited by fire, and was only saved by a generous loan, afterwards converted into a gift, of £10,000 from the duke of Northumberland. Kemble took his final leave of the stage in the part of Coriolanus on the 23rd of June 1817. His retirement was probably hastened by the rising popularity of Edmund Kean. The remaining years of his life were spent chiefly abroad, and he died at Lausanne on the 26th of February 1823.

See Boaden, *Life of John Philip Kemble* (1825); Fitzgerald, *The Kembles* (1871).

**Stephen Kemble** (1758-1822), the second son of Roger, was rather an indifferent actor, ever eclipsed by his wife and fellow player, Elizabeth Siddell Kemble (c. 1765-1841), and a man of such poverty of fortune that he played Falstaff without padding. He managed theatres in Edinburgh and elsewhere.

**Charles Kemble** (1775-1854), a younger brother of John Philip and Stephen, was born at Brecon, South Wales, on the 25th of November 1775. He, too, was educated at Douai.
After returning to England in 1792, he obtained a situation in the post-office, but this he soon resigned for the stage, making his first recorded appearance at Sheffield as Orlando in *As You Like It* in that year. During the early period of his career as an actor he made his way slowly to public favour. For a considerable time he played with his brother and sister, chiefly in secondary parts, and this with a grace and finish which received scant justice from the critics. His first London appearance was on the 21st of April 1794, as Malcolm to his brother's Macbeth. Ultimately he won independent fame, especially in such characters as Archer in George Farquhar's *Beaux' Stratagem*, Dorincourt in Mrs Cowley's *Belle's Stratagem*, Charles Surface and Ranger in Dr Benjamin Hoadley's *Suspicious Husband*. His Laertes and Macduff were hardly less interesting than his brother's Hamlet and Macbeth. In comedy he was ably supported by his wife, Marie Thérèse De Camp (1774–1838), whom he married on the 2nd of July 1806. His visit, with his daughter Fanny, to America during 1832 and 1834, aroused much enthusiasm. The later period of his career was clouded by money embarrassments in connexion with his joint proprietorship in Covent Garden theatre. He formally retired from the stage in December 1836, but his final appearance was on the 10th of April 1840. For some time he held the office of examiner of plays. In 1844–1845 he gave readings from Shakespeare at Wills's Rooms. He died on the 12th of November 1854. Macready regarded his Cassio as incomparable, and summed him up as "a first-rate actor of second-rate parts."

See *Gentleman's Magazine*, January 1855; *Records of a Girldhood*, by Frances Anne Kemble.

***Elizabeth Whitlock*** (1761–1836), who was a daughter of Roger Kemble, made her first appearance on the stage in 1783 at Drury Lane as Portia. In 1785 she married Charles E. Whitlock, went with him to America and played with much success there. She had the honour of appearing before President Washington. She seems to have retired about 1807, and she died on the 27th of February 1836. Her reputation as a tragic actress might have been greater had she not been Mrs Siddons's sister.

***Frances Anne Kemble*** (Fanny Kemble) (1809–1893), the actress and author, was Charles Kemble's elder daughter; she was born in London on the 27th of November 1809, and educated chiefly in France. She first appeared on the stage on the 25th of October 1829 as Juliet at Covent Garden. Her attractive personality at once made her a favourite, her popularity enabling her father to recoup his losses as a manager. She played all the principal women's parts, notably Portia, Beatrice and Lady Teazle, but Julia in Sheridan Knowles's *The Hunchback*, especially written for her, was perhaps her greatest success. In 1832 she went with her father to America, and in 1834 she married there a Southern planter, Pierce Butler. They were divorced in 1849. In 1847 she returned to the stage, from which she had retired on her marriage, and later, following her father's example, appeared with much success as a Shakespearian reader. In 1877 she returned to England, where she lived—using her maiden name—till her death in London on the 15th of January 1893. During this period Fanny Kemble was a prominent and popular figure in the social life of London. Besides her plays, *Frances the First*, unsuccessfully produced in 1832, *The Star of Seville* (1837), a volume of *Poems* (1844), and a book of Italian travel, *A Year of Consolation* (1847), she published a volume of her *Journal* in 1835; and in 1863 another (dealing with life on the Georgia plantation), and also a volume of *Plays*, including translations from Dumas and Schiller. These were followed by *Records of Later Life* (1882), *Notes on some of Shakespeare's Plays* (1883), *Far Away and Long Ago* (1880), and *Further Records* (1891). Her various volumes of reminiscences contain much valuable material for the social and dramatic history of the period.

***Adelaide Kemble*** (1814–1870), Charles Kemble's second daughter, was an opera singer of great promise, whose first London appearance was made in *Norma* on the 2nd of November 1841. In 1843 she married Edward John Sartoris, a rich Italian, and retired after a brief but brilliant career. She wrote *A Week in a French Country House* (1867), a bright and humorous story, and of a literary quality not shared by other tales that followed. Her son, Algernon Charles Sartoris, married General U. S. Grant's daughter.

Among more recent members of the Kemble family, mention may also be made of Charles Kemble's grandson, **Henry Kemble** (1848–1907), a sterling and popular London actor.

***Kemble, John Mitchell*** (1807–1873), English scholar and historian, eldest son of Charles Kemble the actor, was born in 1807. He received his education partly from Dr Richardson, author of the *Dictionary of the English Language*, and partly at the grammar school of Bury St Edmunds, where he obtained in 1826 an exhibition to Trinity College, Cambridge. At the university his historical essays gained him high reputation. The bent of his studies was turned more especially towards the Anglo-Saxon period through the influence of the brothers Grimm, under whom he studied at Göttingen (1831). His thorough knowledge of the Teutonic languages and his critical faculty were shown in his *Beowulf* (1833–1837), *Über die Stammtafel der Westsachsen* (1836), *Codex Diplomaticus Aevi Saxonicè* (1839–1848), and in many contributions to reviews; while his *History of the Saxons in England* (1840; new ed. 1876), though it must now be read with caution, was the first attempt at a thorough examination of the original sources of the first period of English history. He was editor of the *British and Foreign Review* from 1835 to 1844; and from 1840 to his death was examiner of plays. In 1857 he published *State Papers and Correspondence illustrative of the Social and Political State of Europe from the Revolution to the Accession of the House of Hanover*. He died at Dublin on the 26th of March 1857. His *Hord Ferales, or Studies in the Archaeology of Northern Nations*, was completed by Dr R. G. Latham, and published in 1864. He married the daughter of Professor Amadeus Wendt of Göttingen in 1836; and had two daughters and a son; the elder daughter was the wife of Sir Charles Santley, the singer.

***Kemeny, Zsigmond, Baron*** (1816–1875), Hungarian author, came of a noble but reduced family. In 1837 he studied jurisprudence at Marosvásárhely, but soon devoted himself entirely to journalism and literature. His first unfinished work, *On the Causes of the Disaster of Mohacs* (1840), attracted much attention. In the same year he studied natural history and anatomy at Vienna University. In 1841, along with Lajos Kovács, he edited the Transylvanian newspaper *Erdei Híradó*. He also took an active part in provincial politics and warmly supported the principles of Count Stephen Széchenyi. In 1846 he moved to Pest, where his pamphlet, *Korteskedés és ellenőrzés* (Partisanship and its Antidote), had already made him famous. Here he was associated with the most eminent of the moderate reformers, and for a time was a member of the staff of the *Pesti Hírlap*. The same year he brought out his first great novel, *Pál Gyulay*. He was elected a member of the revolutionary diet of 1848 and accompanied it through all its vicissitudes. After a brief exile he accepted the amnesty and returned to Hungary. Careless of his unpopularity, he took up his pen to defend the cause of justice and moderation, and in his two pamphlets, *Forradalom után* (After the Revolution) and *Még egyező a forradalom után* (One word more after the Revolution), he defended the point of view which was realized by Déak in 1867. He subsequently edited the *Pesti Napló*, which became virtually Déak's political organ. Kemeny also published several political essays (*e.g.* the *Two Wesselenyi*, and *Stephen Széchenyi*) which are among the best of their kind that have appeared, and published during these years, such as *Vör és né* (Husband and Wife), *Széndelvény* (The Heart's Secrets), &c., also won for him a foremost rank among contemporary novelists. During the sixties Kemeny took an active part in the political labours of Déak, whose right hand he continued to be, and popularized the Composition of 1867 which he had done so much to bring about. He was elected to the diet of 1867 for one of the divisions of Pest, but took no part in the debates. The last years of his life were passed in complete seclusion in Transylvania. To the works of Kemeny already
KEMP—KEMPT

mentioned should be added the fine historical novel Rajongok
(The Fanatics) (Pest, 1835–1859), and Collected Speeches
(Hung.) (Pest, 1889).

tion and the Composition (Hung.) (Budapest, 1888).

(K. L. K.)

KEMP, William (fl. 1600), English actor and dancer. He
probably began his career as a member of the earl of Leicester's
company, but his name first appears after the death of Leicester
in a list of players authorized by an order of the privy council
in 1593 to play 7 m. out of London. Ferdinand Stanley, 
Lord Strange, was the patron of the company of which Kemp
was the leading member until 1598, and in 1594 was summoned
with Burbage and Shakespeare to act before the queen at Green-
wich. He was the successor, both in parts and reputation, of
Richard Tarlton. But it was as a dancer of jigs that he won his
greatest popularity, one or two actors dancing and singing with
him, and the words doubtless often being improvised. Examples
of the music may be seen in the MS. collection of John Dowland
now in the Cambridge University library. At the same time
Kemp was given parts like Dogberry, and Peter in Romeo and
Juliet; indeed his name appears by accident in place of those of
the characters in early copies. Kemp seems to have exhibited
his dancing on the Continent, but in 1602 he was a member of
the earl of Worcester's players, and Philip Henslowe's diary shows
several payments made to him in that year.

KEMPE, John (c. 1380–1454), English cardinal, archbishop
of Canterbury, and chancellor, was son of Thomas Kempe, a
gentleman of Ollantagh, in the parish of Wye near Ashford, Kent.
He was born about 1380 and educated at Merton College, Oxford.
He practised as an ecclesiastical lawyer, was an assessor at the
trial of Oldcastle, and in 1415 was made dean of the Court of
Arches. Then he passed into the royal service, and being
employed in the administration of Normandy was eventually made
chancellor of the duchy. Early in 1419 he was elected bishop
of Lincoln and was consecrated at Rome the end of December.
In February 1421 he was translated to Chichester, and in November following to London. During the minority of
Henry VI. Kempe had a prominent position in the English
council as a supporter of Henry Beaufort, whom he succeeded
as chancellor in March 1426. In this same year he was promoted
to the archbishopric of York. Kempe held office as chancellor
for six years; his main task in government was to keep Humphrey
of Gloucester in check. His resignation on the 28th of February
1432 was a concession to Gloucester. He still enjoyed Beau-
fort's favour, and retaining his place in the council was employed
on important missions, especially at the congress of Arras in
1435, and the conference at Calais in 1438. In December 1439
he was created cardinal, and during the next few years took less
share in politics. He supported Suffolk over the king's marriage
with Margaret of Anjou; but afterwards there arose some differ-
ence between them, due in part to a dispute about the nomination
of the cardinal's nephew. Thomas Kempe, to whom London.
At the time of Suffolk's fall in January 1450 Kempe
once more became chancellor. His appointment may have been
due to the fact that he was not committed entirely to either party.
In spite of his age and infirmity he showed some vigour in dealing
with Cade's rebellion, and by his official experience and skill did
what he could for four years to sustain the king's authority. He
was rewarded by his translation to Canterbury in July 1452,
when Pope Nicholas added as a special honour the title of
cardinal-bishop of Santa Rufina. As Richard of York gained
influence, Kempe became unpopular; men called him "the
cursed cardinal,"
and his fall seemed imminent when he died
 Suddenly on the 22nd of March 1454. He was buried at Canter-
bury, in the choir. Kempe was a politician first, and hardly at
all a bishop; and he was accused with some justice of neglecting
his diocese, especially at York. Still he was a capable official,
and a faithful servant to Henry VI., who called him "one of the
wisest lords of the land." (Peston Letters, i. 315.) He founded
a college at his native place at Wye, which was suppressed at the
Reformation.

bishops of Canterbury, v. 188–207.

KEMPEN, a town in the Prussian Rhine Province, 40 m.
N. of Cologne by the railway to Zevenaar. Pop. (1900),
6319. It has a monument to Thomas a Kempis, who was born there.
The industries are considerable, and include silk-weaving, glass-
making and the manufacture of electrical plant. Kempen belonged
in the middle ages to the archbishopric of Cologne and received
civic rights in 1294. It is memorable as the scene of a
victory gained, on the 17th of January 1642, by the French
and Huguenots over the Imperialists.

See Terwelp, Die Stadt Kempen (Kempen, 1894), and Niessen,
Heimatkunde des Kreises Kempen (Crefeld, 1895).

KEMPENFELT, Richard (1718–1782), British rear-admiral,
was born at Westminster in 1718. His father, a Swede, is said
have been in the service of James II., and subsequently to have
entered the British army. Richard Kempenfelt went into
the navy, and was gazetted first in the West Indies, taking part
in the capture of Portobello. In 1746 he returned to England,
and from that date to 1758, when he was made rear-admiral, saw
active service in the East Indies with Sir George Pocock and in
various quarters of the world. In 1781 he gained, with a vastly
inferior force, a brilliant victory, fifty leagues south-west of
Ushant, over the French fleet under De Guichen, capturing
twenty prizes. In 1782 he hoisted his flag on the "Royal
George," which formed part of the fleet under Lord Howe.
In August this fleet was ordered to retit at top speed at Portsmouth,
and proceed to the relief of Gibraltar. A leak having been located
below the waterline of the "Royal George," the vessel was
careened to allow of the defect being repaired. According to
the version of the disaster favoured by the Admiralty, she was
overturned by a breeze. But the general opinion of the navy was
that the shifting of her weights was more than the old and rotten
ship could stand. A large portion of her bottom fell out, and she went down at once. It is estimated
that not fewer than 800 persons went down with her, for besides
the crew there were a large number of tradesmen, women and
children on board. Kempenfelt, who was in his cabin, perished
with the rest. Cowper's poem, the "Loss of the Royal George,"
commemorates this disaster. Kempenfelt effected radical altera-
tions and improvements in the signalling system then existing
in the British navy. A painting of the loss of the "Royal
George" is in the Royal United Service Institution, London.

See Charnock's Biog. Nav., vi. 246, and Raffe's Naval Biographies,
1. 215.

KEMPT, sir James (1764–1854), British soldier, was gazetted
to the 101st Foot in India in 1783, but on its disbandment
two years later was placed on half-pay. It is said that he took
a clerkship in Greenwood's, the army agents (afterwards Cox & Co.).
He attracted the notice of the Duke of York, through whom
he was given a commission (very soon followed by a majority) in
the newly raised 113th Foot. But it was not long before his
regiment experienced the fate of the old 101st; this time
however Kempt was retained on full pay in the recruiting service.
In 1799 he accompanied Sir Ralph Abercromby to Holland, and
latter to Egypt as an aide-de-camp. After Abercromby's death
Kempt remained on his successor's staff until the end of the
campaign in Egypt. In April 1803 he joined the staff of Sir
David Dundas, but next month returned to regimental duty, and
a little later received a lieutenant-colony in the 81st Foot.
With his new regiment he went, under Craig, to the Medi-
terranean theatre of operations, and at Maida the light brigade
led by him bore the heaviest share of the battle. Employed
from 1807 to 1811 on the staff in North America, Brevet-Colonel
Kempt at the end of 1811 joined Wellington's army in Spain
with the local rank of major-general, which was, on the 1st of
January 1812, made substantive. As one of Picton's brigadiers,
Kempt took part in the great assault on Badajoz and was severely
wounded. On rejoining for duty, he was posted to the command
of a brigade of the Light Division (43rd, 52nd and 95th Rifles).
KEMPTEN—KEN, THOMAS

which he led at Vera, the Nivelle (where he was again wounded), Bayonne, Orthez and Toulouse. Early in 1815 he was made K.C.B., and in July for his services at Waterloo, G.C.B. At that battle he commanded the 28th, 32nd and 70th as a brigadier under his old chief, Picton, and on Picton's death succeeded to the command of his division. From 1828 to 1830 he was Governor-General of Canada, and at a critical time displayed firmness and moderation. He was afterwards Master-General of the Ordnance. At the time of his death in 1854 he had been for some years a full General.

KEMPTEN, a town in the kingdom of Bavaria on the Iller, 81 m. S.W. of Munich by rail. Pop. (1905), 20,663. The town is well built, has many spacious squares and attractive public grounds, and contains a castle, a handsome town-hall, a gymnasia, &c. The old palace of the abbots of Kempten, dating from the end of the 17th century, is now partly used as barracks, and near to it is the fine abbey church. The industries include wool-spinning and weaving and the manufacture of paper, beer, machines, hosery and matches. As the commercial centre of the Allgäu, Kempten carries on active trade in timber and dairy produce. Numerous remains have been discovered of the Lindenberg, a hill in the vicinity.

Kempten, identified with the Roman Cambodunum, consisted in early times of two towns, the old and the new. The continual hostility that existed between these was intensified by the welcome given by the old town, a free imperial city since 1289, to the Reformed doctrines, the new town keeping to the older faith. The Benedictine abbey of Kempten, said to have been founded in 747 by Hildegard, the wife of Charlemagne, was an important house. In 1360 its abbot was promoted to the dignity of a prince of the Empire by the emperor Charles IV.; the town and abbey passed to Bavaria in 1803. Here the Austrians defeated the French on the 17th of September 1796.

See Förderreuther, Die Stadt Kempten und ihre Umgebung (Kempten, 1901); Hagenmüller, Geschichte der Stadt und der Pfarrkirche St. Johann Baptist, l. (Kempten, 1880); and Meirhofer, Geschichtliche Darstellung der Kirchvirdigsten Schicksale der Stadt Kempten (Kempten, 1856).

KEN, THOMAS (1657–1711), the most eminent of the English non-juring bishops, and one of the fathers of modern English hymnology, was born at Little Berkhamstead, Herts, in 1657. He was the son of Thomas Ken of Furnival's Inn, who belonged to an ancient stock,—that of the Kens of Ken Place, in Somersetshire; his mother was a daughter of the now forgotten poet, John Chalkhill, who is called by Walton an "acquaintant and friend of Edmund Spenser." Ken's step-sister, Anne, was married to Izaak Walton in 1646, a connexion which brought Ken from his boyhood under the refining influence of this gentle and devout man. In 1652 Ken entered Winchester College, and in 1656 became a student of Hart Hall, Oxford. He gained a fellowship at New College in 1657, and proceeded B.A. in 1661 and M.A. in 1664. He was for some time tutor of his college; but the most characteristic reminiscence of his university life is the mention made by Anthony Wood that in the musical gatherings of the time "Thomas Ken of New College, a junior, would be sometimes among them, and sing his part." Ordained in 1662, he successively held the livings of Little Easton in Essex, Bightstone (sometimes called Brixton) in the Isle of Wight, and East Woodhay in Hampshire; in 1672 he resigned the last of these, and returned to Winchester, being by this time a prebendary of the cathedral, and chaplain to the bishop, as well as a fellow of Winchester College. He remained there for several years, acting as curate in one of the lowest districts, preparing his Manual of Prayers for the Use of the Scholars of Winchester College (first published in 1674), and composing hymns. It was at this time that he wrote, primarily for the same body as his prayers, his morning, evening and midnight hymns, the first two of which, beginning "Awake, my soul, and with the sun" and "Glory to Thee, my God, this night," are now household words wherever the English tongue is spoken. The latter is often made to begin with the line "All praise to Thee, my God, this night," but in the earlier editions over which Ken had control, the line is as first given.1 In 1674 Ken paid a visit to Rome in company with young Izaak Walton, and this journey seems mainly to have resulted in confirming his regard for the Anglican communion. In 1679 he was appointed by Charles II. chaplain to the Princess Mary, wife of William of Orange. While with the court at the Hague, he incurred the displeasure of William by insisting that a promise of marriage, made to an English lady of high birth by a relative of the prince, should be kept; and he therefore gladly returned to England in 1680, when he was immediately appointed one of the king's chaplains. He was once more residing at Winchester in 1683 when Charles came to the city with his doubtfully composed court, and his residence was chosen as the home of Neil Gwynne; but Ken stoutly objected to this arrangement, and succeeded in making the favourite find quarters elsewhere. In August of this same year he accompanied Lord Dartmouth to Tangier as chaplain to the fleet, and Pepys, who was one of the company, has left on record some quaint and kindly reminiscences of him and of his services on board. The fleet returned in April 1684, and a few months after, upon a vacancy occurring in the see of Bath and Wells, Ken, now Dr Ken, was appointed bishop. It is said that, upon the occurrence of the vacancy, Charles, mindful of the spirit he had shown at Winchester, exclaimed, "Where is the good little man that refused his lodging to poor Nell?" and determined that no other should be bishop. The consecration took place at Lambeth on the 27th of January 1685; and one of Ken's first duties was to attend the death-bed of Charles, where his wise and faithful ministrations won the admiration of everybody except Bishop Burnet. In this year he published his Exposition on the Church Catechism, perhaps better known by its sub-title, The Practice of Divine Love. In 1688, when James reissued his "Declaration of Indulgence," Ken was one of the "seven bishops" who refused to publish it. He was probably influenced by two considerations: first, by his profound aversion from Roman Catholicism, to which he felt he would be giving some Episcopal recognition by compliance; but, second and more especially, by the feeling that James was compromising the spiritual freedom of the church. Along with his six brethren, Ken was committed to the Tower on the 8th of June 1688, on a charge of high misdemeanour; the trial, which took place on the 20th and 29th of the month, and which resulted in a verdict of acquittal, is matter of history. With the revolution which speedily followed this impolitic trial, new troubles encountered Ken; for, having sworn allegiance to James, he thought himself thereby precluded from taking the oath to William of Orange. Accordingly, he took his place among the non-jurors, and, as he stood firm to his refusal, he was, in August 1691, superseded in his bishopric by Dr Kiddie, dean of Peterborough. From this time he lived mostly in retirement, finding a congenial home with Lord Weymouth, his friend from college days, at Longleat in Wiltshire; and though pressed to resume his diocese in 1703, upon the death of Bishop Kiddie, he declined, partly on the ground of growing weakness, but partly no doubt, from his love for the quiet life of devotion which he was able to lead at Longleat. His death took place there on the 19th of March 1711.

Although Ken wrote much poetry, besides his hymns, he cannot be called a great poet; but he had that fine combination of spiritual insight and feeling with poetic taste which marks all great hymn-writers. As a hymn-writer he has few equals in England; it is said that even he himself complained of his own lack of poetical gifts, surpassed him in his own sphere (see HYMNS). In his own day he took high rank as a pulpit orator, and even royalty had to beg for a seat amongst his audiences; but his sermons are now largely read for the spiritual insight and keenness of mind with which he always presents his theme. He was a man of unshrinking fidelity and invincible fidelity to conscience, weak only in a certain narrowness of view which is a frequent attribute of the intense character which he possessed. As an ecclesiastical historian he is not without his value; his History of the Church of England (1711) is a very useful work.

Ken's poetical works were published in collected form in four volumes by W. Hawkins, his relative and executor, in 1721; his prose

1 The fact, however, that in 1712—which was only a year after Ken's death—his publisher, Brome, published the hymn with the opening words "Awake, my soul, and with the sun," has been described by such a high authority as the 1st Earl of Selborne as sufficient evidence that the alteration had Ken's authority.

Source: British Library
works were issued in 1838 in one volume, under the editorship of J. T. Round. A brief memoir was prefixed by Hawkins to a selection from Ken's works which he published in 1713; and a life, in two volumes, by the Rev. W. L. Bowles, appeared in 1850. But the standard biographies of Ken are those of J. Lavigerie Anderdon (The Life of Thomas Ken, Bishop of Bath and Wells, by a Layman, 1851; 2nd ed., 1854) and of Dean Plumptre (2 vols., 1888; revised, 1900). See also the Rev. W. Hunt's article in the Dict. Nat. Biog.

KEN, a river of Northern India, tributary to the Jumna on its right bank, flowing through Bundelkhand. An important reservoir in its upper basin, which impounds about 180 million cubic feet of water, irrigates about 374,000 acres in a region specially liable to drought.

KENA, or KENAI (sometimes written Oina), a town of Upper Egypt on a canal about a mile E. of the Nile and 380 m. S.S.E. of Cairo by rail. Pop. (1907), 20,060. Kena, the capital of a province of the same name, was called by the Greeks Caene or Caenopolis (probably the Nē Kēnēs of herodotus; see Akarnia) in distinction from Coptos (q.v.), 15 m. S., to whose trade it eventually succedded. It is a remarkable fact that its modern name should be derived from a purely Greek word, like Iskenderia from Alexandria, and Nekrásh from the name of an ancient Egyptian city it seems to point to Kena having originated in a foreign settlement in connexion with the Red Sea trade. The clay for making it is obtained from a valley north of Kena. The pottery is sent down the Nile in specially constructed boats. Kena is also known for the excellence of the dates sold in its bazaars and for the large colony of dancing girls who live there. It carries on a trade in grain and dates with Arabia, via Kosseir on the Red Sea, 100 m. E. in a direct line. This considerable traffic is all that is left of the extensive commerce formerly maintained—chiefly via Berenice and Coptos—between Upper Egypt and India and Arabia. The road to Kosseir is one of great antiquity. It leads through the valley of Hammámát, celebrated for its ancient breccia quarries and deserted gold mines. During the British operations in Egypt in 1801 Sir David Baird and his force marched along this road to Kena, taking sixteen days on the journey from Kosseir.

KENDAL, DUKEDOM OF. The English title of duke of Kendal was first bestowed in May 1667 upon Charles (d. 1667), the infant son of the duke of York, afterwards James II. Several persons have been created earl of Kendal, among them being John, duke of Bedford, son of Henry IV.; John Beaumont, duke of Somerset (d. 1444); and Queen Anne's husband, George, prince of Denmark.

In 1719 Ehrenhare Melusina (1667–1743), mistress of the English king George I., was created duchess of Kendal. This lady was the daughter of Gustavus Adolphus, count of Schen-enburg (d. 1601), and was born at Edem on the 25th of December 1667. Her father held important positions under the elector of Brandenburg; her brother Matthias John (1661–1747) won great fame as a soldier in Germany and was afterwards commander-in-chief of the army of the republic of Venice. Having entered the household of Sophia, electress of Hanover, Melusina attracted the notice of her son, the future king, whose mistress she became about 1690. When George II. was created duke of Kendal in 1714, the "Schenenburg," as Sophia called her, followed him and soon supplanted her principal rival, Charlotte Sophia, Baroness of Kilmannsegge (c. 1673–1725), afterwards countess of Darlington, as his first favourite. In 1716 she was created duchess of Munster; then duchess of Kendal; and in 1723 the emperor Charles VI. made her a princess of the Empire. The duchess was very avaricious and obtained large sums of money by selling public offices and titles; she also sold patent rights, one of these being the privilege of supplying Ireland with a new copper coinage. This she sold to a Wolverhampton iron merchant named William Wood (1671–1730), who flooded the country with coins known as "Wood's halfpence," thus giving occasion for the publication of Swift's famous Drapier's Letters. In political matters she had much influence with the king, and she received £10,000 for procuring the recall of Bolingbroke from exile. After George's death in 1727 she lived at Kendal House, Isleworth, Middlesex, until her death on the 10th of May 1743. The duchess was by no means a beautiful woman, and her thin figure caused the populace to refer to her as the "maypole." By the king she had two daughters: Petronilla Melusina (1693–1758), who was created countess of Walsingham in 1722, and who married the great earl of Chesterfield; and Margaret Gertrude, countess of Lippe (1703–1773).

KENDAL, WILLIAM HUNTER (1843– ), English actor, whose family name was Grimston, was born in London on the 16th of December 1843, the son of a painter. He made his first stage appearance at Glasgow in 1862 as Louis XIV., in A Life's Revenge, billed as "Mr Kendal." After some experience at Birmingham and elsewhere, he joined the Haymarket company in London in 1866, acting everything from burlesque to Romeo. In 1869 he married Margaret (Madge) Shafio Robertson (b. 1849), sister of the dramatist, T. W. Robertson. As "Mr and Mrs Kendal" their professional careers then became inseparable. Mrs Kendal's first stage appearance was as Marie, "a child," in The Orphan of the Frozen Sea in 1854 in London. She soon acquired a reputation as a singer that secured her numerous engagements, and by 1865 was playing Ophelia and Desdemona. She was Mary Meredith in Our American Cousin with Sothorn, and Pauline to his Cloud Melnotte. But her real triumphs were at the Haymarket in Shakespearian revivals and the old English comedies. While Mr Kendal played Orlando, Charles Surface, Jack Absolute and Young Marlowe, his wife made the combination perfect with her Rosalind, Lady Teazle, Lydia Languish and Kate Hardcastle; and she created Galatea in Gilbert's Pygmalion and Galatea (1871). Short seasons followed at the Court theatre and at the Prince of Wales's, at the latter of which they joined the Bancrofts in Diplomacy and other plays. Then in 1879 began a long association with Mr (afterwards Sir John) Hare as joint-managers of the St James's theatre, some of their notable successes being in The Squire, Impulse, The Ironmaster and A Scrap of Paper. In 1888, however, the Hare and Kendal régime came to an end. From that time Mr and Mrs Kendal chiefly toured in the provinces, in America, with an occasional season at rare intervals in London.

KENDAL, a market town and municipal borough in the Kendal parliamentary division of Westmorland, England, 251 m. N.N.W. from London on the Windermere branch of the London & North-Western railway. Pop. (1901), 14,183. The town, the full name of which is Kirkby-Kendal or Kirkby-in-Kendal, is the largest in the county. It is picturesquely placed on the river Kent, and is irregularly built. The white-walled houses with their blue-slated roofs, and the numerous trees, give it an attractive appearance. To the S.W. rises an abrupt limestone eminence, Scout Scar, which commands an extensive view towards Windermere and the southern mountains of the Lake District. The church of the Holy Trinity, the oldest part of which dates from about 1200, is a Gothic building with five aisles and a square tower. In it is the helmet of Major Robert Phillipson, who rode into the church during service in search of one of Cromwell's officers, Colonel Briggs, to do vengeance on him. This major was notorious as "Robby the Devil," and his story is told in Scott's Robbery. Among the public buildings are the town hall, classic in style; the market house, and literary and scientific institution, with a museum containing a fossil collection from the limestone of the locality. Educational establishments include a free grammar school, in modern buildings, founded in 1525 and well endowed; a blue-coat school, science and art school, and green-coat Sunday school (1813). On an eminence east of the town are the ruins of Kendal castle, attributed to the first barons of Kendal. It was the birthplace of Catherine Parr, Henry VIII.'s last queen. On the Castlebrow Hill, an artificial mound probably of pre-Norman origin, an obelisk was raised in 1788 in memory of the revolution of 1688. The woolen manufactures of Kendal have been noted since 1331, when Edward III. is said to have granted letters of protection to John Kemp, a Flemish weaver who settled in the town; and, although the coarse cloth
known to Shakespeare as “Kendal green” is no longer made, its place is more than supplied by active manufactures of tweeds, railway rugs, horse clothing, knitted woollen caps and jackets, worsted and woollen yarns, and similar goods. Other manufactures of Kendal are machine-made boots and shoes, cards for wool and cotton, agricultural and other machinery, paper, and, in the neighbourhood, gunpowder. There is a large weekly market for grain, and annual horse and cattle fairs. The town is governed by a mayor, 6 aldermen and 18 councillors.

Area, 2622 acres.

The outline of a Roman fort is traceable at Watercock near Kendal. The barony and castle of Kendal or Kirkby-in-Kendal, held by Turold before the Conquest, were granted by William I. to Ivo de Taillebois, but the barony was divided into three parts in the reign of Richard II., one part with the castle passing to Sir William Parr, knight, ancestor of Catherine Parr. After the death of her brother William Parr, marquess of Northampton, his share of the barony called Marquis Fee reverted to Queen Elizabeth. The castle, being evidently deserted, was ruined in 1586. Kendal was plundered by the Scots in 1210, and was visited by the rebels in 1715 and again in 1745 when the Pretender was proclaimed king there. Burgessess in Kendal are mentioned in 1345, and the borough with “court housez” and the fee-farm of free tenants is included in a confirmation charter to Sir William Parr in 1472. Richard III. in 1484 granted the inhabitants of the barony freedom from toll, passage and portage, and the town was incorporated in 1576 by Queen Elizabeth under the title of an alderman and 12 burgesses, but Charles I. in 1633 appointed a mayor, 12 aldermen and 20 capital burgesses. Under the Municipal Reform Act of 1835 the corporation was again altered. From 1832 to 1885 Kendal sent one member to parliament, but since the last date its representation has been merged in that of the southern division of the county. A weekly market on Saturday granted by Richard I. to Roger Fitz Reinfrid, 11th century, and the corporation from the earl of Lonsdale and Captain Bagot, lords of the manor, in 1885 and 1886. Of the five fairs which are now held three are ancient, that now held on the 29th of April being granted to Marmaduke de Tweng and William de Ros in 1307, and those on the 8th and 9th of November to Christiana, widow of Ingelram de Gynes, in 1333.

KENDALL, HENRY CLARENCE (1841-1882), Australian poet, son of a missionary, was born in New South Wales on the 8th of April 1841. He received only a slight education, and in 1860 he entered a lawyer's office in Sydney. He had always had literary tastes, and sent some of his verses in 1862 to London to be published in the Athenaeum. Next year he obtained a clerkship in the Lands Department at Sydney, being afterwards transferred to the Colonial Secretary's office; and he combined this work with the writing of poetry and with journalism. His principal volumes of verse are from grass to forest (1869) and Songs from the Mountains (1880), his feeling for nature, as embodied in Australian landscape and bush-life, being very true and full of charm. In 1886 he resigned his post in the public service, and for some little while was in business with his brothers. Sir Henry Parkes took an interest in him, and eventually appointed him to an inspectorship of forests. He died on the 1st of August 1882. In 1886 a memorial edition of his poems was published at Melbourne.

KEANEY, EDWARD VAUGHAN HYDE (1817-1860), Irish barrister and author, was born at Cork on the 2nd of July 1819, the son of a local merchant. He was educated at Trinity College, Dublin; was called to the Irish bar in 1840 and to the English bar in 1847; and obtained a fair practice in criminal cases. In 1868 he became a Q.C. and a bencher of Gray's Inn. It was not, however, till 1853, when he became leading counsel for the Tichborne claimant, that he came into any great prominence. His violent conduct of the case became a public scandal, and after the verdict against his client he started a paper to plead his cause and to attack the judges. His behaviour was so extreme in 1874 he was disbarred and disbarred by his Inn.

He then started an agitation throughout the country to ventilate his grievances, and in 1875 was elected to parliament for Stoke; but no member would introduce him when he took his seat.

Dr. Kenealy, as he was always called, gradually ceased to attract attention, and on the 16th of April 1880 he died in London. He published a great quantity of verse, and also of somewhat mystical theology. His second daughter, Dr Arabella Kenealy, besides practising as a physician, wrote some clever novels.

KENG TUNG, the most extensive of the Shan States in the province of Burma. It is in the southern Shan States' charge and lies almost entirely east of the Salween river. The area of the state is rather over 12,000 sq. m. It is bounded N. by the states of Mang Lôn, Mãng Lem and Kêng Hùng (Hsip Haung Pannah), the two latter under Chinese control; E. by the Mekong river, on the farther side of which is French Lao territory; S. by the Siamese Shan States, and W. in a general way by the Salween river, though it overlaps in some places. The state is known to the Chinese as Mang K'êng, or its capital, called by the Burmese "the 32 cities of the Gôn" (Hkôn). Kêng has expanded very considerably since the establishment of British control, by the inclusion of the districts of Hawn Yawt, Hsen Mawng, Mông Hsat, Mông Pu, and the cis-Mekong portions of Kêng Cheng, which in Burmese times were separate charges. The "classical" name of the state is Khamara or Khemara Tungkapuri. About 63% of the area lies in the basin of the Mekong river and 37% in the Salween drainage area. The watershed is a high and generally continuous range. Some of its peaks rise to over 7000 ft., and the elevation is nowhere much below 5000 ft. Parallel to this successive hill ranges run north and south. Mountainous country so greatly predominates that the scattered valleys are but as islands in a sea of rugged hills. The chief rivers, tributaries of the Salween, are the Nam Hka, the Hwe Lông, Nam Pu, and the Nam Hām. The first two rise in the Wa or Vii states, the Nam Hām in the watershed range in the centre of the state. Rocks and rapids make both un navigable, but much timber goes down the Nam Hām. The lower part of both rivers forms the boundary of Kêng Tung state. The chief tributaries of the Mekong are the Nam Nga, the Nam Lwe, the Nam Yawg, Nam Lin, Nam Hôk and Nam Kôk. Of these the chief is the Nam Lwc, which is navigable in the interior of the state, but enters the Mekong by a gorge broken up by rocks. The Nam Lin and the Nam Kôk are also considerable streams. The lower course of the latter passes by Chieng Râi in Siamese territory. The lower Nam Hôk or Mê Huak forms the boundary with Siam.

The existence of minerals was reported by the sawbwa, or chief, Keng Tong, in 1862; gold, silver, copper, and lead are worked. Gold is washed in most of the streams. Teak forests exist in Mông Pu and Mông Hsat, and the sawbwa works them as government contracts. One-third of the rice realized from the sale of the logs at Mêtan is paid for by the government royalty. There are teak forests also in the Mekong drainage area in the south of the state, but there is only a local market for the timber. Rice, as elsewhere in the Shan States, is the chief crop. Next to it is sugar-cane, grown both on the flat and in the high hills. The fields are separated by several crop changes. The soil is rich in cattle, and exports them to the country west of the Salween. Cotton and opium are exported in large quantities, the former entirely to China, a good deal of the latter to northern Siam, which also purchases rice and sandal. Tea is carried through westwards from Kêng Hùng, and silk from the Siamese Shan States. Cotton and silk weaving are dying out as industries. Large quantities of shoes and sandal are made of buffalo and bulllock hide, with Chinese felt uppers and soft soles. There are also large local paper mills. The chief work in iron is the manufacture of guns, which has been carried on for many years in certain villages of the Sam Tao district. The gun barrels and springs are rude but effective, though not very durable. The revenue of the state is derived from taxation and licences. From 1860, when the state made its submission, the annual tributary offerings made in Burmese times were continued to the British government, but in 1894 these offerings were converted into tribute. For the quinquennial period 1903-1908 the state paid £30,000 ($20,000) annually.
The population of the state was enumerated for the first time in 1901, giving a total of 1,069,878. According to an estimate made by Mr. G. C. Stirling, the political officer in charge of the state, in 1897-1898, of the various tribes of Shans, the Hkias and Lus contribute about one-third of the population of Lower Shan State, about 1,200,000. The Chinese Shans about 7,000, and the Chinese about 5,000. Of the hill tribes, the Kaw or Akas are the most homogeneous with 22,000, but probably the Wa or Vus, disguised under various tribal names, are at least equally numerous. The total population of the Shan States, about 33,000, and the remainder are classed as animists. Spirit-worship is, however, very conspicuously prevalent amongst classes even of the Shan. The present sawbaw or chief received his patent from the British Government on the 9th of February 1897. The early history of Keng Tung is very obscure, but Burmese influence seems to have been maintained since the latter half, at any rate, of the 16th century. The Chinese made several attempts to subdue the state, and appear to have held it for a time in 1765-66. There were few English and Burmese troops. The same fate seems to have attended the first Siamese invasion of 1604. The second and third Siamese invasions, in 1852 and 1854, resulted in great disaster to the invaders, though the capital was invested for a time.

Keng Tung, the capital, is situated towards the southern end of a valley about 12 m. long and with an average breadth of 7 m. The town is surrounded by a brick wall and moat about 5 m. round. Only the central and northern portions are much built over. Pop. (1901), 5,695. It is the most considerable town in the British Shan States. In the dry season crowds attend the market held according to Shan custom every five or six days, and numerous caravans come from China, and form large parties when passing the town. The foot of the watershed range. At first the headquarters of a regiment was stationed there; this was reduced to a wing, and recently to a military police. The site was badly chosen and proved very unhealthy. The head-quarters building and officers' quarters have been transferred to Loi Ngwe Long, a ridge 600 ft. above sea-level 12 m. south of the capital. The rainfall probably averages between 50 and 60 in. for the year. The temperature seems to rise to nearly 100° F. during the hot season, falling then to 70° F. In the coolest weather a temperature of 40° or a few degrees more or less appears to be the lowest experienced. The plain in which the capital stands has an altitude of 3,000 ft.

KENWORTH, a market town in the Rugby parliamentary division of Warwickshire, England; pleasantly situated on a tributary of the Avon, on a branch of the London & North-Western railway, 99 m. N.W. from London. Pop. of urban district (1901), 4,544. The town is only of importance from its antiquarian interest and the magnificent ruins of its old castle. The walls originally enclosed an area of 7 acres. The principal portions of the building remaining are the gatehouse, now used as a dwelling-house; Caesar's tower, the only portion built by Geoffrey de Clinton now extant, with massive walls 15 ft. thick; the Merwyn's tower of Scott's Kenilworth; the great hall built by John of Gaunt with windows of very beautiful design; and the Leicester buildings, which are in a very ruinous condition. Not far from the castle are the remains of an Augustinian monastery founded in 1222, and afterwards made a monastery. Adjacent to the monastery is the parish church of St Nicholas, restored in 1865, a structure of mixed architecture, containing a fine Norman doorway, which is supposed to have been the entrance of the former abbey church.

Kenilworth (Chiniwære, Kinilewære, Kinelwørthe, Kendlord, Killingworth) is said to have been a member of Stoneleigh before the Norman Conquest and a possession of the Saxon kings, whose royal residence there was destroyed in the wars between Edward and Canute. The town was granted by Henry I. to Geoffrey de Clinton, a Norman who built the castle round which the whole history of Kenilworth centres. He also founded a monastery here about 1122. Geoffrey's grandson released his right to King John, and the castle remained with the crown until Henry III. granted it to Simon de Montfort, earl of Leicester. The famous "Dictum de Kenilworth" was proclaimed here in 1266. After the battle of Evesham the forces rallied at the castle, which, after a siege of six months, was surrendered by Henry de Hastings, the governor, on account of the scarceness of food and of the "pestilence disease" which raged there. The king then granted it to his son Edmund. Through John of Gaunt it came to Henry IV. and was granted by Elizabeth in 1562 to Robert Dudley, afterwards earl of Leicester, but on his death in 1588 again merged in the possessions of the Crown. The earl spent large sums on restoring the castle and grounds, and here in July 1575 he entertained Queen Elizabeth at "excessive cost," as described in Scott's Kenilworth. On the queen's first entry "a small floating island illuminated by a great variety of torches . . . made its appearance upon the lake," upon which, clad in silks, were the Lady of the Lake and two nymphs waiting on her, and for several days of her stay "rare shews and sports were there exercised." During the civil wars the castle was dismantled by the soldiers of Cromwell and was from that time abandoned to decay. The only mention of Kenilworth as a borough occurs in a charter of Henry I. to Geoffrey de Clinton and in the charters of Henry II. and Henry II. to the church of St Mary of Kenilworth confirming the grant of lands made by Geoffrey to this church, and mentioning that he kept the land in which his castle was situated and also land for making his borough, park and fishpond. The town possesses large tanneries.

KENITES, in the Bible a tribe or clan of the south of Palestine, closely associated with the Amalekites, whose hostility towards Israel, however, it did not share. On this account Saul spared them when bidden by Yahweh to destroy Amalek; David, too, whilst living in Judah, appears to have been on friendly terms with them (1 Sam. xvi. 30, xxix. 29). Moses himself married into a Kenite family (Judges i. 16), and the variant tradition would seem to show that the Kenites were only a branch of the Midianites (see Jethro, Midian). Jael, the slayer of Sisera (see Deborah), was the wife of Heber the Kenite, who lived near Kadesh in Naphtali; and the appearance of the clan in this locality may be explained from the nomadic habits of the tribe, or else as a result of the northward movement in which at least one other clan or tribe took part (see Dan). There is an obscure allusion to their destruction in an appendage to the oracles of Balaam (Num. xxiv. 21 seq.; see G. B. Gray, Intern. Crit. Comm. p. 376) and with this, the only unfavourable reference to them, may perhaps be associated the curse of Cain. Although some connexion with the name of Cain is probable, it is difficult, however, to explain the curse (for one view, see Levites). More important is the prominent part played by the Kenite (or Midianite) father-in-law of Moses, whose help and counsel are related in Exod. xvi.; and if, as seems probable, the Rechabites (q.v.) were likewise of Kenite origin (1 Chron. ii. 53), this obscure tribe had evidently an important part in shaping the religion of Israel.

See on this question, Hebrew Religion, and Budde, Religion of Israel to the Exile, vol. i.; G. A. Barton, Semitic Origins, pp. 272 sqq.; L. B. Paron, Biblical World (1906, July and August). On the history of the town see Judges i. 16, see Caleb, Genesis, Jerahmeel, Judah. (S. A. C.)

KENMORE, a village and parish of Perthshire, Scotland, 6 m. W. of Aberfeldy. Pop. of parish (1901), 1,271. It is situated at the foot of Loch Tay, near the point where the river Tay leaves the lake. Taymouth Castle, the seat of the Marquess of Breadalbane, stands near the base of Drummond Hill in a princely park through which flows the Tay. It is a stately four-storeyed edifice with corner towers and a central pavilion, and was built in 1801 (the west wing being added in 1842) on the site of the mansion erected in 1538 for Sir Colin Campbell of Glenorchy. The old house was called Balloch (Gaelic, bealach, "the outlet of a lake"). Two miles S.W. of Kenmore are the Falls of the Achray, 80 ft. high. When Wordsworth and his sister visited them in 1803 the grotto at the cascade was fitted up to represent a "hermit's mossy cell." At the village of Fortingall, on the north side of Loch Tay, are the shell of a yew conjectured to be 3,000 years old and the remains of a Roman camp. Glen-lynch House, the seat of the Campbells of Glenlyon, chief agents of the massacre of Glencoe. At Garth, 25 m. N.E., are the ruins of an ancient castle, said to have been a stronghold of Alexander Stewart, the Wolf of Badenoch (1433-1465), in close proximity to the modern mansion built for Sir Donald Currie.

KENMORE, WILLIAM GORDON, 6th viscount (d. 1716), Jacobite leader, son of Alexander, 5th viscount (d. 1698), was descended from the same family as Sir John Gordon of Lochinvar (d. 1604), whose grandson, Sir John Gordon (d. 1634), was
created Viscount Kennmore in 1633. The family had generally adhered to the Presbyterian cause, but Robert, the 4th viscount, had been exempted from the amnesty granted to the Scottish royalists in 1654, and the 5th viscount, who had succeeded his kinsman Robert in 1663, after some vacillation, had joined the court of the exiled Stuarts. The 6th viscount's adherence to the Pretender in 1715 is said to have been due to his wife Mary Dalzell (d. 1776), sister of Robert, 6th earl of Carnwath. He raised the royal standard of Scotland at Lochmaben on the 12th of October 1715, and was joined by about two hundred gentlemen, with Carnwath, William Maxwell, 5th earl of Nithsdale, and George Seton, 5th earl of Winton. This small force received some additions before Kenmure reached Hawick, where he learnt the news of the English rising. He effected a junction with Thomas Forster and James Ralddyke, 3rd earl of Immowater, at Rothbury. Their united forces of some fourteen hundred men, after a series of rather aimless marches, halted at Kelso, where they were reinforced by a brigade under William Mackintosh. Threatened by an English army under General George Carpenter, they eventually crossed the English border to join the Lancashire Jacobites, and the command was taken over by Forster. Kenmure was taken prisoner at Preston on the 13th of November, and was sent to the Tower. In the following January he was tried with other Jacobite noblemen before the House of Lords, where he pleaded guilty, and appealed to the king's mercy. Immediately before his execution on Tower Hill on the 24th of February he reiterated his belief in the claims of the Pretender. His estates and titles were forfeited, but in 1824 an act of parliament repealed the forfeiture, and his direct descendant, John Gordon (1750-1840), became Viscount Kenmure. On the death of the succeeding peer, Alexx., 8th viscount, without issue in 1847, the title became dormant.

KENNEDY, the name of a famous and powerful Scottish family long settled in Ayrshire, derived probably from the name Kenneth. Its chief seat is at Culzean, or Colzean, near Maybole in Ayrshire.

A certain Duncan who became earl of Carrick early in the 13th century is possibly an ancestor of the Kennedys, but a more certain ancestor is John Kennedy of Dunure, who obtained Cassillis and other lands in Ayrshire about 1350. John's descendant, Sir James Kennedy, married Mary, a daughter of King Robert III. and their son, Sir Gilbert Kennedy, was created Lord Kennedy before 1458. Another son was James Kennedy (c. 1400-1465), bishop of St Andrews from 1441 until his death in July 1465. The 4th viscount's college at St Andrews and built a large and famous ship called the "St Salvador." Andrew Lang (History of Scotland, vol. 1) says of him, "The chapel which he built for his college is still thronged by the scarlet gowns of his students; his arms endure on the oaken doors; the beautiful silver mace of his gift, wrought in Paris, and representing all orders of spirits in the universe, is one of the few remaining relics of ancient Scottish plate." Before the bishop had begun to assist in ruling Scotland, a kinsman, Sir Hugh Kennedy, had helped Joan of Arc to drive the English from France.

One of Gilbert Kennedy's sons was the poet, Walter Kennedy (q.v.), and his grandson David, third Lord Kennedy (killed at Flodden, 1513), was created earl of Cassillis before 1530; David's sister Janet Kennedy was one of the mistresses of James IV.

The earl was succeeded by his son Gilbert, a prominent figure in the history of Scotland from 1513 until he was killed at Preston on the 22nd of December 1527. His son Gilbert, the 3rd earl (c. 1517-1558), was educated by George Buchanan, and was a prisoner in England after the rout of Solway Moss in 1542. He was soon released and was lord high treasurer of Scotland from 1554 to 1558, although he had been intriguing with the English and had offered to kill Cardinal Beaton in the interests of Henry VIII. He died somewhat mysteriously at Dieppe late in 1558 when returning from Paris, where he had attended the marriage of Mary Queen of Scots, and the dauphin of France. He was the father of the "king of Carrick" and the brother of Quintin Kennedy (1530-1564), abbot of Croxraguel. The abbot wrote several works defending the doctrines of the Roman Catholic Church, and in 1562 had a public discussion on these questions with John Knox, which took place at Maybole and lasted for three days. He died on the 22nd of August 1564.

Gilbert Kennedy, 4th earl of Cassillis (c. 1541-1576), called the "king of Carrick," became a protestant, but fought for Queen Mary at Langside in 1568. He is better known through his cruel treatment of Allan Stewart, the commissor abbot of Crossraguel, Stewart being badly burned by the earl's orders at Dunure in 1570 in order to compel him to renounce his title to the abbey lands which had been seized by Cassillis. This "ane werry greedy man" died at Edinburgh in December 1576. His son John (c. 1567-1615), who became the 5th earl, was lord high treasurer of Scotland in 1599 and his lifetime witnessed the culmination of a great feud between the senior and a younger branch of the Kennedy family. He was succeeded as 6th earl by his nephew John (c. 1595-1668), called "the grave and solemn earl." A strong presbyterian, John was one of the leaders of the Scots in their resistance to Charles I. In 1643 he went to the Westminster Assembly of Divines and several times he was sent on missions to Charles I. and to Charles II.; for a time he was lord justice general and he was a member of Cromwell's House of Lords. His son, John, became the 7th earl, and one of his daughters, Margaret, married Gilbert Burnet, afterwards bishop of Salisbury. His first wife, Jean (1607-1642), daughter of Thomas Hamilton, 1st earl of Haddington, has been regarded as the heroine of the ballad "The Gypsy Laddie," but this identity is now completely disproved. John, the 7th earl, "the heir," says Burnet, "to his father's stiffness, but not to his other virtues," supported the revolution of 1688 and died on the 23rd of July 1701; his grandson John, the 8th earl, died without sons in August 1759. The titles and estates of the Kennedys were now claimed by William Douglas, afterwards duke of Queensberry, a great-grandson in the female line of the 7th earl and also by Sir Thomas Kennedy, Bart., of Culzean, a descendant of the 3rd earl, i.e. by the heir general and the heir male. In January 1762 the House of Lords decided in favour of the heir male, and Sir Thomas became the 9th earl of Cassillis. He died unmarried on the 30th of November 1775, and his brother David, the 10th earl, also died unmarried on the 18th of December 1792, when the baronetcy became extinct. The earldom of Cassillis now passed to a cousin, Archibald Kennedy, a captain in the royal navy, whose father, Archibald Kennedy (d. 1793), had migrated to America in 1722 and became commander of customs in New York. His son, the 11th earl, had estates in New Jersey and married an American heiress; in 1765 he was said to own more houses in New York than any one else. He died in London on the 30th of December 1794, and was succeeded by his son Archibald (1770-1846), who was created Baron Ailsa in 1806 and marquess of Ailsa in 1831. His great-grandson Archibald (b. 1847) became 3rd marquess.

See the article in vol. i. of Sir R. Douglas's Peerage of Scotland, edited by Sir J. B. Paul (1908). This is written by Lord Ailsa's son and heir, Archibald Kennedy, earl of Cassillis (b. 1872).

KENNEDY, BENJAMIN HALL (1804-1889), English scholar, was born at Summer Hill, near Birmingham, on the 6th of November 1804, the eldest son of Rann Kennedy (1772-1851), who came of a branch of the Ayrshire family which had settled in Staffordshire. Rann Kennedy was a scholar and man of letters, several of whose sons rose to distinction. B. H. Kennedy was educated at Birmingham and Shrewsbury schools, and St John's College, Cambridge. After a brilliant university career he was elected fellow and classical lecturer of St John's College in 1828. Two years later he became an assistant master at Harrow, whence he went to Shrewsbury as headmaster in 1836. He retained this post until 1866, the thirty years of his rule being marked by a long series of successes won by his pupils, chiefly in classics. When he retired from Shrewsbury a large sum was collected as a testimonial to him, and was devoted partly to the new school buildings and partly to the founding of a Latin professorship at Cambridge. The first two occupants of the chair were both Kennedy's old pupils, H. A. J.
Kennedy, T. F. — Kennet

Munro and J. E. B. Mayor. In 1867 he was elected regius professor of Greek at Cambridge and canon of Ely. From 1870 to 1880 he was a member of the committee for the revision of the New Testament. He was an enthusiastic advocate for the admission of women to a university education, and took a prominent part in the establishment of Newnham and Girton colleges. He was also a keen politician of liberal sympathies. He died near Torquay on the 6th of April 1889. Among a number of classical school-books published by him are two, a Public School Latin Primer and Public School Latin Grammar, which were for long in use in nearly all English schools.

His other chief works are: Sophocles, Oedipus Tyrannus (2nd ed., 1883); Aristophanes, Birds (1874); Aeschylus, Agamemnon (2nd ed., 1882), with introduction, metrical translation and notes; a commentary on Virgil (3rd ed., 1881); and a translation of Plato, Theaetetus (1881). He contributed largely to the collection known as Sabrinae Corolla, and published a collection of verse in Greek, Latin and English under the title of Between Whiter (2nd ed., 1882), with many autobiographical details.

His brother, Charles Rann Kennedy (1808-1867), was educated at Shrewsbury school and Trinity College, Cambridge, where he graduated as senior classic (1831). He then became a barrister. From 1849-1856 he was professor of law at Queen's College, Birmingham. As adviser to Mrs Swinfen, the plaintiff in the celebrated will case Swinfen v. Swinfen (1856), he brought an action for remuneration for professional services, but the verdict given in his favour at Warwick assizes was set aside by the court of Common Pleas, on the ground that a barrister could not sue for the recovery of his fees. The excellence of Kennedy's scholarship is abundantly proved by his translation of the orations of Demosthenes (1852-1853, in Bohn's Classical Library), and his blank verse translation of the works of Virgil (1865). He was also the author of New Rules for Pleading (2nd ed., 1841) and A Treatise on Annuities (1846). He died in Birmingham on the 17th of December 1867.

Another brother, Rev. William James Kennedy (1814-1891), was a prominent educationalist, and the father of Lord Justice Sir William Rann Kennedy (b. 1846), himself a distinguished Cambridge scholar.

Kennedy, Thomas Francis (1788-1879), Scottish politician, was born near Ayr in 1788. He studied for the bar and became advocate in 1811. Having been elected M.P. for the Ayr burghs in 1818, he devoted the greater part of his life to the promotion of Liberal reforms. In 1820 he married the only daughter of Sir Samuel Romilly. He was greatly assisted by Lord Cockburn, then Mr. Henry Cockburn, and a volume of correspondence published by Kennedy in 1874 forms a curious and interesting record of the consultations of the two friends, which measures they regarded as requisite for the political regeneration of their native country. One of the first measures to which he directed his attention was the withdrawal of the power of nominating juries from the judges, and the imparting of a right of peremptory challenge to prisoners. Among other subjects were the improvement of the parish schools, of pauper administration, and of several of the corrupt forms of legal procedure which then prevailed. In the construction of the Scottish Reform Act Kennedy took a prominent part; indeed he and Lord Cockburn may almost be regarded as its authors. After the accession of the Whigs to office in 1832 he held various important offices in the ministry, and most of the measures of reform for Scotland, such as burgh reform, the improvements in the law of entail, and the reform of the sheriff courts, owed much to his sagacity and energy. In 1837 he went to Ireland as paymaster of civil service, and set himself to the promotion of various measures of reform. Kennedy retired from office in 1854, but continued to take keen interest in political affairs, and up to his death in 1879 took a great part in both county and parish business. He had a stern love of justice, and a determined hatred of everything savouring of johbery or dishonesty.

Kennedy, Walter (c. 1490-c. 1508), Scottish poet, was the third son of Gilbert, 1st Lord Kennedy. He matriculated at Glasgow University in 1475 and took his M.A. degree in 1478. In 1497 he was one of four examiners in his university, and in 1492 he acted as depute for his nephew, the hereditary bailie of Carrick. He is best known for his share in the Flying with Dunbar (q.v.). In this coarse combat of wits Dunbar taunts his rival with his Highland speech (the poem is an expression of Gaelic and "Inglis," i.e. English, antagonism); and implies that he had been involved in treason, and had disguised himself as a beggar in Galloway. With the exception of this share in the Flying Kennedy's poems are chiefly religious in character. They include The Praise of Aige, An Agit Manis Inventic against Mouth Thankless, An Ballat in Praise of Our Lady, The Passion of Christ and Pious Counsels. They are printed in the rare supplement to David Laing's edition of William Dunbar (1834), and they have been re-edited by Dr J. Schipper in the proceedings of the Kais. Akad. der Wissenschaften (Vienna).

See also the prolegomena in the Scottish Text Society's edition of Dunbar; and (for the life) Pitcairn's edition of the Historie of the Kennedys (1830).

Kennel, a small hut or shelter for a dog, also extended to a group of buildings for a pack of hounds (see Doe). The word is apparently from a Norman-French kenil (this form does not occur, but is seen in the Norman kien, a little dog), modern French chenil, from popular Latin canile, place for a dog, canis, cf. ovile, sheep-cote. The word "kennel," a gutter, in a street or road, is a corruption of the Middle English canel, cennel, in modern English "channel," from Latin canalis, canal.

Kenneth, the name of two kings of the Scots. Kenneth I., MacAlpin (d. c. 860), often described as the first king of Scotland (kingdom of Scone), was the son of the Alpin, called king of the Scots, who had been slain by the Picts in 832 or 834, whilst endeavouring to assert his claim to the Pictish throne. On the death of his father, Kenneth is said to have succeeded him in the kingdom of the Scots. The region of his rule matter of conjecture, though Galloway seems the most probable suggestion, in which case he probably led a piratical host against the Picts. On the father's side he was descended from the Conall Gabhrain of the old Dalriadic Scottish kingdom, and the claims of father and son to the Pictish throne were probably through female descent. Their chief support seems to have been found in Fife. In the seventh year of his reign (839 or 841) he took advantage of the effects of a Danish invasion of the Pictish kingdom to attack the remaining Picts, whom he finally subdued in 844 or 846. In 846 or 848 he transported the relics of St Columba to a church which he had constructed at Scone. He is said also to have carried out six invasions of Northumbria, in the course of which he burnt Dunbar and took Melrose. According to the Scalacronica of Sir Thomas Gray he drove the Angles and Britons over the Tweed, reduced the land as far as that river, and first called his kingdom Scotland. In his reign there appears to have been a serious invasion by Danish pirates, in which Cluny and Dunkeld were burnt. He died in 860 or 862, after a reign of twenty-eight years, at Forteviot and was buried at Iona. The double dates are due to a contest of authorities. Twenty-eight years is the accepted length of his reign, and according to the chronicle of Henry of Huntingdon it began in 832. The Pictish Chronicle, however, gives Tuesday, the 13th of February as the day, and this suits 862 only, in which case his reign would begin in 834.

Kenneth II. (d. 995), son of Malcolm I., king of Alban, succeeded Cullen, son of Indulph, who had been slain by the Britons at St. Clyde in 837. Kenneth began his reign by ravaging the British kingdom, but he lost a large part of his force on the river Cornag. Soon afterwards he attacked Eadulf, earl of the northern half of Northumbria, and ravaged the whole of his territory. He fortified the fords of the Forth as a defence against the Britons and again invaded Northumbria, carrying off the earl's son. About this time he gave the city of Brechin to the church. In 977 he is said to have slain Amlaith or Olaf, son of Indulph, king of Alban, perhaps a rival claimant
to the throne. According to the English chroniclers, Kenneth paid homage to King Edgar for the cession of Lothian, but these statements are probably due to the controversy as to the position of Scotland. The nornmaers, or chiefs, of Kenneth were engaged throughout his reign in a contest with Sigurd the Norwegian, earl of Orkney, for the possession of Caithness and the northern district of Scotland as far south as the Spey. In this struggle the Scots attained no permanent success. In 995 Kenneth, whose strength lay in the other kings of his branch of the house of Kenneth MacAlpin lay chiefly north of the Tay, was slain treacherously by his own subjects, according to the later chroniclers at Fettercairn in the Mearns through an intrigue of Enevela, daughter of the earl of Angus. He was buried at Iona.

See Chronicles of the Picts and Scots, ed. W. F. Skene (Edinburgh, 1868), pp. 227-228; and W. F. Skene, Celtic Scotland (Edinburgh, 1876).

KENNEDY, WHITE (1660-1728). English bishop and antiquary, was born at Dover in August 1660. He was educated at Westminster school and at St Edmund’s Hall, Oxford, where, while an undergraduate, he published several translations of Latin works, including Erasmus In Praise of Folly. In 1685 he became vicar of Ambroden, Oxfordshire. A few years afterwards he returned to Oxford as tutor and vice-principal of St Edmund’s Hall, where he gave considerable impetus to the study of antiquities. George Hickes gave him lessons in Old English. In 1695 he published Parochial Antiquities. In 1700 he became rector of St Botolph’s, Aldgate, London, and in 1701 archdeacon of Huntingdon. For a eulogistic sermon on the first duke of Devonshire he was in 1707 recommended to the deanery of Peterborough. He afterwards joined the Low Church party, strenuously opposed the Sacheverel movement, and in the Bangorian controversy supported with great zeal and considerable bitterness the side of Bishop Hoadly. His intimacy with Charles Trimmell, bishop of Norwich, who was high in favour with the king, secured for him in 1718 the bishopric of Peterborough. He died at Westminster in December 1728.

Kennedy published in 1698 an edition of Sir Henry Spelman’s History of Sacrilege, and he was the author of fifty-seven printed works, chiefly tracts and sermons. He wrote the third volume (Charles I.-Anne) of the composite Compleat History of England (1726), and a more detailed and valuable Register and Chronicle of the Restoration. He was much interested in the Society for the Propagation of the Gospel.

The Life of Bishop White Kennedy, by the Rev. William Newton (London, 1823), is a biography of the bishop. See also Nicholls’s Literary Anecdotes, and I. Disraeli’s Calamities of Authors.

KENNY, JAMES (1780-1849). English dramatist, was the son of James Kenny, one of the founders of Boodles’s Club in London. His first play, a farce called Raising the Wind (1803), was a success owing to the popularity of the character of “Jeremy Diddler.” Kenny produced more than forty dramas and operas between 1803 and 1845, and many of his pieces, in which Mrs Siddons, Madame Vestris, Foote, Lewis, Liston and other leading players appeared from time to time, enjoyed a considerable vogue. His most popular play was Sweethearts and Wives, produced at the Haymarket theatre in 1823, and several times afterwards revived; and among the most successful of his other works were: False Alarms (1807), a comic opera with music by Braham; Love, Law and Physic (1812); Spring and Autumn (1827); The Illustrious Stranger, or Married and Buried (1827); Massiniello (1829); The Sicilian Vespers, a tragedy (1840). Kenny, who was the son of Charles Kenyon, and Samuel Rogers among his contemporaries, died at London on the 5th of June 1849. He left the widow of the dramatist Thomas Holcroft, by whom he had two sons and two daughters.

His second son, CHARLES LAMB KENNY (1822-1885), made a name as a journalist, dramatist and miscellaneous writer. Commencing life as a clerk in the General Post Office in London, he joined the staff of The Times, to which paper he contributed dramatic criticism. In 1856, having been called to the bar, he became secretary to Ferdinand de Lesseps, and in 1857 he published The Gates of the East in support of the projected construction of the Suez Canal. Kenny wrote the words for a number of light operas, and was the author of several popular songs, the best known of which were “Soft and Low” (1866) and “The Vagabond” (1871). He also published a Memoir of M. W. Balfe (1875), and translated the Correspondence of Balzac. He included Thackeray and Dickens among his friends in a literary coterie in which he enjoyed the reputation of a wit and an accomplished writer of vers de société. He died in London on the 25th of August 1881.

KENNEDY, GUSTAV ADOLPH (1818-1897), German mineralogist, was born at Breslau on the 6th of January 1818. After being employed in the Hofmineralien Cabinet at Vienna, he became professor of mineralogy in the university of Zürich. He was distinguished for his researches on mineralogy, crystallography and petrology. He died at Lugano, on the 7th of March 1897.

Publications.—Lehrbuch der reinen Kristallographie (1846); Lehrbuch der Mineralogie (1852 and 1857; 5th ed., 1886); Uebersicht der Resultate mineralogischer Forschungen in den Jahren 1844-1885 (7 vols., 1852-1886); Die Mineralen der Schweiz (1866); Elemente der Petrographie (1868).

KENNICOTT, BENJAMIN (1718-1783). English divine and Hebrew scholar, was born at Totnes, Devonshire, on the 4th of April 1718. He succeeded his father as master of a charity school, but by the liberality of friends he was enabled to go to Wadham College, Oxford, in 1744, where he distinguished himself in Hebrew and divinity. While an undergraduate he published two dissertations, On the Tree of Life in Paradise, with some Observations on the Fall of Man, and On the Obliations of Cain and Abel (published in 1747), which procured him the honour of a bachelor’s degree before the statutory time. In 1747 he was elected fellow of Exeter College, and in 1750 he took his degree of M.A. In 1764 he was made a fellow of the Royal Society, and in 1767 keeper of the Radcliffe Library. He was also canon of Christ Church (1770) and rector of Culham (1753), in Oxfordshire, and was subsequently presented to the living of Menheniot, Cornwall, which he was unable to visit and resigned two years before his death. He died at Oxford, on the 15th of September 1783.

His chief work is the Vetus Testamentum hebraicum cum variis lectionibus (2 vols. fol., Oxford, 1776-1780). Before this appeared he had written two parts of the Printed Hebrew Text of the Old Testament considered, published respectively in 1753 and 1759, which were designed to combat the then current ideas as to the “absolute integrity” of the received Hebrew text. The first consisted in a “comparison of the ancient, with 2 Sam. v. and Exi” and observations on seventy MSS., with an extract of mistakes and various readings”; the second defends the claims of the Samaritan Pentateuch, assails the correctness of the printed copies of the Chaldee paraphrase, gives an account of Hebrew MSS. of the Bible known to be extant, and catalogues one hundred MSS. preserved in the British Museum and in the libraries of Oxford and Cambridge. In 1760 he issued his proposals for collating all Hebrew MSS. of date before the 15th century. He had procured an amount of nearly £10,000 was obtained, and many learned men addressed themselves to the work of collation. Bruns of Helmstadt making himself specially useful as regarded MSS. in Germany, Switzerland and Italy. Between 1778 and 1783 the progress of the work were given; in its course 615 Hebrew MSS. and 52 printed editions of the Bible were either wholly or partially collated, and use was also made (but often very perfunctorily) of the quotations in the Talmud. The materials thus collected, when arranged and made ready for the press, extended to 30 vols. fol. The text finally followed in printing was that of Van der Hooght—unpointed however, the points having been disregarded in the collation, and the various readings were printed at the foot of the page. The Samaritan Pentateuch stands alongside the Hebrew in parallel columns. The Dissertatio generalis, appended to the second volume, contains an account of the MSS. and other authorities, and after a discussion of the several MSS. divided into periods, and beginning with the formation of the Hebrew canon after the return of the Jews from the exile. Kennicott’s great work was in one sense a failure. It yielded no materials of value for the emendation of the received text, and by disregarding the chief points overlooked the one thing in which some result (grammatical if not critical) might have been derived from collation of Massorethic MSS. But the negative result of the publication and of the Vavie.
KENNINGTON—KENSINGTON 733

Lectures of De Rossi, published some years later, was important. It showed that the Hebrew text can be emended only by the use of the versions aided by conjecture.

Kenscott’s work was perpetuated by his widow, who founded two university scholarships at Oxford for the study of Hebrew. The fund yields an income of £200 per annum.

KENNINGTON, a district in the south of London, England, within the municipal borough of Lambeth. There was a royal palace here until the reign of Henry VII. Kennington Common, now represented by Kennington Park, was the site of a gallows until the end of the 18th century, and was the meeting-place appointed for the great Chartist demonstration of the 4th of April 1848. Kennington Oval is the ground of the Surrey County Cricket Club. (See LAMBETH.)

KENORA (formerly RAT PORTAGE), a town and port of entry in Ontario, Canada, and the chief town of Rainy River district, situated at an altitude of 1087 ft. above the sea. Pop. (1891), 1806; (1901) 5222. It is 133 m. by rail east of Winnipeg, on the Canadian Pacific railway, and at the outlet of the Lake of the Woods. The Winnipeg river lies at this point a full of 16 ft., which, with the lake as a reservoir, furnishes an abundant and unfailing water-power. The industrial establishments comprise iron foundries, saw-mills and flour-mills, one of the latter being the largest in Canada. It is the distributing point for the gold mines of the district, and during the summer months steamboat communication is maintained on the lake. There is important sturgeon fishing.

KENOSHA, a city and the county-seat of Kenosha county, Wisconsin, U.S.A., on the S.W. shore of Lake Michigan, 35 m.s. of Milwaukee and 50 m. N. of Chicago. Pop. (1900), 11,066, of whom 3,333 were foreign-born: (1910), 21,371. It is served by the Chicago & North-Western railway, by interurban electric lines connecting with Chicago and Milwaukee, and by freight and passenger steamship lines on Lake Michigan. It has a good harbour and a considerable lake commerce. The city is finely situated on high bluffs above the lake, and is widely known for its healthiness. At Kenosha is the Gilbert M. Simmons library, with 10,000 volumes in 1868. Just south of the city is Kemper Hall, a Protestant Episcopal school for girls, under the charge of the Sisters of St Mary, opened in 1857 as a memorial to Jackson Kemper (1839-1850), the first missionary bishop (1835-1859), and the first bishop of Wisconsin (1854-1870) of the Protestant Episcopal Church. Among Kenosha’s manufactures are brass and iron beds (the Simmons Manufacturing Co.), mattresses, typewriters, leather and brass goods, wagon, and automobiles—the “Rambler” automobile being made at Kenosha by Thomas B. Jeffery and Co. There is an extensive sole-leather tannery. The total value of the factory product in 1905 was $12,562,600, the city ranking third in product value among the cities of the state. Kenosha, originally known as Southport, was settled about 1832, organized as the village of Southport in 1842, and chartered in 1850 as a city under its present name.

KENSETT, JOHN FREDERICK (1818-1872), American artist, was born in Cheshire, Connecticut, on the 22d of March 1818. After studying engraving he went abroad, took up painting, and exhibited at the Royal Academy, London, in 1845. In 1847 he was elected to the National Academy of Design, New York, and in 1850 he was appointed a member of the committee to superintend the decoration of the United States Capitol at Washington, D.C. After his death the contents of his studio realized at public auction over $50,000. He painted landscapes more or less in the manner of the Hudson River School.

KENSINGTON, a western metropolitan borough of London, England, bounded N.E. by Paddington, and the city of Westminster. S.E. by Chelsea, S.W. by Fulham, N.W. by Hammersmith, and extending N. to the boundary of the county of London. Pop. (1901), 176,628. It includes the districts of Kensal Green (partly) in the north, Notting Hill in the north-western portion, Earl’s Court in the south-west, and Brompton in the south-east. A considerable but indefinite area adjoining Brompton is commonly called South Kensington; but the area known as West Kensington is within the borough of Fulham.

The name appears in early forms as Chenesiune and Kennesitune. Its origin is obscure, and has been variously connected with a Saxon royal residence (King’s town), a family of the name of Chenesi, and the word caen, meaning wood, from the forest which originally covered the district and was still traceable in Tudor times. The most probable derivation, however, finds in the name a connection with the Saxon tribe or family of Kensings. The history of the manor is traceable from the time of Edward the Confessor, and after the Conquest it was held of the Bishop of Coutances by Aubrey de Vere. Soon after this it became the absolute property of the de Veres, who were subsequently created Earls of Oxford. The place of the manorial courts is preserved in the name of the modern district of Earl’s Court. With a few short intervals the manor continued in the direct line until Tudor times. There were also three sub-manors, one given by the first Aubrey de Vere early in the 12th century to the Abbot of Abingdon, whence the present parish church is called St Mary Abbots; while in another, Knotting Barns, the origin of the name Notting Hill is found. The brilliant period of history for which Kensington is famous may be dated from the settlement of the Court here by William III. The village, as it was then, had a reputation for healthiness through its gravel soil and pure atmosphere. A mansion standing on the western flank of the present Kensington Gardens had been the seat of Heneage Finch, Lord Chancellor and afterwards Earl of Nottingham. It was known as Nottingham House, but when bought from the second Earl by William, who was desirous of avoiding residence in London as he suffered from asthma, it became known as Kensington Palace. The extensive additions and alterations made by Wren according to the taste of the King resulted in a severely plain edifice of brick; the orangery, added in Queen Anne’s time, is a better example of the same architect’s work. In the palace died Mary, William’s consort, William himself, Anne and George II., whose wife Caroline did much to beautify Kensington Gardens, and formed the beautiful lake called the Serpentine (1753). But a higher interest attaches to the palace as the birthplace of Queen Victoria in 1819; and her accession was announced to her. By her order, towards the close of her life, the palace became open to the public.

Modern influences, one of the most marked of which is the widespread erection of vast blocks of residential flats, have swept away much that was reminiscent of the historical connexions of the “old court suburb.” Kensington Square, however, lying south of High Street in the vicinity of St Mary Abbots church, still preserves some of its picturesque houses, nearly all of which were formerly inhabited by those attached to the court; it numbered among its residents Addison, Talleyrand, John Stuart Mill, and Green the historian. In Young Street, opening from the Square, Thackeray lived for many years. His house here, still standing, is most commonly associated with his work, though he subsequently moved to Onslow Square and to Palace Green. Another link with the past is found in Holland House, hidden in its beautiful park north of Kensington Road. It was built by Sir Walter Cope, lord of the manor; in 1607, and obtained its present name on coming into the possession of Henry Rich, Earl of Holland; Sir Walter married Cope’s daughter. He extended and beautified the mansion. General Fairfax and General Lambert are mentioned as occupants after his death, and later the property was let, William Penn of Pennsylvania being among those who leased it. Addison, marrying the widow of the 6th earl, lived here until his death in 1719. During the tenancy of Henry Fox, third Lord Holland (1773-1840), the house gained a European reputation as a meeting-place of statesmen and men of letters. The formal gardens of Holland House are finely laid out, and the rooms of the house are both beautiful in themselves and enriched with collections of pictures, china and tapestries. Famous houses no longer standing were Campden House, in the district north-west of the parish church, formerly known as the Grave Pits; and Gore House, on the site
of the present Albert Hall, the residence of William Wilberforce, and later of the countess of Blessington.

The parish church of St Mary Abbots, High Street, occupies an ancient site, but was built from the designs of Sir Gilbert Scott in 1869. It is in Decorated style, and has one of the loftiest spires in England. In the north the borough includes the cemetery of Kensal Green (with the exception of the Roman Catholic portion, which is in the borough of Hammersmith); it was opened in 1838, and great numbers of eminent persons are buried here. The Roman Catholic church of Our Lady of Victory lies close to Kensington Road, and in Brompton Road is the Oratory of St Philip Neri, a fine building with richly decorated interior, noted for the beauty of its musical services, as is the Carmelite Church in Church Street. St Charles's Roman Catholic College (for boys), near the north end of Ladbroke Grove, was founded by Cardinal Manning in 1865; the buildings are now used as a training centre for Catholic school mistresses.

Of secular institutions the principal are the museums in South Kensington. The Victoria and Albert, commonly called the South Kensington, Museum contains various exhibits divided into sections, and includes the buildings of the Royal College of Science. Close by is the Natural History Museum, and a great building by Alfred Waterhouse, opened as a branch of the British Museum in 1880. Near this stood Cromwell House, erroneously considered to have been the residence of Oliver Cromwell, the name of which survives in the adjacent Cromwell Road. In Kensington Gardens, near the upper end of Exhibition Road, which separates the two museums, was held the Great Exhibition of 1851, the hall of which is preserved as the Crystal Palace at Sydenham. The greater part of the gardens, however, with the Albert Memorial, erected by Queen Victoria in memory of Albert, prince consort, the Albert Hall, opposite to it, one of the principal concert-halls in London, and the Imperial Institute to the south, are actually within the city of Westminster, though commonly connected with Kensington. The gardens (275 acres) were laid out in the time of Queen Anne, and have always been a popular and fashionable place of recreation. Extensive grounds at Earl's Court are open from time to time for various exhibitions. Further notable buildings in Kensington are the town-hall and free library in High Street, which is also much frequented for its excellent shops, and the Brompton Consumption Hospital, Fulham Road. In Holland Park Road is the house of Lord Leighton (d. 1860), given to the nation, and open, with its art collection, to the public.

Kensington is a suffragan bishopric in the diocese of London. The parliamentary borough of Kensington has north and south divisions, each returning one member. The borough council consists of a mayor, 10 aldermen and 60 councillors. Area, 2,901.1 acres.

KENT, EARLS AND DUKES OF. The first holder of the English earldom of Kent was probably Odo, bishop of Bayeux, and the second a certain William de Ypres (d. 1162), both of whom were deprived of the dignity. The regent Hubert de Burgh obtained this honour in 1227, and in 1231 it was granted to Edmund Plantagenet, the youngest brother of Edward II. Edmund (1301-1330), who was born at Woodstock on the 3rd of August 1301, received many marks of favour from his brother the king, whom he steadily supported until the last act in Edward's life opened in 1326. He fought in Scotland and then in France, and was a member of the council when Edward III. became king in 1327. Soon at variance with Queen Isabella and her lover, Roger Mortimer, Edmund was involved in a conspiracy to restore Edward II., who was led to believe was still alive; he was arrested, and beheaded on the 10th of March 1328. Although he had been condemned as a traitor his elder son Edmund (c. 1327-1333) was recognized as earl of Kent, the title passing on his death to his brother John (c. 1330-1352).

After John's childless death the earldom appears to have been held by his sister Joan, "the fair maid of Kent," and in 1360 Joan's husband, Sir Thomas de Holand, or Holland, was summoned to parliament as earl of Kent. Holland, who was a soldier of some repute, died in Normandy on the 28th of December 1360, and his widow married Edward the Black Prince, by whom she was the mother of Richard II. The next earl was Holand's eldest son Thomas (1350-1397), who was marshal of England from 1380 to 1385, and was in high favour with his half-brother, Richard II. The 3rd earl of Kent of the Holand family was his son Thomas (1374-1400). In September 1397, a few months after becoming earl of Kent, Thomas was made duke of Surrey as a reward for assisting Richard II. against the lords appellant; but he was degraded from his dukedom in 1399, and was beheaded in January of the following year for conspiring against Henry IV. However, his brother Edmund (1384-1408) was allowed to succeed to the earldom, which became extinct on his death in Brittany in September 1408.

In the same century the title was revived in favour of William, a younger son of Ralph Neville, 1st earl of Westmorland, and through his mother Joan Beaufort a grandson of John of Gaunt, duke of Lancaster. William (c. 1405-1463), who held the barony of Fauconberg in right of his wife, Joan, gained fame during the wars in France and fought for the Yorkists during the Wars of the Roses. His prowess is said to have been chiefly responsible for the victory of Edward IV. at Towton in March 1461, and soon after this event he was created earl of Kent and admiral of England. He died in January 1463, and, as his only legitimate issue were three daughters, the title of earl of Kent again became extinct. Neville's natural son Thomas, "the bastard of Fauconberg" (d. 1471), was a follower of Warwick, the "Kingmaker."

The long connexion of the family of Grey with this title began in 1465, when Edmund, Lord Grey of Ruthin, was created earl of Kent. Edmund (c. 1420-1459) was the eldest son of Sir John Grey, while his mother, Constance, was a daughter of John Holand, duke of Exeter. During the earlier part of the Wars of the Roses Grey fought for Henry VI.; but by deserting the Lancastrians during the battle of Northampton in 1460 he gave himself to the Yorkists. He was treasurer of England and held other high offices under Edward IV. and Richard III. His son and successor, George, 2nd earl of Kent (c. 1455-1503), also a soldier, married Anne Woodville, a sister of Edward IV.'s queen, Elizabeth, and was succeeded by his son Richard (1481-1524). After Richard's death without issue, his half-brother and heir, Henry (c. 1495-1562), did not assume the title of earl of Kent on account of his poverty; but in 1572 Henry's grandson Reginald (d. 1573), who had been member of parliament for Weymouth, was recognized as earl; he was followed by his brother Henry (1541-1615), and then by another brother, Charles (c. 1552-1590). His son, Henry, the 8th earl (c. 1582-1639), married Elizabeth (1582-1651), daughter of Gilbert Talbot, 7th earl of Shrewsbury. This lady, who was an authoress, took for her second husband the jurist John Selden. Henry died without children in November 1639, when the earldom of Kent, separated from the barony of Ruthin, passed to his cousin Anthony (1557-1643), a clergyman, who was succeeded by his son Henry (1594-1651), Lord Grey of Ruthin. Henry had been a member of parliament from 1640 to 1643, and as a supporter of the popular party was speaker of the House of Lords until its abolition. The 11th earl was his son Anthony (1643-1702), whose son Henry became 12th earl in August 1703, lord chamberlain of the royal household from 1704 to 1710, and in 1706 was created earl of Harold and marquess of Kent, becoming duke of Kent four years later. All his sons predeceased their father, and when the duke died in June 1740, his titles of earl, marquess and duke of Kent became extinct.

In 1799 Edward Augustus, fourth son of George III., was created duke of Kent and Strathearn by his father. Born on the 2nd of November 1767, Edward served in the British army in North America and elsewhere, becoming a field marshal in 1805. To quote Sir Spencer Walpole, Kent, a stern disciplinarian, “was unpopular among his troops; and the storm which was created by his well-intentioned effort at Gibraltar to check the licentiousness and drunkenness of the garrison compelled him finally to retire from the governorship of this colony.” Owing to pecuniary difficulties his later years were mainly passed on the continent of Europe. He died at Sliemouth on the 23rd
of January 1820. In 1818 the duke married Maria Louisa Victoria (1786-1861), widow of Emich Charles, prince of Liechten (d. 1814), and sister of Leopold I., king of the Belgians; and his only child was Queen Victoria (q.v.).

KENT, JAMES (1763-1847), American jurist, was born at Philipp in New York State on the 31st of July 1763. He graduated at Yale College in 1781, and began to practise law at Poughkeepsie, in 1785 as an attorney, and in 1787 at the bar. In 1791 and 1792-93 Kent was a representative of Dutchess county in the state Assembly. In 1793 he removed to New York, where Governor Jay, to whom the young lawyer's Federalist sympathies were a strong recommendation, appointed him a master in chancery for the city. He was professor of law in Columbia College in 1793-98, and from 1796 to 1824 was a member of the Assembly. In 1797 he was recorder of New York, in 1798 judge of the supreme court of the state, in 1804 chief justice, and in 1814 chancellor of New York. In 1822 he became a member of the convention to revise the state constitution. Next year, Chancellor Kent resigned his office and was re-elected to his former chair. Out of the lectures he now delivered grew the Commentaries on American Law (4 vols., 1826-1830), which by their learning, range and lucidity of style won for him a high and permanent place in the estimation of both English and American jurists. Kent rendered most essential service to American jurisprudence while serving as chancellor. Chancery law had been very unprofitable during the colonial period, and had received little development, and no decision had been published. His judgments of this class (see Johnson's Chancery Reports, 7 vols., 1816-1824) cover a wide range of topics, and are so thoroughly considered and developed as unquestionably to form the basis of American equity jurisprudence. Kent was a man of great purity of character and of singular simplicity and guilelessness. He died in New York on the 12th of December 1847.

To Kent we owe several other works (including a Commentary on International Law) of less importance than the Commentaries. See 1797, Life, Character and Public Services of James Kent (1848); The National Portrait Gallery of Distinguished Americans, vol. ii. (1852); W. Kent, Memoirs and Letters of Chancellor Kent (Boston, 1898).

KENT, WILLIAM (1685-1748), English "painter, architect, and the father of modern gardening," as Horace Walpole in his Anecdotes of Painting describes him, was born in Yorkshire in 1685. Apprenticed to a coach-painter, his ambition soon led him to London, where he began life as a portrait and historical painter. He found patrons, who sent him in 1710 to study in Italy; and at Rome he made other friends, among them Lord Burlington, with whom he returned to England in 1719. Under that nobleman's roof Kent chiefly resided till his death on the 14th of April 1748—obtaining abundant commissions in all departments of his art, as well as various court appointments which brought him an income of £600 a year. Walpole says that Kent was below mediocrity in painting. He had some little taste and skill in architecture, of which Horace Walpole perhaps the most favourable example. The mediocre statue of Shakespeare in Westminster Abbey sufficiently stamps his powers as a sculptor. His merit in landscape gardening is greater. In Walpole's language, Kent "was painter enough to taste the charms of landscape, bold and opinionate enough to dare and to dictate, and born with a genius to strike out a great system from the twilight of imperfect essays." In short, he was the first in English gardening to vindicate the natural against the artificial. Banishing all the clipped monstrosities of the topiary art in yew, box or holly, releasing the streams from the conventional canal and marble basin, and rejecting the mathematical symmetry of ground plan then in vogue for gardens, Kent endeavoured to imitate the variety of nature, with due regard to the principles of light and shade and perspective. Sometimes he carried his imitation too far, as when he planted dead trees in Kensington gardens to give a greater air of truth to the scene, though he himself was one of the first to detect the folly of such an extreme. Kent's plans were designed rather with a view to immediate effect over a comparatively small area than with regard to any broader or subsequent results.

KENT, one of the kingdoms of Anglo-Saxon Britain, the dimensions of which seem to have corresponded with those of the present county (see below). According to tradition it was the first part of the country occupied by the invaders, its founders, Hengest and Horsa, having been employed by the British king Vortigern against the Picts and Scots. Their landing, according to English tradition, took place between 450-455, though in the Welsh accounts the Saxons are said to have arrived in 428 (cf. Hist. Brit. 60). According to The Anglo-Saxon Chronicle, which probably used some lost list of Kentish kings, Hengest reigned 455-458, and was succeeded by his son Æsc (Oisc), who reigned till 512; but little value can be attached to these dates. Documentary history begins with Aethelbert, the great-grandson of Æsc, who reigned probably 560-616. He married Bertha, daughter of the Frankish king Haribert, or Charibert, an event which no doubt was partly responsible for the success of the mission of Augustine, who landed in 597. Aethelbert was at this supreme over all the English kingdoms south of the Humber. On his death in 616 he was succeeded by his son Eadbald, who renounced Christianity and married his stepmother, but was shortly afterwards converted by Laurentius, the successor of Augustine. Eadbald was succeeded in 649 by his son Erconberht, who enforced the acceptance of Christianity throughout his kingdom, and was succeeded in 664 by his son Ecgbert, the latter again by his brother Hlothhere in 673. The early part of Hlothhere's reign was disturbed by an invasion of Aethelhald's Mercians. He issued a code of laws, which is still extant, together with his nephew Eadric, the son of Ecgbert, but in 685 a quarrel broke out between them in which Eadric called in the South Saxons. Hlothhere died of his wounds, and was succeeded by Eadric, who, however, reigned under two years.

The death of Eadric was followed by a disturbed period, in which Kent was under kings whom Bede calls "dubii vel externi." An unsuccessful attempt at conquest seems to have been made by the West Saxons, one of whose princes, Mul, brother of Ceaddwala, is said to have been killed in 687. There is some evidence for a successful invasion by the East Saxons in Sigehere during the same year. A king named Oswine, who apparently belonged to the native dynasty, seems to have obtained part of the kingdom in 688. The other part came in 689 into the hands of Swefheard, probably a son of the East Saxons king Sebbe. Wulfred, a son of Ecgbert, succeeded Oswine about 690, and obtained possession of the whole kingdom before 694. From him also we have a code of laws. At Wulfred's death in 725 the kingdom was divided between his sons Aethelberht, Eadbeth and Alric, the last of whom appears to have died soon afterwards. Aethelberht reigned till 762; Eadbeth, according to the Chronicler, died in 748, but some doubtful charters speak of him as alive in 761-762. Eadbeth was succeeded by his son Eardwulf, and he again by Eannmund, while Aethelberht was succeeded by a king named Sigeread. From 764-779 we find a king named Ecgbert, who in the early part of his reign had a colleague named Eredberht. At this period Kentish history is very obscure. Another king named Aedberht appears in 781, and a king Ealhmund in 784, but there is some reason for suspecting that Offa annexed Kent about this time. On his death (796) Eadbeth Prenae made himself king, but in 798 he was defeated and captured by Coenwulf, who made his own brother Cuthred king in his place. On Cuthred's death in 807 Coenwulf seems to have kept Kent in his own possession. His successors Coelwulf and Beornwulf likewise appear to have held Kent, but in 825 we hear of a king Baidred who was expelled by Ecgbert king of Wessex. Under the West Saxons dynasty Kent, together with Essex, Sussex and Surrey, was sometimes given as a dependent kingdom to one or other of the royal families. During Ecgbert's reign it was allotted to his son Aethelwulf, on whose accession to the throne of Wessex, in 839, it was given to Aelhelm, probably his son, who lived at least till 851. From 855 to 860 it was governed by Aethelberht son of Aethelwulf. During the last years of Alfred's reign it seems to have been entrusted by him to his son Edward. Throughout the 9th century we hear also of two earls, whose spheres of authority may have corresponded to those of the two
KENT

KENT, a south-eastern county of England, bounded by the Thames estuary, E. and S.E. by the English Channel, S.W. by Sussex, and W. by Surrey. In the north-west the administrative county of London encroaches upon the ancient county of Kent, the area of which is 1,353.7 sq. m. The county is roughly triangular in form, London lying at the apex of the western angle, the North Foreland at the eastern end, and Dungeness at the southern. The county is divided centrally, from west to east, by the well-marked range of hills known as the North Downs, entering Kent from Surrey. In the west above Westerm hill these hills exceed 800 ft.; to the east the height is much less, but even in Kent (for in Surrey they are higher) the North Downs form a more striking physical feature than their height would indicate. They are intersected, especially on the north, by numerous deep valleys, well wooded. At three points such valleys, cut completely through the main line of the hills. In the west the Darent, flowing north to the Thames below Dartford, pierces the hill north of Sevenoaks, but its waters are collected chiefly from a subsidiary ridge of the Downs running parallel to the main line and south of it, and known as the Ragstone Ridge, from 600 to 800 ft. in height. The Medway, however, cuts through the entire hill system, rising in the Forest of Risques, Sussex, flowing N.E. and E. past Tonbridge, collecting feeders from south and east (the Telse, Beult and others) near Yalding, and then flowing N.E. and N. through the hills, past Maidstone, joining the Thames at its mouth through a broad estuary. The rich lowlands, between the Downs and the Forest Ridges to the south (which themselves extend into Kent), watered by the upper Medway, are a part of the common land within the district well known under the name of the Weald. The easternmost penetration of the Downs is that effected by the Stour (Great Stour) which rises on their southern face, flows S.E. to Ashford, where it receives the East Stour, then turns N.E. past Wye and Canterbury, to meander through the lowlands representing the former channel which isolated the Isle of Thanet from the mainland. The channel was called the Wintersme, and its extent may be gathered from the position of the village of Fordwich near Canterbury, which had formerly a tidal harbour, and is a member of the Cinque Port of Sandwich. The Little Stour joins the Great Stour in these lowlands from a deep vale among the Downs.

About two-thirds of the boundary line of Kent is formed by tidal water. The estuary of the Thames may be said to stretch from London Bridge to Sheerness in the Isle of Sheppey, which is divided from the mainland by the narrow channel (bridged at Queensbridge) of the Swale. Sheerness lies at the mouth of the Medway, a narrow branch of which cuts off a tongue of land termed the Isle of Grain lying opposite Sheerness. Along the banks of the Thames the coast is generally low and marshy, embankments being in several places necessary to prevent inundation. At a few points, however, as at Gravesend, spurs of the North Downs descend directly upon the shore. In the estuary of the Medway there are a number of low marsh islands, but Sheppey presents the sea a range of slight cliffs from 60 to 90 ft. in height. The marshes extend along the Swan to Whitstable, whence stretches a low line of shingle enclaves, forming the tongue of Thanet, when they become lofty and grand, extending round the Foreland southward to Pegwell Bay. The coast from Sheppey round to the South Foreland is skirted by numerous flats and sands, the most extensive of which are the Goodwin Sands off Deal. From Pegwell Bay south to a point near Deal the coast is flat, and the drained marshes or levels of the lower Stour extend to the west; but whence the coast rises again into chalk cliffs, the eastward termination of the North Downs, the famous white cliffs which form the nearest point of England to continental Europe, overlooking the Strait of Dover. These cliffs continue round the South Foreland to Folkstone, where they fall away, and are succeeded west of Sandgate by a flat shingly shore. To the south of Hythe this shores borders the estuaries of the Stour, where the coast, intersected by the strait of Hythe, is overlooked by a line of abrupt hills, but for the rest is divided on the north from the drainage system of the Stour only by a slight uplift. The marsh, drained by many channels, seldom rises over a dozen feet above sea-level. At its south-eastern extremity, and at the extreme south of the county, is the shingly promontory of Dungeness. Within historic times much of this marsh was covered by the sea, and the valley of the river Rother, which forms part of the boundary of Kent with Sussex, entering the sea at Rye harbour, was represented by a tidal estuary for a considerable distance inland.

Geology.—The northern part of the county lies on the southern rim of the London basin; here the beds are dipping northwards. The southern part of the county is occupied by a portion of the London range, calcareous chalk, from which is derived the chalky ridge between the estuaries of the Thames and Medway, as well as Sheppey and a district about 8 m. wide stretching southwards from Whitstable to Canterbury, and extending eastwards to the Isle of Thanet. The London Clay occupies the tract of the Weald, and southwards to the east of Hythe, is overlooked by a line of abrupt hills, but for the rest is divided on the north from the drainage system of the Stour only by a slight uplift. The marsh, drained by many channels, seldom rises over a dozen feet above sea-level. At its south-eastern extremity, and at the extreme south of the county, is the shingly promontory of Dungeness. Within historic times much of this marsh was covered by the sea, and the valley of the river Rother, which forms part of the boundary of Kent with Sussex, entering the sea at Rye harbour, was represented by a tidal estuary for a considerable distance inland.
basin is succeeded by the North Downs, an elevated ridge of country consisting of an outcrop of chalk which extends from Westerham to Folkestone with an irregular breadth generally of 3 to 6 miles, but expanding to nearly 12 miles in the vicinity of Dover and the Channel. After dipping below the London Clay at Canterbury, it sends out an outcrop which forms the greater part of Thanet. Below the chalk is a thin strip of Upper Greensand bedded with the Thanet sandstone, which is due to the fact that the Thanet clay is a narrow valley formed by the Gault, a fossiliferous blue clay. This is succeeded by an outcrop of the Lower Greensand— including the Folkestone, Sandgate and Hythe beds with the thin Atherfield Clay. The Thanet sandstone, which forms the sea cliffs, contains a considerable number of marine and freshwater fossils. Along the borders of Sussex there is a narrow strip of country consisting of picturesque sandy hills, formed by the Hastings beds, whose height above the sea is nearly 400 ft. and the south-west corner of the county is occupied by Romney Marsh, which within a comparatively recent period has been recovered from the sea. Valley gravels border the Thames, and Pleistocene mammalia have been found in fissures in the Hythe beds at Ightham, where ancient stone implements are common. Remains of crag deposits lie in pipes in the chalk near Lenham. Coal-measures, as will be seen, have been found near Dover.

Dover Common Clay is much used for bricks, coarse pottery and Roman cement. Lime is obtained from the Chalk and Greensand formations. Ironstone is found in the Wadhurst Clay, a subdivision of the Hastings beds, clays and calcareous ironstone in the Ashdown sands. The extensive ironstone of both beds has long been worked. The last Wealden furnace was put out in 1828.

Climate and Agriculture.—The unhealthiness of certain portions of the county caused by the marshes is practically removed by draining operations. The climate is influenced by the position of the sea, which regulates the temperature, and by variations in the amount of rainfall. It is both rainy and dry. The average temperature for January is 37°F. at Canterbury, and 39°F. at Dover; for July 63°F. and 61°F. respectively, and the mean annual 50° and 52°F. respectively. Rainfall is light, the mean annual being 27.72 in. at Dover and 23.34 in. at Maidstone. The rainfall is heaviest in the south and lighter in the north. The soil is varied in character, but on the whole rich and under high cultivation. The methods of culture and the kinds of crops grown indicate the variations of climate and the capacity of any other county in England. Upon the London Clay the land is generally heavy and stiff, but very fruitful when properly manured and cultivated. The marsh lands along the banks of the Thames, Medway, Stour and Weald consist chiefly of rich chalk alluvium. In the Isle of Thanet a light mould predominates, which has been much enriched by fish manure. The valley of the Medway, especially the district round Maidstone, is the most fertile part of the county. The soil here is a deep loam, often varied with chalk. On the ragstone the soil is occasionally thin and mixed with small portions of sand and stone; but in some situations the ragstone has a thick covering of clay loam, which is most suitable for the production of wheat and various kinds of vegetables. In the districts of Romney Marsh, with a substratum of clay. The soil of Romney Marsh is a clay alluvium.

No part of England surpasses the more fertile portions of this county in the peculiarity of its rural scenery. About one-quarter of the total area is under cultivation. Oats and wheat are grown in almost equal quantities, barley being of rather less importance. A considerable acreage is under beans, and in Thanet mustard, sugar-beet, and potatoes are variously cultivated. The orchard beds and the county is specially noted for the cultivation of fruit and hops. Market gardens are very numerous in the neighbourhood of London. The principal orchard districts are the valleys of the Darent and Medway, and particularly that of the latter; are the valley of the Weald, and that of the Thames. The length of the hop districts are the country between Canterbury and Faversham, the valley of the Medway in mid Kent, and the district of the Weald. The hop, which originally was not cultivated in Kent, is still densest wooded, and the hop gardens are generally extensive in the valley of the Medway. Fine oaks and beeches are numerous, and yew trees of great size and age are seen in some Kentish churchyards. A vast amount of woodland is seen in all parts of the county. A large extent of woodland consists of ash and chestnut plantations, maintained for the growth of hop poles. Cattle are grazed in considerable numbers on the marsh lands, and dairy farms are numerous in the vicinity of London. For the rearing of sheep Kent is one of the chief counties in England. A breed peculiar to the district, known as Kents, is grazed on Romney Marsh, but Southdowns are the principal breed raised on the uplands. Bee-keeping is extensively practised. Dairy schools are maintained by the technical education committee of the county council. The South eastern Agricultural College at Wye is under the control of the county councils of Kent and Surrey.

Ironworks.—There were formerly extensive ironworks in the Weald. Another industry now practically extinct was the manufacture of woollen cloth. The neighbourhood of Lamberhurst and Cranbrook was the special seat of these trades. Among the principal manufactures were those of the vale of the Darent, and the banks of the Darent, Medway, Cray and neighbouring streams; engineering, chemical and other works along the Thames; manufactures of bricks, tiles, pottery and cement, especially by the lower Medway; and the weaving of cloth by the Government establishments at Chatham and Sheerness. Shipbuilding is prosecuted here and at Gravesend, Dover and other ports. Gunpowder is manufactured near Erith and Faversham and elsewhere.

Deep-sea fishing is largely prosecuted all round the coast. Shrimps, sole and flounders are taken in great numbers in the estuaries of the Thames and Medway, along the north coast and off Ramsgate. The history of the Kentish oyster fisheries goes back to the time of the Roman occupation, when the fame of the oyster beds off Rye (Richborough) extended even to Rome. The principal beds are near Whitstable, Faversham, Milton, Queenborough and Rochester, some being worked by ancient companies or guilds of fishermen.

After the cessation in 1882 of works in connexion with the Channel tunnel, to connect England and France, coal-boring was attempted in the disused shaft, west of the Shakespeare Cliff railway tunnel near Folkestone. When 470 ft. below the surface the coal seams were discovered later. The company which took up the mining was unsuccessful, and the work was resumed by the Consolidated Kent Collieries Corporation, and is now showing signs of being a successful development of the mining industry in Kent.

Communications.—Railway communications are practically monopolized by the South Eastern & Chatham Company, a monopoly of which company the county forms a part. Although the county is not penetrated by railways, it is connected with those of the remainder of England and Ireland by means of a number of road communication, and by the Medway tunnel to France.

The county contains 5 lathes, a partition peculiar to the county. The municipal boroughs are Bromley (pop. 27,354), Canterbury, a city and county borough (24,886), Chatham (37,057), Deal (10,581), Dover (41,794), Faversham (11,290), Folkestone (30,650), Gillingham (24,530), Gravesend (27,166), Hythe (5557), Lydd (2675), Maidstone (31,360), Margate (17,950), Sandwich (4427), Sheerness (15,445), Ramsgate (27,721), Rochester, a city (30,590), Sandwich 12,904), Tenterden (3243), Tunbridge Wells (33,373). The urban districts are Ashford (12,887), Beckenham (26,331), Bexley (12,918), Broadstairs and St Peter's (6466), Cheriton (7091), Chislehurst (7429), Dartford (18,644), Erith (25,206), Fools Cry (5817), Herne Bay (5258), Milton (7086), Northfleet (12,206), Penge (32,465), Sandgate (5296), Sevenoaks (8106), Sheerness (18,170), Sittingbourne (8943), Southborough (9779), Tonbridge (12,726), Walmer (5614), Whitstable (7086), Wrotham (3571). Other small towns are Rainham (1903) near Chatham, Aylesford (2678), East Malling (2391) and West Malling (2312) in the Maidstone district; Edenbridge (2546) and Westerham (903) on the western border of the county; Cranbrook (3949), Goudhurst (2725) and Hawkhurst (3165) in the south-west. Among villages which have grown into residential towns through their
proximity to London, beyond those included among the boroughs and urban districts, there should be mentioned Orpington (4,259).

The county is in the south-eastern circuit, and assizes are held at Maidstone. It has two courts of quarter sessions, and is divided into 17 petty sessional divisions. The boroughs having separate commissions of the peace and courts of quarter sessions are Canterbury, Deal, Dover, Faversham, Folkestone, Gravesend, Hythe, Maidstone, Margate, Rochester, Sandwich and Tenterden; while those of Lydd, New Romney, Ramsgate and Tunbridge Wells have separate commissions of the peace. The liberty of Romney Marsh has petty and general sessions. The justices of the Cinque Ports exercise certain jurisdiction, the non-corporate members of the Cinque Ports of Dover and Sandwich having separate commissions of the peace and courts of quarter sessions. The central criminal court has jurisdiction over certain parishes adjacent to London. All those civil parishes within the county of Kent of which any part is within twelve miles of, or of which no part is more than fifteen miles from, Charing Cross, are within the metropolitan police district. The total number of civil parishes is 427. Kent is mainly in the diocese of Canterbury, but has parts in those of Rochester, Southwark and Chichester.

It contains 476 ecclesiastical parishes or districts, wholly or in part. The county (extra-metropolitan) is divided into 8 parliamentary divisions, namely, North-western or Dartford, Western or Sevenoaks, South-western or Tunbridge, Mid or Medway, North-eastern or Faversham, Southern or Ashford, Eastern or St Augustine's and the Isle of Thanet, each returning one member; while the boroughs of Canterbury, Chatham, Dover, Gravesend, Hythe, Maidstone and Rochester each return one member.

**History.**—For the ancient kingdom of Kent see the preceding article. The shire organization of Kent dates from the time of Aethelstan, the name as well as the boundary being that of the ancient kingdom, though at first probably with the addition of the suffix “shire,” the form “Kentshire” occurring in a record of the Saxon period. The county was divided into 49 districts, or “hundred.” The 24 “Borough Hundreds” were: Aylesford, Canterbury, Chatham, Dartford, Faversham, Gravesend, Maidstone, Margate, Rochester, Sandwich, Sevenoaks, Tonbridge, Tunbridge, Tenterden, and Whitstable. These 24 “Borough Hundreds” were divided into 13 districts, or “hundreds.”

At the time of the Domesday Survey Kent comprised sixty hundreds, and there was a further division into six hundreds, probably representing the shires of the ancient kingdom, of which two, Sutton and Aylesford, correspond with the present-day liberties. The remaining four, Borowast, Lest, Estre Lest, Limowast Lest and Wiwast Lest, existed at least as early as the 9th century, and were apparently named from their administrative centres, Burgwortha (the burg being Canterbury), Eastre, Lynne and Wye, all of which were meeting places of the Kentish Council. The five modern liberties (Aylesford, St Augustine, Scray, Sheppey and Sutton-at-Hone) all existed in the time of Edward I., with the additional liberty of Heileling, which was absorbed before the next reign in that of St Augustine. The Nomina Villarum of the reign of Edward II. mentions all the sixty-six modern hundreds, more than two-thirds of which were at that date in the hands of the church.

Sheriffs of Kent are mentioned in the time of Æthelred II., and in Saxons times the shiremoot met three times a year on Penenden Heath near Maidstone. After the Conquest the great ecclesiastical landholders claimed exemption from the jurisdiction of the shire, and in 1279 the abbot of Battle claimed to have his own coroner in the hundred of Wye. In the 13th century twelve liberties in Kent claimed to have separate bailiffs. The assizes for the county were held in the reign of Henry III. at Canterbury and Rochester, and also at the Lowey of Tonbridge under a mandate from the Crown as a distinct liberty; afterwards at different intervals at East Greenwich, Dartford, Maidstone, Milton-next-Gravesend and Sevenoaks; from the Restoration to the present day they have been held at Maidstone. The liberty of Romney Marsh has petty and quarter sessions under its charter.

Kent is remarkable as the only English county which comprises two entire bishoprics, Canterbury, the see for East Kent, having been founded in 597, and Rochester, the see for West Kent, in 600. In 1295 the archdeaconry of Canterbury was co-extensive with that diocese and included the deaneries of Westbere, Bridge, Sandwich, Dover, Elham, Lympne, Charing, Sutton, Sittingbourne, Ospringe and Canterbury; the archdeaconry of Rochester, also co-extensive with its diocese, included the deaneries of Rochester, Dartford, Malling and Shoreham. In 1845 the deaneries of Charing, Sittingbourne and Sutton were comprised in the new archdeaconry of Maidstone, which in 1846 received in addition the deaneries of Dartford, Malling and Shoreham from the archdeaconry of Rochester. In 1853 the deaneries of Malling and Charing were subdivided into North and South Malling and East and West Charing. Lympne was subdivided into North and South Lympne in 1857 and Dartford into East and West Dartford in 1864. Gravesend and Cobham deaneries were created in 1862 and Greenwich and Woolwich in 1868, all in the archdeaconry of Rochester. In 1873 East and West Bridge deaneries were created in the archdeaconry of Canterbury, and Croydon in the archdeaconry of Maidstone. In 1889 Tunbridge deanship was created in the archdeaconry of Maidstone. In 1906 the deaneries of East and West Dartford, North and South Malling, Greenwich and Woolwich were abolished, and Shoreham and Tunbridge were transferred from Maidstone to Rochester archdeaconry.

Between the Conquest and the 14th century the earldom of Kent was held successively by Odo, bishop of Bayeux, William of Ypres and Hubert de Burgh (sheriff of the county in the reign of Henry III.), none of whom, however, transmitted the honour, which was bestowed by Edward I. on his youngest son Edmund of Woodstock, and subsequently passed to the families of Holland and Neville (see Kent, Earls and Dukes of). In the Domesday Survey only five lay tenants-in-chief are mentioned, all the chief estates being held by the church, and the fact that the Kentish gentry are less ancient than in some remoter shires is further explained by the constant implantation of new stocks [from London, Chatham and Greenwich]. Greenwich is illustrious as the birthplace of Henry VIII., Mary and Elizabeth. Sir Philip Sidney was born at Penshurst, being descended from William de Sidney, chamberlain to Henry II. Bocot Malherbe was the seat of the Wottons, from whom descended Nicholas Wotton, privy councillor to Henry VIII., Edward VI., Mary and Elizabeth. The family of Leiborne of Leiborne Castle, of whom Sir Roger Leiborne took an active part in the barons' wars, became extinct in the 14th century. Sir Francis Walsingham was born at Chislehurst, where his family had long flourished; Hever Castle was the seat of the Boleyns and the scene of the courtship of Anne Boleyn by Henry VIII. Allington Castle was the birthplace of Sir Thomas Wyatt.

Kent, from its proximity to London, has been intimately concerned in every great historical movement which has agitated the country, while its busy industrial population has steadily resisted any infringement of its rights and liberties. The chief events connected with the county during the Norman kings were the capture of Rochester by William Rufus during the rebellion of Odo of Bayeux; the capture of Dover and Leeds castles by Stephen; the murder of Thomas à Becket at Canterbury in 1170; the submission of John to the pope's legate at Dover in 1213, and the capture of Rochester Castle by the king in the same year. Rochester Castle was in 1216 captured by the dauphin of France, to whom nearly all Kent submitted, and during the wars of Henry III. with his barons was captured by Gilbert de Clare. In the peasants' rising of 1381 the rebels plundered the archbishop's palace at Canterbury, and 100,000 Kentishmen gathered round Wat Tyler of Essex. In 1450 Kent took a leading part in Jack Cade's rebellion; and in 1554 the insurrection of Sir Thomas Wyat began at Maidstone. On the outbreak of the Great Rebellion feeling was much divided, but after capturing Dover Castle the parliament soon subdued the whole county. In 1645, however, a widespread insurrection was organized on behalf of Charles, and was suppressed by Fairfax. The county was among the first to welcome back Charles II. In 1667 the Dutch fleet under De Ruyter advanced up the Medway, levelling the fort at Sheerness and burning the ships at Chatham. In
the Kentish petition of 1701 drawn up at Maidstone the county protested against the peace policy of the Tory party.

Another of the chief industries of Kent were the iron-smelting and iron-rolling industries. The Domesday Survey, besides testifying to the agricultural activity of the country, mentions over one hundred salt-works, and numerous valuable fisheries, in Chart Sutton and Leeds, and cheese at Milton. The Hundred Rolls of the reign of Edward I. frequently refer to wool, and Flemish weavers settled in the Weald in the time of Edward III. Tile manufacture was established at Wye in the 14th century. Valuable timber was afforded by the vast forest of the Weald, but the restrictions imposed on the felling of wood for fuel did serious detriment to the iron-trade, and after the statute of 1558 forbidding the felling of timber for iron-smelting within fifteen miles of the coast, industry steadily declined. The discovery of coal in the northern counties dealt the final blow to its prosperity. Cherries are said to have been imported from Flanders and first planted in Kent by Henry VIII. and from this period the culture of fruits (especially apples and cherries) and of hops spread rapidly over the county. Thread-making at Maidstone and silk-weaving at Canterbury existed in the 16th century, and before 1590 one of the first paper-mills in England was set up at Dartford. The statute of 1650 forbidding the exportation of wool, followed by the Plague of 1665, led to a serious trade depression, while the former enactment resulted in the vast smuggling trade which spread along the coast, 40,000 packs of wool being smuggled to Calais from Kent and Sussex in two years.

In 1290 Kent returned two members to parliament for the county, and in 1295 Canterbury, Rochester and Tunbridge were also represented; Canterbury however made no returns after this date. In 1317 Maidstone acquired representation, and in 1572 Queenborough. Under the act of 1832 the county returned four members in two divisions, Chatham was represented by one member and Greenwich by two, while Queenborough was disfranchised. Under the act of 1868 the county returned six members in three divisions and Gravesend returned one member. By the act of 1885 the county returned eight members in eight divisions, and the representation of Canterbury, Maidstone and Rochester was reduced to one member each. By the London Government Act of 1892 the borough of Greenwich was taken out of Kent and made one of the twenty-eight metropolitan boroughs of the county of London.

Antiquities. As was to be expected from its connexion with the early history of England, and from its beauty and fertility, Kent has an unusual number of ancient and historic foundations. The earliest were the priory of Christ's Church and the abbey of St. Peter and St. Paul, now called St. Augustine's, both at Canterbury, founded by Augustine and the monks who accompanied him on his return to England. Of the other foundations the nunnery at Folkestone (630), Lyminge (633; nunnerly and monastery), Reculver (669), Minster-in-Th Thanet (670), Minster-in-Shippes (675), and the priory of St. Martin at Dover (690), all belonging to the Benedictine order. Some of these were refounded, and the principal monastic remains now existing are those of the Benedictine priories at Rochester (1089), Folkestone (1092), Dover (1140); the Benedictine nunneries of Milton and St. Margaret's at Maidstone (founded by King Stephen), and Davington (1535); the Cistercian Abbey at Boxley (1140); the Cluniac abbey at Faversham (1147) and priory at Monks Horton (time of Henry I.), the preceptory of Knights; Tunbridge, however, at the time of the Conquest, was the site of a Premonstratensian abbey of St. Radigund's, near Dover (1101); the first house of Dominicans in England at Canterbury (1221); the first Carmelite house in England, at Aylesford (1240); and the priory of St. Stephen's at Tunbridge (1255). Other houses of which there are slight remains are Lesnes abbey, near Erith, and Bisleton priory near Ashford, established in 1178 and 1255 respectively, and both belonging to the Augustinian canons; and the house of the Augustinian canons at Canterbury (St. Gregory's; 1084), Leeds, near Maidstone (1119), Tunbridge (middle of 12th century), Comberwell, near Cranbrook (time of Henry II.), the nunneries of St. Steven's and St. Gertrude's at Lamberhurst (1206), the nunnery of St. Walwin at Walmer (1192), both belonging to the Benedictines; the Trinitarian priory of Mottenden near Headcorn, the first house of Crutched Friars in England (1224), where miracle plays were presented in the church by the friars on Trinity Sunday; the Carmelitine priories at Sandwich (1272) and Losenham near Tenterden (1241); and the preceptory of Knights of St. John of Jerusalem at West Peckham, near Tunbridge (1408).

Apart from the cathedral churches of Canterbury and Rochester, the county is unsurpassed in the number of churches it possesses of the highest interest. For remains of a date before the Conquest the church of Lyminge is of first importance. Here, apart from the Roman remains, there may be seen portions of the church which originally belonged to the monastery of St. Augustine. The church, rebuilt in the 15th and 16th centuries, and, with considerable use of Roman material, in 1595 by St. Dunstan. There is similar early work in the church of Paddlesworth, not far distant. Among numerous Norman examples, that of Queenborough is of especial interest and is most perfect specimens of its kind in England, with a profusion of ornament, especially round the south doorway and east window. The churches of St. Margaret-at-Cliff, Patricroft, and Darenth are remarkable. The altar-piece of the church of Bilsington should also be mentioned. Among several remarkable Early English examples none is finer than Hythe church, built by Henry II. in the 13th century. The church of St. Mary and Eanswith, Folkestone, Minster-in-Th Thanet, Chalk, with its curious porch, Faversham and Westwell, with fine contemporary glass, are also worthy of notice. Stone church, near Dartford, a late example of this style, transitional to Decorated, is very fine, and among Decorated buildings Chatham church exhibits some of its windows the peculiar tracery known as Kentish Decorated. Perpendicular churches, though numerous, are less remarkable, but the fine glass of this period in Nettlestead church may be noticed. The church of Chaldon contains one of the richest collections of medieval glass in England.

Kent is also rich in examples of ancient architecture other than ecclesiastical. The castles of Rochester and Dover are famous; those of Canterbury and Chilham are notable among others. Ancient houses are numerous; those preserved at Dover are the Palace of Leedes Castle in the Maidstone district, Penshurst Place, Hever Castle near Edenbridge, Saltwood and Westenhanger near Hythe, the More House at Ightham near Westrom, Knole House near Sevenoaks, and Cobham Hall. Minor examples of early domestic architecture abound throughout the county.

Authorities.—A full bibliography of the many earlier works on the subject and its towns is given in J. R. Smith's Bibliotheca Cambiana (London, 1837). There may be mentioned here W. Lambardes, Perambulation of Kent (London, 1576, 1826); R. Kilburne, Topography or Survey of the County of Kent (London, 1659); J. and T. Plowright, Description of the County of Kent (London, 1749); J. Harris, History of Kent (London, 1755); E. Hasted, History and Topographical Survey of Kent (4 vols. folio, London, 1775–1790; 2nd ed., 12 vols. 8vo, London, 1797–1801); W. H. Ireland, History of the County of Kent (London, 1828–1840); C. Sandys, Catholic Antiquities of Kent (London, 1851); A. Hussey, Notes on the Churches of Kent (London, 1852); L. B. Larking, The Domesday Book of Kent (1859); R. Furnley, History of the Weald of Kent (Ashford, 1871–1874); W. A. Secomb, History of Faversham and the Nevendon (Hastings, 1877); S. R. Glynne, Notes on Churches of Kent, ed. W. H. Gladstone (London, 1877); J. Hutchinson, Men of Kent and Kentish Men (London, 1862); Victoria County History, Kent. See also Archaeologia Cantiana, the translations of the Kent Archaeological Society, London, from 1858.

KENTIGERN, ST., OR MUNGO ("dear friend," a name given to him, according to Jocelyn, by St Servanus), a Briton of Strathclyde, called by the Goildels In Glasclus, " the Grey Hound," was, according to the legends preserved in the lives which remain, of royal descent. His mother when with child was thrown down from a hill called Dunpelder (Traprain Law, Haddingtonshire), but survived the fall and escaped by sea to Culross on the farther side of the Firth of Forth, where Kentigern was born. It is possible that she may have been a nun, as a convent had been founded in early Christian times on Traprain Law. The life then spent by Kentigern in training of the body by Service, but the date of the latter renders this impossible. Returning to Strathclyde Kentigern lived for some time at Glasgow, near a cemetery ascribed to St. Ninian, and was eventually made bishop of that region by the king and clergy. This story is partially attested by Welsh documents, in which Kentigern appears as the bishop of Garthawal, apparently the ruler of the region about Glasgow. Subsequently he was opposed by a pagan king called Morken, whose relatives after his death succeeded in forcing the saint to retire from Strathclyde. He thereupon took refuge with St. David at Menevia (St. David's), and eventually founded a monastery at Llanedey (St Asaph's), for which purpose he received grants from Maelgwn, prince of Gwynedd. After the battle of Arderyd in 573 in which King Rydderch, leader of the Christian party in Strathclyde, was victorious, Kentigern was recalled. He fixed his see first at Hoddam in Dumfriesshire, but afterwards...
returned to Glasgow. He is credited with missionary work in Galloway and north of the Firth of Forth, but most of his efforts were devoted to 300 miles south of the Tyne. 

KENTON, a city and the county seat of Hardin county, Ohio, U.S.A., on the Scioto river, 60 m. N.W. of Columbus. Pop. (1800), 655; including 463 foreign-born and 187 negroes; (1810), 718. It is served by the Erie, the Cleveland, Cincinnati, Chicago & St. Louis, and the Ohio Central railways. It is built on the water-parting between Lake Erie and the Gulf of Mexico, here about 1,000 ft. above sea-level. There are shops of the Ohio Central railway here, and manufactories of hardware. The municipality owns and operates its waterworks.

Kenton was named in honour of Simon Kenton (1755-1836), a famous scout and Indian fighter, who took part in the border warfare, particularly in Kentucky and Ohio, during the War of American Independence and afterwards. It was platted and became the county seat in 1835, and was chartered as a city in 1855.

KENTON—KENTUCKY

KENTUCKY, a South Central State of the United States of America, situated between 36°30' and 39°47' N. and 82° and 89° W. It is bounded N., N.W., and N.E. by Illinois, Indiana and Ohio; E. by the Big Sandy river and its E. fork, the Tug, which separates it from West Virginia, and by Virginia; S.E. and S. by Virginia and Tennessee, and W. by the Mississippi river, which separates it from Missouri. It has an area of 45,958 sq. m. of this, 417 sq. m., including the entire breadth of the Ohio river, over which it has jurisdiction, are water surface.

Physiography.—From mountain heights along its eastern border the surface of Kentucky is a north-western slope across two much dissected plateaus to a gracefully undulating lowland in the north central part and a low western slope across the same plateaus to a lower and more level lowland at the western extremity. The narrow mountain belt is part of the western edge of the Appalachian Mountain Province in which parallel ridges of folded mountains, often further divided by valleys and rivers, are seen, and the land is cut by valleys which have steep sides but are seldom more than 1500 ft. above the sea. The domain of the state which lies east of the river is divided into the Highland Rim Plateau and a coastal plain. The Highland Rim Plateau is also known as the Blue Grass Region; this region is separated from the Highland Rim Plateau by a semicircular escarpment extending from Portsmouth, Ohio, at the mouth of the Scioto river, to the mouth of the Salt river and thence to the Ohio river.

The Highland Rim Plateau, lying to the south, east and west of the escarpment, embraces fully one-half of the state, and slopes from elevations of 1000 to 1200 ft. or more to the east to about 500 ft. in the west. Drained by the Ohio river, it extends to the Allegheny Plateau; a peculiar feature of the southern portion of it is the numerous circular depressions (sink holes) in the surface and the cavernous region beneath. Kentucky is noted for its caves, the best-known of which are Mammoth Cave in Western Kentucky, and the Limestone Park, near the city of Bowling Green, in the southern part of the state. The caverns are cut in the beds of limestone (lying immediately below the coal-bearing series) by streams that pass beneath the surface in the "sink holes," and according to Professor N. S. Shaler there are "enormous accumulations of ," which are large enough to "permit the easy passage of man." Down the steep slopes of the escarpment the Highland Rim Plateau drops 200 ft. or more to the famous Blue Grass Region, in which erosion has developed a gently rolling surface, bounded on the west by the Allegheny Plateau and the Blue Grass Region; it is like a beautiful park, without rugged cliffs, precipitous slopes or flat marshy bottoms, but marked by rounded hills and dales, especially within a radius of 20 m. around Lexington, the county seat of this rather unusually luxuriant vegetation. During spring, autumn, and winter in particular, the blue-grass (Poa compressa and Poa pratensis) spreads a mat, green, thick, fine and soft, over much of the country, and it is a good winter pasture; about the middle of summer this grass is dried and mowed, and the dried grass is brought in bundles to the settlements and is used as fuel and for thatching. The named region is drained by the Ohio river, which has an average grade of 0.177 ft. per mile, and at its mouth is one of the principal northern rivers of the United States. With the Mississippi, it is navigable for 1000 miles, and although the only substantial defile in it is near its mouth, there are no falls or rapids. The drainage of the region under which the caverns lie is mostly underground.

Pisana and Flora.—The first white settlers found great numbers of buffaloes, elk, geese, ducks, turkeys and partridges, also many bears, panthers, lynx, wolves, foxes, beavers, otters, minks, musk-rats, rabbits, squirrels, raccoons, woodchucks, opossums and...
skunks, and the streams were inhabited by trout, perch, buffalo-fish, sun-fish, mullet, eels, and suckers. Of the larger game there remain only a few deer, bears and lynx in the mountain districts, and the numbers of small game and fish have been greatly reduced. In its prime the state was generally covered by forests, but although the middle section has been cleared and here the blue grass is now the dominant feature of the flora. Extensive forest areas still remain both in the east and the west. In the east oak, maple, beech, chestnut, walnut, and hickory trees are the commonest; in the west the forests are composed largely of cypress, ash, oak, hickory, chestnut, walnut, beech, tulip-tree, gum and sycamore trees. Locus, pawpaw, cucumber, and the mulberry are found in the lowlands. The peanuts and soy beans are also widely grown, and the grape, raspberry and strawberry are native fruits.

Climate. — The climate is somewhat more mild and even than that of the neighboring states. The mean annual temperature, on 34° 9' F. on the whole, and on 49° 9' F. for the entire state; the thermometer seldom registers as high as 100° or as low as 10°. The mean annual precipitation ranges from 38 in. in the north-east to 30 in. in the south, and is about 46 in. for the entire state; it is usually distributed evenly throughout the year and very little is in the form of snow. The prevailing winds blow from the west or west-south west, rain-bearing winds blow mostly from the south; and the cold waves come from the north or north-west.

Soil. — The best soils are the alluvium in the bottom-lands along some of the larger rivers and that of the Blue Grass Region, which is derived from a limestone rich in organic matter (containing phosphorus) and rapidly decomposing. The soil within a radius of some miles of that region is composed of the blue grass, which contains about 95% of organic matter and contains a larger mixture of sand. The soils of the Highland Rim Plateau and as well as of the lowland west of the Tennessee river vary greatly, but the most valuable contain a considerable proportion of subsoil and a sandy loam. On the escarpment around the Blue Grass the soils are for the most part either cherty or stiff clay and of inferior quality. On the mountains and on the Allegheny Plateau there are many good agricultural soils, but the leading crops are tobacco and corn.

Agriculture. — Kentucky is chiefly an agricultural state. Of the 752,531 of its inhabitants who, in 1900, were engaged in some gainful occupation, 409,185 or 54.2% were agriculturists, and of its total land area of 49,464,000 acres, 43,854,000 acres, or 88.7%, was under cultivation. The percentage of improved farm land increased from 35% in 1850 to 49% in 1890. The number of farms increased from 74,777 in 1850 to 160,433 in 1880 and to 234,667 in 1890; and then rapidly increased to 255,000 in 1899. The total acreage of all crops was 3,124,630, valued at $60,857,460, in 1899, and of tobacco 3,165,930, valued at $65,303,000. In 1899, the value of farm land and improvements was $261,178,430, of buildings on farms, $90,887,460; of livestock, $73,739,100. In the year 1899 the value of all farm products was $100,363,685, of which $21,128,530 was the value of products fed to livestock, including the following items: crops, $74,783,365; animal products, $44,365,940; and forest products, $17,840,760. The total acreage of all crops in 1899 was 6,582,666. Indian corn is the largest and most valuable crop. As late as 1886, when produced 58,672,951 bu., Kentucky was the second largest Indian-corn producing state in the Union. In 1899 the crop had increased to 73,974,220 bu. and the acreage was 3,310,257 (more than half the acreage of all the United States) and the yield of this acreage was 22.9 bu. per acre. Tobacco was the second leading crop, and in 1899 the crop was of 853,139 acres and valued at $67,737,100. In 1899 the crops of cigarettes and cigar tobacco contained 75,760,000 lb. and the yield of this crop was 34.9% of the total acreage in the continental United States, yielding 314,288,950 lb. As compared with the state's Indian corn crop of that year, the acreage was only a little more than one-ninth, but the value ($18,541,982) was about 63%.

North of the Black Patch is a district in which is grown a heavy-leaf tobacco, a large part of which is shipped to Great Britain; and farther north and east a dark tobacco is grown for the American market.
where crops are generally light, Indian corn, oats and potatoes are the principal products, but tobacco, flax and cotton are grown. The thoroughbred Kentucky horse long had a world-wide reputation for speed, and the Blue Grass Region, especially Fayette, Bourbon and Woodford counties, was known for its celebrated bloodstock. There is considerable fruit raising in America and has large breeding farms. In Fayette County, in 1900, the average value of colts between the ages of one and two years was $377.10. The principal breeds of beef and dairy cattle are the Brahm, Shorthorn, Jersey, and Hereford. In 1900, the average value of horses and mules was 108,110 mules, 364,025 dairy cows, 755,714 other neat cattle, 1,300,832 sheep and 2,088,686 swine; in 1910 there were in Kentucky 407,000 horses, 207,000 mules, 394,000 milk cows, 665,000 other neat cattle, 1,000,000 sheep, and 2,000,000 swine. The principal hog-raising counties in 1900 were Bourbon, Scott and Harrison, and the principal hog-raising counties were Graves, Hardin, Ohio, Union and Hickman.

Fire, and Timber.—More than one-half of the state (about 22,200 sq. mi.) was in 1900 still wooded. In 1900, the total of the cut of 727,218 M. ft., 822,804 were white oak and 279,740 M. ft. were tulip-tree. Logging is the principal industry of several localities, especially in the east, and the lumber product of the state increased in value from $1,003,434 in 1850 to $4,064,316 in 1880, and to $13,771,511 in 1900. The factory product in 1900 was valued at $13,388,533 and in 1905 at $14,359,000. In 1905 of a total of 58,212,700 M. ft. of lumber, 29,757 M. ft. were oak and 15,057 M. ft. were tulip-tree.

Manufactures.—Kentucky's manufactures are principally those for which the products of her farms and forests furnish the raw material. The principal is the distillation of corn and the state increased 117.2% and the value of products increased 142.8%.

Minerals.—The mineral resources of Kentucky are important and valuable, though not very extensive. The value of all mineral products in 1900 was $12,365,356. The iron and steel industries manufacture based upon products of mines or quarries in the state was $25,204,788; the total value of mineral products was $19,043,341 in 1907. Bituminous coal is the principal mineral, and in 1907 Kentucky ranked second among the states in coal production. The output in 1905 amounted to 26,612,498 tons and in 1902 to 7,971,274 tons as compared with 2,300,755 tons produced in 1890. In 1902 the amount was about equally divided between the coal and coke industries. Chief coal-producing counties are Carter, Lawrence, Johnson, Lee, Breathitt, Rockcastle, Pulaski, Laurel, Knox, Bell and Whitley counties, and has an area of about 11,180 sq. m., and the western coal regions, which is in Henderson, Union, Webster, Daviess, Hancock, McLean, Ohio, Hopkins, Butler, Muhlenberg and Christian counties, and has an area of 5,800 sq. m. In 1907 the output of the western district was 6,295,397 tons; that of the eastern, 4,457,727. The largest coal-producing counties in 1907 were Whitley, 1,249,000 tons; Bath, 1,110,000 tons; and Bell, 492,000 tons. The coal mined in eastern Kentucky is a excellent steam producer, especially the Jenico coal of Whitley County, Kentucky, and of Campbell County. Kentucky is well known as a lead producer and contains large deposits of lead, barite, barytes, and Bell and Whitley counties, very little is fit for making coke; in 1880 the product was 425,000 tons of coke (value $125,250); in 1890, 12,343 tons ($21,191); in 1900, 95,534 tons ($35,503); in 1905, 126,879 tons ($135,503); in 1910, 1,076,879 tons ($157,288). Coal was first mined in Kentucky in Laurel and Pulaski county in 1827; between 1829 and 1835 the annual output was from 200 to 6000 tons; in 1840 it was 23,527 tons and in 1860 97,260 tons.

Petroleum was discovered on Little Rennick's Creek, near Burkesville, in Cumberland county, in 1829, when a flowing oil well (the "Old Oil Well," was so called) was explored; the accumulation has not been increased in Kentucky, the quality of the oil is not known to be of much value. Pocahontas, oil was struck by men boring for a "salt well," and after a second discovery in the 'sixties at the mouth of Crocus Creek a small but steady amount of oil was got each year. Crocus Creek, and a line of oil streams (Warren, Ripley, Marion, Union, and Whitley counties), is now worked. There is some oil in Pulaski county, and with branches to the Ragland, Barbourville and Prestonburg fields, had in 1902 a mileage of 275 m. The principal fields are in the "southern tier," from Wayne to Allen county, including Barren county; farther east, Knox county, and Floyd and Knott counties; to the north-east the Ragland field in Bath and Rowan counties on the Licking river. In 1902 the petroleum produced in the state amounted to 248,850 barrels, valued at $172,877, a gain in quantity of 81.4% over 1901. Kentucky is the S.W. extreme of the natural gas region of the west flank of the Appalachian system; the greatest amount is found in Martin county in the east, and Breckinridge county in the west. The value of the state's petroleum in 1907 was $190,937, 1905 $199,569, 1896 $286,243 in 1900, $365,615 in 1902, and $386,176 in 1907.

Iron ore has been found in several counties, and an iron furnace was built in Bath county, in the N. E. part of the state, as early as 1807. This was succeeded by many others, but all were abandoned in 1810. In 1902 it was mined only in Bath, Lyon and Trigg counties, of which the total product was 71,200 long tons, valued at only $86,169; in 1904 only 25,000 tons were mined, valued at the mines at $35,000.

1 In the census of 1905 statistics for other than factory-made products, such as those of the hand trades, were not included.
of the limestone, resembling the Bedford limestone of Indiana, and best known under the name of the finest variety, the "Bowling Green stone" of Warren county; and sandstones good for structural purposes are found in both coal regions, and especially in county. In 1907 the total value of limestone quarried in the state was $891,204, of all stone, $1,002,450. (Fire and pottery clay and cement rock also abound within the state. The value of clay products was $2,406,350 in 1905 (when Kentucky was tenth among the states) and was $2,611,304 in 1907 (when Kentucky was eleventh among the states).) The manufacture was started at Shippingport, a suburb of Louisville, whence the natural cement of Kentucky and Indiana, produced within a radius of 15 m. from Louisville, is called "Louisville cement." In 1905 the value of natural cement manufactured increased to $2,775,850. (Compared with the 1890 (accredited to the United States Geological Survey) was only $83,000. The manufacture of Portland cement is of greater importance.

There are mineral springs, especially salt springs, in various parts of the State. The leading ones are the Blue Licks on the Licking River; these springs are comparatively little economic importance; no salt was reported among the state's manufactures for 1905, and in 1907 only 736,920 gallons of mineral waters were bottled for sale. Historically and geologically, however, these springs are of considerable interest. According to Professor N. S. Shaler, state geologist in 1875-1880, 'the rocks whence they flow were formed on the Silurian sea-floors, a good deal of the sea-water was imprisoned in the strata, between the grains of sand or mud and in the cavities of the shells that make up a large part of the rock, and this water has been slowly displaced by the downward sinking of the rain-water through the rifts of the strata, and thus finds its way to the surface: so that these springs offer to us a share of the ancient seas, in which perhaps a million years ago the beasts and fishes swam. This is a most impressive, but peculiar, way of water supply in Southern Kentucky." To these springs in prehistoric and historic times came annually great numbers of animals for salt, and in the marshes and swamps around some of them, especially Big Bone Lick (in Boone county, 20 miles from Cincinnati) and Paroquet (in Scott county, 27 miles from Louisville), thousands of deer, elk and musk. A legend preserves the story of the degenerated bison.1 The early settlers and the Indians came to the springs to shoot large game for food, and by boiling the waters the settlers obtained valuable supplies of salt. Several of the Kentucky springs have been so used that fresh water is rare; for example, the two Kentucky springs near to the Ohio River near the town of Franklin, a distance of 27 m. Not until 1851 was the line completed to Louisville. Kentucky's trade during the greater part of the 19th century was very largely with the South, and with the facilities which railways brought in 1850-1860 the trade was increased. The railway system was retarded. Up to 1880 the railway mileage had increased to only 1,530; but during the next ten years it increased to 2,942, and railways were in considerable measure substituted for water craft. The principal lines are the Louisville & Nashville, the Chesapeake & Ohio, the Illinois Central, and the Cincinnati Southern (Queen & Crescent route). Most of the lines run south or south-west from Cincinnati and Louisville, and the east border of the state still has a small railway mileage and practically no water roads, most of the travel being on horseback. The wagon roads of the Blue Grass Region are excellent, because of the plentiful and cheap supply of stone for road building. The assessment of railway property in the tax lists and the regulation of railway rates, are entrusted to a state railway commission.

Population.—The population of Kentucky in 18502 was 1,688,805; in 1860, 1,958,635, an increase within the decade of 12.7%; in 1900 it was 2,147,774; and in 1910 it had reached 2,289,905. Of the total population 1,157,785 were coloured and 50,249 were foreign-born; of the coloured, 28,350, were negroes, 102 were Indians, and 57 were Chinese; of the foreign-born, 27,555 were natives of Germany, 9,874 were natives of Ireland, and 32,562 were natives of England. Of the foreign-born, 21,427, or 42.6%, were inhabitants of the city of Louisville, leaving a population outside of this city of which 98.4%3 were native born. The rugged east section of the state, a part of Appalachian America, is inhabited by a people of marked characteristics, portrayed in the fiction of Miss Murfee ("Charles Eugen," Craddock) and John Fox, Jr. They are nearly all of British—English and Scotch-Irish—descent, with a trace of Huguenot. They have good native ability, but through lack of communication with the outside world their progress has been retarded. Before the Civil War they were owners of land, but for the most part not owners of slaves, so that a social and political barrier, as well as the barriers of nature, separated them from the other inhabitants of the state. In their speech several hundred words persist which elsewhere have been obsolete for three centuries or occur only in dialects in England. Their life is still in many respects very primitive; their houses are generally built of logs, their clothes are often of homespun, Indian corn and ham form a large part of their diet, and their means of transportation are the saddle-horse and sleds and wheeled carts drawn by oxen or mules. In instincts and in character, also, the typical "mountaineers" are to a marked degree primitive; they are, for the most part, very ignorant; they are generally hospitable and are warm-hearted to friends and strangers, but are implacable in their enmities and are prone to vendettas and family feuds, which often result in the killing in open fight or from ambush of members of one faction by members of another; and their relative seclusion and isolation has brought them little contact with the outer world in the counties and districts, to a disregard for law, or to a belief that they must exercise justice with their own hands.

The population of Kentucky is largely rural. However, in the decade between 1890 and 1900 the percentage of urban population (i.e. population of places of 4000 inhabitants or more) to the total population was increased from 17.5% to 17.7% and the percentage of some 284,706, a total of 311,583, was in 1890, of which 156,007, or 50.249, was in Cincinnati, and 40,651, or 13.1%, in Louisville. In addition, there were 54,793, or 17.3%, in the cities of the Lexington area, of which 31,280, or 9.4%, was in Lexington. In 1890 the Lexington area was 52.9 miles from Cincinnati, 72.9 from Louisville, 67.1 from Paducah, and 68.6 from Nashville. In 1880 the states were paducah.15

1 For a full account of the "licks," see vol. i. pt. ii. of the Memoirs of the Kentucky Geological Survey.

2 The population of the state at the previous censuses was: 73,677 in 1790; 270,985 in 1800; 406,511 in 1810; 564,317 in 1820; 687,917 in 1830; 728,775 in 1840; 926,405 in 1850; 1,355,684 in 1860 and 1,321,011 in 1870.

3 There were three previous constitutions—those of 1792, 1799 and 1850.
idots and insane persons, all male citizens of the United States, who are at least 21 years of age, and have lived in the state one year, in the county six months, and in the voting precinct sixty days next preceding the election, are entitled to vote. The legislature provides by law for registration in cities of the first, second, third and fourth classes—the minimum population for a city of the fourth class being 3300. Corporations are forbidden to contribute money for campaign purposes on penalty of forfeiting their charters, or, if not chartered in the state, their right to carry on business in the state. The executive is composed of a governor, a lieutenant-governor, a treasurer, an auditor of public accounts, a register of the land office, a commissioner of agriculture, labour, and statistics, a secretary of state, an attorney-general, and a superintendent of public instruction. All are chosen by popular vote for four years and are ineligible for immediate re-election, and each must be at least 30 years of age and must have been a resident citizen of the state for two years next preceding his election. If a vacancy occurs in the office of governor during the first two years a new election is held; if it occurs during the last two years the lieutenant-governor serves out the term. Lieutenant-governor Beckham, elected in 1890 to fill out the unexpired term of Governor Goebel (assassinated 1890), was re-elected in 1903, the leading lawyers of the state holding that the constitutional inhibition on successive terms did not apply in such a case.

The governor is commander-in-chief of the militia when it is called into the service of the United States; he may remit fines and forfeitures, commute sentences, and grant reprieves and pardons, except in cases of impeachment. The chief executive and the members of the legislature are officers of the state. His control of patronage, however, is not extensive and his veto power is very weak. He may veto any measure, including items in appropriation bills, but the legislature can override his veto by a simple majority of all the members of each branch, and various state administrative boards are the board of equalization of five members, the board of health of nine members, a board of control of state institutions with four members (bipartisan), and the railroad commission, the rural schools, the central boards of charities, and the sinking fund commission of three members each. Legislative power is vested in a General Assembly, which consists of a Senate and a House of Representatives. Senators are elected for four years and may retire, by the expiration of their terms, a clear majority of the members are elected for two years. The minimum age for a representative is 24 years, for a senator 30 years.

There are thirty-eight senators and one hundred representatives. The Senate sits as a court for the trial of impeachment cases. It has fourteen senators, who, if they are found guilty of receiving ordinary bills, on the third reading, not only must they receive a majority of the quorum, but that majority must be at least two-thirds of the total membership of the house. For the enactment of public and county laws, a two-thirds majority of the total membership in each house is required. All revenue measures must originate in the House of Representatives, but the Senate may introduce amendments. There are many detailed restrictions of all local and special legislation. The constitution provides for local option elections on the liquor question in counties, cities, towns and precincts; in 1907, out of 119 counties 87 voted for prohibition.

The courts generally consists of a court of appeals, circuit courts, quarter courts, county courts, justices of the peace courts, police courts and fiscal courts. The court of appeals is composed of from five to seven judges (seven in 1909), elected, one from each appellate district, for four years. There is a justice of the peace in every town or village that has a population of more than 2500, and in every parish or town ships district that has a population of more than 4000. Each justice of the peace is elected by the qualified electors of the district for a term of four years. The clerk, sheriff, coroner, surveyor and assessor, elected for four years, are commonly known as the justices of the peace. The courts of common pleas are divided into four circuits, those containing a population of more than 150,000 constituting separate districts; each district has a judge and a commonwealth's attorney. The county officials are the judge, clerk, attorney, sheriff, coroner, surveyor and assessor, elected for four years. Each county contains from three to eight justices of the peace districts. The financial board of the county is composed of the county judge and the justices of the peace, or of the county judge and any two justices of the peace. The county judge, sheriff, coroner, surveyor and assessor, elected for four years, are the county officials. The municipalities are divided into six classes according to population, a classification which permits considerable local legislation in spite of the constitutional inhibition. Marriages between persons who have been married before, either by virtue of a marriage or by a marriage of insane persons is legally void. Among causes for absolute divorce are adultery, desertion for one year, habitual drunkenness for one year, cruelty, untemperable temper, physical incapacity at time of marriage, and the joining of either party or any religious sect which regards marriage as unlawful. The home stead law declares exempt from execution an unmortgaged dwelling house (with appurtenances) not to exceed $1000 in value, and certain property, such as tools of one's trade, libraries (to the value of $500) of ministers and lawyers, and provisions for one year for each member of the family. Child labour is regulated by an act passed by the General Assembly in 1908; this act prohibits the employment of children between 7 and 14 in any gainful occupation during the session of school or in stores, factories, mines, offices, hotels or shops. The penalty for violating the act is a fine of $50 and imprisonment for not more than one year. The law in effect during 1907 provided for the removal from state institutions of children between 14 and 16 who have been under care for the first time and sentenced to the state institution, and the removal of children under 16 who are not to work more than 10 hours a day or 60 hours a week, or between 7 p.m. and 7 a.m.

Charitable and Penitent Institutions.—The charitable and penitent institutions of the state are under the control of the state board of charities, which is elected by the governor. There are a deaf and dumb institution at Danville (1823), an institution for the blind at Louisville (1842), and an institution for the education of feeble-minded children at Frankfort (1860). The Eastern Lunatic Asylum, as it was then called, was established in 1815 as a private institution, came under the control of the state in 1824. The Central Lunatic Asylum at Anchorage, founded in 1860 as a house of refuge for young criminals, became an asylum in 1870. The Asylum for the Insane at Louisville was founded in 1848. The main penitentiary at Frankfort was completed in 1799 and a branch was established at Eddyville in 1891. Under an act of 1868 two houses of reform for juvenile delinquents, one for boys, the other for girls, were established near Lexington.

Education.—The early history of the schools of Kentucky shows that the rural school conditions have been very unsatisfactory. A system of five trustees, with a sixty-day term of school, was replaced by a three trustee system, first with a one-hundred-day term of school, and subsequently with a one-hundred-and-twenty day term of school annually. The state fund has not been supplemented locally for the payment of teachers, who have consequently been poorly paid. The state has been the only supporter of the public school system, and the tax effort which has supported it is not adequate. Any provision for revenue for school purposes as follows: (1) the interest on the Bond of the Commonwealth for $1,327,000; (2) dividends on 598 shares of the capital stock of the Bank of Kentucky—repealed; (3) annual tax on 265,208 acres of the state and public school lands; (4) two per cent on the gross receipts of the state and corporate franchises directed to be assessed for taxation; (6) a certain portion of fines, forfeitures and licences realized by the state; and (7) a portion of the dog taxes of each county. The present system as established by Legislative Acts of 1908 may be summarized as follows: the rural schools, the graded schools, and the high schools (which are further classified as city and county high schools). The 1908 session of the General Assembly passed an act providing for the examination of each public school by an inspector to determine that the county tax be fully assessed, and that any county be divided into four, six or eight educational divisions, that one trustee be elected for each subdivision, that the trustees of the subdivision form a board of education, and that this board of education be in turn divided into a county board of education. These boards provide for a graded school by voting for an ad valorem and poll tax which is limited to amount. There were in 1900 335 districts which had complied with this act, and were known as Graded Common School districts. In 1908 62 cities in the state were established as graded schools. Statutes provide that all children between the ages of 7 and 14 years living in such districts must attend school annually for at least eight consecutive weeks. In all counties of the first class the fourth term, and of the fourth class there may be, maintained under control of a city Board of Education a system of public schools, in which all children between the ages of 6 and 20 residing in the city may be taught at public expense. The following table shows the number of schools which have been under the control of the state University without examination. A truancy act (1908) provides that every child between the ages of 7 and 14 years living in a city of the first, second, third or fourth grade must attend school for the full term of school of said school. It was provided by statute that before June 1910,
there should have been established in each county of the state at least one County High School to which all common school graduates of the county should be admitted without charge. Separate institutes for white and colored teachers are conducted annually in each county. A weekly attendance of at least five days is required of every teacher. The state provides for the issuance of three kinds of certificates. A state diploma issued by the State Board of Examiners is good for life. A state certificate issued by the State Board of Regents is good for five years and renewable. County certificates issued by the County Board of Examiners are of three classes, valid for one, two or four years, respectively.

According to a school census there was in 1895-96 a school population of 1,000,000, upon which were required 18,000 teachers, and the total revenue for school purposes was $5,805,997, of which about $2,437,942.56 came from the state treasury.

Finance.—Kentucky, in common with other states in this part of the country, suffered from over-speculation in land and railways during the panic of 1837, and the funds used in these enterprises amount to four and one-half millions of dollars in 1850, when the new constitutions limited the power of the legislature to contract further obligations or to decrease or misapply the sinking funds. From 1850 to 1860 the state debt increased to $57,097,290, and the annual interest paid to the state during the Civil war was about $1,711,394. In 1903 the total debt, exclusive of debt in other countries, held for educational purposes, was $1,711,394, but this debt was paid in full in the years immediately following. The sinking fund commission is composed of the governor, attorney-general, secretary of state, auditor and treasurer. The first banking currency in Kentucky was issued in 1802 by a co-operative insurance company established by the Mississippi Valley traders. The Bank of Kentucky, established at Frankfort in 1806, had a monopoly for several years. In 1826 it was sold to the state, and the Bank of Kentucky, which existed from 1806 to 1818, went into liquidation during the panic of 1819. The Bank of the Commonwealth was chartered in 1820 as a state institution and the charter of the Bank of Kentucky was revoked in 1822. A court decided that this legislation tended to promote the interests of the Bank of the Commonwealth gave rise to a bitter controversy which had considerable influence upon the political history of the state. This bank failed in 1829. In 1834 the legislature chartered the Bank of Kentucky, the Bank of Louisville and the Northern Bank of Kentucky. These institutions survived the panic of 1837 and soon came to be recognized as among the most prosperous and the most conservative banks west of the Alleghenies. The state banking laws are stringent and most of the business is still controlled by banking companies chartered under the state laws.

History.—The settlement and the development of that part of the United States west of the Allegheny Mountains has probably been the most notable feature of American history since the close of the Seven Years' War (1763). Kentucky was the first settlement in this movement, the first state west of the Allegheny Mountains admitted into the Union. In 1763 the Kentucky country was claimed by the Cherokees as a part of their hunting grounds, by the Six Nations (Iroquois) as a part of their western conquests, and by Virginia as a part of the territory granted to her by her charter of 1609, although it was actually inhabited only by a few Chickasaws near the Mississippi river and by a small tribe of Shawnees in the north, opposite what is now Portsmouth, Ohio. The early settlers were often attacked by Indian raiders from what is now Tennessee or from the country north of the Ohio, but the work of colonization would have been far more difficult if those Indians had lived in the Kentucky region itself.

Dr Thomas Walker (1775-1894), an agent and surveyor of the Loyal Land Company, made an exploration in 1790 into the present state from the Cumberland Gap, in search of a suitable place for settlement but did not get beyond the mountain region. In the next year Christopher Gist, while on a similar mission for the Ohio Company, explored the country westward from the mouth of the Scioto river. In 1792 John Finley, an Indian trader, descended the Ohio river in a canoe to the site of Louisville. It was Finley's descriptions that attracted Daniel Boone, and soon after Boone's first visit, in 1776, travelers through the Kentucky region became numerous. The first permanent English settlement was established at Harrodsburg in 1774 by James Harrod, and in October of the same year the Ohio Indians, having been defeated by Virginia troops in the battle of Point Pleasant (in what is now West Virginia), signed a treaty by which they surrendered their claims south of the Ohio river. In March 1775 Richard Henderson and some North Carolina land speculators met about 1200 Cherokee Indians in council on the Watauga river and concluded a treaty with them for the purchase of all the territory south of the Ohio river and between the Kentucky and Cumberland rivers. The purchase was named Transylvania, and within less than a month after the treaty was signed, Boone, under its auspices, founded a settlement at Boonesborough which became the headquarters of the colony. The title was declared void by the Virginia government in 1778, but Henderson and his associates received 200,000 acres in compensation, and all sales made to actual settlers were confirmed. During the War of Independence the colonists were almost entirely neglected by Virginia and were compelled to defend themselves against the Indians who were often under British leadership. Boonesborough was attacked in April and in July 1777 and in August 1778. Bryant's (or Bryan's) Station, near Lexington, was besieged in August 1782 by about 600 Indians under the notorious Simon Girty, who after raising the siege drew the defenders, numbering fewer than 200, into an ambush and in the battle of Blue Licks which ensued the Kentuckians lost about 67 killed and 7 prisoners. Kentucky county, practically coterminous with the present state of Kentucky and embracing all the territory south of the Ohio river and west of Big Sandy Creek and the ridge of the Cumberland Mountains, was one of three counties which was formed out of Fincastle county in 1776. Four years later, this in turn was divided into three counties, Jefferson, Lincoln and Fayette, but the name Kentucky was revived in 1782 and was given to the judicial district which was then organized for these three counties. The War of Independence was followed by an extensive immigration from Virginia, Maryland and North Carolina of a population of which fully 95%, excluding negro slaves, were of pure English, Scotch or Scotch-Irish descent. The manners, customs and institutions of Virginia were transplanted beyond the mountains. There was the same political rivalry between the slave-holding farmers of the Blue Grass region and the "poor whites" of the mountain districts that there was in Virginia between the tide-water planters and the mountaineers. Between these extremes were the small farmers of the "Barrens" and the Fincastle Region in Virginia. The aristocrat influences in both states were strong on the Southern and Democratic side, but while they were strong enough in Virginia to lead the state into secession they were unable to do so in Kentucky.

1 Most of the early settlers of Kentucky made their way thither either by the Ohio river (from Fort Pitt) or—the far larger number—by way of the Cumberland Gap and the "Wilderness Road." This latter route began at Ingles's Ferry, on the New river, in what is now West Virginia, and passed through the Cumberland Gap. The "Wilderness Road," as marked by Daniel Boone in 1775, was a mere trail, running from the Watauga settlement in east Tennessee to the Cumberland Gap, and thence by way of what are now Crab Orchard, Danville and Bardstown, to the Falls of the Ohio, and was passable only for a short while until 1795 when the state made it a wagon road. Consult Thomas Speed, The Wilderness Road (Louisville, Ky., 1886), and Archer B. Hulbert, Boone's Wilderness Road (Cleveland, O., 1903).

2 The "Barrens" were in the north part of the state west of the Blue Grass Region, and were so-called merely because the Indians had burned most of the forests here in order to provide better pasturage for buffaloes and other game.
At the close of the War of Independence the Kentuckians complained because the mother state did not protect them against their enemies and did not give them an adequate system of local government. Nine conventions were held at Danville from 1784 to 1790 to demand separation from Virginia. The Virginia authorities expressed a willingness to grant the demand provided Congress would admit the new district into the Union as a state. The delay, together with the proposal of John Jay, the Secretary for Foreign Affairs and commissioner to negotiate a commercial treaty with the Spanish envoy, to surrender navigation rights on the lower Mississippi for twenty-five years in order to remove the one obstacle to the negotiations, aroused so much feeling that General James Wilkinson and a few other leaders began to intrigue not only for a separation from Virginia, but also from the United States, and for the formation of a close alliance with the Spanish at New Orleans. Although most of the settlers were too loyal to be led into any such plot they generally agreed that it might have a good effect by bringing pressure to bear upon the Federal government. Congress passed a preliminary act in February 1791, and the state was formally admitted into the Union on the 1st of June 1792. In the Act of 1776 for dividing Fincastle county, Virginia, the ridge of the Cumberland Mountains was named as a part of the east boundary of Kentucky; and now that this ridge had become a part of the boundary between the states of Virginia and Kentucky they, in 1799, appointed a joint commission to run the boundary line on this ridge. A dispute with Tennessee over the southern boundary was settled in a similar manner in 1820. 1 The constitution of 1792 provided for manhood suffrage and for the election of the governor and of senators by an electoral college. General Isaac Shelby was the first governor. The people still continued to have troubles with the Indians and with the Spanish at New Orleans. The Federal government was slow to act, but its action when taken was effective. The power of the Indians was overthrown by General Anthony Wayne's victory in the battle of Fallen Timbers, fought the 20th of August 1794 near the rapids of the Maumee river a few miles above the site of Toledo, Ohio; and the Mississippi question was settled temporarily by the treaty of 1795 and permanently by the purchase of Louisiana in 1803. In 1798-1799 the legislature passed the famous Kentucky Resolutions in protest against the alien and sedition laws unconstitutional and therefore "void and of no force," principally on the ground that they provided for an exercise of powers which had been reserved to the state. The resolutions further declare that "this Commonwealth is determined, as it doubts not its co-states are, namely to submit to undelegated and therefore unlimited powers in no man or body of men on earth," and that "these and successive acts of the same character, unless arrested on the threshold, may tend to drive these states into revolution and blood." Copies of the resolutions were sent to the governors of the various states, to be laid before the different state legislatures, and replies were received from Connecticut, Delaware, Massachusetts, New Hampshire, New York, Rhode Island, Vermont and Virginia, but all except that from Virginia were unfavourable. Nevertheless the Kentucky legislature on the 22nd of November 1799 reaffirmed in a new resolution the principles it had laid down in the first series, asserting in this new resolution that the state "does now unequivocally declare its attachment to the Union, and to that compact [the Constitution], agreeably to its obvious and real intention, and will be among the last to seek its dissolution," but that "the same construction contended for by sundry of the state legislatures, that the General Government is the exclusive judge of the extent of the powers delegated to it, stop nothing [short] of despotism—since the discretion of those who administer the government, and not the Constitution, would be the measure of their powers," 2 that the several states who formed that instrument, being sovereign and independent, have the unquestionable right to judge of the infraction," and "that a nullification by those sovereignties of all unauthorized acts done under color of that instrument is the rightful remedy." These measures show that the state was Democratic-Republican in its politics and pro-French in its sympathies, and that it was inclined to follow the leadership of that state from which most of its people had come. The constitution of 1799 adopted the system of choosing the governor and senators by popular vote and deprived the supreme court of its original jurisdiction in land cases. The Burr conspiracy (1804-1806) aroused some excitement in the state. Many would have followed Burr in a filibustering attack upon the Spanish in the South-West, but scarcely any would have approved of a separation of Kentucky from the Federal Union. No battles were fought in Kentucky during the War of 1812, but her troops constituted the greater part of the forces under General William Henry Harrison. They took part in the operations at Fort Wayne, Fort Meigs, the river Raisin and the Thames. The Democratic-Republicans controlled the politics of the state without any serious opposition until the conflict in 1820-1826, arising from the demands for a more adequate system of currency and other measures for the relief of delinquent debtors divided the state into what were known as the relief and anti-relief parties. After nearly all the forty-six banks chartered by the legislature in 1818 had been wrecked in the financial panic of the legislature in 1820 passed a series of laws designed for the benefit of the delinquent debtors; and when one making state bank notes a legal tender for all debts. A decision of the Clark county district court declaring this measure unconstitutional was affirmed by the court of appeals. The legislature in 1824 repealed all of the laws creating the existing court of appeals and then established a new one. This precipitated a bitter campaign

1 The southern boundary to the Tennessee river was surveyed in 1787-88 by commissioners representing Virginia and North Carolina, and was supposed to run along the parallel of latitude 36° 30', but by mistake was actually run north of that parallel. By a treaty of 1819 the Indian title to the territory west of the Tennessee was extinguished, the boundary was extended from 36° 30' south latitude to a parallel of 36° 30' from the Mississippi to the Tennessee. In 1820 commissioners representing Kentucky and Tennessee formally adopted the line of 1799-1780 and the line of 1819 as the boundary between the two states.

2 This resolution read as follows: Resolved, that the several states composing the United States of America are not united on the principle of unlimited submission to their general government; but that by compact under the style of a Constitution for the United States and of amendments thereto, they constituted a general government for special purposes, delegated to Congress certain definite powers, reserving each state to itself the residuary mass of right to their own self-government; and that whereas the general government assumes undelegated powers its acts are unconstitutional, void, and of no force: That to this compact each state acceded as a state, and is an integral party, its co-states forming, as to itself, the other party; That the government created by this compact was not made the exclusive or final judge of the extent of the powers delegated to itself, since that would have made its discretion, and not the Constitution, the measure of its powers; but that, as in all other cases of compact among parties having no common judge, each party has an equal right to judge for itself as well of infractions as of the mode and measure of redress.
between the anti-relief or "old court" party and the relief or "new court" party, in which the former was successful. The old court party followed the lead of Henry Clay and John Quincy Adams in national politics, and became National Republicans and later Whigs. The new court party followed Andrew Jackson and Martin Van Buren and became Democrats. The electoral vote of the state was cast for Jackson in 1828 and for Clay in 1832. During the next thirty years Clay's conservative influence dominated the politics of the state.\(^1\) Kentucky voted the Whig ticket in every presidential election from 1832 until the party made its last campaign in 1852. When the Whigs were destroyed by the slavery issue some of them immediately became Democrats, but the majority became Americans, or Know-Nothing. They elected the governor in 1853 and almost succeeded in carrying the state for their presidential ticket in 1856. In 1860 the people of Kentucky were drawn toward the South by their interest in slavery and by their social relations, and toward the North by business ties and by a national sentiment which was fostered by the Clay traditions. They naturally assumed the leadership in the Constitutional Union movement of 1860, casting the vote of the state for Bell and Everett. After the election of President Lincoln they also led in the movement to secure the adoption of the Crittenden Compromise or some other peaceful solution of the difficulties between the North and the South.

A large majority of the state legislature, however, were Democrats, and in his message to this body, in January 1861, Governor Magoffin, also a Democrat, proposed that a convention be called to determine "the future of Federal and inter-state relations of Kentucky;" later too, in reply to the president's call for volunteers, he declared, "Kentucky will furnish no troops for the wicked purpose of subduing her sister Southern States." Under these conditions the Unionists asked only for the maintenance of neutrality, and some of them to this effect were under a large majority—48 to 47. Some of the secessionists took this as a defeat and left the state immediately to join the Confederate ranks. In the next month there was an election of congressmen, and an anti-secession candidate was chosen in nine out of ten districts. An election in August of one-half the Senate and all of the House of Representatives resulted in a Unionist majority in the new legislature of 103 to 35, and in September, after Confederate troops had begun to invade the state, Kentucky formally declared its allegiance to the Union. From September 6th to the fall of Fort Donelson in February 1862 that part of Kentucky which is south and west of the Green River was occupied by the Confederate army under General A. S. Johnston, and at Russellville in that district a so-called "sovereignty convention" assembled on the 18th of November. This body, composed mostly of Kentucky men who had joined the Confederate army, passed an ordinance of secession, elected state officers, and appointed commissioners to the Confederate Congress, which body voted on the 9th of December to admit Kentucky into the Confederacy. Throughout the war Kentucky was represented in the Confederate Congress—representatives and senators being elected by Confederate soldiers from the state. The officers of this "provisional government," headed by G. W. Johnson, who had been elected "governor," left the state when General A. S. Johnston withdrew; Johnson himself was killed at Shiloh, but an attempt was subsequently made by General Bragg to install this government at Frankfort. General Felix K. Zollicoffer (1812–1862) had entered the south-east part of the state through Cumberland Gap in September, and later with a Confederate force of about 7000 men attempted the invasion of central Kentucky, but in October 1861 he met with a slight repulse at Wild Cat Mountain, near London, Laurel county, and on the 10th of January 1862, in an engagement near Mill Springs, Wayne county, that was fought without an equal force under General George H. Thomas, he was killed and his force was utterly routed. In 1862 General Braxton Bragg in command of the Confederates in eastern Tennessee, eluded General Don Carlos Buell, in command of the Federal Army of the Ohio stationed there, and entering Kentucky in August 1862 proceeded slowly toward Louisville, hoping to win the state to the Confederate cause and gain recruits for the Confederacy in the state. His main army was preceded by a division of about 15,000 men under General Edmund Kirby Smith, who on the 30th of August defeated a Federal force under General Wm. Nelson near Richmond and threatened Cincinnati. Bragg met with little opposition on his march, but Buell, also marching from eastern Tennessee, reached Louisville first (Sept. 24), turned on Bragg, and forced him to withdraw. On his retreat, Bragg attempted to set up a Confederate government at Frankfort, and Richard J. Hayes, who had been chosen as G. W. Johnson's successor, was actually "inaugurated," but naturally this state "government" immediately collapsed. On the 8th of October Buell and Bragg fought an engagement at Perryville which, though tactically indecisive, was a strategic victory for Buell; and thereafter Bragg withdrew entirely from the state into Tennessee. This was the last serious attempt on a large scale by the Confederates to win Kentucky; but in February 1863 one of General John H. Morgan's brigades made a raid on Mount Sterling and captured it; in March General Pegram made a raid into Pulaski county; in March 1864 General N. B. Forrest assaulted Fort Anderson at Paducah but failed to capture it; and in June General Morgan made an unsuccessful attempt to take Lexington.

Although the majority of the people sympathized with the Union, the emancipation of the slaves without compensation even to loyal owners, the arming of negro troops, the arbitrary imprisonment of citizens and the interference of Federal military officials in purely civil affairs aroused so much feeling that the state became strongly Democratic, and has remained so almost uniformly since the war. Owing to the panic of 1893, distrust of the free silver movement and the expenditure of large campaign funds, the Republicans were successful in the gubernatorial election of 1895. The election of 1899 was disputed. William S. Taylor, Republican, was inaugurated governor on the 12th of December, but the legislative committee on contests decided in favour of the Democrats. Governor-elect Goebel was shot by an assassin on the 30th of January 1900, was sworn into office on his deathbed, and died on the 3rd of February. Taylor fled the state to escape trial on the charge of murder. Lieutenant-Governor Beckham filled out the unexpired term and was re-elected in 1903. In 1907 the Republicans again elected their candidate for governor.

KENYA—KENYON

GOVERNORS OF KENTUCKY—continued

William O. Bradley
Republican
1869–1899

William S. Taylor §
Republican
1890–1900

William Goebel* Democratic
1900

J. C. W. Beckham
1900–1907

Augustus E. Willson
Republican
1907–

* Died in office.
† Governor Stevenson resigned on the 31st of July to become Attorney-General of the United States and John L. Helm served out the unexpired term.
‡ Governor Stevenson resigned on the 13th of February 1871 to become Attorney-General of the United States, and Lewis filled out the remainder of the term and was elected in 1871 for a full term.
§ Taylor's election was contested by Goebel, who received the certificate of election.

BIBLIOGRAPHY.—For descriptions of physical features and accounts of natural resources see Reports of the Kentucky Geological Survey, the Biennial Reports of the American Geographical Society, the Reports of the United States Census and various publications of the U.S. Geological Survey, and other publications listed in Bulletin 301 (Bibliography and Index of North American Geology) for 1901–1905; and other bibliographic surveys of the State, see Gilbert Imlay, A Topographical Description of the Western Territory of North America (London, 3rd ed., 1797), in which John Filson's Discovery, Settlement and Present State of Kentucky (1784) is reprinted; in the Memoirs of the Blue Grass Region, see James Lane Allen's The Blue Grass Region of Kentucky (Cincinnati, 1896). For administration, see the Official Manual for the Courts, State and County Officials and General Assembly of the State of Kentucky (Lexington, 1891), which contains the Constitution of 1871 and the Debates and Proceedings of the Convention . . . of 1894 (Frankfort, 1894); The Official Report of the Proceedings, Debates and Debates of the Constitutional Convention of 1890 (4 vols., Frankfort, 1890); B. H. Young, History and Texts of Three Constitutions of Kentucky (Louisville, 1890); J. F. Bullitt and John Feland, The General Statistics of Kentucky (Frankfort and Louisville, 1877, revised editions, 1881, 1887); and the Annual Reports of State officers and boards. For history see R. M. McElroy's Kentucky in the Nation's History (New York, 1909, with bibliography); or (more briefly) N. S. Shaler's Kentucky in the War (New York, 1866); and especially in The Political Beginnings of Kentucky (Louisville, 1889) is a good monograph dealing with the period before 1792; it should be compared with Thomas M. Green's The Spanish Conspiracy; A Record of Events in Western Kentucky and the Southern Creoles (New York, 1884), in the earlier period, and John M. Brown's The Political Beginnings of Kentucky (Louisville, 1889), written in reply to it. Among older histories are Humphrey Marshall, The History of Kentucky . . . and the Present State of the Country (2 vols., Frankfort, 1812, 1824), extremely Federalistic in tone; and William H. S. Bishop, The History of Kentucky, its People, Natural Resources, and Institutions (3 vols., Covington, Ky., 1871–1875), revised edition (1894), in the same spirit. The State of Kentucky is depicted in its Relations to the United States by E. D. Warfield's The Kentucky Resolutions of 1798 (New York, 2nd ed., 1887) is an excellent monograph. For the Civil War history see "Campaigns in Kentucky and Tennessee," in the 7th volume of The United States Geographical Survey, Labbhard Statistics, (1908); Thomas Speed’s History of the Union in Kentucky (New York, 1907); Basil W. Duke, History of Morgan's Cade (Cincinnati, 1867), and general works on the history of the war. See also Alvin F. Lewis, His Cousin Boylan, in the Circumstances of the U.S. Bureau of Education (Washington, 1899), and R. G. Thwaites, Daniel Boone (New York, 1902). There is much valuable material in the Register (Frankfort, 1903 seq.) of the Kentucky Historical Society, especially in the publications of the Filson Club of Louisville. American writers are the first works of John Filson, the first Historian of Kentucky (1820); Thomas Speed, The Wilderness Road (1866); W. H. Perrin, The Pioneer Press of Kentucky (Louisville, 1887); and The History of the State of Kentucky and Its Resources (New York, 1882), containing a description of Kentucky. See also the Kentucky State of its Resources, 1792–1860, by F. H. McElroy (New York, 1890), and The Centenary of Kentucky (1892), containing an address, "The State of Kentucky: Its Discovery, Settlement, Autonomy and Progress in a Hundred Years," by Reuben T. Durrett.

KENYA, a great volcanic mountain in British East Africa, situated just south of the equator in 37° 20’ E. It is one of the highest mountains of Africa, its highest peak reaching an altitude of 17,007 ft. (with a possible error of 50 ft. either way). The central core, which consists of several steep pyramids, is that of a very old and possibly volcanic, which when its crater was complete may have been several miles above the present summit. Lava flow from these directions from the central crystalline core, pointing to the conclusion that the main portion of the mountain represents a single volcanic mass. For the central peaks, of which the axis runs from W.N.W. to S.S.E., ridges radiate outwards, separated by broad valleys, ending upwards in vast cirques. The most important ridges centre in the peak Lenana (16,350 ft.) at the eastern end of the central group, and through it runs the chief water-parting of the mountain, in a generally north to south direction. Three main valleys, known respectively as the Muteu, Gorges and Hobley valleys, run down this to the east, and four—Mackinder, Hausberg, Teleki and Höhnel—to the west. From the central peaks fifteen glaciers, all lying west of the main divide, descend to the north and south, the two largest being the Lewis and Gregory glaciers, each about 1 m. long, which, with the smaller Kolb glacier, lie immediately west of the main divide. Most of the glaciers terminate at an altitude of 14,800–14,900 ft., but the small César glacier, drained to the Hausberg valley, reaches 14,955. Glaciation was formerly much more extensive, old moraines being observed down to 12,000 ft. In the upper parts of the valleys a number of lakes occur, occupying hollows and rock basins in the agglomeration of ashes, fed by springs, and feeding many of the streams that drain the mountain slopes. The largest of these are Lake Höhnel, lying at an altitude of 14,000 ft., at the head of the valley of the same name, and Lake Michaelson (12,700 ft.) in the Gorges Valley. At about the foot of the core the radiating ridges become less abrupt and descend with a gentle gradient, finally passing somewhat abruptly, at a height of some 7000 ft., into the level plateau. These outer slopes are clothed with dense forest and jungle, composed chiefly of junipers and Podocarpus, and between 8000 and 9000 ft. of huge bamboos. The forest zone extends to about 10,500 ft., above which is the steeper alpine zone, in which pasturages alternate with rocks and crags. This extends to a general height of about 15,000 ft., but in damp, sheltered valleys the pasturages extend some distance higher. The only trees or shrubs in these are the giant Senecio (groundsel) and Lobelia, and tree-heaths, the Senecio forming groves in the upper valleys. Of the fauna of the lower slopes, tracks of elephant, leopard and buffalo have been seen, between 11,500 and 14,500 ft. That of the alpine zone includes two species of daisy, Proactis, a cone (Hyoxa), and a rat (Ofomys). The bird life is of considerable interest, the finest species of the upper zone being an eagle-owl, met with at 14,000 ft. At 11,000 ft. was found a brown chat, with good deal of white in its tail. Both the fauna and flora of the higher levels present close affinities with those of Mount Elgon, of other mountains of East Africa and of Cameroon Mountain. The true native names of the mountain are said to be Kilinyaga, Doenyo Ebor (white mountain) and Doenyo Egeri (spotted mountain). It was first seen, from a distance, by the missionary Ludwig Krapf in 1849; approached from the west by Joseph Thomson in 1883; partially ascended by Count S. Teleki (1886), J. W. Gregory (1893) and Georg Kolb (1866); and its summit reached by H. J. Mackinder in 1899. See J. W. Gregory, The Great Rift-Valley (London, 1866); H. J. Mackinder, "Journey to the Summit of Mount Kenya," Geological Magazine, May 1906.

KENYON, LLOYD KENYON, 1ST BARON (1732–1802), lord chief-justice of England, was descended by his father's side from an old Lancashire family; his mother was the daughter of a small farmer near Exeter. He was born on a farm near Ditton, in Flintshire, on the 5th of October 1732. Educated at Ruthin grammar school, he was in his fifteenth year sent to Eton, where he went to Nantwich, Cheshire. In 1750 he entered at Lincoln's Inn, London, and in 1756 was called to the bar. As for several years he was almost unemployed, he utilized his leisure in taking notes of the cases argued in the court of King's Bench, which he afterwards published. Through answering the cases of his friend John Dunning, afterwards Lord Ashburnton, he gradually became known to the attorneys, after which his success was so rapid that in 1780 he was made king's counsel. He showed conspicuous ability in the cross-examination of the witnesses at the trial of Lord George Gordon, but his speech was so tactless that the verdict of acquittal was really due to the brilliant effort of Erskine, the junior counsel. This want of tact, indeed, often betrayed Kenyon into striking blunders; as an advocate he was,
moreover, deficient in ability of statement; and his position was achieved chiefly by hard work, a good knowledge of law and several lucky friendships. Through the influence of Lord Thurlow, Kenyon in 1780 entered the House of Commons as member for Hindon, and in 1782 he was, through the same friendship, appointed attorney-general in Lord Buckingham's administration, an office which he continued to hold under Pitt. In 1784 he received the mastership of the rolls, and was created a baronet. In 1788 he was appointed lord chief justice as successor to Lord Mansfield, and the same year was raised to the peerage as Baron Kenyon of Gredington. As he had made many enemies, his elevation was by no means popular with the bar; but on the bench, in spite of his capricious and choleric temper, he proved himself not only an able lawyer, but a judge of rare and inflexible impartiality. He died at Bath, on the 4th of April 1802. Kenyon was succeeded as 2nd baron by his son George (1776–1855), whose great-grandson, Lloyd (b. 1864), became the 4th baron in 1886.

*See Life by Hon. G. T. Kenyon, 1873.*

**KEOKUK,** a city of Lee county, Iowa, U.S.A., on the Mississippi river, at the mouth of the Des Moines, in the S.E. corner of the State, about 240 m. from St. Louis. Pop. (1800), 4,641; (1900), 14,604, including 1,533 foreign-born; (1910), 14,008. It is served by the Chicago, Burlington & Quinicy, the Chicago, Rock Island & Pacific, the Wabash, and the Toledo, Peoria & Western railways. There is a bridge (about 2,200 ft. long) across the Mississippi, and another (about 1,200 ft. long) across the Des Moines. The city has a public library and St Joseph and Graham hospitals, and is the seat of the Keokuk Medical College (1840). There is a national cemetery here. Much of the city is built on bluffs along the Mississippi. Keokuk Government has constructed a navigable canal (opened 1877) about 9 m. long, with a draft at extreme low water of 5 ft.; at the foot a great dam, 13 m. long and 38 ft. high, has been constructed. Keokuk has various manufactures; its factory product in 1905 was valued at $4,255,915, 35.6% more than in 1900. The city was named after Keokuk, a chief of the Sauk and Foxes (1780-1848), whose name meant "the watchful" or "he who moves alertly." In spite of Black Hawk's war policy in 1832, Keokuk was passive and neutral, and with a portion of his nation remained peaceful while Black Hawk and his warriors fought. His grave, surmounted by a monument, is in Rand Park. The first house on the site of the city was built about 1820, but further settlement did not begin until 1836. Keokuk was laid out as a town in 1837, was chartered as a city in 1848, and in 1807 was one of five cities of the state governed by a special charter.

**KEONJHAR,** a tributary state of India, within the Orissa division of Bengal; area, 3,069 sq. m.; pop. (1901), 285,758; estimated revenue, £20,000. The state is an offshoot from Mayurbhanj. Part of it consists of rugged hills, rising to more than 300 ft. above sea-level. The residence of the raja is at Keonjhar (pop. 4,353).

**KEONTHAL,** a petty hill state in the Punjab, India, with an area of 116 sq. m.; pop. (1901), 27,499; estimated revenue, £4,470. The chief, a Rajput, received the title of raja in 1857. After the Gurkha War in 1814, a portion of Keonthal, which had been occupied by the Gurkhas, was sold to the maharaja of Patiala, the remainder being restored to its hereditary chief. In 1823 the district of Punar was added to the Keonthal state. The raja exercises rights of lordship over the petty states of Kothi, Theog, Madhan and Raties.

**KEPLER, JOHANN** (1571–1630), German astronomer, was born on the 27th of December 1571, at Weil, in the duchy of Württemberg, of which town his grandfather was burgomaster. He was the eldest child of an ill-assorted union. His father, Henry Kepler, was a reckless soldier of fortune; his mother, Catherine Guldenmann, the daughter of the burgomaster of Eltingen, was undisciplined and ill-educated. Her husband found campaigning in Flanders under Alva a welcome relief from domestic life; and, after having lost all he possessed by a forfeited security and tried without success the trade of tavern-keeping in the village of Elmendingen, he finally, in 1580, deserted his family. The misfortune and misconduct of his parents were not the only trouble of Kepler's childhood. He recovered from his illness in his fourth year with crippled hands and eyesight permanently impaired; and a constitution enfeebled by premature birth had to withstand successive shocks of severe illness. His schooling began at Leonberg in 1577—the year, as he himself tells us, of a great comet; but domestic bankruptcy occasioned his transference to field-work, in which he was exclusively employed for several years. Bodily infirmity, combined with mental aptitude, were eventually considered to indicate a theological vocation; he was, in 1584, placed at the seminary of Adelberg, and thence removed, two years later, to that of Maulbronn. A brilliant examination for the degree of bachelor procured him, in 1588, admittance on the foundation to the university of Tübingen, where he laid up a copious store of classical erudition, and imbied Copernican principles from the private instructions of his teacher and life-long friend, Michael Maestlin. Yet, however, he had little knowledge of, and less inclination for, astronomy; and it was with extreme reluctance that he turned aside from the more promising career of the ministry to accept, early in 1594, the vacant chair of mathematics at Tübingen; but the proposer of the Tübingen professors by the Lutheran states of Storia.

The best recognized function of German astronomers in that day was the construction of prophesying almanacs, greedily bought by a credulous public. Kepler thus found that the first duties required of him were of an astronomical nature, and set himself with characteristic alacrity to master the rules of the art as laid down by Ptolemy and Cardan. He, moreover, sought in the events of his own life a verification of the theory of planetary influences; and it is to this practice that we owe the summary record of each year's occurrences which, continued almost to his death, affords for his biography a slight but sure foundation. But his thoughts were already working in a higher sphere. He early attained to the settled conviction that for the actual disposition of the solar system some abstract intelligible reason must exist, and this, after much meditation, he believed himself to have found in an imaginary relation between the "five regular solids," and the number and distances of the planets. In note with exultation the 6th of July 1595, as the date of the pseudo-discovery, the publication of which in *Promotus Dissertationum Cosmographicae seu Mysterioum Cosmographicum* (Tübingen, 1596) procured him much fame, and a friendly correspondence with the two most eminent astronomers of the time, Tycho Brahe and Galileo.

Soon after his arrival at Gratz, Kepler contracted an engagement with Barbara von Müllbeck, a wealthy Styrian heiress, who, at the age of twenty-three, had already survived one husband and been divorced from another. Before her relatives could be brought to countenance his pretensions, Kepler was obliged to undertake a journey to Württemberg to obtain documentary evidence of the somewhat obscure nobility of his family, and it was thus not until the 27th of April 1597 that the marriage was celebrated. In the following year the archduke Ferdinand, on assuming the government of his hereditary dominions, issued an edict of banishment against Protestant teachers and professors. Kepler immediately fled to the Hungarian frontier, but, by the favour of the Jesuits, was recalled and reinstated in his post. The gymnasium, however, was deserted; the nobles of Styria began to murmur at subsidizing a teacher without pupils; and he found it prudent to look elsewhere for employment. His refusal to subscribe unconditionally to the rigid formula of belief adopted by the theologians of Tübingen permanently closed against him the gates of his alma mater. His embarrassment was relieved however by an offer from Tycho Brahe of the position of assistant in his observatory near Prague, which, after a preliminary visit of four months, he accepted. The arrangement was made just in time; for in October 1600 he received definitive notice to leave Gratz, and, having leased his wife's property, he departed with his family for Prague.

By Tycho's unexpected death (Oct. 24, 1601) a brilliant career seemed to be thrown open to Kepler. The emperor Rudolph II
immediately appointed him to succeed his patron as imperial mathematician, although at a reduced salary of 500 florins; the invaluable treasure of Tycho's observations was placed at his disposal; and the laborious but congenial task was entrusted to him of completing the tables to which the grateful Dane had already affixed the title of Rudolphine. The first works executed by him at Prague were, nevertheless, a homage to the astrological proclivities of the emperor. In De fundamentis astrologiae cortioribus (Prague, 1602) he declared his purpose of preserving and purifying the grain of truth which he believed the science to contain. Indeed, the doctrine of "aspects" and "influences" fitted excellently with his mystical conception of the universe, and enabled him to discharge with a semblance of sincerity the most lucrative part of his professional duties. Although he strictly limited his prophetic pretensions to the estimate of tendencies and probabilities, his forecasts were none the less in demand. Shrewd sense and considerable knowledge of the world came to the aid of stellar lore in the preparation of "prognostics" which, not unfrequently hitting off the event, earned him as much credit with the vulgar as his cosmical speculations with the learned. He drew the horoscopes of the emperor and Wallenstein, as well as of many a noble peer; but, though never the true to the unworthy character of such a prince, he made necessity his excuse for a compromise with superstition. "Nature," he wrote, "which has conferred upon every animal the means of subsistence, has given astrology as an adjunct and ally to astronomy." He dedicated to the emperor in 1603 a treatise on the "great conjunction" of that year (Judicium de trigono igneo); and he published his observations on a brilliant star which appeared suddenly (Sept. 30, 1604), and remained visible for seventeen months, in De stella nova in pede Serpentarii (Prague, 1606). While sharing the opinion of Tycho as to the origin of such bodies by condensation of nebulous matter from the Milky Way, he attached a mystical signification to the coincidence in time and place of the sidereal apparition with a triple conjunction of Mars, Jupiter and Saturn.

The main task of his life was not meanwhile neglected. This was nothing less than the foundation of a new astronomy, in which physical cause should replace arbitrary hypothesis. A preliminary study of optics led to the publication, in 1604, of his Astronomiae pars optica, containing important discoveries in the theory of vision. In addition to this he devoted himself to the subject of trigonometry, and in 1616 published his Principia triangulorum, a work of great importance, containing a number of theorems bearing on the law of refraction. But it was not until 1609 that, the "great Martian labour" being at length completed, he was able, in his own figurative language, to lead the captive planet to the foot of the imperial throne. From the time of his first introduction to Tycho he had devoted himself to the investigation of the orbit of Mars, which, on account of its relatively large eccentricity, had always been especially recalcitrant to theory, and the results appeared in Astronomia nova ariudogrotr, seu Physica coelestis tradita commentariis de motibus stellae Maris (Prague, 1609).

In this, the most memorable of Kepler's multiform writings, two of the cardinal principles of modern astronomy—the laws of elliptical orbits and of equal areas—were established (see Astronomy: History); important truths relating to gravity were enunciated, and the tides ascribed to the influence of lunar attraction; while an attempt to explain the planetary revolutions in the then backward condition of mechanical knowledge produced a theory of vortices closely resembling that afterwards adopted by Descartes. Having been provided, in August 1610, by Galileo Galilei, with one of the new-born instruments, Kepler began, with unshakeable delight, to observe the wonders revealed by it. He had welcomed with a little essay called Dessimatio cum Nuncio Sidereo Galileo's first announcement of celestial novelties; he now, in his Dioptrice (Augsburg, 1611), expounded the theory of refraction by lenses, and suggested the principle of the "astronomical" or inverting telescope. Indeed the work may be said to have founded the branch of science to which it gave its name.

The year 1611 was marked by Kepler as the most disastrous of his life. The death by small-pox of his favourite child was followed by that of his wife, who, long a prey to melancholy, was on the 3rd of July carried off by typhus. Public calamity was added to private bereavement. On the 23rd of May 1611 Matthias, brother of the emperor, assumed the Bohemian crown in Prague, compelling Rudolph to take refuge in the citadel, where he died on the 20th of January following. Kepler's fidelity in remaining with him to the last did not deprive him of the favour of his successor. Payments of arrears, now amounting to upwards of 4000 florins, was not, however, in the desperate condition of the imperial finances, to be hoped for; and he was glad, while retaining his position as court astronomer, to accept (in 1612) the office of mathematician to the states of Upper Austria. His residence at Linz was troubled by the harsh conduct of the pastor Hitzler, in excluding him from the rites of his church on the ground of supposed Calvinistic leanings—a decision confirmed, with the addition of an insulting reprimand, on his appeal to Wurttemberg. In 1613 he appeared with the emperor Matthias before the diet of Ratisbon as the advocate of the introduction into Germany of the Gregorian calendar; but the attempt was for the time frustrated by anti-papal prejudice. The attention devoted by him to chronological subjects is evidenced by the publication about this period of several essays in which he sought to adjust 1600, the year of the epoch of the new calendar, to the Gregorian cycle.

Kepler's second courtship forms the subject of a highly characteristic letter addressed by him to Baron Stralendorf, in which he reviews the qualifications of eleven candidates for his hand, and explains the reasons which decided his choice in favour of a portly orphan girl named Susanna Reutlinger. The marriage was celebrated at Linz, on the 30th of October 1613, and seems to have proved a happy and suitable one. The abundant vintage of that year drew his attention to the defective methods in use for estimating the cubical contents of vessels, and his essay on the subject (Novo Stereometria Dolorum, Linz, 1615) entitles him to rank among those who prepared the discovery of the infinitesimal calculus. His observations on the three comets of 1618 were published in De Comitis, contemporaneously with De Harmonice Mundi (Augsburg, 1610), of which the first lineaments had been traced twenty years previously at Grazt. This extraordinary production is memorable as having announced the discovery of the "third law"—that of the sesquiplicate ratio between the planetary periods and distances. But the main triumph of the treatise was the exposition of an elaborate system of celestial harmonies depending on the various and varying velocities of the several planets, of which the sentient soul animating the sun was the solitary auditor. The work exhibiting this fantastic emulation of extravagance with genius was dedicated to James I. of England, and the compliment was acknowledged with an invitation to that island, conveyed through Sir Henry Wotton. Notwithstanding the distracted state of his own country, he refused to abandon it, as he had previously, in 1617, declined the post of successor to G. A. Magini in the mathematical chair of Bologna.

The insurmountable difficulties presented by the lunar theory forced Kepler, after an enormous amount of fruitless labour, to abandon his design of comprehending the whole scheme of the heavens in one great work to be called Hipparcis, and he then threw a portion of his materials into the form of a dialogue intended for the instruction of general readers. The Epiome Astronomiae Copernicane (Linz and Frankfort, 1618–1621), a lucid and attractive textbook of Copernican science, was remarkable for the "physical astronomy," as well as for the extension to the Jovian system of the laws recently discovered to regulate the motions of the planets. The first of a series of ephemeredes, calculated on these principles, was published by him at Linz in 1617; and in that for 1620, dedicated to Baron Napier, he for the first time employed logarithms. This important invention was eagerly welcomed by him, and its theory formed the subject of a treatise entitled Chilias Logarithmorum, printed in 1624, but circulated in manuscript three years earlier, which largely contributed to bring the new method into general use in Germany.

His studies were interrupted by family trouble. The restless
disposition and unbridled tongue of Catherine Kepler, his mother, created for her numerous enemies in the little town of Leonberg, while her unreviewed conjectures exposed her to a species of calumny, and at last, were readily circulated and believed. As early as 1615 suspicions of sorcery began to be spread against her, which she, with more spirit than prudence, met with an action for libel. The suit was purposely protracted, and at length, in 1620, the unhappy woman, then in her seventy-fourth year, was arrested on a formal charge of witchcraft. Kepler immediately hastened to Württemberg, and owing to his indefatigable exertions she was acquitted after having suffered thirteen month's imprisonment, and endured with undaunted courage the formidable ordeal of "torture," or examination under the imminent threat of torture. She survived her release only a few months, dying on the 13th of April 1622.

Kepler's whole attention was now devoted to the production of the new tables. "Germany," he wrote, "does not long for peace more anxiously than I do for their publication." But financial difficulties, combined with civil and religious convulsions, long delayed the accomplishment of his desires. From the 24th of June to the 9th of August 1626, Linz was besieged, and its inhabitants reduced to the utmost straits by bands of insurgent peasants. The pursuit of science needed a more tranquil shelter; and on the raising of the blockade, Kepler obtained permission to transfer his types to Ulm, where, in September 1627, the Rudolphine Tables were at length given to the world. Although by no means free from errors, their value appears from the fact that they ranked for a century as the best aid to astronomy. Appendixed were tables of logarithms and of refraction, together with Tycho's catalogue of 777 stars, enlarged by Kepler to 1005.

Kepler's claims upon the insolvent imperial exchequer amounted by this time to 12,000 florins. The emperor Ferdinand II., too happy to transfer the burden, countenanced an arrangement by which Kepler entered the service of the duke of Friedland (Wallenstein), who assumed the full responsibility of the debt. In July 1628 Kepler accordingly arrived with his family at Sagan in Silesia, where he applied himself to the printing of ephemerides up to the year 1636, and when he issued, in 1629, a Notice to the Curious in Things Celestial, warning astronomers of approaching transits. That of Mercury was actually seen by Gassendi in Paris on the 7th of November 1631 (being the first passage of a planet across the sun ever observed); that of Venus, predicted for the 6th of December following, was invisible in western Europe. Wallenstein's promises to Kepler were but imperfectly fulfilled. In lieu of the sums due, he offered him a professorship at Rostock, which Kepler declined. An expedition to Ratisbon, undertaken for the purpose of representing his case to the diet, terminated his life. Shaken by the journey, which he had performed entirely on horseback, he was attacked with fever, and died at Ratisbon, on the 15th of November (N.S.), 1630, in the fifty-ninth year of his age. An inventory of his effects showed him to have been possessed of no inconsiderable property at the time of his death. By his first wife he had five, and by his second seven children, of whom only two, a son and a daughter, reached maturity.

The character of Kepler's genius is especially difficult to estimate. His tendency towards mystical speculation formed a not less fundamental quality of his mind than its strong grasp of positive scientific truth. Without assigning to each element its due value, no sound comprehension of his modes of thought can be obtained. The universe was essentially Pythagorean and Platonic. He started with the conviction that the arrangement of its parts must correspond with certain abstract conceptions of the beautiful and harmonious, and under this inspiration, that led him to the planets, severe labours of which his great discoveries were the fruit. His demonstration that the planes of all the planetary orbits pass through the centre of the sun, coupled with his clear recognition of the sun as the moving power of the system, entitles him to rank as the founder of modern astronomy. But these labours, induced by him of planetary movements and distances to musical intervals and geometrical constructions seemed to himself discoveries no less admirable than the achievements which have secured his lasting fame. Outside the boundaries of the solar system, the metaphysical side of his genius, no longer held in check by experience, fully asserted itself. The Keplerian like the Pythagorean cosmos was three-fold, consisting of the centre, or sun, the surface, represented by the sphere of the fixed stars, and the intermediate space, filled with ethereal matter. It is a mistake to suppose that he regarded the stars as so many suns. He quotes indeed the opinion of Giordano Bruno to that effect, but with dissent. Among his happy conjectures was that the sun's axial rotation, possibly produced by him as the physical cause of the revolutions of the planets, and soon after confirmed by the discovery of sun-spots; the suggestion of a periodical variation in the obliquity of the ecliptic; and the explanation of the irregular atmospheric effect of the radiance observed to surround the totally eclipsed sun.

It is impossible to consider without surprise the colossal amount of work accomplished by Kepler under numerous disadvantages. His work was the first in which the harmonic law of planetary motion and the highest triumph of genius, that of having given to mankind the best that was in him. In private character he was amiable and affectionate; his generosity in recognizing the merits of others was only equalled by his passion against all that was false; a life marked by numerous disquietudes was cheered and ennobléd by sentiments of sincere piety.

Kepler's extensive literary remains, purchased by the empress Catherine II. in 1724 from some Frankfort merchants, and long inaccessibly deposited in the observatory of Pulkowa, were fully brought to light, under the able editorship of Dr Ch. Frisch, in the first complete edition of his works. This important publication (Joannis Kepleri opera omnia, Frankfurt, 1856-1871, 8 vols. 8vo) contains, besides the works already enumerated and several minor treatises, a posthumous scientific satire entitled Joh. Keppleri Somnium (first printed in 1634) and a vast mass of his correspondence. A careful biography is appended, founded mainly on his letters, and other documents. The only completed work by him with Herwart von Hohenburg, unearthed by C. Anschartz at Munich, was printed at Prague in 1886.

AUGUSTUS KEPEL, Viscount (1725-1786). British admiral, second son of the second earl of Albemarle, was born on the 25th of April 1725. He went to sea at the age of ten, and had already five years of service to his credit when he was appointed to the "Centurion," and was sent with Anson round the world in 1740. He had a narrow escape of being killed in the capture of Paia (Nov. 13, 1741), and was named acting lieutenant in 1742. In 1744 he was promoted to commander and post captain. Until the peace of 1748 he was actively employed. In 1747 he ran his ship the "Maidstone" (50) ashore near Belleisle while chasing a French vessel, but was honourably acquitted by a court martial, and reappointed to another command. After peace had been signed he was sent into the Mediterranean to persuade the delays of Algiers to restrain the piratical operations of his subjects. The day is said to have complained that the king of England should have sent a beardless boy to deal with the worst, and to have been told that if the beard was the necessary qualification for an ambassadorship, "he would have been easy to send a "Billy goat." After trying the effect of bullying without success, the day made a treaty, and Keppel returned in 1751. During the Seven Years' War he saw constant service. He was in North America in 1755, on the coast of France in 1756, was detached on a cruise to reduce the French settlements on the west coast of Africa in 1758, and his ship the "Torbay" (74) was the first to get into action in the battle of Quiberon in 1759. In 1757 he had formed part of the court martial which had condemned Admiral Byng, and had been active among those who had endeavoured to secure a pardon for him; but neither he nor those who had acted with him could produce any serious reason why the sentence should not be carried out. When Spain joined France in 1740 he was sent as second command with Sir George Pocock in the expedition which took Havannah. His health suffered from the fever which carried off an immense proportion of the soldiers and sailors, but the
KEPEL, SIR H.—KER

£25,000 of prize money which he received freed him from the unpleasant position of younger son of a family ruined by the extravagance of his father. He became rear-admiral in October 1762, was one of the Admiralty Board from July 1765 to November 1766, and was promoted vice-admiral on the 24th of October 1770. When the Falkland Island dispute occurred in 1770 he was to have commanded the fleet to be sent against Spain, but a settlement was reached, and he had no occasion to hoist his flag. The most important and the most debated period of his life belongs to the opening years of the war of American Independence. Keppel was by family connexion and personal preference a strong supporter of the Whig connexion, led by the Marquess of Rockingham and the Duke of Richmond. He shared in all the passions of his party, then excluded from power by the resolute will of George III. As a member of Parliament, in which he had a seat for Windsor from 1761 till 1786, and then for Surrey, he was a steady partisan, and was in constant hostility with the "King's Friends." In common with them he was prepared to believe that the king's ministers, and in particular Lord Sandwich, then First Lord of the Admiralty, were capable of any villainy. When therefore he was appointed to command the Western Squadron, the main fleet prepared against France in 1778, he went to sea predisposed to think that the First Lord would be glad to cause him to be defeated. It was a further misfortune that when Keppel hoisted his flag one of his subordinate admirals should have been Sir Hugh Palliser (1723-1796), who was a member of the Admiralty Board, a member of parliament, and in Keppel's opinion, which was generally shared, jointly responsible with his colleagues for the bad state of the navy. When, therefore, the battle which Keppel fought with the French on the 27th of July 1778 ended in a highly unsatisfactory manner, owing mainly to his own unintelligent management, but partly through the failure of Sir Hugh Palliser to obey orders, he became convinced that he had been deliberately betrayed. Though he praised Sir Hugh in his public despatch he attacked him in private, and the Whig press, with the unquestionable aid of Keppel's friends, began a campaign of calumny to which the ministerial papers answered in the same style, each side accusing the other of deliberate treason. The result was a scandalous series of scenes in parliament and of courts martial. Keppel was first tried and acquitted in 1779, and then Palliser was also tried and acquitted. Keppel was ordered to strike his flag in March 1779. Until the fall of Lord North's ministry he acted as an opposition member of parliament. When it fell in 1782 he became First Lord, and was created Viscount Keppel and Baron Elden. His career in office was not distinguished, and he broke with his old political associates by resigning as a protest against the Peace of Paris. He finally disgraced himself by joining the Coalition ministry formed by North and Fox, and with its fall disappeared from public life. He died unmarried on the 2nd of October 1786. Burke, who regarded him with great affection, said that he had "something high" in his nature, and that it was "a wild stock of pride on which the tenderest of all hearts had grafted the milder virtues." His popularity disappeared entirely in his later years. His portrait was six times painted by Sir Joshua Reynolds. The copy which belonged originally to Burke is now in the National Gallery.

There is a full Life of Keppel (1842), by his grand-nephew, the Rev. Thomas Keppel. (D. H.)

KEPEL, SIR HENRY (1809-1904), British admiral, son of the 4th earl of Albemarle and of his wife Elizabeth, daughter of Lord de Clifford, was born on the 14th of June 1809, and entered the navy from the old naval academy of Portland. His family connections secured him rapid promotion, at a time when the rise of least fortunate officers was very slow. He became lieutenant in 1829 and commander in 1833. His first command in the "Childers" brig (16) was largely passed on the coast of Spain, which was then in the midst of the convulsions of the Carlist war. Captain Keppel had already made himself known as a good seaman. He was engaged with the squadron stationed on the west coast of Africa to suppress the slave trade.

In 1837 he was promoted post captain, and appointed in 1841 to the "Dido" for service in China and against the Malay pirates, a service which he repeated in 1847, when in command of H.M.S. "Maeander." The story of his two commands was told by himself in two publications, The Expedition to Borneo of H.M.S. "Dido" for the Suppression of Piracy (1846), and in A Visit to the Indian Archipelago in H.M.S. "Maeander" (1853). The substance of these books was afterwards incorporated into his autobiography, which was published in 1859 under the title A Sailor's Life under four Sovereigns. In 1853 he was appointed to the command of the "St Jean d'Arc" of 101 guns for service in the Crimean War. But he had no opportunity to distinguish himself at sea in that struggle. As commander of the naval brigade landed to co-operate in the siege of Sebastopol, he was more fortunate, and he had an honourable share in the latter days of the siege and reduction of the fortress. After the Crimean War he was again sent out to China, this time in command of the "Raleigh," as commodore to serve under Sir M. Seymour. The "Raleigh" was lost on an uncharted reef near Hong-Kong, but three small vessels were named to act as her tenders, and Commodore Keppel commanded in them, and with the crew of the "Raleigh," in the action with the Chinese at Fatshen Creek (June 1, 1857). He was honourably acquitted for the loss of the "Raleigh," and was named to the command of the "Alligator," which he held till his promotion to rear-admiral. For his share in the action at Fatshen Creek he was made K.C.B. The prevalence of peace gave Sir Henry Keppel no further chance of active service, but he held successive commands till his retirement from the active list in 1879, two years after he attained the rank of Admiral of the Fleet. He died at the age of 95 on the 17th of January 1904.

KER, JOHN (1675-1726), Scotch spy, was born in Ayrshire on the 8th of August 1675. His true name was Crawford, his father being Alexander Crawford of Crawfordland; but having married Anna, younger daughter of Robert Ker, of Kersland, Ayrshire, whose only son Daniel Ker was killed at the battle of Steinkirk in 1692, he assumed the name and arms of Ker in 1697, after buying the family estates from his wife's elder sister. Having become a leader among the extreme Covenanters, he made use of his influence to relieve his pecuniary embarrassments, selling his support at one time to the Jacobites, at another to the government, and whenever possible to both parties at the same time. He held a licence from the government in 1707 permitting him to associate with those whose disloyalty was known or suspected, proving that he was at that date the government's paid spy; and in his Memoirs Ker asserts that he had a number of other spies and agents working under his orders in different parts of the country. He entered into correspondence with Catholic priests and Jacobite conspirators, whose schemes, so far as he could make himself cognisant of them, he betrayed to the government. But he was known to be a man of the worst character, and it is improbable that he succeeded in gaining the confidence of people of any importance. The duchess of Gordon was for a time, it is true, one of his correspondents, but in 1707 she had discovered him to be "a knave." He went to London in 1709, where he seems to have extracted considerable sums of money from politicians of both parties by promising or threatening, as the case might be, to expose Godolphin's relations with the Jacobites. In 1713, if his own story is to be believed, business of a semi-diplomatic nature took Ker to Vienna, where, although he failed in the principal object of his errand, the emperor made him a present of his portrait set in jewels. Ker also occupied an important place in the cabinet of 1715, by gathering information which he forwarded to the elector of Saxony; and in the following year on his way home he stopped at Hanover to give some advice to the future king of England as to the best way to govern the English. Although in his own opinion Ker materially assisted in placing George I. on the English throne, his services were unrewarded, owing, he would have us believe, to the incorruptibility of his character. Similiar ingratitude was the recompense for his revelations of the Jacobite intentions in 1715;
and as he was no more successful in making money out of the East India Company, nor in certain commercial schemes which engaged his interest during the next few years, he died in a debtors' prison, on the 8th of July 1726. While in the King's Bench he sold to Edmund Curll the bookseller, a fellow-prisoner, who was serving a sentence of five months for publishing obscene books, the manuscript of (or possibly only the materials on which were based) the Memoirs of John Ker of Kersland, which Curll published in 1726 in three parts, the last of which appeared after Ker's death. For issuing the first part of the Memoirs, which purported to make disclosures damaging to the government, but which Curll in self-justification described as "vindicating the memory of Queen Anne," the publisher was sentenced to the pillory at Charing Cross; and he added to the third part of the Memoirs the indictment on which he had been convicted.

See the above-mentioned Memoirs (London, 1726-1727), and in particular the "preface" to part i.; George Lockhart, The Lockhart Papers (2 vols., London, 1817); Nathaniel Hooke, Correspondence, edited by W. D. Macray (Roxburgh Club, 2 vols., London, 1870), in which Ker is referred to under several pseudonyms, such as "Wicks," "Trustie," "the Cameroun Meaulmoung," etc.

KERAK, a town in eastern Palestine, 10 m. E. of the southern angle of the Lisan promontory of the Dead Sea, on the top of a rocky hill about 3000 ft. above sea-level. It stands on a platform forming an irregular triangle with sides about 3000 ft. in length, and separated by deep ravines from the ranges around on all sides but one. The population is estimated at 6000 Moslems and 1800 Orthodox Greek Christians. Kerak is identified with the Moabitic town of Kir-Hareseth (destroyed by the Hebrews, Edomite coalition, 2 Kings iii. 25), and denounced by Isaiah under the name Kir of Moab (xv. 1), Kir-Hareseth (xvi. 7) or Kir-Ilersi (xvi. 11): Jeremiah also refers to it by the last name (xxxix. 31, 36). The modern name, in the form Xaraz, appears in 2 Macc. xii. 17. Later, Kerak was the seat of the archbishop of Petra. The Latin kings of Jerusalem, recognizing its importance as the key to the E. Jordan region, made the place a great fortress, the secret of the conquests was safeguarded by Saladin, to whom it last yielded in 1218. The Arabian Ayyubides fortified the town, as did the Egyptian Mameluke sultans. The fortifications were repaired by Bibras in the 13th century. For a long time after the Turkish occupation of Palestine and Egypt it enjoyed a semi-independence, but in 1853 a Turkish governor with a strong garrison was established there, which has greatly contributed to secure the safety of travellers and the general quiet of the district. The town is an irregular congeries of flat mud-roofed houses. In the Christian quarter is the church of St. George; the mosque also is a building of Christian origin. The town is surrounded by a wall with five towers; entrance now is obtained through breaches in the wall, but formerly it was accessible only by means of tunnels cut in the rocky substratum. The castle, now used as the headquarters of the garrison and closed to visitors, is a remarkably fine example of a crusaders' fortress.

KERALA, or CHERA, the name of one of the three ancient Dravidian kingdoms of the Tamil country of southern India, the other two being the Chola and the Panda. Its original territory comprised the country now contained in the Malabar district, with Travancore and Cochin, and later the country included in the Coimbatore district and a part of Salem. The boundaries, however, naturally varied much from time to time. The earliest references to this kingdom appear in the edicts of Asoka, where it is called Keralapura (i.e. son of Kerala), a name which in a slightly corrupt form is known to Pliny and the author of the Periplus. There is evidence of a lively trade carried on by sea with the Roman empire in the early centuries of the Christian era, but of the political history of the Kerala kingdom nothing is known beyond a list of rajahs compiled from inscriptions, until in the 10th century the struggle began with the Ibys, on whom it was conquered and held till their overthrow by the Mahomedans in 1310. These in their turn were driven out by a Hindu confederation headed by the chiefs of Vijayanagar, and Kerala was absorbed in the Vijayanagar empire until its destruction by the Mahomedans in 1565. For about 80 years it seems to have preserved a precarious indepentence under the naks of Madura, but in 1640 was conquered by the Adil Shah dynasty of Bijapur and in 1652 seized by the king of Mysore.

KERASUND (anc. Choerades, Pharmacia, Cerasus), a town on the N. coast of Asia Minor, in the Trebizond vilayet, and the port—an exposed roadstead—of Kara-Hissar Shaki, with which it is connected by a carriage road. Pop. just under 10,000, Moslems being in a slight minority. The town is situated on a rocky promontory, crowned by a Byzantine fortress, and has a growing trade. It exports filberts (for which product it is the centre), walnuts, hides and timber. Cerasus was the place from which the wild cherry was introduced into Italy by Lucullus and so to Europe (hence Fz. cerise, "cherry").

KÉRATRY, AUGUSTE HILARION, COMTE DE (1769-1859), French writer and politician, was born at Rennes on the 28th of December 1769. Coming to Paris in 1799, he associated himself with Bernardin de St. Pierre. After being twice imprisoned during the Terror he retired to Brittany, where he devoted himself to literature till 1814. In 1818 he returned to Paris as deputy for Finistère, and sat in the Chamber till 1824, becoming one of the recognized liberal leaders. He was re-elected in 1827, took an active part in the establishment of the July monarchy, was appointed a councillor of state (1830), and in 1837 was made a peer of France. After the coup d'état of 1852 he retired from public life. Among his publications were Contes et Idylles (1791); Lysus et Cyclippe, a poem (1801); Inductions morales et physiologiques (1817); Documents pour servir à l'histoire de France (1820); Du Beau dans les arts d'imitation (1822); Le Dernier des Beaumonats (1824). His last work, Clarisse (1854), a novel, was written when he was eighty-five. He died at Port-Marly on the 7th of November 1859.
